The effect of intervening task performance on subjective workload ratings p 144 A86-23746

RETINA
Examination of retinal pattern threshold levels and their possible effect on computer access control mechanisms [AD-A161213] p 128 N86-19895

RETRAINING
Medical control of the aircrew during a retraining process p 110 A86-23494

RHYTHM (BIOLOGY)
Problem of biological clocks: New data on circadian changes in status of human organism p 120 N86-19848

RIBONUCLEIC ACIDS
Sequence of the 16S rRNA gene from the thermoacidophilic archaebacterium Sulfolobus solfataricus and its evolutionary implications p 104 A86-23998
The tryptophanyl-tRNA synthetases from eurocaryotes, procaryotes, and archebactena have a common antigenic determinant p 105 A86-24323

ROBOTICS
Independent study of automation and robotics for the National Space Program by the Automation and Robotics Panel [NASA-CR-176523] p 148 N86-18990

ROBOTS
Independent study of automation and robotics for the National Space Program by the Automation and Robotics Panel [NASA-CR-176523] p 148 N86-18990

ROTARY WING AIRCRAFT
An examination of ability requirements for various rotary wing missions p 128 A86-23716

S

SABATIER REACTION
Comparison of CO2 reduction process - Bosch and Sabatier [SAE PAPER 851343] p 139 A86-23530

SAFETY
Space Station crew safety - Human factors model p 143 A86-23742

SAFETY FACTORS
Excursion limits in shallow water heliox saturation diving p 125 N86-19877

SALMONELLA
Immunomodulation by proteins of bordetella pertussis [AD-A160078] p 107 N86-18953

SCANNING
Effects of digital altimetry on pilot workload [SAE PAPER 841489] p 132 A86-26019

SCENEDESMUS
Potential for utilization of algal biomass for components of the diet in CELSS [SAE PAPER 851386] p 140 A86-23567

SCORING
A comparison of dichotic listening task scoring methods [AD-A159920] p 133 N86-18980

SCRUBBERS
Design guidelines for carbon dioxide scrubbers, revision A [AD-A160181] p 147 N86-18989

SEATS
Effect of seat cushions of human respone to +Gz impact p 145 A86-25652

SECRETIONS
Review of duodenal and gastric ulcer [AD-A160919] p 117 N86-18977

SEDATIVES
An experimental trial to test the efficacy of temazepam to induce sleep and improve subsequent performance during partial sleep deprivation and circadian rhythm desynchronosis [AD-A160795] p 116 N86-18972

SENSORIMOTOR PERFORMANCE
Acquisition of perceptual-motor skill - Adaptive and part-whole training p 129 A86-23727
Perceptual-motor coordination and adaptation during locomotion - Determinants of prism adaptation in hall exposure p 131 A86-24324
Some psychological aspects of air sickness p 131 A86-24508

SENSORY PERCEPTION
Canadian medical experiments on Shuttle Flight 41-G p 110 A86-22996

SENSORY STIMULATION
Simple and choice reaction time in a secondary task under varied stimulus modality probabilities [AD-A159698] p 135 N86-19896

SEQUENCING
Sequence polymorphism of HLA-DR beta 1 alleles relating to T cell-recognized determinants [AD-A160237] p 107 N86-18956

SEROTONIN
Effects of 24 h sleep deprivation on biogenic amine metabolism p 120 N86-19846

SERVOCONTROL
Duty-cycle analysis of a human-controlled manipulator p 137 A86-23424

SERVOMECHANISMS
Servo operated anti-G suit pressurization system [AD-D011932] p 147 N86-18988

SETTLING
Evaluation of radiation-induced damage in the erythrocyte membranes of rats and dogs according to changes in the erythrocyte sedimentation behavior p 106 A86-24424

SEX FACTOR
Less bubble formation in women divers p 126 N86-19883

SHALLOW WATER
Excursion limits in shallow water heliox saturation diving p 125 N86-19877

SHEEP
Ultrasonic detection of circulating bubbles in ewes exposed to simulated dives deeper than 800 msw under isobaric conditions and with unchanged gas mixtures p 125 N86-19882

SHIVERING
Interaction of the thermoreceptor and vestibular signals in the regulation of the activity of flexor and extensor motor nuclei during cold tremors p 103 A86-23493

SIGNAL DETECTION
Use of a signal detection paradigm to assess subjective intersection points in a target location task p 129 A86-23720
Effect of wearing chemical protective clothing in the heat on signal detection over the visual field p 145 A86-25657

SIGNAL PROCESSING
Luminance and chromaticity signal processing in the human visual system p 121 N86-19852
Simple and choice reaction time in a secondary task under varied stimulus modality probabilities [AD-A159698] p 135 N86-19896

SIGNS AND SYMPTOMS

SIGNS AND SYMPTOMS
Clinical problems encountered by a squadron flight surgeon p 112 A86-24502
Ischemic cardiopathology in pilots - The risk, the methods of detection and prevention p 113 A86-24511
Clinico-epidemiological characteristics of Q fever in Carpathian foothills p 118 N86-19834
Evaluation of a multi-method group treatment approach for the management of stress [AD-A160813] p 135 N86-19897

SIMULATION
USSR Space Life Sciences Digest, issue 3 [NASA-CR-3922(03)] p 106 N86-18949
Simulation model for plant growth in controlled environment systems p 149 N86-19914

SKIN (ANATOMY)
The absorption of benzene through human skin [AD-A161157] p 127 N86-19894

SKIN TEMPERATURE (BIOLOGY)
Mechanism of noradrenaline effect on the skin thermoreceptors p 103 A86-23491
Diver response to hot water loss at depths greater than 300 meters: Experimental observations and theoretical interpretation p 121 N86-19855

SLEEP
Hypnogenic activity of a cyclic structural analog of delta-sleep-inducing peptide p 105 A86-24368
An experimental trial to test the efficacy of temazepam to induce sleep and improve subsequent performance during partial sleep deprivation and circadian rhythm desynchronosis [AD-A160795] p 116 N86-18972
Enhancement of somniferous effects of thermal pulsation by simultaneous application to two reflexogenic zones p 120 N86-19849

SLEEP DEPRIVATION
An experimental trial to test the efficacy of temazepam to induce sleep and improve subsequent performance during partial sleep deprivation and circadian rhythm desynchronosis [AD-A160795] p 116 N86-18972
Physical fitness as a moderator of cognitive work capacity and fatigue onset under sustained combat-like operations [AD-A160417] p 134 N86-18982
Effects of 24 h sleep deprivation on biogenic amine metabolism p 120 N86-19846

SMEAR
Suppression of visible persistence in apparent motion p 133 A86-26298

SODIUM
Sodium and [illegible] recycle in closed ecosystem-space agriculture p 144 A86-25199

SOFTWARE TOOLS
Utility of an emulation and simulation computer model for air revitalization system hardware design, development, and test [SAE PAPER 851377] p 140 A86-23560

SOLID WASTES
Wet oxidation of a spacecraft model waste [SAE PAPER 851372] p 140 A86-23555

SOLUBILITY
A model of inhaled gas and vapor transport in the human lung [AD-A160829] p 117 N86-18976

SOLVENTS
Micellar enzymology p 109 N86-19831

SONAR
The effects of bimodal presentation of stimuli and noise on target detection [AD-A160122] p 134 N86-18981
Multimodal versus unimodal information processing of words [AD-A160517] p 134 N86-18984

SPACE ADAPTATION SYNDROME
Metabolic aspects of the problem of stress in space flight --- Russian book p 105 A86-24136
General automatic components of motion sickness [NASA-CR-176516] p 126 N86-19886

SPACE FLIGHT
USSR Space Life Sciences Digest, issue 3 [NASA-CR-3922(03)] p 106 N86-18949
The beginnings of airborne weightlessness research [AD-A160575] p 115 N86-18966
A proposal for a longitudinal study to assess the hazards of radiation in space flight [AD-A160801] p 117 N86-18975

SPACE FLIGHT FEEDING
Potential for utilization of algal biomass for components of the diet in CELSS p 148 N86-19907
BLSS, a European approach to CELSS p 148 N86-19908
Design concepts for bioreactors in space p 151 N86-19926
The development of an unconventional food regeneration process: Quantifying the nutritional components of a model methylotrophic yeast p 151 N86-19928
Utilization of potatoes in CELSS: Productivity and growing systems p 152 N86-19935
Optimization of controlled environments for hydroponic production of leaf lettuce for human life support in CELSS p 152 N86-19936

SPACE FLIGHT STRESS
Health maintenance and human productivity in the Space Station Era [SAE PAPER 851312] p 110 A86-23503
Metabolic aspects of the problem of stress in space flight --- Russian book p 105 A86-24136
Anabolic steroids as a countermeasure against bone demineralization during space flight p 114 A86-25662

SPACE HABITATS
Controlled Ecological Life Support Systems: CELSS 1985 Workshop [NASA-TM-88215] p 148 N86-19906
Potential for utilization of algal biomass for components of the diet in CELSS p 148 N86-19907
CELSS experiment model and design concept of gas recycle system p 148 N86-19909
The C23A system, an exmaple of quantitative control of plant growth associated with a data base p 148 N86-19911
Plan for CELSS test bed project p 149 N86-19915
Plant growth chamber M design p 149 N86-19916
Operational development of small plant growth systems p 149 N86-19917
Design concepts for bioreactors in space p 151 N86-19926
A method for screening of plant species for space use p 152 N86-19938
The role of plant disease in the development of controlled ecological life support systems p 153 N86-19942
Development of space technology for ecological habitats p 153 N86-19943

SPACE MISSIONS
The roles of astronauts and machines for future space operations [SAE PAPER 851332] p 137 A86-23521

SPACE PROCESSING
Physiological insights gained through zero-G medical research p 144 A86-24121

SPACE SHUTTLE MISSION 41-G
Canadian medical experiments on Shuttle Flight 41-G p 110 A86-22996

SPACE SHUTTLES
Performance and endurance testing of a prototype carbon dioxide and humidity control system for Space Shuttle extended mission capability [SAE PAPER 851374] p 140 A86-23557

SPACE STATIONS
Human physiological adaptation to extended Space Flight and its implications for Space Station [SAE PAPER 851311] p 110 A86-23502
Physiological considerations for EVA in the Space Station era [SAE PAPER 851313] p 111 A86-23504
Electrochemical CO2 concentration for the Space Station Program [SAE PAPER 851341] p 138 A86-23528
Comparison of CO2 reduction process - Bosch and Sabatier [SAE PAPER 851343] p 139 A86-23530
Phase change water processing for Space Station [SAE PAPER 851346] p 139 A86-23532
Water quality monitor for recovered spacecraft water [SAE PAPER 85-1347] p 139 A86-23533
Space Station nitrogen supply system based on stored chemicals [SAE PAPER 851349] p 139 A86-23535
Space Station life sciences guidelines for nonhuman experiment accommodation [SAE PAPER 851370] p 104 A86-23553
Space Station Environmental Control/Life Support System engineering [SAE PAPER 851375] p 140 A86-23558
Environmental Control and Life Support Systems technology options for Space Station application [SAE PAPER 851376] p 140 A86-23559
BLSS, a European approach to CELSS --- Biological Life Support Systems [SAE PAPER 851391] p 141 A86-23569
Utilization of membranes for H2O recycle system [SAE PAPER 851394] p 141 A86-23571
Space Station crew safety - Human factors model p 143 A86-23742
Independent study of automation and robotics for the National Space Program by the Automation and Robotics Panel [NASA-CR-176523] p 148 N86-18990
Potential for utilization of algal biomass for components of the diet in CELSS p 148 N86-19907
BLSS, a European approach to CELSS p 148 N86-19908
CELSS experiment model and design concept of gas recycle system p 148 N86-19909
Utilization of membranes for H2O recycle system p 148 N86-19910
Water recycling system using thermopervaporation method p 150 N86-19921
Development of space technology for ecological habitats p 153 N86-19943

SPACE STORAGE
Space Station nitrogen supply system based on stored chemicals [SAE PAPER 851349] p 139 A86-23535

SPACE SUITS
Physiological considerations for EVA in the Space Station era [SAE PAPER 851313] p 111 A86-23504
Evolution of the Shuttle Extravehicular Mobility Unit's life support system [SAE PAPER 85-1333] p 137 A86-23522
Your space suit and you - Significance of manloading in pressure suit design [SAE PAPER 851334] p 137 A86-23523
Enhancement of space suit glove performance [SAE PAPER 851335] p 138 A86-23524

SPACEBORNE EXPERIMENTS
Space Station life sciences guidelines for nonhuman experiment accommodation [SAE PAPER 851370] p 104 A86-23553
Description of concept and first feasibility test results of a life support subsystem of the Botany Facility based on water reclamation [SAE PAPER 851397] p 104 A86-23574
The life sciences on board of Spacelab D1 p 106 A86-24610
Gas and water recycling system for IOC vivarium experiments p 150 N86-19920

SPACECRAFT CABIN ATMOSPHERES
Static feed water electrolysis system for Space Station O2 and H2 generation [SAE PAPER 851339] p 138 A86-23526
Electrochemical CO2 concentration for the Space Station Program [SAE PAPER 851341] p 138 A86-23528
Comparison of CO2 reduction process - Bosch and Sabatier [SAE PAPER 851343] p 139 A86-23530
Space Station nitrogen supply system based on stored chemicals [SAE PAPER 851349] p 139 A86-23535
Performance and endurance testing of a prototype carbon dioxide and humidity control system for Space Shuttle extended mission capability [SAE PAPER 851374] p 140 A86-23557

SPACECRAFT DESIGN
Independent study of automation and robotics for the National Space Program by the Automation and Robotics Panel [NASA-CR-176523] p 148 N86-18990

SPACECRAFT ENVIRONMENTS
Wet oxidation of a spacecraft model waste [SAE PAPER 851372] p 140 A86-23555
BLSS, a European approach to CELSS --- Biological Life Support Systems [SAE PAPER 851391] p 141 A86-23569
CELSS experiment model and design concept of gas recycle system [SAE PAPER 851393] p 141 A86-23570

SPACECREWS
Space Station crew safety - Human factors model p 143 A86-23742

SPACELAB PAYLOADS
The life sciences on board of Spacelab D1 p 106 A86-24610
First German Spacelab missions, no. 6 p 118 N86-18979

SPATIAL DEPENDENCIES
The effects of the contrast, spatial frequency, and temporal frequency of a surrounding field upon the detection thresholds of gratings p 132 A86-26293

SPATIAL DISTRIBUTION
Eye movements and spatial pattern vision [AD-A160406] p 115 N86-18963

SPATIAL RESOLUTION
Eye movements and spatial pattern vision [AD-A160406] p 115 N86-18963

SPECTROSCOPY
Indirect observation by C-13 NMR spectroscopy of a novel CO2 fixation pathway in methanogens p 103 A86-23225

SPRAYED COATINGS
Refurbishing spray on aluminum enamel on proximity clothing
[AD-A159707] p 153 N86-19944
STATISTICAL ANALYSIS
A cold thyroid nodule - Statistical data and aeronautical aptitude p 112 A86-24507
Problem of biological clocks: New data on circadian changes in status of human organism p 120 N86-19848
STATISTICS
The use of accident statistics to influence simulator design p 144 A86-23744
STEAM
Water recycling system using thermopervaporation method p 150 N86-19921
STEROIDS
Anabolic steroids as a countermeasure against bone demineralization during space flight p 114 A86-25662
STRESS (PHYSIOLOGY)
Methods of regulating the adaptation and resistance processes in navy personnel p 110 A86-23495
Prediction modeling of physiological responses and human performance in the heat
[AD-A160513] p 115 N86-18965
Glucocorticoid antagonism by endotoxin: Biological effects during stress and basis for inhibition of phosphoenolpyruvate carboxykinase
[AD-A160740] p 116 N86-18969
Physical fitness as a moderator of cognitive work capacity and fatigue onset under sustained combat-like operations
[AD-A160417] p 134 N86-18982
Diver response to hot water loss at depths greater than 300 meters: Experimental observations and theoretical interpretation p 121 N86-19855
Psychological and physiological stress reactions among sports diver-students p 124 N86-19875
STRESS (PSYCHOLOGY)
Antistress effect of 1-chlormethylsilatrane p 105 A86-24309
An investigation into effects of environmental changes on locus of control
[AD-A160861] p 135 N86-18987
Psychological and physiological stress reactions among sports diver-students p 124 N86-19875
Evaluation of a multi-method group treatment approach for the management of stress
[AD-A160813] p 135 N86-19897
STRESSES
Physical fitness as a moderator of cognitive work capacity and fatigue onset under sustained combat-like operations
[AD-A160417] p 134 N86-18982
STUDENTS
An investigation into peer and supervisor differences in the observation of performance-related behaviors
[AD-A160819] p 135 N86-19898
SUBMARINES
Lung rupture as a complication in free escape --- from submarines p 122 N86-19862
Body weight changes before and after submarine patrols
[AD-A161144] p 127 N86-19893
SUBMERGING
Lung volumes and dynamic compliance during immersion and oxygen breathing p 122 N86-19860
SUGAR BEETS
The effect of ultradian and orbital cycles on plant growth p 153 N86-19940
SURGERY
Magnets and surgical procedures p 119 N86-19841
SURGICAL INSTRUMENTS
Cutting head for ultrasonic lithotripsy
[NASA-CASE-GSC-12944-1] p 126 N86-19885
SUSPENDING (HANGING)
Thymic involution in the suspended rat - Adrenal hypertrophy and glucocorticoid receptor content p 106 A86-25660
SWIMMING
Design guidelines for carbon dioxide scrubbers, revision A
[AD-A160161] p 147 N86-18989
SYNTHETIC APERTURE RADAR
Color coding of synthetic aperture radar imagery p 142 A86-23713
SYSTEMS ANALYSIS
System development and evaluation technology: State of the art of manned system measurement
[AD-A160418] p 134 N86-18983
SYSTEMS ENGINEERING
Your space suit and you - Significance of manloading in pressure suit design
[SAE PAPER 851334] p 137 A86-23523
Space Station Environmental Control/Life Support System engineering
[SAE PAPER 851375] p 140 A86-23558
System development and evaluation technology: State of the art of manned system measurement
[AD-A160418] p 134 N86-18983
Independent study of automation and robotics for the National Space Program by the Automation and Robotics Panel
[NASA-CR-176523] p 148 N86-18990
An engineering analysis of a closed cycle plant growth module p 150 N86-19919

T

TABLES (DATA)
On the use of a bubble formation model to calculate diving tables p 114 A86-25658
Plausibility functions of Iowa vocabulary test items estimated by the simple sum procedure of the conditional P.D.F. Approach
[AD-A160850] p 134 N86-18986
Repetitive decompression tables for no-stop excursions from saturation --- underwater habitats p 125 N86-19876
Alternatives to standard air tables --- diver decompression p 125 N86-19880
TARGET ACQUISITION
The effects of redundancy, target density and practice on a complex visual search task p 142 A86-23712
TASK COMPLEXITY
Why do performance and subjective workload measures dissociate? p 129 A86-23726
Acquisition of perceptual-motor skill - Adaptive and part-whole training p 129 A86-23727
Message-based screen interfaces - The effects of presentation rates and task complexity on operator performance p 143 A86-23734
Dual hemispheric processing in a letter matching task p 131 A86-24325
Automation in the cockpit - Who's in charge?
[SAE PAPER 841534] p 146 A86-26005
TASTE
Oral changes in divers working with electrical equipment under water p 124 N86-19873
TECHNOLOGICAL FORECASTING
A technology forecasting and assessment method for evaluating system utility and operator workload p 142 A86-23704
TECHNOLOGY ASSESSMENT
Enhancement of space suit glove performance
[SAE PAPER 851335] p 138 A86-23524
Thermoelectric integration membrane evaporation subsystem water recovery - Technology update
[SAE PAPER 851348] p 139 A86-23534
A technology forecasting and assessment method for evaluating system utility and operator workload p 142 A86-23704
Winging it in the 1980's - Why guidelines are needed for cockpit automation
[SAE PAPER 841634] p 147 A86-26022
TEETH
In vitro comparison of zinc phosphate and glass ionomers ability to inhibit decalcification under and adjacent to orthodontic bands
[AD-A160881] p 127 N86-19889
TELEOPERATORS
Duty-cycle analysis of a human-controlled manipulator p 137 A86-23424
Research issues in teleoperator systems p 143 A86-23735
Human operator control of a bilateral teleoperator in part-simulation of zero gravity p 143 A86-23736
TEMPERATURE EFFECTS
Diver response to hot water loss at depths greater than 300 meters: Experimental observations and theoretical interpretation p 121 N86-19855
Effect of low and high environmental temperatures on decompression sickness in the aging rat p 126 N86-19884
TEST CHAMBERS
Plan for CELSS test bed project p 149 N86-19915
Plant growth chamber M design p 149 N86-19916
Operational development of small plant growth systems p 149 N86-19917
Gas and water recycling system for IOC vivarium experiments p 150 N86-19920
THALAMUS
Neuronal response and evoked potentials in subcortical formations in visual perception. Part 1: Problem formulation and principles of solution p 119 N86-19844
THERMAL COMFORT
The effects of the insulation properties of different dry suit systems on the diver's heat balance and comfort during diving to 50 m p 121 N86-19856
THERMAL INSULATION
The effects of the insulation properties of different dry suit systems on the diver's heat balance and comfort during diving to 50 m p 121 N86-19856
THERMAL RADIATION
Enhancement of somniferous effects of thermal pulsation by simultaneous application to two reflexogenic zones p 120 N86-19849
THERMOELECTRICITY
Thermoelectric integration membrane evaporation subsystem water recovery - Technology update
[SAE PAPER 851348] p 139 A86-23534
THERMOGRAPHY
Thermovisual indicators of brain response to visual stimuli p 119 N86-19843
THERMOPHILES
Sequence of the 16S rRNA gene from the thermoacidophilic archaebacterium Sulfolobus solfataricus and its evolutionary implications p 104 A86-23998
Sequence divergence of an archaebacterial gene cloned from a mesophilic and a thermophilic methanogen p 104 A86-23999
THERMORECEPTORS
Mechanism of noradrenaline effect on the skin thermoreceptors p 103 A86-23491
Interaction of the thermoreceptor and vestibular signals in the regulation of the activity of flexor and extensor motor nuclei during cold tremors p 103 A86-23493
THERMOREGULATION
Interaction of the thermoreceptor and vestibular signals in the regulation of the activity of flexor and extensor motor nuclei during cold tremors p 103 A86-23493
THRESHOLDS (PERCEPTION)
The effect of impulse intensity and the number of impulses on hearing and cochlear pathology in the chinchilla
[AD-A161230] p 109 N86-19827
THROMBOSIS
Platelet-endothelial function in relation to environmental temperature
[AD-A160744] p 116 N86-18970
THYMUS GLAND
Thymic involution in the suspended rat - Adrenal hypertrophy and glucocorticoid receptor content p 106 A86-25660
THYROID GLAND
A cold thyroid nodule - Statistical data and aeronautical aptitude p 112 A86-24507
TIME DEPENDENCE
Retention of helicopter flight skills - Is there a 'critical period' for proficiency loss? p 129 A86-23716
Acquisition of perceptual-motor skill - Adaptive and part-whole training p 129 A86-23727
The effects of the contrast, spatial frequency, and temporal frequency of a surrounding field upon the detection thresholds of gratings p 132 A86-26293
TISSUES (BIOLOGY)
Tissue gas bubble dynamics during hypobaric exposures
[SAE PAPER 851337] p 111 A86-23525
Hematopoiesis in conventional mice after wound trauma
[AD-A160436] p 108 N86-18959
TOLERANCES (PHYSIOLOGY)
Methods of regulating the adaptation and resistance processes in navy personnel p 110 A86-23495
Factors which alter human physiological responses during exercise-heat acclimation
[AD-A160580] p 115 N86-18967
Examination of retinal pattern threshold levels and their possible effect on computer access control mechanisms
[AD-A161213] p 128 N86-19895
TOLUENE
Identification and quantification of the water-soluble components of JP-4 and a determination of their biological effects upon selected freshwater organisms
[AD-A160271] p 108 N86-18957
TOOTH DISEASES
Oral changes in divers working with electrical equipment under water p 124 N86-19873
TOXICITY
Identification and quantification of the water-soluble components of JP-4 and a determination of their biological effects upon selected freshwater organisms
[AD-A160271] p 108 N86-18957
Characteristics of effects of microbiological means of plant protection on organism p 109 N86-19829
The absorption of benzene through human skin
[AD-A161157] p 127 N86-19894

TOXICOLOGY

TOXICOLOGY
Chemical characterization and toxicologic evaluation of airborne mixtures: Tumorigenicity studies of Diesel Fuel-2, Red Smoke Dye and Violet Smoke Dyes in the SENCAR Mouse Skin Tumorigenesis Bioassay System
[AD-A159728] p 114 N86-18962

TOXINS AND ANTITOXINS
Metabolism of T-2 mycotoxin by cultured cells
[AD-A159678] p 107 N86-18951
Immunomodulation by proteins of bordetella pertussis
[AD-A160078] p 107 N86-18953
Glucocorticoid antagonism by endotoxin: Biological effects during stress and basis for inhibition of phosphoenolpyruvate carboxykinase
[AD-A160740] p 116 N86-18969
Potential for cross-reactive protection using peptides and adjuvants or carrier molecules
[AD-A160360] p 108 N86-19826

TRAINING ANALYSIS
An evaluation of aviator training ability requirements scale ratings p 128 A86-23715
Psychological and physiological stress reactions among sports diver-students p 124 N86-19875

TRAINING EVALUATION
Acquisition of perceptual-motor skill - Adaptive and part-whole training p 129 A86-23727

TRAJECTORIES
The beginnings of airborne weightlessness research
[AD-A160575] p 115 N86-18966

TRANSFER OF TRAINING
Acquisition of perceptual-motor skill - Adaptive and part-whole training p 129 A86-23727
Part-training strategies in simulated carrier landing final approach training p 131 A86-23749

TRANSPIRATION
Wheat response to CO2 enrichment: CO2 exchanges transpiration and mineral uptakes p 152 N86-19932

TREMORS
Some dominant frequencies of postural tremor are lower at 31 bar p 122 N86-19859

TRYPTOPHAN
The tryptophanyl-tRNA synthetases from eurocaryotes, procaryotes, and archebacteria have a common antigenic determinant p 105 A86-24323

TUMORS
Chemical characterization and toxicologic evaluation of airborne mixtures: Tumorigenicity studies of Diesel Fuel-2, Red Smoke Dye and Violet Smoke Dyes in the SENCAR Mouse Skin Tumorigenesis Bioassay System
[AD-A159728] p 114 N86-18962

TWITCHING
How does skeletal muscle effectively function both in the case of posture maintenance and twitch movements? p 105 A86-24308

TYROSINE
Use of tyrosine or foods to amplify catecholamine release
[AD-A160274] p 108 N86-18658

U

U.S.S.R.
USSR Space Life Sciences Digest, issue 3
[NASA-CR-3922(03)] p 106 N86-18949

ULCERS
Gastric and duodenal ulcers and the flight fitness of pilots p 113 A86-24509
Review of duodenal and gastric ulcer
[AD-A160919] p 117 N86-18977

ULTRASONIC SCANNERS
Cutting head for ultrasonic lithotripsy
[NASA-CASE-GSC-12944-1] p 126 N86-19885

ULTRAVIOLET LASERS
Covalent crosslinks between filaments in DNA induced by laser p 109 N86-19839

UNDERWATER BREATHING APPARATUS
Design guidelines for carbon dioxide scrubbers, revision A
[AD-A160181] p 147 N86-18989

UNDERWATER ENGINEERING
Oral changes in divers working with electrical equipment under water p 124 N86-19873

UNDERWATER PHYSIOLOGY
The Eleventh Annual Meeting of the European Undersea Biomedical Society (EUBS) on Diving and Hyperbaric Medicine
[FOA-C-50021-H1] p 121 N86-19854
Diver response to hot water loss at depths greater than 300 meters: Experimental observations and theoretical interpretation p 121 N86-19855
Comparison of bradycardia breath-hold on divers and nondivers: Its importance for the capacity visit of divers p 122 N86-19863
High pressure oxygen (OHP) induced increase of serum prolactin is not due to a dopamine (DA)-receptor blockade p 123 N86-19867
Psychological and physiological stress reactions among sports diver-students p 124 N86-19875
An appraisal of dive profiles in shellfish divers with reference to the risk of decompression sickness p 125 N86-19879
Ultrasonic detection of circulating bubbles in ewes exposed to simulated dives deeper than 600 msw under isobaric conditions and with unchanged gas mixtures p 125 N86-19882

UNDERWATER TESTS
Excursion limits in shallow water heliox saturation diving p 125 N86-19877

UNDERWATER VEHICLES
Research issues in teleoperator systems p 143 A86-23735

UREAS
Effects of NO3(-) and NH4(+) and urea on each other's uptake and incorporation p 152 N86-19933

URINALYSIS
Proteinuria in fighter pilots after high +Gz exposure p 113 A86-25653

V

VACCINES
Investigation of reactogenic and antigenic activity of chromatographically purified, concentrated and inactivated dry vaccine against tick borne encephalitis p 119 N86-19837

VACUUM
Can plants grow in quasi-vacuum? p 152 N86-19931

VAPOR PRESSURE
Phase change water processing for Space Station
[SAE PAPER 851346] p 139 A86-23532

VAPORS
A model of inhaled gas and vapor transport in the human lung
[AD-A160829] p 117 N86-18976

VASCULAR SYSTEM
Tissue gas bubble dynamics during hypobaric exposures
[SAE PAPER 851337] p 111 A86-23525

VEGETABLES
Operational development of small plant growth systems p 149 N86-19917

VEGETATION
Description of concept and first feasibility test results of a life support subsystem of the Botany Facility based on water reclamation p 149 N86-19912

VEGETATION GROWTH
Controlled Ecological Life Support Systems: CELSS 1985 Workshop
[NASA-TM-86215] p 148 N86-19906
The C23A system: an exmaple of quantitative control of plant growth associated with a data base p 148 N86-19911
Simulation model for plant growth in controlled environment systems p 149 N86-19914
Plan for CELSS test bed project p 149 N86-19915
Plant growth chamber M design p 149 N86-19916
Operational development of small plant growth systems p 149 N86-19917
Electrochemical control of pH in a hydroponic nutrient solution p 150 N86-19918
An engineering analysis of a closed cycle plant growth module p 150 N86-19919
An analysis of the productivity of a CELSS continuous algal culture system p 151 N86-19927
Can plants grow in quasi-vacuum? p 152 N86-19931
Wheat response to CO2 enrichment: CO2 exchanges transpiration and mineral uptakes p 152 N86-19932
Studies on maximum yield of wheat for the controlled environments of space p 152 N86-19934
Utilization of potatoes in CELSS: Productivity and growing systems p 152 N86-19935
Optimization of controlled environments for hydroponic production of leaf lettuce for human life support in CELSS p 152 N86-19936
Closed culture plant studies: Implications for CELSS p 152 N86-19937
Potato leaf explants as a spaceflight plant test system p 153 N86-19939
The effect of ultradian and orbital cycles on plant growth p 153 N86-19940
Nitrogen uptake and utilization by intact plants p 153 N86-19941
The role of plant disease in the development of controlled ecological life support systems p 153 N86-19942
Development of space technology for ecological habitats p 153 N86-19943

VERBAL COMMUNICATION
Multimodal versus unimodal information processing of words
[AD-A160517] p 134 N86-18984

VESTIBULES
Interaction of the thermoreceptor and vestibular signals in the regulation of the activity of flexor and extensor motor nuclei during cold tremors p 103 A86-23493

VIBRATION EFFECTS
Mechanical solid vibrations p 113 A86-24512
Effect of vibration on the readability of color CRT displays
[SAE PAPER 841466] p 146 A86-26009

VIBRATION MODE
Mechanical solid vibrations p 113 A86-24512

VIDEO DATA
An investigation into peer and supervisor differences in the observation of performance-related behaviors
[AD-A160819] p 135 N86-19896

VIRULENCE
Enhancement of Pseudomonas aeruginosa virulence by hyperbaric atmosphere conditions p 122 N86-19858

VISION
Visual form perception from halftone images p 120 N86-19847

VISUAL ACCOMMODATION
Perceptual-motor coordination and adaptation during locomotion - Determinants of prism adaptation in hall exposure p 131 A86-24324

VISUAL DISCRIMINATION
Luminance and chromaticity signal processing in the human visual system p 121 N86-19852

VISUAL FIELDS
Dual hemispheric processing in a letter matching task p 131 A86-24325
Effect of wearing chemical protective clothing on the heat on signal detection over the visual field p 145 A86-25657

VISUAL PERCEPTION
The detection and identification of pictorial changes between successive presentations p 129 A86-23721
Does location cueing increase the efficiency of the early stages of perceptual processing? p 129 A86-23722
Acquisition of perceptual-motor skill - Adaptive and part-whole training p 129 A86-23727
The effects of aerial perspective on altitude estimation p 130 A86-23730
Perceptual-motor coordination and adaptation during locomotion - Determinants of prism adaptation in hall exposure p 131 A86-24324
Dual hemispheric processing in a letter matching task p 131 A86-24325
Effect of vibration on the readability of color CRT displays
[SAE PAPER 841466] p 146 A86-26009
Visual distortion - The correlation model
[SAE PAPER 841595] p 114 A86-26026
The effects of the contrast, spatial frequency, and temporal frequency of a surrounding field upon the detection thresholds of gratings p 132 A86-26293
Suprathreshold contrast perception as a function of spatial frequency p 133 A86-26295
Overall similarity and the identification of separable-dimension stimuli: A choice model analysis p 133 A86-26296
Suppression of visible persistence in apparent motion p 133 A86-26298
Neuronal response and evoked potentials in subcortical formations in visual perception. Part 1: Problem formulation and principles of solution p 119 N86-19844
Visual form perception from halftone images p 120 N86-19847
Local and global factors in learning
[AD-A161128] p 136 N86-19904

VISUAL SIGNALS
Effect of wearing chemical protective clothing on the heat on signal detection over the visual field p 145 A86-25657
A purely central movement aftereffect induced by binocular viewing of dynamic visual noise p 133 A86-26297

VISUAL STIMULI
Does location cueing increase the efficiency of the early stages of perceptual processing? p 129 A86-23722
A digital image processing facility for human factors research p 143 A86-23737
Dual hemispheric processing in a letter matching task p 131 A86-24325
Sensitivity to phase distortions in central and peripheral vision p 133 A86-26294
Suprathreshold contrast perception as a function of spatial frequency p 133 A86-26295

Overall similarity and the identification of separable-dimension stimuli - A choice model analysis
p 133 A86-26296
A purely central movement aftereffect induced by binocular viewing of dynamic visual noise
p 133 A86-26297
Suppression of visible persistence in apparent motion
p 133 A86-26298
Thermovisual indicators of brain response to visual stimuli
p 119 N86-19843

VISUAL TASKS
The effects of simulator and aircraft motion on eye scan behavior
p 126 A86-23709
The effects of redundancy, target density and practice on a complex visual search task
p 142 A86-23712
Event-related potential indices of workload in a single task paradigm
p 130 A86-23733
An analysis of visual tasks in helicopter shipboard landing
[AD-A161101]
p 136 N86-19903

VOICE COMMUNICATION
The effect of asymmetric transfer on dual-task assessment of voice technology
p 141 A86-23702
U.S. Army helicopter voice technology applications
[SAE PAPER 841609]
p 147 A86-26026
Comparison of voice types for helicopter voice warning systems
[SAE PAPER 841611]
p 147 A86-26030
Advanced technology - New fixes or new problems? — for helicopter voice warning systems
p 147 A86-26031

W

WARNING SYSTEMS
Comparison of voice types for helicopter voice warning systems
[SAE PAPER 841611]
p 147 A86-26030
Advanced technology - New fixes or new problems? — for helicopter voice warning systems
p 147 A86-26031

WASTE DISPOSAL
Wet oxidation of a spacecraft model waste
[SAE PAPER 851372]
p 140 A86-23555
Supercritical waste oxidation of aqueous wastes
p 150 N86-19922
Observations on gas exchange and element recycle within a gas-closed algal-mouse system
p 150 N86-19924

WASTE TREATMENT
Wet-oxidation waste management system for CELSS
[SAE PAPER 851398]
p 141 A86-23575
Plan for CELSS test bed project
p 149 N86-19915
Carbon dioxide evolution rate as a method to monitor and control an aerobic biological waste treatment system
p 151 N86-19930

WASTE UTILIZATION
Sodium and potassium recycle in closed ecosystem-space agriculture
p 144 A86-25199
BLSS, a European approach to CELSS
p 148 N86-19908
Utilization of membranes for H2O recycle system
p 148 N86-19910

WASTE WATER
Membrane-based water- and energy-recovery systems for the manned space station
[SAE PAPER 851345]
p 139 A86-23531
Phase change water processing for Space Station
[SAE PAPER 851346]
p 139 A86-23532
Water quality monitor for recovered spacecraft water
[SAE PAPER 85-1347]
p 139 A86-23533
Utilization of membranes for H2O recycle system
[SAE PAPER 851394]
p 141 A86-23571
Supercritical waste oxidation of aqueous wastes
p 150 N86-19922

WATER
Static feed water electrolysis system for Space Station O2 and H2 generation
[SAE PAPER 851339]
p 138 A86-23526
Utilization of membranes for H2O recycle system
p 148 N86-19910
Gas and water recycling system for IOC vivarium experiments
p 150 N86-19920
Water recycling system using thermopervaporation method
p 150 N86-19921

WATER QUALITY
Water quality monitor for recovered spacecraft water
[SAE PAPER 85-1347]
p 139 A86-23533
Hygienic aspects of water supply for chamber sanitary facilities, changes of divers' bacterial mouth flora and effectiveness of ear prophylaxis in saturation dives
p 124 N86-19874

WATER RECLAMATION
Phase change water processing for Space Station
[SAE PAPER 851346]
p 139 A86-23532
Water quality monitor for recovered spacecraft water
[SAE PAPER 85-1347]
p 139 A86-23533
Thermoelectric integration membrane evaporation subsystem water recovery - Technology update
[SAE PAPER 851348]
p 139 A86-23534
Description of concept and first feasibility test results of a life support subsystem of the Botany Facility based on water reclamation
[SAE PAPER 851397]
p 104 A86-23574

WATER TREATMENT
Membrane-based water- and energy-recovery systems for the manned space station
[SAE PAPER 851345]
p 139 A86-23531
Environmental Control and Life Support Systems technology options for Space Station application
[SAE PAPER 851376]
p 140 A86-23559
Utilization of membranes for H2O recycle system
[SAE PAPER 851394]
p 141 A86-23571
Utilization of membranes for H2O recycle system
p 148 N86-19910
Description of concept and first feasibility test results of a life support subsystem of the Botany Facility based on water reclamation
p 149 N86-19912
Water recycling system using thermopervaporation method
p 150 N86-19921
Supercritical waste oxidation of aqueous wastes
p 150 N86-19922

WEAPON SYSTEMS
Cockpit automation technology
p 142 A86-23724

WEAPONS DELIVERY
Operator loading effects in a simulated tactical decision-making problem
p 130 A86-23739

WEIGHTLESSNESS
Human physiological adaptation to extended Space Flight and its implications for Space Station
[SAE PAPER 851311]
p 110 A86-23502
Anabolic steroids as a countermeasure against bone demineralization during space flight
p 114 A86-25662
Summaries of 1984-85 NASA space-gravitational biology accomplishments
[NASA-TM-88379]
p 107 N86-18950
The beginnings of airborne weightlessness research
[AD-A160575]
p 115 N86-18966

WEIGHTLESSNESS SIMULATION
Effect of rotopositioning on the growth and maturation of mandibular bone in immobilized Rhesus monkeys
p 106 A86-25659
Summaries of 1984-85 NASA space-gravitational biology accomplishments
[NASA-TM-88379]
p 107 N86-18950
First German Spacelab missions, no. 6
p 116 N86-18979

WHEAT
Wheat response to CO2 enrichment: CO2 exchanges transpiration and mineral uptakes
p 152 N86-19932
Effects of NO3(-) and NH4(+) and urea on each other's uptake and incorporation
p 152 N86-19933
Studies on maximum yield of wheat for the controlled environments of space
p 152 N86-19934

WORK CAPACITY
Physical fitness as a moderator of cognitive work capacity and fatigue onset under sustained combat-like operations
[AD-A160417]
p 134 N86-19982

WORKLOADS (PSYCHOPHYSIOLOGY)
An empirical demonstration of multiple resources
p 141 A86-23703
A technology forecasting and assessment method for evaluating system utility and operator workload
p 142 A86-23704
Effect of workload on the auditory evoked brainstem response
p 128 A86-23705
Why do performance and subjective workload measures dissociate?
p 129 A86-23726
Personality differences as a moderator of mental workload behavior - Mental workload performance and strain reactions as a function of cognitive complexity
p 130 A86-23732
Event-related potential indices of workload in a single task paradigm
p 130 A86-23733
Inflight evaluation of four measures of pilot workload
p 130 A86-23745
The effect of intervening task performance on subjective workload ratings
p 144 A86-23746
The use of reflective SWAT for workload assessment — Subjective Workload Assessment Technique
p 144 A86-23747
Aerospace Behavioral Engineering Technology Conference, 3rd, Long Beach, CA, October 15-18, 1984, Proceedings
[SAE P-151]
p 145 A86-26001
AI applications to military pilot decision aiding - A perspective on transition
[SAE PAPER 841533]
p 146 A86-26004
Subjective workload and individual differences in information processing abilities
[SAE PAPER 841491]
p 132 A86-26011
A review of pilot workload measurement techniques used on the A-10 single seat night attack test program
[SAE PAPER 841492]
p 146 A86-26016
Effects of digital altimetry on pilot workload
[SAE PAPER 841489]
p 132 A86-26019
U.S. Army helicopter voice technology applications
[SAE PAPER 841609]
p 147 A86-26026

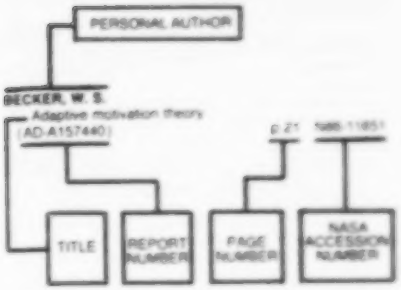
X

XYLENE
Identification and quantification of the water-soluble components of JP-4 and a determination of their biological effects upon selected freshwater organisms
[AD-A160271]
p 108 N86-18957

Y

YEAST
The development of an unconventional food regeneration process. Quantifying the nutritional components of a model methylotrophic yeast
p 151 N86-19929

Typical Personal Author Index Listing



Listings in this index are arranged alphabetically by personal author. The title of the document provides the user with a brief description of the subject matter. The report number helps to indicate the type of document listed (e.g., NASA report, translation, NASA contractor report). The page and accession numbers are located beneath and to the right of the title. Under any one author's name the accession numbers are arranged in sequence with the AIAA accession numbers appearing first.

A

ABELES, F. J.
The roles of astronauts and machines for future space operations
[SAE PAPER 851332] p 137 A86-23521
ACUNAS, B.
A survey of aseptic bone negroes in Turkish sponge divers, interim report p 124 N86-19671
ADOLFSON, J.
Lung rupture as a complication in free escape p 122 N86-19662
AGENANT, D. M. A.
Early detection and treatment of avascular bone necrosis in divers p 124 N86-19672
ALAVI, A.
Determination of the lumped constant and the kinetic constants for deoxyglucose and fluorodeoxyglucose in man
[DE86-000317] p 116 N86-18679
ALEKSEEVA, I. I.
Mechanism of circulatory disorders in animals subjected to high-dose irradiation p 106 A86-24423
ALLEGRINI, N. D.
Ischemic cardiopathology in pilots - The risk, the methods of detection and prevention p 113 A86-24511
ALLURSI, E. A.
Human Factors Society, Annual Meeting, 28th, San Antonio, TX, October 22-26, 1984, Proceedings. Volumes 1 & 2 p 141 A86-23701
ALLURSI, M. J.
Human Factors Society, Annual Meeting, 28th, San Antonio, TX, October 22-26, 1984, Proceedings. Volumes 1 & 2 p 141 A86-23701
ALTER, B. J.
Sequence polymorphism of HLA-DR beta 1 alleles relating to T cell-recognized determinants
[AD-A160237] p 107 N85-16856
ANDERSEN, H. T.
Proteinuria in fighter pilots after high +Gz exposure p 113 A86-25650
ANDERSON, L. A.
Does location cueing increase the efficiency of the early stages of perceptual processing? p 129 A86-23722
ANDRE, M.
The CZSA system, an example of quantitative control of plant growth associated with a data base
[SAE PAPER 851395] p 134 A86-23572
The CZSA system, an example of quantitative control of plant growth associated with a data base p 140 N86-18911
Can plants grow in quasi-vacuum? p 132 N86-19651
Whole response to CO2 enrichment, CO2 exchange, transpiration and mineral uptakes p 132 N86-19652
ANGIULLO, E. D.
Cutting head for ultrasonic lithotripsy
[NASA-CASE-GSC-12944-1] p 126 N86-19661
ANSWAT, S. A.
An investigation into effects of environmental changes on locus of control
[AD-A160861] p 135 N86-19387
ARABADZE, G. G.
Element analysis of subcellular formations of major blood vessels by laser mass spectrometry p 119 N86-18633
ARBAK, C. J.
Eye-controlled switching for crew station design p 142 A86-23771
The use of reflective SIGHT for workload assessment p 144 A86-23781
AREND, L. E.
Eye movements and spatial pattern vision
[AD-A160406] p 115 N86-19363
ARETZ, A. J.
Cockpit automation technology p 142 A86-23724
ARNETT, C.
Determination of the lumped constant and the kinetic constants for deoxyglucose and fluorodeoxyglucose in man
[DE86-000317] p 116 N86-18679
ARNETT, G.
An analysis of the productivity of a CELSS continuous algal culture system p 131 N86-19657
ARNO, R.
Space Station life sciences guidelines for nonhuman experiment accommodation
[SAE PAPER 851370] p 124 A86-23553
ARNTZEN, A. J.
Alternatives to standard air tables p 125 N86-19660
ASHIDA, K.
Water recycling system using thermoregenerative method p 130 N86-19647
ASK, A.
Increased innings of the heart in humoral hypothermic atmosphere p 123 N86-19663
ATHANASSENAS, G.
High-pressure oxygen (OHP) induced increase of serum prolactin is not due to a dopamine (DA)-receptor blockade p 123 N86-19662
ATKINS, H.
Determination of the lumped constant and the kinetic constants for deoxyglucose and fluorodeoxyglucose in man
[DE86-000317] p 116 N86-18679
AVERNER, M. M.
Observations on gas exchange and element recycle within a gas-closed algal-mouse system p 132 N86-19654

B

BADURA, C.
A survey of aseptic bone negroes in Turkish sponge divers, interim report p 124 N86-19671
BACH, F. H.
Molecular approaches to selective immunosuppression
[AD-A160141] p 107 N86-19654
BADA, J. L.
Radiocline stereoassimilens on the earth p 114 A86-24144
BAER, R.
Lung volumes and dynamic compliance during immersion and oxygen breathing p 122 N86-19661

BISHOP, R.
Magnetic-field hazards bibliography, 2nd edition
[AD-A160154] p 107 N86-18955
BLONS, J. H.
Recurrent serious otitis in a reconnaissance pilot - The consequences for his career p 112 A86-24506
BLOOM, R. F.
System development and evaluation technology: State of the art of manned system measurement
[AD-A160418] p 134 N86-18983
BOBYREV, V. N.
Postradiation disorders of peripheral-nerve regeneration and the role of free-radical oxidation products in the appearance of these disorders p 105 A86-24422
BOETTCHER, K. L.
On the analysis and design of human information processing organizations
[AD-A161015] p 136 N86-19902
BOFF, K. R.
Eye-controlled switching for crew station design
p 142 A86-23711
BOLSHSKOVA, T. D.
Effects of 24 h sleep deprivation on biogenic amine metabolism p 120 N86-19846

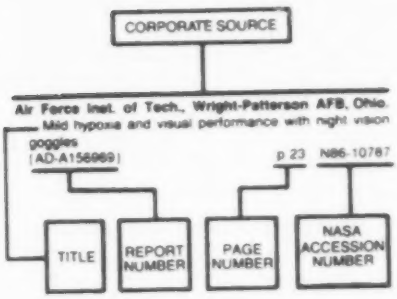
Typical Corporate Source Index Listing



Listings in this index are arranged alphabetically by corporate source. The title of the document is used to provide a brief description of the subject matter. The page number and the accession number are included in each entry to assist the user in locating the abstract in the abstract section. If applicable, a report number is also included as an aid in identifying the document.

A

Admiralty Research Establishment, Gosport (England).
Some dominant frequencies of postural tremor are lower at 31 bar p 122 N86-19859

Aerospace Medical Research Labs., Wright-Patterson AFB, Ohio.
Effect of rotopositioning on the growth and maturation of mandibular bone in immobilized Rhesus monkeys p 106 A86-25659

Air Force Inst. of Tech., Wright-Patterson AFB, Ohio.
Glucocorticoid antagonism by endotoxin: Biological effects during stress and basis for inhibition of phosphoenolpyruvate carboxykinase [AD-A160740] p 116 N86-18969

An experimental trial to test the efficacy of temazepam to induce sleep and improve subsequent performance during partial sleep deprivation and circadian rhythm desynchronosis [AD-A160795] p 116 N86-18972

A study of the flight environment component of aircrew fatigue in student navigators [AD-A160796] p 117 N86-18973

Some nonoccupational aspects of sensorineural loss of hearing acuity: A proposed design for study [AD-A160799] p 117 N86-18974

A proposal for a longitudinal study to assess the hazards of radiation in space flight [AD-A160801] p 117 N86-18975

A model of inhaled gas and vapor transport in the human lung [AD-A160829] p 117 N86-18976

An investigation into effects of environmental changes on locus of control [AD-A160861] p 135 N86-18987

A study of patient's self-image during orthodontic treatment [AD-A160751] p 126 N86-19886

In vitro comparison of zinc phosphate and glass ionomers ability to inhibit decalcification under and adjacent to orthodontic bands [AD-A160881] p 127 N86-19889

Evaluation of a multi-method group treatment approach for the management of stress [AD-A160813] p 135 N86-19897

An investigation into peer and supervisor differences in the observation of performance-related behaviors [AD-A160819] p 135 N86-19898

The clinical prediction of dangerousness [AD-A160820] p 135 N86-19899

Mesolimbic and nigrostriatal dopaminergic systems: Behavioral neuropharmacology [AD-A160821] p 136 N86-19900

The influence of quality circles on attitudinal outcomes among civil engineering personnel [AD-A161152] p 136 N86-19905

Air Force Systems Command, Wright-Patterson AFB, Ohio.
The absorption of benzene through human skin [AD-A161157] p 127 N86-19894

Arizona State Univ., Tempe.
Subjective workload and individual differences in information processing abilities [SAE PAPER 841491] p 132 A86-26011

Armed Forces Radiobiology Research Inst., Bethesda, Md.
Hematopoiesis in conventional mice after wound trauma [AD-A160436] p 108 N86-18959

Army Aeromedical Research Lab., Fort Rucker, Ala.
Dynamics of head protection (impact protective comparison of the SPH-4 flight helmet to a commercial motorcycle helmet) [AD-A161164] p 154 N86-19945

Helicopter-referenced single control, center-position force exertion capabilities of males and females [AD-A161234] p 154 N86-19946

Army Environmental Hygiene Agency, Aberdeen Proving Ground, Md.
Magnetic-field hazards bibliography, 2nd edition [AD-A160154] p 107 N86-18955

Army Medical Research Inst. of Infectious Diseases, Fort Detrick, Md.
Metabolism of T-2 mycotoxin by cultured cells [AD-A159678] p 107 N86-18951

Army Research Inst. for the Behavioral and Social Sciences, Alexandria, Va.
Physical fitness as a moderator of cognitive work capacity and fatigue onset under sustained combat-like operations [AD-A160417] p 134 N86-18962

Army Research Inst. of Environmental Medicine, Natick, Mass.
Prediction modeling of physiological responses and human performance in the heat [AD-A160513] p 115 N86-18965

Factors which alter human physiological responses during exercise-heat acclimation [AD-A160580] p 115 N86-18967

Platelet-endothelial function in relation to environmental temperature [AD-A160744] p 116 N86-18970

Astro Resources International Corp., League City, Tex.
Water quality monitor for recovered spacecraft water [SAE PAPER 85-1347] p 139 A86-23533

B

Battelle Columbus Labs., Ohio.
An engineering analysis of a closed cycle plant growth module p 150 N86-19919

Bergen Univ. (Norway).
A study of human lymphocyte morphology from the peripheral circulation after hyperbaric exposure p 121 N86-19857

Increased inotropism of the heart in normoxic hyperbaric atmosphere p 123 N86-19869

Psychological and physiological stress reactions among sports diver-students p 124 N86-19875

Boeing Aerospace Co., Seattle, Wash.
Development status of regenerable solid amine CO_2 control systems [SAE PAPER 85-1340] p 138 A86-23527

Brookhaven National Lab., Upton, N. Y.
Determination of the lumped constant and the kinetic constants for deoxyglucose and fluorodeoxyglucose in man [DE86-000317] p 118 N86-18978

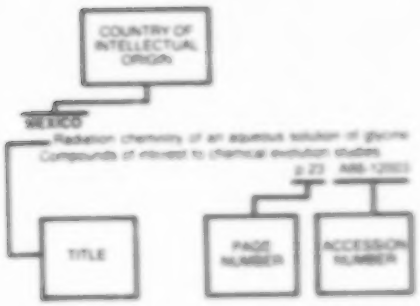
Utilization of membranes for H2O recycle system
p 148 N86-19910

Typical Foreign Technology Index Listing



Listings in this index are arranged alphabetically by country of intellectual origin. The title of the document is used to provide a brief description of the subject matter. The page number and the accession number are included in each entry to assist the user in locating the citation in the abstract section.

A

AUSTRALIA
Dual hemispheric processing in a letter matching task.
p 131 A86-24325
The effects of the contrast, spatial frequency, and temporal frequency of a surrounding field upon the detection thresholds of gratings. p 132 A86-26293
Suppression of visible persistence in apparent motion.
p 133 A86-26294

C

CANADA
Canadian medical experiments on Shuttle Flight 41-G.
p 110 A86-10998
Investigation of the method to determine carboxyhaemoglobin in blood
(AD-A161061) p 127 N86-10692

CZECHOSLOVAKIA
Some problems in flight mechanics with respect to flight safety p 131 A86-23772

D

DENMARK
Excursion limits in shallow water helox saturation diving p 125 N86-10677

F

FRANCE
The CESA system, an example of quantitative control of plant growth associated with a data base
(SAE PAPER 851390) p 104 A86-23573
Clinical and psychological surveillance of student pilots at the beginning of training p 111 A86-24007
Clinical problems encountered by a squadron flight surgeon p 112 A86-24032
Clinical problems posed by the medical surveillance of pilots exposed to high levels of acceleration
p 112 A86-24033
Ophthalmological problems linked to helicopter flight
p 112 A86-24034
A new test of the color vision of professionals
p 112 A86-24035
Recurrent serious otitis in a noncommercial pilot. The consequences for his career p 112 A86-24036
A cold thyroid nodule - Statistical data and aeronautical aptitude p 112 A86-24037
Some psychological aspects of an ischemia
p 131 A86-24038
Gastric and duodenal ulcers and the flight fitness of pilots p 112 A86-24039
Mitral valve prolapse in a young person - An examination of the risk of arrhythmia. The impact on the flight fitness of a pilot p 113 A86-24010
Ischemic cardiopathology in pilots - The risk, the methods of detection and prevention
p 113 A86-24011
Mechanical solid vibrations p 113 A86-24012
Comparison of bradycardia by ... chest on divers and nondivers. Its importance for the capacity test of divers
p 122 N86-10663
The influence of individual factors in man on bubble formation in air diving decompression
p 125 N86-10681
Ultrasonic detection of circulating bubbles in (rats) exposed to simulated dives deeper than 600 m in under isobaric conditions and with unchanged gas mixtures
p 125 N86-10682
The CESA system, an example of quantitative control of plant growth associated with a data base
p 148 N86-10611
Can plants grow in quasi-vacuum?
p 152 N86-10697
Wheat response to CO2 enrichment. CO2 exchanges, transpiration and mineral uptakes. p 152 N86-10732

G

GERMANY, FEDERAL REPUBLIC OF
SLOS, a European approach to CELSS
(SAE PAPER 851391) p 147 A86-23569
Description of concept and first feasibility test results of a life support subsystem of the Botany Facility based on water reclamation
(SAE PAPER 851397) p 104 A86-23574
The life sciences on board of Spacelab D1
p 109 A86-24010
Sensitivity to phase disturbions in central and peripheral vision p 132 A86-26294
First German Spacelab missions, no. 9
p 116 N86-10573
High pressure oxygen (OHP) induced increase of serum prolactin is not due to a dopamine (DA)-receptor blockade p 123 N86-10667
Hygienic aspects of water supply for chamber sanitary facilities, changes of divers' bacterial mouth flora and effectiveness of oral prophylaxis in saturation divers
p 124 N86-10674
Wet chamber dives to test algorithms for electronic decompressionmeters p 125 N86-10676
SLOS, a European approach to CELSS
p 148 N86-10608
Description of concept and first feasibility test results of a life support subsystem of the Botany Facility based on water reclamation p 148 N86-10612

I

IRAN
Orthostatic tolerance of normal indians and those with suspected abnormal cardiovascular reflex status
p 114 A86-23661

J

JAPAN
CELSS experiment model and design concept of gas recycle system
(SAE PAPER 851391) p 147 A86-23571
Utilization of membranes for H2O recycle system
(SAE PAPER 851394) p 147 A86-23572
Wet-oxidation waste management system for CELSS
(SAE PAPER 851398) p 147 A86-23575
Sodium and potassium require in closed ecosystem space agriculture p 148 A86-23746
On the plant's behavior in detecting a system parameter change p 148 A86-23753
An appraisal of dive profiles or shallow divers with reference to the risk of decompression sickness
p 121 N86-10670
Effect of low and high environmental temperatures on decompression sickness in the aging rat
p 126 N86-10684
CELSS experiment model and design concept of gas recycle system p 148 N86-10605
Utilization of membranes for H2O recycle system
p 148 N86-10610
Gas and water recycling system for ESI aquarium experiments p 152 N86-10620
Waste recycling system using thermogravimetric method p 152 N86-10621

N

NETHERLANDS
Effects of intermittent exposure to hyperoxia in operational diving p 123 N86-10679
Early detection and treatment of neurological sickness in divers p 124 N86-10672

NORWAY
Problems in higher posts after high ... Oz exposure.
p 110 A86-23623
A study of human lymphocyte metabolism from the peripheral circulation after hyperbaric exposure
p 121 N86-10677
Entrainment of Pseudomonas aeruginosa in saliva by hyperbaric atmospheric conditions p 122 N86-10658
Effects of dry and humidified breathing gas (air) at 37 C on pulmonary function in hyperbaric conditions
p 122 N86-10661
Increased outputs of the heart in normoxic hyperbaric atmosphere p 123 N86-10665
Psychological and physiological stress reactions among sports diver students p 124 N86-10673
Alternatives to standard air tables
p 125 N86-10680

P

POLAND
The absorption of benzene through human skin
(AD-A161127) p 127 N86-10694

S

SPAIN
Explaining the unexplained: divers and flying accidents p 123 N86-10664
Lone surface navigation in women divers
p 126 N86-10683

SWEDEN
A multivariate study of the relationship between hydrostatic loads and the physiological impairment of ataxic worlds p 104 A86-23567
The Eleventh Annual Meeting of the European Undersea Biomedical Society (EUBS) on Diving and Hyperbaric Medicine
(PB86-218031/XAB) p 121 N86-10671
The effects of the vasodilator propentofylline (HWA 285) hydrochloride on the blood circulation and oxygen supply during hypoxia p 121 N86-10675
Lung volumes and dynamic compliance during normoxic and oxygen breathing p 121 N86-10681

Lung rupture as a complication in free escape
p 122 N86-19862
An attempt to counteract nitrogen narcosis by naloxone administration p 123 N86-19865
Elevations of plasma endotoxin levels and lysosomal enzyme activities in divers during a simulated chamber dive to 300 msw p 123 N86-19866
Oral changes in divers working with electrical equipment under water p 124 N86-19873

T

TURKEY
A survey of aseptic bone negrosis in Turkish sponge divers, interim report p 124 N86-19871

U

U.S.S.R.
Morphological changes in some internal organs of guinea pigs due to the effect of a constant electromagnetic field p 103 A86-23490
Mechanism of noradrenaline effect on the skin thermoreceptors p 103 A86-23491
Effect of hyperoxic gas mixtures on oxygen mass transfer through the hematoparenchymatous barrier
p 103 A86-23492
Interaction of the thermoreceptor and vestibular signals in the regulation of the activity of flexor and extensor motor nuclei during cold tremors p 103 A86-23493
Medical control of the aircrew during a retraining process p 110 A86-23494
Methods of regulating the adaptation and resistance processes in navy personnel p 110 A86-23495
Mathematical models of the effect of gravitation on lung functions p 111 A86-24135
Metabolic aspects of the problem of stress in space flight p 105 A86-24136
Ionizing radiation and blood vessels
p 105 A86-24144
Neurons as detectors of errors in the subcortical structures of the human brain p 111 A86-24307
How does skeletal muscle effectively function both in the case of posture maintenance and twitch movements? p 105 A86-24308
Antistress effect of 1-chlormethylsilitrane
p 105 A86-24309
The tryptophanyl-tRNA synthetases from eurocaryotes, procaryotes, and archebacteria have a common antigenic determinant p 105 A86-24323
Hypnogenic activity of a cyclic structural analog of delta-sleep-inducing peptide p 105 A86-24368
Postradiation disorders of peripheral-nerve regeneration and the role of free-radical oxidation products in the appearance of these disorders p 105 A86-24422
Mechanism of circulatory disorders in animals subjected to high-dose irradiation p 106 A86-24423
Evaluation of radiation-induced damage in the erythrocyte membranes of rats and dogs according to changes in the erythrocyte sedimentation behavior
p 106 A86-24424
Effect of nonionizing microwave radiation on the autoimmune reactions and antigenic structure of serum proteins p 106 A86-24425

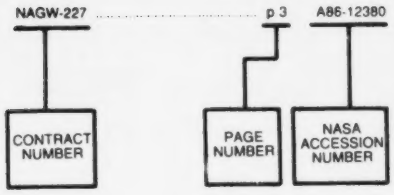
Typical Contract Number Index Listing



Listings in this index are arranged alpha-numerically by contract number. Under each contract number, the accession numbers denoting documents that have been produced as a result of research done under that contract are arranged in ascending order with the AIAA accession numbers appearing first. The accession number denotes the number by which the citation is identified in the abstract section. Preceding the accession number is the page number on which the citation may be found.

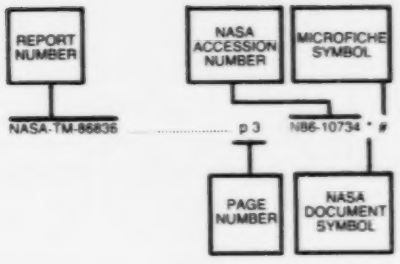
Typical Report Number Index Listing



Listings in this index are arranged alpha-numerically by report number. The page number indicates the page on which the citation is located. The accession number denotes the number by which the citation is identified. An asterisk (*) indicates that the item is a NASA report. A pound sign (#) indicates that the item is available on microfiche.

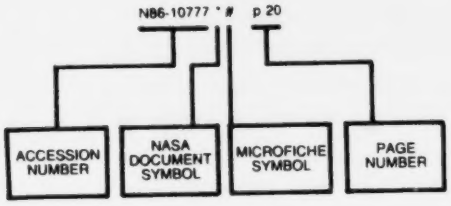
Typical Accession Number Index Listing



Listings in this index are arranged alpha-numerically by accession number. The page number listed to the right indicates the page on which the citation is located. An asterisk (*) indicates that the item is a NASA report. A pound sign (#) indicates that the item is available on microfiche.

AVAILABILITY OF CITED PUBLICATIONS

IAA ENTRIES (A86-10000 Series)

Publications announced in *IAA* are available from the AIAA Technical Information Service as follows: Paper copies of accessions are available at $10.00 per document (up to 50 pages), additional pages $0.25 each. Microfiche[1] of documents announced in *IAA* are available at the rate of $4.00 per microfiche on demand. Standing order microfiche are available at the rate of $1.45 per microfiche for *IAA* source documents and $1.75 per microfiche for AIAA meeting papers.

Minimum air-mail postage to foreign countries is $2.50. All foreign orders are shipped on payment of pro-forma invoices.

All inquiries and requests should be addressed to: Technical Information Service, American Institute of Aeronautics and Astronautics, 555 West 57th Street, New York, NY 10019. Please refer to the accession number when requesting publications.

STAR ENTRIES (N86-10000 Series)

One or more sources from which a document announced in *STAR* is available to the public is ordinarily given on the last line of the citation. The most commonly indicated sources and their acronyms or abbreviations are listed below. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

Avail: NTIS. Sold by the National Technical Information Service. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code preceded by the letters HC or MF in the *STAR* citation. Current values for the price codes are given in the tables on NTIS PRICE SCHEDULES.

Documents on microfiche are designated by a pound sign (#) following the accession number. The pound sign is used without regard to the source or quality of the microfiche.

Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) is available at greatly reduced unit prices. For this service and for information concerning subscription to NASA printed reports, consult the NTIS Subscription Section, Springfield, Va. 22161.

NOTE ON ORDERING DOCUMENTS: When ordering NASA publications (those followed by the * symbol), use the N accession number. NASA patent applications (only the specifications are offered) should be ordered by the US-Patent-Appl-SN number. Non-NASA publications (no asterisk) should be ordered by the AD, PB, or other *report* number shown on the last line of the citation, not by the N accession number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy. The current price and order number are given following the availability line. (NTIS will fill microfiche requests, as indicated above, for those documents identified by a # symbol.)

Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Administration, Public Document Room (Room 126), 600 Independence Ave., S.W., Washington, D.C. 20546, or public document rooms located at each of the NASA research centers, the NASA Space Technology Laboratories, and the NASA Pasadena Office at the Jet Propulsion Laboratory.

(1) A microfiche is a transparent sheet of film, 105 by 148 mm in size containing as many as 60 to 98 pages of information reduced to micro images (not to exceed 26.1 reduction).

Avail: DOE Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts.* Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center - Its Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center.

Avail: Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation.

Avail: USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed in this introduction. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.

Avail: HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, California. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.

Avail: BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, inquiry should be addressed to the BLL.)

Avail: Fachinformationszentrum, Karlsruhe. Sold by the Fachinformationszentrum Energie, Physik, Mathematik GMBH, Eggenstein Leopoldshafen, Federal Republic of Germany, at the price shown in deutschmarks (DM).

Avail: Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.

Avail: U.S. Patent and Trademark Office. Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of $1.50 each, postage free.

Avail: ESDU. Pricing information on specific data, computer programs, and details on ESDU topic categories can be obtained from ESDU International Ltd. Requesters in North America should use the Virginia address while all other requesters should use the London address.

Other availabilities: If the publication is available from a source other than the above, the publisher and his address will be displayed entirely on the availability line or in combination with the corporate author line.

PUBLIC COLLECTIONS OF NASA DOCUMENTS

DOMESTIC: NASA and NASA-sponsored documents and a large number of aerospace publications are available to the public for reference purposes at the library maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

EUROPEAN: An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England for public access. The British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy or microfiche of NASA and NASA-sponsored documents, those identified by both the symbols # and *. from ESA — Information Retrieval Service European Space Agency, 8-10 rue Mario-Nikis, 75738 CEDEX 15, France.

FEDERAL DEPOSITORY LIBRARY PROGRAM

In order to provide the general public with greater access to U.S. Government publications, Congress established the Federal Depository Library Program under the Government Printing Office (GPO), with 50 regional depositories responsible for permanent retention of material, inter-library loan, and reference services. At least one copy of nearly every NASA and NASA-sponsored publication, either in printed or microfiche format, is received and retained by the 50 regional depositories. A list of the regional GPO libraries, arranged alphabetically by state, appears on the inside back cover. These libraries are *not* sales outlets. A local library can contact a Regional Depository to help locate specific reports, or direct contact may be made by an individual.

STANDING ORDER SUBSCRIPTIONS

NASA SP-7011 and its supplements are available from the National Technical Information Service (NTIS) on standing order subscription as PB 86-912300 at the price of $8.00 domestic and $16.00 foreign, and at $14.00 domestic and $28.00 foreign for the annual index. Standing order subscriptions do not terminate at the end of a year, as do regular subscriptions, but continue indefinitely unless specifically terminated by the subscriber. Questions on the availability of the predecessor publications, *Aerospace Medicine and Biology* (Volumes I-XI), should be directed to NTIS.

NEW PERSPECTIVES ON BACTERIAL FERREDOXIN EVOLUTION

D. G. GEORGE, L. T. HUNT, L.-S. L. YEH, and W. C. BARKER (National Biomedical Research Foundation, Washington, DC)

Journal of Molecular Evolution (ISSN 0022-2844), vol. 22, no. 1, 1985, p. 20-31. refs

(Contract NASW-3954; NIH-GM-08710; NIH-RR-01821)

Ferredoxins are low-molecular-weight, nonheme, iron proteins which function as electron carriers in a wide variety of electron transport chains. Howard et al. (1983) have suggested that the amino end of Azotobacter vinelandii ferredoxin shows a greater similarity to the carboxyl end of ferredoxin from Chromatium vinosum and that their half-chain sequences are homologous when the half-chains of either species are considered in inverse order. Examination of this proposition has made it necessary to reevaluate previous conclusions concerning the evolution of bacterial ferredoxin. Attention is given to the properties of the bacterial ferredoxin sequences, and the evolution of the bacterial ferredoxins.

AEROSPACE MEDICINE AND BIOLOGY

A CONTINUING BIBLIOGRAPHY WITH INDEXES

(Supplement 286)

A selection of annotated references to unclassified reports and journal articles that were introduced into the NASA scientific and technical information system and announced in June 1986 in

- *Scientific and Technical Aerospace Reports (STAR)*
- *International Aerospace Abstracts (IAA).*

NASA Scientific and Technical Information Branch 1986
National Aeronautics and Space Administration
Washington, DC

This supplement is available from the National Technical Information Service (NTIS), Springfield, Virginia 22161, price code A05.

INTRODUCTION

This Supplement to *Aerospace Medicine and Biology* lists 213 reports, articles and other documents announced during June 1986 in *Scientific and Technical Aerospace Reports (STAR)* or in *International Aerospace Abstracts (IAA)*. The first issue of the bibliography was published in July 1964.

In its subject coverage, *Aerospace Medicine and Biology* concentrates on the biological, physiological, psychological, and environmental effects to which man is subjected during and following simulated or actual flight in the Earth's atmosphere or in interplanetary space. References describing similar effects of biological organisms of lower order are also included. Such related topics as sanitary problems, pharmacology, toxicology, safety and survival, life support systems, exobiology, and personnel factors receive appropriate attention. In general, emphasis is placed on applied research, but references to fundamental studies and theoretical principles related to experimental development also qualify for inclusion.

Each entry in the bibliography consists of a bibliographic citation accompanied in most cases by an abstract. The listing of the entries is arranged by *STAR* categories 51 through 55, the Life Sciences division. The citations, and abstracts when available, are reproduced exactly as they appeared originally in *IAA* or *STAR*, including the original accession numbers from the respective announcement journals. The *IAA* items will precede the *STAR* items within each category.

Seven indexes -- subject, personal author, corporate source, foreign technology, contract, report number, and accession number -- are included.

An annual index will be prepared at the end of the calendar year covering all documents listed in the 1986 Supplements.

STROMATOLITES FROM THE 3,300-3,500-MYR SWAZILAND SUPERGROUP, BARBERTON MOUNTAIN LAND, SOUTH AFRICA
G. R. BYERLY, D. R. LOWER, and M. M. WALSH (Louisiana State University, Baton Rouge) Nature (ISSN 0028-0836), vol. 319, Feb. 6, 1986, p. 489-491. Research supported by the ARCO Foundation, Anglo-American Corp. and University of Cape Town. refs
(Contract NSF EAR-79-19907; NSF EAR-79-19908; NSF EAR-82-06015)

A morphologically variable assemblage of stromatolites has been discovered in thin chert layers within the Fig Tree Group of the Swaziland Supergroup, South Africa. They are commonly low-relief, nearly stratiform, laterally linked domes. Rarer forms include pseudocolumns and crinkly stratiform stromatolites. The stromatolites grew on a substrate of altered komatiitic lava and sediments deposited on the lava surface, and in most places are covered by later komatiitic flows. Abundant fine-grained tourmaline included within the stromatolite laminae suggests that stromatolites formed in an environment dominated by boron-rich hot-spring emissions and evaporitic brines. POLYRIBONUCLEIC ACIDS AS ENZYMES
F. H. WESTHEIMER (California, University, La Jolla) Nature (ISSN 0028-0836), vol. 319, Feb. 13, 1986, p. 534, 535. refs

The implications of the discovery by Cech and Altman (1986) that polyribonucleic acids can function as enzymes are considered. Emphasis is given to a description of the enzymic properties of the cascade of spontaneous selfsplicing reactions in the RNA of Tetrahymena thermopila, in particular the catalytic properties of the intervening linear sequence (1-IVS). The possibility that ribozymes may have preceded protein enzymes in the prebiotic environment is briefly discussed. I.H.

A86-27473
EFFECT OF COSMOHELIOGEOPHYSICAL FACTORS ON BACTERIAL AGGLUTIONATION IN VITRO [VLIIANIE KOSMOGELIOGEOFIZICHESKIKH FAKTOROV NA KHOD AGGLIUTINATSII BAKTERII IN VITRO]
A. M. OPALINSKAIA and L. P. AGULOVA (Tomskii Gosudarstvennyi Universitet, Tomsk, USSR) Biofizika (ISSN 0006-3029), vol. 31, Jan.-Feb. 1986, p. 94-98. In Russian. refs

The effect of solar cosmic ray characteristics on biological activity was studied, using antiserum-produced agglutination of Salmonella typhosa as an elementary model. The six year long study has encompassed periods of both minimal (1973-1974) and maximal (1977-1980) solar activity. Among the various indices of solar radiation examined, the index of neutron component intensity exhibited the most distinct and reliable correlation with the agglutination rate. Agglutination rate was also seen to vary with season, solar rotation, polarity of the interplanetary magnetic field, and the course of geomagnetic storms. The onset of a geomagnetic storm coincided with a slowdown of the agglutination reaction, while the storm's end coincided with its speedup. Shielding of the reaction vessel with steel and Permalloy has almost abolished these effects, indicating the role of electromagnetism in bioactivity. I.S.

A86-27475
EFFECT OF LOW-POWER MILLIMETER-RANGE MONOCHROMATIC ELECTROMAGNETIC RADIATION ON BIOLOGICAL PROCESSES [VLIIANIE MONOKHROMATICHESKIKH ELEKTROMAGNITNYKH IZLUCHENII MILLIMETROVOGO DIAPAZONA MALOI MOSHCHNOSTI NA BIOLOGICHESKIE PROTSESSY]
M. B. GOLANT Biofizika (ISSN 0006-3029), vol. 31, Jan.-Feb. 1986, p. 139-147. In Russian. refs

A systematic analysis is presented of Soviet and foreign studies dealing with the effects of low-power millimeter waves on living organisms. The basic characteristics of the biologically-active microwaves are discussed, including flux density, radiation frequency, duration of exposure, and the maximally sensitive body areas. Special consideration is given to biological and physical factors responsible for the microwave effects, and to biophysical aspects of these effects. The mechanism for the effects of nonionizing monochromatic microwaves is explained by the possibility that the microwave radiation imitates, to a certain extent, the signals of correlation and control used by physiological systems, and thus influences the dynamics of the body's functional changes. I.S.

A86-27878#
MEDICAL TECHNOLOGY IN SPACE - FORESEEABLE ECONOMIC ISSUES
J. S. HIXSON (Medicasters, Inc., Bethesda, MD) IN: Space, our next frontier; Proceedings of the Conference, Dallas, TX, June 7, 8, 1984 . Dallas, TX, National Center for Policy Analysis, 1985, p. 52-61. refs

An evaluation is made of economic factors affecting the development and operation of hospital facilities in space. Such facilities are currently envisioned as serving two distinct primary purposes: the first of these complements the life support systems which will accompany space personnel in exploratory or commercial ventures in space, while the second actively exploits the microgravity environment for the development of novel medical technologies that will be economically useful in either orbital or terrestrial settings. Attention is presently given to the two distinct value and financing systems that these purposes require. O.C.

SKELETAL MUSCLE LACTATE RELEASE AND GLYCOLYTIC INTERMEDIATES DURING HYPERCAPNIA
T. E. GRAHAM, J. K. BARCLAY, and B. A. WILSON (Guelph, University, Canada) Journal of Applied Physiology (ISSN 0161-7567), vol. 60, Feb. 1986, p. 568-575. refs
(Contract NSERC-A-6466)

The effect of respiratory acidosis on the rates of glycolysis and the lactate (La) release in the autoperfused gastrocnemius-plantaris muscle group was studied in anesthetized dogs ventilated either with air or with oxygen-nitrogen mixture

enriched with 4 percent of CO2. Blood flow, VO2, VCO2, and tension development were unaffected by respiratory acidosis. The glycogen catabolism was also not affected, but the release of La was lowered by muscle activity in CO2, and there was evidence that glycolysis was inhibited at the phosphofructokinase step, with increases recorded for the fructose-6-phosphate, the fructose-6-phosphate/fructose 1, 6-diphosphate, and the alpha-glycerophosphate/dihydroxyacetone phosphate ratios. Net La uptake occurred during the last 10 min of contractions. I.S.

ELECTRICAL ENHANCEMENT OF HEALING
B. A. ROWLEY (Wright State University, Dayton, OH) IN: NAECON 1985; Proceedings of the National Aerospace and Electronics Conference, Dayton, OH, May 20-24, 1985. Volume 2 . New York, Institute of Electrical and Electronics Engineers, 1985, p. 994-999. refs

A review is presented of the use of electrical currents in effecting growth and regeneration of soft tissue, with a particular focus on low intensity direct currents. Data are presented on the use of tissue cultures as a model for investigating the phenomena. The use of low-intensity direct currents has been shown to enhance the repair of decubitus ulcers and to assist in the elimination of infecting bacteria. The exact mechanisms of this process are not known. Studies in vivo and in vitro do not always correlate. Low level 60-Hz currents have not been shown to have any measurable effect on bacteria or tissue growth. D.H.

CRITICAL LIFE SCIENCE ISSUES FOR A MARS BASE
P. J. BOSTON (National Center for Atmospheric Research, Boulder, CO) IN: The case for Mars II . San Diego, CA, Univelt, Inc., 1985, p. 287-332. refs
(AAS 84-167)

A number of the major issues of concern to the life scientist in regard to future Mars missions are examined. Issues covered include: contamination (forward and backward between Mars and earth), self-sufficiency of the base (whether the needs of the crew are to be totally resupplied, partially resupplied, or met through primary self-sufficiency), food self-sufficiency (including an adequate buffer or reserve for nutrition, and considering, as one possibility, microorganisms for food). Research recommendations, medical issues, and the question of whether life now exists or has ever existed on Mars are additional issues to be weighed. D.H.

CHARACTERIZATION AND OPTIMIZATION OF HYDROGEN PRODUCTION BY A SALT WATER BLUE-GREEN ALGA OSCILLATORIA SP. MIAMI BG 7. II USE OF IMMOBILIZATION FOR ENHANCEMENT OF HYDROGEN PRODUCTION
E. J. PHLIPS and A. MITSUI (Miami, University, FL) International Journal of Hydrogen Energy (ISSN 0360-3199), vol. 11, no. 2, 1986, p. 83-89. refs
(Contract NSF CPE-83-12092; NAS10-10531)

The technique of cellular immobilization was applied to the process of hydrogen photoproduction of nonheterocystous, filamentous marine blue-green alga, Oscillatoria sp. Miami BG 7. Immobilization with agar significantly improved the rate and longevity of hydrogen production, compared to free cell suspensions. Rates of H2 production in excess of 13 microliters H2 mg dry/wt h were observed and hydrogen production was sustained for three weeks. Immobilization also provided some stabilization to environmental variability and was adaptable to outdoor light conditions. In general, immobilization provides significant advantages for the production and maintenance of hydrogen photoproduction for this strain. Author

FOLIAGE PLANTS FOR INDOOR REMOVAL OF THE PRIMARY COMBUSTION GASES CARBON MONOXIDE AND NITROGEN DIOXIDE
B. C. WOLVERTON, R. C. MCDONALD (NASA, National Space Technology Laboratories, Bay St. Louis, MS), and H. H. MESICK (Pan American World Services, Bay St. Louis, MS) Mississippi Academy of Sciences, Journal (ISSN 0076-9436), vol. 30, 1985, p. 1-8. refs

Foliage plants were evaluated for their ability to sorb carbon monoxide and nitrogen dioxide, the two primary gases produced during the combustion of fossil fuels and tobacco. The spider plant (Chlorophytum elatum var. vittatum) could sorb 2.86 micrograms CO/sq cm leaf surface in a 6 h photoperiod. The golden pothos (Scindapsus aureus) sorbed 0.98 micrograms CO/sq cm leaf surface in the same time period. In a system with the spider plant, greater than or equal to 99 percent of an initial concentration of 47 ppm NO2 could be removed in 6 h from a void volume of approximately 0.35 cu m. One spider plant potted in a 3.8 liter container can sorb 3300 micrograms CO and effect the removal of 8500 micrograms NO2/hour, recognizing the fact that a significant fraction of NO2 at high concentrations will be lost by surface sorption, dissolving in moisture, etc. Author

STIMULATION OF BRAIN MUSCARINIC ACETYLCHOLINE RECEPTORS ACUTELY REVERSES RADIOGENIC HYPODIPSIA
G. A. MICKLEY (U.S. Armed Forces Radiobiology Research Institute, Bethesda, MD) and K. E. STEVENS (U.S. Air Force Academy, Colorado Springs, CO) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, March 1986, p. 250-255. DOD-USAF-supported research. refs

The role of hypothalamic muscarinic receptors in the production of radiation-induced hypodipsia was investigated in Co-60-irradiated rats, by measuring water consumption changes after intrahypothalamic injection of either carbachol (a muscarinic agonist) or atropine (an antagonist) into the irradiated rats. The lower dose of radiation (600 rads) produced a 5-d hypodipsia, whereas a more transient, albeit larger, effect was seen after 1000 rads. Carbachol produced acute reversal of radiogenic hypodipsia, while atropine potentiated the hypodipsia. These postirradiation drug-induced behaviors were similar to those observed after the same dose was given before irradiation. The persistence and the pharmacologic liability of the cholinergic functions suggest that other neuronal systems and/or neurochemicals may be more prominently involved in the radiogenic hypodipsia. I.S.

CHANGES IN GLYCOLYTIC INTERMEDIATES IN RAT ERYTHROCYTES DURING EXPOSURE TO SIMULATED HIGH ALTITUDE
A. NAKAMURA, H. OSADA, T. SAKAGUCHI, I. SAKURAI, and S. YAGURA (Japan Air Self-Defense Force, Aeromedical Laboratory, Tokyo) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, March 1986, p. 256-262. refs

Regulatory mechanisms of erythrocyte glycolysis and 2,3-diphosphoglycerate (2.3DPG) metabolism under hypoxia were studied in rats exposed to a simulated altitude of 18,000 ft (5,486 m) for 5 d. Changes in erythrocyte glycolytic intermediates were determined by enzymatic analysis. Marked alterations of glycolytic intermediates were found during 1 d of exposure which were quite different from those observed during exposure for 2,3, and 5 d. Alterations of intermediates seem to be highly correlated with blood pH changes; however, pH alone cannot explain the overall changes in intermediates. Results suggested that overall intermediate changes are the results of the combined effect of alterations of cellular pH and hemoglobin desaturation. Increased 2,3DPG at initial stages of exposure (within 1 d) may be caused mainly by the increased cellular pH; sustained elevation of 2,3DPG at later

stages could be attributed to the relief of product inhibition of diphosphoglycerate mutase by deoxygenation. Author

CARDIOVASCULAR RECEPTORS AND FLUID VOLUME CONTROL (1985 ARMSTRONG LECTURE)
J. P. MEEHAN (Southern California, University, Los Angeles, CA) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, March 1986, p. 267-275. refs

Experiments with negative pressure breathing led Gauer and Henry to the discovery of left atrial receptors that affected the release of ADH and the concept of a cardiovascular basis for fluid volume control. Since then, neural mechanisms involving cardiac receptors controlling the release of renin have been described, thus giving strong support for the role of cardiac receptors in fluid volume control. The original experimental work in the dog has been confirmed. The available pool of patients that have undergone heart transplant operations provide the opportunity for more definitive studies on the role of cardiac receptors in the control of cardiovascular function. EFFECT OF WEIGHTLESSNESS ON THE DEVELOPMENT OF NEUROSECRETORY STRUCTURES OF THE HYPOTHALAMO-HYPOPHYSEAL SYSTEM OF THE RAT BRAIN (ELECTRON-MICROSCOPE STUDY) [VLIIANIE NEVESOMOSTI NA RAZVITIE NEIROSEKRETORNYKH STRUKTUR GIPOTALAMO-GIPOFIZARNOI SISTEMY MOZGA KRYS /ELEKTRONNO-MIKROSKOPICHESKOE ISSLEDOVANIE/]
I. I. BABICHENKO (Universitet Druzhby Narodov, Moscow, USSR) Akademiia Nauk SSSR, Doklady (ISSN 0002-3264), vol. 286, no. 4, 1986, p. 976-978. In Russian. refs

The paper presents an analysis of the ultrastructure of the neurosecretory elements of the hypothalamo-hypophyseal system of developing rats whose mothers were flown on the Cosmos-1514 biosatellite during the 13-18th days of pregnancy. A delay in differentiation and changes in the basic components of the neuropil were observed in the neurosecretory-element ultrastructure in 18-day rat embryos 5-6 hours after a 5-day stay in weightlessness. These changes are evidently connected with the effect of a number of humoral factors (particularly an elevated concentration of calcium ions in the blood) on the developing brain. B.J.

ELECTRICAL ACTIVITY OF CEREBELLUM IN THE WAKEFULNESS-SLEEP CYCLE [ELEKTRICHESKAIA AKTIVNOST' MOZZHECHKA V TSIKLE BODRSTVOVANIE-SON]
G. L. BEKAIA and G. G. BERADZE (AN GSSR, Institut Fiziologii, Tbilisi, Georgian SSR) Fiziologicheskii Zhurnal SSSR (ISSN 0015-329X), vol. 71, Dec. 1985, p. 1480-1487. In Russian. refs

Dynamics of spontaneous electrical activity of cerebellar cortex and of fastigial nuclei were compared in unrestrained cats with implanted electrodes. The activity recorded during the periods of wakefulness and various phases of sleep revealed characteristic differences between these two structures, expressed most clearly during the paradoxical sleep phsae. An analysis of activities in fastigial nuclei and dorsal hippocampus has shown a weak correlation between the two processes. Functional significance of the changes observed in electrical activity of the cerebellum during the wakefulness-sleep cycle and their possible mechanisms are discussed. I.S.

THE INFLUENCE OF THE INITIAL VALUE OF A PARAMETER ON ITS CHANGE UNDER THE ACTION OF EXTERNAL FACTORS [VLIIANIE ISKHODNOI VELICHINY PARAMETRA NA EGO IZMENENIIA PRI VNESHNIKH VOZDEISTVIIAKH]
V. I. KOPANEV and V. V. VLASOV (Voenno-Meditsinskaia Akademiia, Leningrad, USSR) Akademiia Nauk SSSR, Izvestiia, Seriia Biologicheskaia (ISSN 0002-3329), Jan.-Feb. 1986, p. 96-114. In Russian. refs

The chief postulates and consequences of the law of initial values (LIV), concerning changes in organisms under the action of external factors, are discussed. The applicability of the LIV in the analysis of the responsivity and resistance of organisms is shown to be very broad. The LIV can explain many individual differences between organisms and the characteristics of the initial state of organisms at the moment external stimulation is applied. The relationship between the LIV and other ways of describing responses of the organism to external factors are examined. B.J.

SHKLOVSKIY DISCUSSES POSSIBILITY OF EXTRATERRESTRIAL INTELLIGENCE
I. S. SHKLOVSKIY *In its* USSR Report: Space (JPRS-USP-86-002) p 39-44 10 Feb. 1986 Transl. into ENGLISH from Zemlya I Vselennaya (Moscow, USSR), no. 3, May - Jun. 1985 p 76-80
Avail: NTIS HC A05

The silence of the universe can be completely and naturally attributed to the fact that extraterrestrial civilizations have either perished, not being able to contend with the problems that arose in the course of their own development, or there have never been such civilizations. In an examination of the history of terrestrial civilization it is seen that there are global problems in the present era and an inability to solve them can lead mankind to destruction. The proposed hypothesis makes possible a more profound discussion of the board range of problems related to the future of mankind and the extent to which life occurs in the universe. Author

Experiments performed by crews of Salyut orbiting stations have been aimed at obtaining extrapure hemagglutinin and other surface proteins of the influenza virus, using the method of electrophoresis. The series of space experiments called Tavriya demonstrated that such products can be obtained comparatively quickly and easily in conditions of zero gravity. A new generation electrophoretic unit called EFU-Robot is now in use on the Salyut-7 station. The EFU-Robot can be programmed by a cosmonaut to select samples of substances purified in the course of experiments and automatically transfer the samples from the unit's working chamber to ampoules, using syringes. Preparations obtained during the current manned orbital mission were delivered to Earth recently by cosmonauts. Author

Natural mechanisms of anticipation of weather changes in animals and human beings, and effects of weather conditions on human behavior and working fitness were studied. Meteorological sounds on the noise of free atmosphere caused by turbulent motion of the air. It is perceived by living organisms as sounds, analyzed by them and their behavior is modified accordingly. The biological forecasting mechanism may lead to the development of improved weather-forecasting methods and equipment. An acoustic weather-forecasting method was ued. Cloudiness and precipitation reportedly were forecast with accuracies of 98% and 85 percent using this method. A medical forecasting method using primary data, which is based on the meteorological-adaptation hypothesis was developed. Ecological factors are considered in the forecasting and prevention of illness. E.A.K.

We have been monitoring the body temperature and relative activity of up to 24 rats at a time using a recently developed biotelemetry system (The Dataquest III; Mini-Mitter Company). Each cage is maintained in a constant temperature chamber at 27 C and is on a 12:12 hour light-dark cycle. In the process of testing the versatility of this system and obtaining pilot data we have generated data for two manuscripts: (1) Hyperthermia induced by open-field stress is blocked by salicylate, Physiology and Behavior, and (2) Selection of cage size by Sprague-Dawley rats. Data directly relevant to the ultimate goal of the research include the following: a. We have established a dose of sodium salicylate which will block the circadian rise in body temperature, and b. We have established the normal circadian variation in activity for rats maintained on a 12:12 light-dark cycle. The administration of an antipyretic dose of sodium salicylate to rats in the late afternoon resulted in significant attenuation of the rise in body temperature normally observed at night; the drug had no effect on activity. Administration of this same dose of sodium salicylate to rats during the morning hours had no effect on body temperature or on activity. Since antipyretic drugs are thought to act by returning an elevated thermoregulatory set-point to normal, these data suggest to us that the rise in temperature observed at night in rats is a true fever, perhaps induced by interleukin-1 (IL-1). In order to elucidate the role of Ca(2+)-dependent protein phosphorylation in plant cell function, a Ca(2+)-dependent protein kinase from suspension-cultured soybean cells has been partially purified and characterized. It was previously shown that crude extracts of the soybean cells contain soluble protein kinase(s) that preferentially phosphorylates at least eight endogenous proteins in vitro in the presence of 0.5 mM CaCl2. An assay based on phosphorylation of the artificial substrate histone H1 has been devised. DOE

Important new roles for computation in the life sciences are being found in the study of the linear polymers DNA, RNA, and proteins, and in the correlation of the sequence with the structure and function of each. Because of the ease with which DNA sequences can be determined and the definitive and often surprising information contained in the sequences, an explosion of biological information is taking place that will increasingly rely on computers for its analysis and understanding. The model studies presented here probe possible effects that the protein environment may induce or impose on the conformation and electronic configuration of photosynthetic chromophores. Results are presented for the effect of axial ligation and hydrogen bonding on the electron spin resonance properties of bacteriopheophytin and bacteriochlorophyll a cation radicals. X-ray diffraction results on single crystals illustrate the significant conformational changes that different crystal habits enforce on the same skeleton of bacteriopheophytins d and the structural consequences of oxidation on a magnesium porphyrin. Theoretical calculations are also described that predict spectral and redox properties of bacteriochlorophyll g, the recently discovered chromophore of the anoxygenic bacterium, heliobacterium chlorum. COMPARATIVE ANALYSIS OF BIOMASS PYROLYSIS CONDENSATES
D. C. ELLIOTT Sep. 1985 38 p refs Presented at the Health and Environmental Research on Complex Organic Mixtures, Richland, Wash., 21 Oct. 1985
(Contract DE-AC06-76RL-01830)
(DE86-001773; PNL-SA-13158; CONF-851027-2) Avail: NTIS HC A03/MF A01

The purpose of this research is to determine the chemical composition, physical properties, and biological activity of biomass gasification/pyrolysis tars and condensates. The analytical results show conclusively that all biomass derived tars and condensates are not the same. There is no typical tar composition that can be adequately used. It is dependent on the operating conditions, principally a time/temperature thermal severity-type function. Results show high biological activity (Ames assay) only in high-temperature processed tars. Mutagenic activity in gasification condensates is correlated with the concentration of polycyclic aromatic hydrocarbons in the same. Based on the above information, a potential processing dilemma has now been identified. Higher temperatures are generally perceived to improve the efficiency and rate of gasification. In addition, our data also suggests that less contamination will remain in the aqueous byproduct stream when the gasification is performed at higher temperature. On the other hand, the tar components that do remain following higher temperature processing contain more highly condensed PAH which result in a higher level of mutagenic activity. The transformation from phenolic to PAH is strongly a function of temperature in the range of 700(0) to 950(0)C. Therefore consideration of the processing requirements for the aqueous condensate stream versus the organic condensate stream may become critical with operating temperature being the major independent variable. DOE

GREENHOUSES WITH CURVILINEAR PLANTING SURFACE
Y. A. BERKOVICH, V. A. KORBUT, and V. I. PAVLOVSKIY *In its* USSR Report: Space Biology and Aerospace Medicine, Volume 19, no. 6, November - December 1985 (JPRS-USB-86-001) p 115-119 19 Feb. 1986 refs Transl. into ENGLISH from Kosmicheskaya Biologiya i Aviakosmicheskaya Meditsina (Moscow, USSR), v. 19, no. 6, Nov. - Dec. 1985 p 77-80
Avail: NTIS HC A08/MF A01

The laws of light distribution in plants shown on the flat plane, spherical or cylindrical surfaces were investigated. In microgravity where the plants are arranged radially the level of illumination of lower leaf strata is higher on curvilinear than on flat surfaces. This is due to the following: as the plants grow they get separated; also, the concentration of the light flux increases with depth of plants on the curvilinear surfaces. In view of this, a space greenhouse is suggested, the design of which provides high productivity per unit volume and per unit energy of the incident flux of photosynthetically active radiation. This article reflects the theme of one of the areas of investigation of the Laboratory of Microbial Protein Synthesis, where we are studying the factors which accelerate the conversion (mobility) of macroergic and other phosphorous compounds. The purpose of these studies is to increase the energy supply of the metabolic synthesis reactions connected with the yield and quality of food yeast. Professor Malkov, the author of the idea of the partial inhibition of respiration in order to save carbon, mentions a factor which may be the cause of intensification of the biosynthetic processes of the yeasts he investigated. We are speaking here about the doubled amount of labile phosphorous p7 obtained in yeast as a result of placing it in concentrated orthophosphate. In our investigations the increased labile phosphorous content is connected with the biosynthetic activity of the yeast. The article correlates many stuides which show the very important role of ATP and polyphosphates as energy accumulators and transporters, and presents data from the literature and preliminary results of our own investigations which indicate the exceptional effectiveness of making practical use of the phenomena of microbial synergism and metabiosis. Bacteria which split orthophosphates were studied on the basis of these results. There is also significant interest in the phosphatase activity of food yeast using organophosphates as a phosphorous source. GRA

Non-toxic synthetic adjuvants are under prime consideration for use in increasing the immune response of human beings. Three of microbial origin are the muramyl di-peptides (N-acetyl-muramyl-L-alany-D-isoglutamine and analogs, termed MDP), polyadenylic acid polyuridylic acid-polyuridylic acid complexes termed poly A-poly U) and the recently isolated monophosphoryl lipid A. While each of these has been demonstrated in animals to be active in increasing the immune response when given with the antigen, each also has been found to suppress this response when given one to several days before antigen. The enhancing actions of MDP and poly A-poly U have been well characterized. However, characterization of the suppressive phenomenon has been minimal, but it is important to gain a responsible understanding of how these adjuvants regulate the immune response non-specifically. Accordingly, the experiments proposed during the tenure of this contract were undertaken to further knowledge of how each of these adjuvants activate the suppressive arm of the immune response. GRA

The immunomodulatory action of a non-toxic monophosphoryl lipid A (MPL) and a toxic diphosphoryl lipid A (DPL) fraction derived from endotoxins of the heptoseless mutants of bacteria were compared. Both derivatives retained the ability characteristic of lipopolysaccharides, to enhance antibody formation in young adult mice when injected along with antigen and suppress antibody production when given a day before antigen. In aging mice, a model of immunodeficiency, a marked restoration of antibody formation was observed when antigen was injected together with either MPL or DPL. Levels of antibody in these aging mice were comparable to those observed in young adult mice. Moreover, both MPl and DPL enhanced antibody production significantly in the endotoxin low-responder mouse strains, C3H/HeJ and C57Bl/10 ScN, whereas, phenol-water extracted endotoxin from an R-7 mutant was ineffective. MPL and DPL also acted as suppressive agents when administered prior to antigen in the C3H/HeJ strain. Thus, the results from these studies show that (a) the toxic properties of lipid A can be removed without eliminating immunomodulating activity, and (b) such lipidic compounds can overcome the immunologic lesions of immunodeficient and hyporesponsive animals. Gliding bacteria adjuvant (GBA) is composed of macromolecular substances secreted or shed into the growth media of a newly described Cytophaga species. We had established prior to the onset of this contract that GBA strongly augments the in vitro generation of humoral immunity by mouse spleen cells and that it is mitogenic for murine spleen cells. Since GBA is very water soluble, its absorbance at 280 nm is low, and its biological activities are stable to boiling, we hypothesized that GBA was a polysaccharide or a complex of polysaccharides. Our principal objectives during the first year of this contract were to develop methods for large scale production and purification of GBA, to initiate studies of its physical and chemical properties, to prepare a panel of monoclonal antibodies against GBA for future studies defining its biologically significant epitopes and to extend studies of its biological activities. Large scale production and purification have been essentially achieved using protocols described in this report. Knowledge of the biological activities of GBA for mammalian cells was extended this year. Titration curves with the most highly purified preparations of GBA were performed with assays measuring in vitro adjuvanticity, mitogenicity, B cell polyclonal activation and induction of the murine macrophage cell line, WEHI 265, to secrete IL-1. Studies on the mechanism of action of GBA were initiated. GRA

Initially, the objectives of this work were to characterize substances which regulated DNA synthesis in lymphocytes. In particular we wished to determine the role of detergent soluble (DS)DNA in replication of activated splenocytes. We now feel that DS DNA is a hitherto overlooked class of replication intermediates not yet stabilized by nucleosome maturation. One possibility is that the detergent lability arises because of the presence of topoisomerase II in the replicating region which results in the release of these fragile fragments. These observations hold not only in activated lymphocytes but also in any actively dividing cell. GRA

Nine years ago, a convenient syntheses for a new class of heterocyclic molecules, the bimanes or 1,5-diazabicyclo(3.3.0) octadienediones was discovered and developed. In the course of preparing the bromo derivatives, fortuitously that proteins were fluorescently labeled by bromobimanes. It was established that bromobimanes reacted preferentially with thiols, and usefulness of such labeling for both small and large molecules in biological systems was demonstrated. Many applications of the agents have been reported. The primary aims of our research on the bimanes are divided into the following areas: (1) synthesis, (2) reactivity, (3) photophysics, and (4) application to macromolecules. Although we have a number of new results, it seems pertinent to base this report on a new summary of the application of bimane labeling to thiols. GRA

There were 2 objectives in this research project: development of an in vivo assay for mistranslation-inducing activity of pollutants and characterization of amino acid substitutions. The first objective proved to be the more difficult. The T7 0.3 gene product (0.3 protein) was purified by a modification of the published procedure, and used to raise rabbit antibody to this protein. A radioimmune precipitation assay was developed which coulu be used to estimate increased misincorporation of cysteine into 0.3 protein. A sample assay involving only counting of the radioimmune precipitate was not achieved because we were not able to obtain the 0.3 protein free of contaminating proteins in the RIP. The 2nd objective proved more fruitful. The cysteine substitution sites in the N-terminal 42 positions of 0.3 protein have been successfully identified. Cleavage of 0.3 protein with trypsion to identify cysteine for arginine substitutions showed that the major sites of cysteine misincorporation were at residues other than arginine. Sequencing of (35S) cysteine-labeled 0.3 protein showed that the most frequent substitution was at residue 15 (tyrosine) and other substitutions were at a positions 9 (asparagine), 12 (aspartate), 41 (alanine) and 42 (aspartqate). Japanese research and development in several of the main areas of biotechnology, including biochemical process technology, biosensors, cell culture technology, protein engineering, and recombinant DNA technology are assessed. Japan's strategic planning in biotechnology is based on a 10 to 15 year time scale, whereas most similar planning and resource commitment in the United States is based on a 3 to 5 year time scale. This difference in time scale is thought to be partially responsible for Japan's apparently more technology-driven than market-driven resource commitment. It is noted that much of the commercialization of biotechnology in Japan is being carried out by large established companies and that Japan has a well-established coordination of the development of biotechnology by industry, universities, and government groups. INTERACTION BETWEEN THE OTOLITHIC ORGAN AND THE SEMICIRCULAR CANALS OF THE VESTIBULAR APPARATUS IN THE SYSTEM OF SPATIAL ANGULAR STABILIZATION IN HUMANS [VZAIMODEISTVIE OTOLITOVOGO ORGANA I POLUKRUZHNYKH KANALOV VESTIBULIARNOGO APPARATA V SISTEME UGLOVOI STABILIZATSII CHELOVEKA V PROSTRANSTVE]
V. M. GUSEV (AN SSSR, Institut Fiziologii, Leningrad, USSR) and V. A. KISLIAKOV Biofizika (ISSN 0006-3029), vol. 31, Jan.-Feb. 1986, p. 123-127. In Russian. refs

A mathematical model is developed for spatial angular stabilization in which the fixed and variable space coordinates are related to the coordinates of the semicircular canals and the otolithic organ during spatial displacement. The equations describing the interrelationship of both vestibular systems are solved for the case of abrupt displacement of angular vectors, and for the case of slow periodic variations of the same angles, approximating the pitching and rocking motions of a medium-size fishing trawler. The results indicate a need for integrated activity of both the semicircular canals and the otolithic organ for an acceptable stabilization: the canals insure short-term stabilization and stabilization during the abrupt changes of spatial orientation, while the otolithic organ plays a dominant role during long-term slowly occurring changes. THE EFFECTS OF CIRCUIT WEIGHT TRAINING AND G EXPERIENCE ON +GZ TOLERANCE
C. MIZUMOTO and M. IWANE Japan Air Self Defence Force, Aeromedical Laboratory, Reports (ISSN 0023-2858), vol. 26, Sept. 1985, p. 105-120. In Japanese, with abstract in English. refs

Two experiments evaluating the G tolerance of ten men ranging in age from 21-32 years are described. Four men were subjected to G force and their tolerance was estimated, and the other six men performed circuit weight training (CWT). Graphs of G tolerance changes for the ten subjects are presented and analyzed. The data reveal that exposure to G force once a week for four weeks does not affect G tolerance. In the men subjected to CWT for eight weeks, four men increased their G tolerance by 0.5-0.8 G, one displayed no change in tolerance, and the sixth decreased G tolerance by 0.4G; a correlation between femoral muscle strength and G tolerance is observed. It is concluded that short periods of CWT will increase peak G tolerance. I.F.

CHANGES IN CATECHOLAMINE EXCRETION DURING PHYSICAL AND MENTAL WORKLOAD
A. NAKAMURA, Y. KAKIMOTO, T. SAKAGUCHI, I. SAKURAI, F. TAJIMA et al. Japan Air Self Defence Force, Aeromedical Laboratory, Reports (ISSN 0023-2858), vol. 26, Sept. 1985, p. 121-129. In Japanese, with abstract in English. refs

The excretion of norepinephrine and epinephrine in four male subjects exposed to physical and mental work is evaluated. The physical exercise involved running and the bicycle ergometer, and the mental work included the addition of digits, span of attention and preposition cancellation tests, and instrument reading. The preparation of the urine samples and the catecholamine analysis are described. Graphs displaying the amount of norepinephrine and epinephrine excreted following work are presented. The data reveal that norepinephrine excretion is increased significantly with physical work and epinephrine is increased during mental work. I.F.

EFFECTS OF PHYSIOLOGICAL AND MENTAL STRESS ON CREW MEMBERS IN RELATIVELY LONG FLIGHT BY C-1 JET TRANSPORT AIRCRAFT
Y. KAKIMOTO Japan Air Self Defence Force, Aeromedical Laboratory, Reports (ISSN 0023-2858), vol. 26, Sept. 1985, p. 131-155. In Japanese, with abstract in English. refs

The relationship between physical and mental work and crew response is examined. The age and flying experience of the crew members, and the thermal conditions and noise level in the cockpit are described. The heart rate, critical flicker frequency (CFF), salivary cortisol level, adrenalin excretion, and fatigue level of the pilots and copilots during operation and nonoperation are evaluated. The data reveal that the heart rate of both pilots and copilots increases during takeoff and landing. During cruise the pilots heart rate is constant; however, the copilots display an increase in heart rate revealing a correlation between heart rate and flying experience. The salivary cortisol response is parallel to the heart rate changes. It is detected that the adrenalin level in the copilots increases with operation and in the pilots it remains unchanged. The CFF in the pilots is unchanged and in the copilots a lower level is observed; the pilots are subjected to increased fatigue compared to the copilots. It is concluded that the pilots remain alert by maintaining constant levels during operation and nonoperation, and that copilots could adapt to long flight missions with increased flight experience. I.F.

AFTERDROP OF BODY TEMPERATURE DURING REWARMING - AN ALTERNATIVE EXPLANATION
P. WEBB (Webb Associates, Yellow Springs, OH) Journal of Applied Physiology (ISSN 0161-7567), vol. 60, Feb. 1986, p. 385-390. refs
(Contract N00014-72-C-0057; N00014-80-C-0193)

The effect of the rate of body cooling and rewarming on afterdrop (a continued fall of deep body temperatures during rewarming) was investigated in healthy men subjected to either a rapid cooling-immediate rewarming, a rapid cooling-delayed rewarming, or a slow, prolonged cooling-immediate rewarming regimen. Typical afterdrops in the rectal, esophageal, and auditory canal temperatures were observed in the case of rapid cooling-immediate rewarming regimen, but not in the two other regimens. Afterdrops were also observed in two inanimate models with no circulation. These results make the circulatory explanation of afterdrop improbable. Instead, afterdrop can be explained by the simple rules of heat flow through a mass of tissue. I.S.

A86-28123
EFFECTS OF BODY MASS AND MORPHOLOGY ON THERMAL RESPONSES IN WATER
M. M. TONER, M. N. SAWKA, M. E. FOLEY, and K. B. PANDOLF (U.S. Army, Research Institute of Environmental Medicine, Natick, MA) Journal of Applied Physiology (ISSN 0161-7567), vol. 60, Feb. 1986, p. 521-525. refs

Effects of body mass and surface area on thermal responses to 1-h long immersion into 26-C water were studied in two groups of men, similar in total body fat and skinfold thicknesses, but different in other body characteristics. The large-body mass (LM) group was 16.3 kg heavier and 0.22 sq cm/kg smaller in surface area-to-mass ratio, A(D)/wt, than the small-body mass (SM) group. Metabolic rate (M), and the rectal, skin, and esophageal temperatures, (Tre, Tsk, and Tes) were measured at the end of 1-h periods of rest and exercise in water. While the M, Tre, Tes, and the calculated, value of tissue insulation were similar in both groups after exercise, the value of tissue insulation was lower in the SM group, indicating that a greater body mass increases the overall tissue insulation during rest, when the perfusion of the muscle mass is relatively low. The effect of A(D)/wt in thermoregulation in water appeared to be minimal. I.S.

DEVICE FOR RAPID QUANTIFICATION OF HUMAN CAROTID BARORECEPTOR-CARDIAC REFLEX RESPONSES
J. M. SPRENKLE, D. L. ECKBERG, R. L. GOBLE, J. J. SCHELHORN, and H. C. HALLIDAY (USVA, Medical Center; Virginia, Medical College, Richmond) Journal of Applied Physiology (ISSN 0161-7567), vol. 60, Feb. 1986, p. 727-732. USVA-supported research. refs
(Contract NAS9-16046; NCH-HL-22296)

A new device has been designed, constructed, and evaluated to characterize the human carotid baroreceptor-cardiac reflex response relation rapidly. This system was designed for study of reflex responses of astronauts before, during, and after space travel. The system comprises a new tightly sealing silicon rubber neck chamber, a stepping motor-driven electrodeposited nickel bellows pressure system, capable of delivering sequential R-wave-triggered neck chamber pressure changes between +40 and -65 mmHg, and a microprocessor-based electronics system for control of pressure steps and analysis and display of responses. This new system provokes classic sigmoid baroreceptor-cardiac reflex responses with threshold, linear, and saturation ranges in most human volunteers during one held expiration. Author

A86-28448
ESTIMATING THE SMALL AIRWAYS RESISTANCE FROM MEASUREMENTS OF THE UPSTREAM RESISTANCE OF SEVERAL GAS MIXTURES
D. B. REYNOLDS and B. BRUNS (Wright State University, Dayton, OH) IN: NAECON 1985; Proceedings of the National Aerospace and Electronics Conference, Dayton, OH, May 20-24, 1985. Volume 2 . New York, Institute of Electrical and Electronics Engineers, 1985, p. 992, 993. refs

Based on measurements of the maximal expiratory flow-volume (MEFV) for air and for He-O2, a theory and methods are developed to extrapolate the upstream resistance, i.e. the resistance of airways peripheral to the equal pressure point of maximal expiration, to the zero gas density limit. In so doing, the purely viscosity dependent portion of the upstream resistance is obtained. This viscosity dependent part provides an estimate of the small airway resistance. D.H.

A86-28813
COUNTERMEASURES FOR THE EFFECTS OF PROLONGED WEIGHTLESSNESS
D. WOODARD (Wright State University, Dayton, OH) IN: The case for Mars II . San Diego, CA, Univelt, Inc., 1985, p. 655-663. refs
(AAS 84-187)

The need for artificial gravity during interplanetary flight could be eliminated by practical countermeasures to the degenerative changes induced by prolonged weightlessness. Current countermeasures are time-consuming, difficult to sustain, and only partially effective. Ground-based research suggests that the forms of exercise currently in use in space are not appropriate for maintaining muscle and bone strength, and that isokinetic exercise applying a maximal effort against a high resistance would be much more effective. Bone loss could be further reduced by use of anabolic steroid hormones. These appear safe and effective in reversing osteoporosis on earth. It is estimated that with these measures significant atrophic changes could be prevented with only about 30 minutes of exercise per day. An experiment to test these measures in earth orbit is proposed. Author

IMMUNOLOGICAL ANALYSES OF U.S. SPACE SHUTTLE CREWMEMBERS
G. R. TAYLOR, L. S. NEALE, and J. R. DARDANO (NASA, Johnson Space Center, Houston, TX) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, March 1986, p. 213-217. refs

Changes in the immunoresponsiveness of 'T' lymphocytes following space flight have been reported previously. Additional data collected before and after 11 Shuttle space flights show that absolute lymphocyte numbers, lymphocyte blastogenic capability, and eosinophil percent in the peripheral blood of crewmembers are generally depressed postflight. These responses resemble those associated with physical and emotional stress and may not be related to flight per se. Additional data from Space Shuttle flights 41B and 41D, involving 11 crewmembers, indicate a postflight decrease in cells reacting with 'B' lymphocyte and monocyte monoclonal antibody tags. Further, the loss of 'T' lymphocyte blast capability correlates with the decreased monocyte count (correlation coefficient = 0.697). This finding implies that the previously reported loss of blastogenic capability may be a function of decreased monocyte control, as noted in several nonspaceflight related studies. Author

THE EFFECTIVE INTENSITY OF CORIOLIS, CROSS-COUPLING STIMULATION IS GRAVITOINERTIAL FORCE DEPENDENT - IMPLICATIONS FOR SPACE MOTION SICKNESS
J. R. LACKNER and A. GRAYBIEL (Brandeis University, Waltham, MA) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, March 1986, p. 229-235. refs
(Contract NAS9-15147)

The effect of gravity on the severity of the Coriolis-induced motion sickness was investigated in ten individuals subjected to high and low G-force phases of parabolic flight maneuvers using constant level Coriolis, cross-coupled angular acceleration stimulation. Using seven levels of severity in the diagnosis of motion sickness, it was found that the subjects were less susceptible at 0 G than at +2 Gz, and that the perceived intensity and provocativeness of Coriolis stimulation decreased in 0 G and increased in +2 Gz relative to the +1 Gz baseline values. The changes in the apparent intensity of Coriolis stimulation occur virtually immediately when the background gravitatioinertial force level is varied. These findings explain why the Skylab astronauts were refractory to motion sickness during Coriolis stimulation in-flight. I.S.

A86-29094
TRANSDERMAL SCOPOLAMINE - HUMAN PERFORMANCE AND SIDE EFFECTS
C. GORDON, J. ATTIAS, A. ROLNICK (Isreal Navy, Motion Sickness Research Center, Haifa), and O. BINAH (Israel Navy, Motion Sickness Research Center; Technion Israel Institute of Technology, Haifa) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, March 1986, p. 236-240. refs

The effect of transdermal scopolamine on performance was tested on 23 naval volunteers. Performance was evaluated by using a battery of professional (naval-related) and cognitive tests. For all tests performed, there were no significant differences between the scores obtained in placebo and transdermal scopolamine conditions. These results were in close agreement with subjective estimations of performance. Transdermal scopolamine significantly reduced salivary flow, whereas mood state, visual acuity, and eye accommodation for near vision were not affected. It is concluded that transdermal scopolamine administration is not accompanied by decrement in performance abilities and can safely be used by naval crews. Author

THE STATE OF MAN'S ORGANISM UNDER CONDITIONS OF ELEVATED ATMOSPHERIC CARBON DIOXIDE [SOSTOIANIE ORGANIZMA V USLOVIIAKH VOZDUSHNOI SREDY S POVYSHENNYM SODERZHANIEM UGLEKISLOGO GAZA]
V. G. ALTUKHOV, M. A. GREBENIK, and A. A. SHAPOVALOV Voenno-Meditsinskii Zhurnal (ISSN 0026-9050), Dec. 1985, p. 43, 44. In Russian.

Effects of elevated atmospheric CO2 were studied in three groups of men subjected to prolonged habitation in atmospheric chambers equilibrated with CO2 at the levels of (1) 0.80 percent, (2) 0.60 percent, and (3) 0.25 percent, respectively. Various physiological parameters, as well as the results of mental acuity tests and subjective evaluations of wellbeing, recorded every 10 days during the exposure and at the end of several 10-day periods after the test, were compared with the pre-test results. While the 0.25 pct CO2 atmosphere did not adversely affect psychophysiological status of the subjects, the two regimens with higher CO2 contents have led to marked increases of mental and physical fatigue signs, which were preceded by an increase of partial CO2 pressure in the alveolar air and a drop in blood pH. I.S.

CONCERNS ARE BEING RAISED ABOUT LIVING IN THE SPACE ENVIRONMENT
W. L. GIUFFRE Commercial Space (ISSN 8756-4831), vol. 1, Winter 1986, p. 69, 70.

An evaluation is made of current understanding and outstanding problems in the field of physiological adaptation to weightless environments. The primary concerns associated with long duration space flight encompass motion sickness and disorientation, muscle atrophy, bone decalcification, and radiation exposure. Data that are currently being analyzed from the Spacelab mission D1 may show that the process of readaptation into earth gravity does not occur as rapidly as had been thought. It is noted that while space motion sickness drugs are helpful, they are not completely preventive. Future NASA planning stresses the importance of physical exercise. O.C.

(AD-P004882) Avail: NTIS HC A99/MF E03 CSCL 13L

New weapons and the vehicles on which they mount have and will continue to become increasingly complex. These weapons are potentially more demanding, and challenges need to be addressed. One important challenge is the need to accurately monitor and control the amount of toxic substances, generated by weapon systems, that may endanger the soliders who will operate the systems. Toxic fumes generated from various sources can have debilitating effects on the efficiency of occupants and operators of vehicles and ground equipment. The insidious nature of these effects underscores the necessity for detecting, measuring, and eliminating these hazards to the extent possible. The overall problem that must be addressed is the potential exposure of soldiers to carbon monoxide, ammonia, oxides of sulfur, oxides of nitrogen, lead fumes, and other harmful substances. The exposures are likely to be relatively intense (above present Federal standards for occupational exposure), brief (1 hour or less), and rapidly repeated (as often as six times daily for periods as long as 14 days). Such exposures may occur when soldiers are trained to use various weapon systems or while in combat. GRA

NEUROPHYSIOLOGICAL ACTIVITY AND PSYCHOPHYSICAL EFFECTIVENESS OF ENVIRONMENTAL FACTORS [NEUROPHYSIOLOGISCHE VERARBEITUNG UND PSYCHOPHYSISCHE WIRKSAMKEIT VON UMWELTEINFLUESSEN]
W. H. EHRENSTEIN *In* Deutscher Wetterdienst Annals of Meteorology, No. 22. International Symposium on Human Biometeorology p 1-5 13 Aug. 1985 refs In GERMAN
Avail: Issuing Activity

The sensorial transmission of the body/environment relationship is presented as well as the correlation between subjective and objective data through sensorial organs. The correlation investigation method is successfully applied to vision investigation to study the neurophysiological activity and psychophysical effectiveness of environmental factors. Further application of the psychophysiological concepts and methods presented is recommended for medical meteorological research. The investigation of qualitative relationships using impression scales is recommended to determine the central processes in the psychological assessment of the environmental factors.

THE INTERFACE BETWEEN ATMOSPHERE AND ORGANISM
F. K. PIERAU *In* Deutscher Wetterdienst Annals of Meteorology, No. 22. International Symposium on Human Biometeorology p 6-8 13 Aug. 1985 refs
Avail: Issuing Activity

The effects of temperature, air currents, and humidity on the human body and the stimulation of skin receptors are studied. The somatosensory processes underlying the communication between man and his environment and the relay of sensory information into the central nervous system are discussed. The transformation of temperature and mechanical signals into bioelectric signals (generation of a depolarizing nonpropagated receptor potential), the encoding of the stimulus features and the principles of processing in the central nervous system are reviewed. Mechanisms to detect air humidity by nasal and/or hypothalamic temperature receptors (slowly adapting and rapidly adapting mechanoreceptors) are discussed. The high sensitivity (transient and proportional) of temperature receptors is used to sense changes in air humidity. Sudden increase of nasal temperature may contribute to sensation of humidity. APPLICATION OF A NONSTATIONARY ENERGY BUDGET MODEL TO DETERMINE THERMAL COMFORT [ANWENDUNGSMOEGLICHKEITEN EINES INSTATIONAEREN ENERGIEBILANZMODELLS ZUR BEWERTUNG DER THERMISCHEN BEHAGLICHKEIT]
P. HOEPPE *In* Deutscher Wetterdienst Annals of Meteorology, No. 22. International Symposium on Human Biometeorology p 17-18 13 Aug. 1985 refs In GERMAN
Avail: Issuing Activity

A nonstationary energy budget model based on the fundamental energy flux equations is applied to determine heat stress and heat storage under variable environmental conditions. Temperature variations in the body core and shell are calculated. A man walking on a 200 m long sunlit street section at a speed of 0.4 m/sec dressed in light summer clothing is exposed to 3 min direct sun radiation and street surface radiation. No sultriness is noted with the nonstationary model. Nonstationary energy budget models can be applied for cold and warm therapy since they can give information on the optimal exposure times to reach a given thermal body condition. Author (ESA)

PHYSICAL CAUSES OF AIR DRAFT PHENOMENA, NEW FACTS [PHYSIKALISCHE URSACHEN FUER ZUGERSCHEINUNGEN - NEUE ERKENNTNISSE]
E. MAYER *In* Deutscher Wetterdienst Annals of Meteorology, No. 22. International Symposium on Human Biometeorology p 19-20 13 Aug. 1985 refs In GERMAN
Avail: Issuing Activity

The physical causes of air draught phenomena causing health troubles are analyzed (especially man's local convective cooling resulting in a surface temperature decrease) as well as the relationship between convective heat transfer factor and thermal comfort. Measurements of convection on a heated artificial head show a parabolic correlation between self-convection and the product of air velocity mean value with turbulence degree and convective heat transfer factor. The area under the hyperboles corresponds to thermal comfort. Measurements were performed in buildings with and without air conditioning. Experimental results show good agreement with inquiry results. More cases of air draft troubles are recorded in buildings with air conditioning than in buildings without air conditioning. Convective heat transfer factor is better adapted to thermal comfort evaluation than air velocity mean value. Author (ESA)

CLIMATIC CURE ON A PRACTICAL LEVEL [KLIMATUR IN DER PRAXIS]
A. SCHUH *In* Deutscher Wetterdienst Annals of Meteorology, No. 22. International Symposium on Human Biometeorology p 21-22 13 Aug. 1985 refs In GERMAN
Avail: Issuing Activity

About 150 patients were submitted to cardiovascular training and thermoregulatory training during their cure period to improve their response to climatic stimuli by applying ambulatory therapy. Pulse and blood pressure were measured to determine the physiological reaction and eye stress under climatic conditions. Patients were taught the thermoregulation system so as to react economically to climatic conditions. They were interrogated on their thermal comfort during the walk. Lactate formation and rewarming time were measured. Improved response to cold stimuli can be achieved with the application of this form of climatic cure combining cardiopulmonar training and thermoregulatory training.

ON THE IMPORTANCE OF COOLING IN CLIMATIC THERAPY [ZUR BEDEUTUNG DER ABKUEHLUNG IM RAHMEN DER KLIMATHERAPIE]
L. KLINKER and E. TUROWSKI *In* Deutscher Wetterdienst Annals of Meteorology, No. 22. International Symposium on Human Biometeorology p 23-24 13 Aug. 1985 refs In GERMAN
Avail: Issuing Activity

The effects of meteorological cold stimuli under constant social environment before, during, and after a cold air resting cure with whole body stress are analyzed. Resistance and vegetative transposition are reflected by an increase in the resting time for a cooling value of 188 kJ/sq m and by an increased excretion of creatinine and of a subsitute product of adrenalin and noradrenalin. Increased blood pressure in cold pressure test, blood pressure fall to 5 to 15 mm, pulse frequency drop to 1.5 per min. and a drop in flicker fusion frequency and in the pupillary aperture are recorded during the acclimatization period. A better use of oxygen is observed during cooling therapy. Dosage recommendations for the different groups of patients according to their sensitivity to cold conditions are given. Author (ESA)

THE INFLUENCE OF HELIOMETEOROLOGIC FACTORS ON CIRCULATION AND SOME VEGETATIVE FUNCTIONS
I. OERMENYI *In* Deutscher Wetterdienst Annals of Meteorology, No. 22. International Symposium on Human Biometeorology p 25-26 13 Aug. 1985
Avail: Issuing Activity

Solar effects on circulation and vegetative functions were studied based on daily measurements of the systolic and diastolic blood pressure (SBP and DBP), and the arterial pulse number (APN) of 112 patients and 11 control individuals leading to a vegetative Index (VI). If VI is positive, sympathetic reactions increase; if VI is negative, parasympathetic reactions increase. Weather data and chromospheric flares are taken into account. The SBP and DBP increase during cold front passage, upper or lower, and during anticyclonic weather formation. The APN increases in presence of higher troposphere subtropical air. Tropospheric coding and continental cold air cause increased parasympathetic reactions. The latter increase in accordance with the direction of weather and geoactive solar activity. Sympathetic-like reactions appear with increased solar radio noise level around 200 MHz and 19 Ghz. The results of the study are used in forecasting physiological effects for public health. METEOROTROPIC DETERMINANTS OF ROAD COLLISIONS AND ACCIDENTS
M. BARANOWSKA and B. GABRYL-WOJTACH *In* Deutscher Wetterdienst Annals of Meteorology, No. 22. International Symposium on Human Biometeorology p 27-28 13 Aug. 1985 refs
Avail: Issuing Activity

The effects of traffic intensity fluctuations and rainfall and fog on human psychophysical performance are studied based on statistics of daily number of road collisions and accidents (Lkw) over a period of 8 yr. Correlation is found between Lkw and rainfall but not between Lkw and duration of fog. The relationship between Lkw and basic systems and atmospheric fronts as well as the influence of extreme environmental changes are investigated. A significant increase of accidents is noted during strong front passages. A correlation is noted between Lkw statistics and cyclonal processes and extreme environmental changes, whatever the seasonal rhythm. Author (ESA)

OBJECTIVE INVESTIGATIONS AND SUBJECTIVE OBSERVATIONS OF SENSITIVITY TO WEATHER [OBJEKTIVE UNTERSUCHUNGEN UND SUBJEKTIVE BEOBACHTUNGEN UEBER WETTERFUEHLIGKEIT]
F. J. JENKNER *In* Deutscher Wetterdienst Annals of Meteorology, No. 22. International Symposium on Human Biometeorology p 29-30 13 Aug. 1985 In GERMAN
Avail: Issuing Activity

The following criteria were investigated in 4,000 patients (women: 68%, men: 32%); sex, sensitivity to weather, light or painful troubles, shorter or longer period, with normal or increased blood, sedimentation rate, vertigo, headaches, lymphocyte count, pherogram, lymphocytosis. Women are more sensitive to weather changes than men with a higher frequency and increased blood sedimentation rate. Sensitive patients with a frequency of 75% for women and 25% for men have more painful troubles, a longer anamnesis period, more migraine and vertigo and a delay of the ovalbumin fraction. In insensitive patients the frequency is 62% for women and 38% for men. Further investigations are recommended to elicit the reasons of the statistically based differences. Author (ESA)

COLLOIDAL AND METEOROLOGICAL IN VITRO REACTIONS
N. PLESKO *In* Deutscher Wetterdienst Annals of Meteorology, No. 22. International Symposium on Human Biometeorology p 31-32 13 Aug. 1985 refs
Avail: Issuing Activity

A reaction measuring system was developed to determine the effects of differential mean mole weight colloids, and to investigate the state variations of colloidal systems in correlation with solar-terrestrial phenomena. The relationships between solar terrestrial phenomena and the measurement variations, and between the measurement variations and weather sensitivity in healthy and ill people are investigated. The measured data corrected by the two relationships can then be applied for prevention in medicine, transport, and industry. The closed measuring system is insensitive to vibrations, gravity, and temperature stable when stored, and automatically performs the measurement of large molecular polyvinylpyrrolidon (PVP) in solutions with few electrolytes. The pseudopolarization effects depend on the adsorption layer thickness due to the degree of association of dissolved PUP molecules and to solar terrestrial factors. Author (ESA)

WEATHER SENSITIVITY AS DISCOMFORT [DIE WETTERFUEHLIGKEIT ALS DISKOMFORT]
W. H. WEIHE *In* Deutscher Wetterdienst Annals of Meteorology, No. 22. International Symposium on Human Biometeorology p 35-37 13 Aug. 1985 refs In GERMAN
Avail: Issuing Activity

Weather sensitivity due to a thermal imbalance between environment and organism leads to uneasiness or discomfort. Subjective and cognitive processes trigger the behavorial temperature regulation in order to sustain the autonomous physiological regulation. The behavorial temperature regulation can influence healing or aggravate the discomfort condition. Ill behavorial attitudes (unadapted dressing, inactivity, unbalanced eating and drinking, environment changes, etc.) are modified with training, decisiveness, will power, self-confidence and education. Weather sensitivity appears when individuals cannot perceive the relationship between thermal load error and temperature preferred conditions. Pharmacotherapy is recommended for special cases only. Further investigation of weather sensitivity is recommended to check the identity between sensitivity and thermal discomfort under natural weather changes. Individuals should be taught temperature balance. Author (ESA)

WEATHER AS A PHYSICAL PROCESS AND PARAMETERIZATION OF THE EFFECTS AS A METEOROLOGICAL CONTRIBUTION FOR INVESTIGATING THE CORRELATION BETWEEN WEATHER AND MAN [DAS WETTER ALS PHYSIKALISCHE PROZESS UND SEINE WIRKUNGSRELEVANTE PARAMETRISIERUNG ALS METEOROLOGISCHER BEITRAG ZUR UNTERSUCHUNG DER BEZIEHUNG WETTER - MENSCH]
K. BUCHER *In* Deutscher Wetterdienst Annals of Meteorology, No. 22. International Symposium on Human Biometeorology p 38-41 13 Aug. 1985 refs In GERMAN
Avail: Issuing Activity

Use of meteorological parameters as causal parameters for medical research on thermoregulatory troubles due to atmospheric processes is discussed. They can be used for characterization of specific atmospheric processes. An objective classification of meteorological parameters is based on biotropy influenced by weather change intensity and pressure areas and on the characterization of the transition areas between systems with differential air pressure. Air temperature and humidity changes are investigated for quantification of the description of meteorological processes. The change of the atmospheric dynamic relations determined by statistical investigations based on factor analysis influences the meteorological parameters measured near the ground. Author (ESA)

WEATHER AND MIGRAINE [WETTER UND MIGRAENE]
F. L. JENKNER and A. MACHALEK *In* Deutscher Wetterdienst Annals of Meteorology, No. 22. International Symposium on Human Biometeorology p 43-44 13 Aug. 1985 refs In GERMAN
Avail: Issuing Activity

The relationship between headache intensity and weather situations is investigated statistically based on forms filled in by 80 ambulent patients suffering from migraine from April to September 1982. The correlations are determined using univariant methods (correlation and regression analysis) and parameter-free methods (Chi-squared test and U-test) with respect to high pressure and low pressure weather situations, even pressure distribution, variable weather, and southern circulation form. Almost 60% of the patients are sensitive to weather. Less cases of high intensity headaches occur under low pressure weather conditions than under anticyclonal and zonal circulation weather situations. More serious headaches occur under atmospheric subsidence. No reliable statistical results can be obtained due to the medical data inhomogeneity. Improved terminology of bioweather situations should give more accurate data on the relationship between headache intensity and frequency and weather. Author (ESA)

TEMPERATURE WIND SPEED HUMIDITY (TWH): A BIOMETEOROLOGICAL INDEX TESTING
K. ZANINOVIC *In* Deutscher Wetterdienst Annals of Meteorology, No. 22. International Symposium on Human Biometeorology p 45-46 13 Aug. 1985 refs
Avail: Issuing Activity

The temperature, wind velocity, humidity index (TWH) based on measured values of temperature, wind speed and air humidity, on Hill's equations for cooling power, and on Brazol's sensation scale is tested for extreme temperature conditions to assess thermal sensation and its applicability in bioclimate evaluation. The TWH was compared with air enthalpy average values of a 10-day period during 10 yr. The TWH index including wind cooling effects gives better results than air enthalpy. It reinforces the sensation of cold in winter and smoothes the sensation of warmth in summer mornings and evenings. Author (ESA)

WEATHER AND ASTHMA SYMPTOMS [WETTER UND ASTHMASYMPTOMATIK]
J. LECHELER and M. VOELKER *In* Deutscher Wetterdienst Annals of Meteorology, No. 22. International Symposium on Human Biometeorology p 47-48 13 Aug. 1985 refs In GERMAN
Avail: Issuing Activity

The influence of weather-dependent environmental factors outside the laboratory on asthma was investigated based on the observation of 46 heavily asthmatic children and teenagers undergoing a long therapy at 1200 m. Peak-flow forms are filled in indicating their lung function every morning and evening. The values are compared with those of the weather station with respect to temperature, air humidity, sunshine, rainfall amount in mm, and atmospheric pressure. Correlation is noted between peak flow measured lung function values and monthly average temperatures and average insolation time. A relationship between temperature collapses and lung function worsening is noted. During the first months of summer the influence of the weather-dependent factors is added to the allergy stress. A 2 yr observation time is recommended to obtain more accurate results. Author (ESA)

STUDY OF A METEOROLOGICAL PREDICTION OF ACUTE MYOCARDIAL INFARCTION INCIDENCE
Y. WANG and X. ZHANG (Lianyungang Ocean Station, China) *In* Deutscher Wetterdienst Annals of Meteorology, No. 22. International Symposium on Human Biometeorology p 49-50 13 Aug. 1985 refs
Avail: Issuing Activity

The relationship between acute myocardial infarction incidence and weather in Beijing area is investigated. Excitation weather event and mitigating weather situation effects are analyzed to draw prediction model charts for infarction incidence. The whole-year synoptic situation is split into 65.5% for mitigating weather situation and 34.5% for excitation weather events. The disease occurrence is associated with cold front passage, low temperature, and high wind situations. Severe cold air before the front edge of cold high situation without any cold front passage is sufficient to affect a patient. Association of excitation weather event and precipitation eliminates the harmful effect. Further study of the disease inducement effects of excitation weather events is recommended. Author (ESA)

INVESTIGATIONS OF THE POSSIBLE INFLUENCE OF AIR ELECTRICAL PHENOMENA ON DULLING AND GHOST ACHING IN AMPUTATED PATIENTS [UNTERSUCHUNGEN UEBER EINEN MOEGLICHEN EINFLUSS VON LUFTELEKTRISCHEN ERSCHEINUNGEN AUF STUMPF- UND PHANTOMSCHMERZEN BEI AMPUTIERTEN]
J. PELZ (Freie Univ., Berlin, West Germany) and H. J. SWANTES *In its* Annals of Meteorology, No. 22. International Symposium on Human Biometeorology p 55-56 13 Aug. 1985 refs In GERMAN
Avail: Issuing Activity

The effects of air electricity on dulling and ghost aching in amputated patients are investigated based on written patients' complaints, weather observations in weather stations, and on automatic measurement of the atmospheric impulse radiation. Ghost aching geographical distribution is shown statistically. Ghost aching occurrence increases parallel to increased impulse radiation. Dulling troubles have a similar distribution as the occurrence distribution. The occurrence geographical distribution of aching complaints per month and per patient from 1976 to 1979 is investigated, leading to a mapping of the complaint locations. The correlation between bad weather occurrence and aching occurrence cannot be made. The same mapping can be made for dulling troubles. Author (ESA)

Avail: Issuing Activity

Forty asthmatic children and adolescents with seasonal sensitization and rhinoconjunctivitis were monitored and their symptomatology compared during the pollinosis season. The comparison shows a significant reduction of the bronchial symptomatology as well as of the allergic rhinoconjunctivitis due to a reduced allergen influx resulting from reduced airborne pollen in high mountains. Disappearance of the perennial allergens, better monitoring, and therapy optimization account for bronchial improvement. The seasonal allergen effects are reduced by height-dependent reduced airborne pollen. Author (ESA)

IMMISSION AND WEATHER EFFECTS ON CHILDREN'S AIRWAY ILLNESSES IN BERLIN (1979-1982): METHODOLOGY AND RESULT SUMMARY [IMMISSIONS- UND WETTEREINFLUESSE AUF ATEMWEGSERKRANKUNGEN VON KINDERN IN BERLIN (1979-1982). METHODIK UND ERGEBNISUEBERBLICK]
U. FEGELER, R. MOYZES, E. WEDLER, and K. EBERHARD *In* Deutscher Wetterdienst Annals of Meteorology, No. 22. International Symposium on Human Biometeorology p 72-74 13 Aug. 1985 refs In GERMAN
Avail: Issuing Activity

The possible acute effects of inhalative air pollution and of meteorological environmental factors on the morbidity rate of children's upper and lower airway illnesses listed in four diagnosis groups (pseudo Croup, bronchitis-pneumonia, asthma, and influenza) are reviewed with respect to immission parameters. Independent variables (SO2 concentration, equivalent temperature, interdiurnal air pressure, and relative indoor humidity) are linearly correlated with morbidity rate in monthly, weekly, and daily mean values. Air pollution immission and meteorological parameters influence the course of the infection rate of upper and lower airway illnesses. They have hazardous effects on the respiratory tissue separately or combined. Assumptions on the influence on infection rates of air chemical and thermal complex are given for Croup syndrome and asthma. Author (ESA)

U. FEGELER, R. MOYZES, E. WEDLER, and K. EBERHARD *In* Deutscher Wetterdienst Annals of Meteorology, No. 22. International Symposium on Human Biometeorology p 82-85 13 Aug. 1985 refs In GERMAN
Avail: Issuing Activity

Croup syndrome and asthma airway troubles in children aged 0 to 6 yr divided into 3 age groups were clinically investigated to determine the effects of immission and weather conditions on the infection percentage according to annual, interannual, and weekly variations, and SO2 concentration periods and days. Croup affection percentage increases from summer to fall, during the cold period due to an increased immission. Linear correlations are made between SO2 concentration, indoor humidity, and infection percentage. Maximum occurrence of asthma affections is in winter and from May to July due to pollen allergens. A positive correlation is made between asthma and SO2 concentration, a negative one between asthma and indoor humidity. The injection epidemiological effect (mycoplasma pneumoniae) is excluded for Croup syndrom. It is taken into account for asthma.

HUMAN BIOCLIMATIC CLASSIFICATION METHODS ILLUSTRATED WITH EXAMPLES OF SELECTED COUNTRIES [HUMANBIOKLIMATISCHE KLASSIFIZIERUNGSMETHODEN AM BEISPIEL AUSGEWAEHLTER LAENDER]
O. HARLFINGER *In* Deutscher Wetterdienst Annals of Meteorology, No. 22. International Symposium on Human Biometeorology p 119-121 13 Aug. 1985 refs In GERMAN
Avail: Issuing Activity

The analysis of meteorological parameters for tourism, recreation, and outdoor activities with respect to climatic comfort and discomfort is illustrated. Consideration of the thermal hygrometric area using model calculations or bioclimatologically complex factors to determine the boundary between comfort and discomfort; methods for determination of tourist season based on climatic parameters; and a combination of the first two methods with differential weighting of climatic and bioclimatic factors are used in bioclimatic holiday counseling. COMPARISON BETWEEN METEOROLOGICAL COMPLEX VALUES AND A MODEL OF MAN'S ENERGY BUDGET [VERGLEICH ZWISCHEN METEOROLOGISCHEN KOMPLEXGROESSEN UND EINEM ENERGIEBILANZMODELL DES MENSCHEN]
N. HAMMER, E. KOCH, and E. RUDEL *In* Deutscher Wetterdienst Annals of Meteorology, No. 22. International Symposium on Human Biometeorology p 122-123 13 Aug. 1985 refs In GERMAN
Avail: Issuing Activity

Heat and cooling parameters are compared to comfort criteria resulting from a model of man's energy budget with respect to sitting, slow and rapid walking, and dressing according to seasons. Assessment using equivalent temperature limits shows good agreement with energy budget methods during a 300 W activity and the cooling factor during a light sport activity. The results show a need for further investigation using the energy budget model to give physicians information on therapeutic applications of climate. Author (ESA)

A medico-meteorological-bioclimatic assessment of Saarland (West Germany) was made for construction of a recreation network. It is based on investigations of local wind circulation and cloud cover and air pollution in valleys. Air temperature and air humidity are measured. Inquiry forms are distributed to farmers, walkers, and highway engineers to obtain further information on local climatic particularities. Results of the measurement and written inquiry campaign are mapped to give information on the investigated area planning and utilization for adequate recreation forms according to bioclimatic criteria. SPATIAL DISTRIBUTION OF HEAT AND COLD STRESS IN THE FEDERAL REPUBLIC OF GERMANY [DIE RAEUMLICHE VERTEILUNG VON WAERMEBELASTUNG UND KAELTESTRESS IN DER BUNDESREPUBLIK DEUTSCHLAND]
G. JENDRITZKY *In its* Annals of Meteorology, No. 22. International Symposium on Human Biometeorology p 134-136 13 Aug. 1985 refs In GERMAN
Avail: Issuing Activity

A stochastic climate model based on data of cooling effects on the thermoregulatory system was developed to design monthly differential climate maps for description of the thermal environment in city and environmental planning. The model is standardized with respect to individual thermoregulation differences, to Sun-shadow difference and to heat loss conditions. The small-scale effects on orography or vegetation as well as UV radiation, oxygen partial pressure, and air hygiene are not taken into account. The maps constitute a standardized basis for space comparison with respect to efficiency, thermal comfort, and human health.

APPLICATION OF METEOROLOGICAL AND SOLAR DATA IN HEALTH RESORT CLIMATHERAPY
S. TYCZKA and I. PONIKOWSKA *In* Deutscher Wetterdienst Annals of Meteorology, No. 22. International Symposium on Human Biometeorology p 140-141 13 Aug. 1985
Avail: Issuing Activity

A quantitative analysis of the thermal and photochemical effects of solar radiation on 150 healthy patients aged 18 to 60 is made to determine the effectiveness of heliotherapy using long-term actinometric data and the intensity of ultraviolet solar radiation corresponding to the Sun exposure time necessary to obtain a skin photoerythema. Global solar radiation is analyzed in relation to the mean photoerythema dose, to the Sun's altitude and to cloudiness. The skin photoerythema dose is the product of solar radiation intensity and Sun exposure time. The results are valid for insolation conditions similar to those on the Baltic coast with solar altitude of 50 to 60 deg. Author (ESA)

ANALYSIS TECHNIQUES FOR CONTINUOUS TWENTY FOUR HOUR AMBULATORY BLOOD PRESSURE PATTERNS Abstract Only
D. J. ROFFE 1985 3 p
Avail: Issuing Activity

The Oxfor ambulatory blood pressure recording system records each arterial blood pressure complex during a 24 hour period onto a miniature cassette tape. A hierarchy of analysis techniques was developed on a DEC LSI-11/03 minicomputer. Subsequent statistical analysis and graphical representation describe the patient's arterial blood pressure variation throughout the recording period. Inspection of 24 hour continuous ambulatory blood pressure record shows many marked, apparently spontaneous blood pressure fluctuations. Detection of these blood pressure transients as they occur may help sort out their causal mechanisms. A microprocessor device was constructed to monitor direct blood pressure in real time and compile a history of the blood pressure and heart rate. E.A.K.

THE EFFECT OF EQUALLY EFFECTIVE NEUTRON AND X-RAY RADIATION DOSES ON THE EPITHELIAL CELLS OF THE HAIR BULB
S. M. VALTER, E. L. GINSBURG, A. V. BOGATYREV, G. I. KALONYKOVA, and A. G. SVERDLOV 6 Nov. 1985 13 p refs Transl. into ENGLISH from Radiobiologia (USSR), v. 22, issue 5, 1982 p 637-642
(BLL-CE-TRANS-8221-(9022.090)) Avail: British Library Lending Div., Boston Spa, Engl.

Two stages in the response of rat hair follicle cells to X-ray and neutron irradiation with equally effective doses were examined. Enlargement of endoplasmic reticulum canals, swelling of some of the mitochondria, and appearance of autophagous vacuoles in cells were detected during the first day following irradiation. After 5 to 7 days, the changes which occurred were characteristic of the process of hair follicle transfer from the active to resting stage. No qualitative distinctions are detected in the radiation response of the cells studied. E.A.K.

A number of physiological changes have been demonstrated in bone, muscle and blood after exposure of humans and animals to microgravity. Determining mechanisms and the development of effective countermeasures for long duration space missions is an important NASA goal. The advent of tomographic nuclear magnetic resonance imaging (NMR or MRI) gives NASA a way to greatly extend early studies of this phenomena in ways not previously possible; NMR is also noninvasive and safe. NMR provides both superb anatomical images for volume assessments of individual organs and quantification of chemical/physical changes induced in the examined tissues. The feasibility of NMR as a tool for human physiological research as it is affected by microgravity is demonstrated. The animal studies employed the rear limb suspended rat as a model of mucle atrophy that results from microgravity. And bedrest of normal male subjects was used to simulate the effects of microgravity on bone and muscle. Author

CONTRIBUTIONS TO WORKLOAD OF ROTATIONAL OPTICAL TRANSFORMATIONS Final Technical Report
R. P. ATKINSON and T. L. HARRINGTON 1985 123 p refs
(Contract NCC2-272)
(NASA-CR-176542; NAS 1.26:176542) Avail: NTIS HC A06/MF A01 CSCL 06S

An investigation of visuomotor adaptation to optical rotation and optical inversion was conducted. Experiment 1 examined the visuomotor adaptability of subjects to an optically rotating visual world with a univariate repeated measures design. Experiment 1A tested one major prediction of a model of adaptation put forth by Welch who predicted that the aversive drive state that triggers adaptation would be habituated to fairly rapidly. Experiment 2 was conducted to investigate the role of motor activity in adaptation to optical rotation. Specifically, this experiment contrasted the reafference hypothesis and the proprioceptive change hypothesis. Experiment 3 examined the role of cognition, error-corrective feedback, and proprioceptive and/or reafferent feedback in visuomotor adaptation to optical inversion. Implications for research and implications for practice were suggested for all experiments. Author

STIMULUS SPECIFICITY AND INDIVIDUAL STEREOTYPY OF AUTONOMIC RESPONSES TO MOTION STRESSORS M.S. Thesis
M. G. MORGAN Aug. 1985 54 p refs
(Contract NCC2-115)
(NASA-CR-176543; NAS 1.26:176543) Avail: NTIS HC A04/MF A01 CSCL 06S

Motion sickness research shows a lack of agreement regarding the contribution of the autonomic nervous system (ANS). The resolution of this question is exigent for Space Adaptation Syndrome, zero gravity sickness. A case is drawn for the necessity to apply a methodological approach that incorporates: (1) standardization of parameters in relation to the individual differences in variability and prestimulus levels; (2) a concern for patterning of responses; and (3) the physiological association with subjective reports. Vasomotor, heart rate, respiration rate, skin conductance and subjective reports of malaise were collected from 22 subjects while participating in three motion stressors; vertical acceleration, Coriolis stimulation, and combined optokinetic and Coriolis stimulation. The results demonstrate that ANS response patterns can be separated into three mutually exclusive components: (1) a generalized response to motion sickness; (2) a stimulus specific response to the type of stressor being presented; and (3) individualized stereotypical response patterns that are associated with subjective reports of malaise. EXPLORATORY STUDIES OF PHYSIOLOGICAL COMPONENTS OF MOTION SICKNESS: CARDIOPULMONARY DIFFERENCES BETWEEN HIGH AND LOW SUSCEPTIBLES Progress Report
K. NAIFEH 1985 18 p refs
(NASA-CR-176541; NAS 1.26:176541) Avail: NTIS HC A02/MF A01 CSCL 06S

A comprehensive examination of cardiovascular autonomic response to motion sickness was studied and whether differences in cardiopulmonary function exist in high and low susceptibility groups were determined. Measurement techniques were developed as was test equipment for its ability to provide accurately new measures of interest and to test the adequately of these new measures in differentiating between susceptibility groups. It was concluded that these groups can be differentiated using simple, brief stressors and measurements of cardiodynamic function. Author

(NASA-CR-176539; NAS 1.26:176539) Avail: NTIS HC A02/MF A01 CSCL 06S

A total of 12 AFT training sessions were administered to SL 3 Payload Specialists over a 7 month period. Nine of these sessions were 2 hours in duration and three were 3 hours in duration. A total of three rotating chair tests were conducted in this time frame with four subjects. The performance of these crewmen across tests is shown. Test 1, a baseline motion sickness test, was conducted approximately 10 months prior to the mission, before any AFT was administered. Test 2 was administered after 2 hours of AFT, test 3 after 4 hours and test 4 after 6 hours (total) of training in symptom control. Improvement in performance is reflected by a subject's ability to tolerate a greater number of rotations across tests. Additional training for crewman was not possible within the constraints of the mission. Results of the mission indicate that, as predicted preflight, subject #32 was relatively symptom free inflight while subject #33 was not. Other preflight and postflight tests and analyses are reported. Author

COMPARISON OF MALE AND FEMALE MAXIMUM LIFTING CAPACITY
M. A. TEVES, J. A. VOGEL, and J. E. WRIGHT Sep. 1985 15 p
(AD-A160687; USARIEM-M40/85) Avail: NTIS HC A02/MF A01 CSCL 06S

A large influx of women into traditionally male fields of employment has drawn much attention to the strength differences between men and women. Two tests of isometric strength (handgrip and upright pull) and two tests of maximum lift capacity (a weight lift machine-IDL 152 and a weighted box lift MLC 132) were administered to 90 male and 107 female soldiers at the end of their Basic Training in order to examine differences in female/male (F/M) strength ratio. Skinfold measurements were made to obtain an estimate of lean body mass (LBM). Females exhibited 63% of the isometric strength and 55-59% of the lifting capacity of males. When the scores were normalized for body weight (BW) females were 75% as strong as males on isometric measures, and were able to lift 66% as much on IDL 152 and 72% as much on MLC 132. Comparison of the two lifting tasks revealed that on the average, males were able to lift 18% more weight and 24% more weight on the free lift than on the machine lift. This would suggest that if a machine lift is used for pre-employment screening purposes, the absolute weight an applicant is required to lift on the machine need not equal the maximum weight to be lifted on the job. As the difference between a machine lift and a free lift task was greater in females, a machine lift test may pose a greater disadvantage to female candidates than would isometric or free weight lift testing. SAM (for Structural Analysis of Man) is a three-dimensional discrete element mathematical model developed for the prediction of the dynamic response of the head-spine-torso structure to severe impact environments. The model mathematically describes the equations of motion for a system of rigid bodies representing, for example, the head, torso segments and the pelvis, interconnected by deformable elements representing, for example, the intervertebral discs, ligaments and other connective tissues. SAM consists of two distinct components; a general purpose, large displacement, dynamic structural analysis program and a data base containing a number of data sets each which contains material, geometric and inertial property, connectivity and loading environment data. This report describes: the development of a model of the diaphragm which, when incorporated into the HSM, will significantly enhance its ability to replicate the effects of the secondary +Gz loading path through the viscera-abdominal wall/diaphragm/rib-cage system; a discussion of spinal injuries associated with pilot ejection and proposed injury criteria for the cervical spine; an axisymmetric finite element analysis of a lumbar vertebral body with comparisons to other models and specific attention to the question of material distribution effects on stresses; and frontal (-Gx) and lateral (+Gy) impact simulations using the recently developed Head-Cervical Spine Model and comparisons of simulation results with experimental data. The orbiter and probe portions of the NASA Galileo spacecraft contain components which require auxiliary heat during the mission. To meet these needs, the Department of Energy's (DOE's) Office of Special Nuclear Projects (OSNP) has sponsored the design, fabrication, and testing of a one-watt encapsulated plutonium dioxide-fueled thermal heater named the Light-Weight Radioisotope Heater Unit (LWRHU). This report addresses the radiological risks which might be encountered by people both at the launch area and worldwide should postulate mission failures or malfunctions occur, which would result in the release of the LWRHUs to the environment. Included are data from the design, mission descriptions, postulated accidents with their consequences, test data, and the derived source terms and personnel exposures for the various events. DOE

SPATIAL ILLUSIONS OF VESTIBULAR GENESIS DURING FLIGHTS IN AIRCRAFT
E. V. LAPAYEV and O. A. VORCBYEV *In its* USSR Report: Space Biology and Aerospace Medicine, Volume 19, no. 6, November - December 1985 (JPRS-USB-86-001) p 11-16 19 Feb. 1986 refs Transl. into ENGLISH from Kosmicheskaya Biologiya i Aviakosmicheskaya Meditsina (Moscow, USSR), v. 19, no. 6, Nov. - Dec. 1985 p 11-15
Avail: NTIS HC A08/MF A01

Vestibular illusions (incidence, pattern, manifestation, negative effect on pilot's activity) that occur in the atmospheric flight were studied. A special questionnaire was used to interview anonymously 484 flying crewmembers. Spatial illusions were detected in 71.1% of the crewmembers; they developed in 50.6% when turns were performed and they were perceived in 76.2% as a false bank. Over 50% (54.3%) of the crewmembers interviewed reported that spatial illusions adversely affected pilot's performance and 3.6% of them indicated that they adversely influenced the flight program as a whole. Spatial illusions can be generated by various factors which should be taken into account in order to improve countermeasures against spatial illusions in the flying personnel.

VESTIBULAR FUNCTION IN OLDER INDIVIDUALS SUBMITTED TO ANTIORTHOSTATIC HYPOKINESIA FOR 30 DAYS
V. K. GAVRILIN and L. N. ZAKHAROVA *In its* USSR Report: Space Biology and Aerospace Medicine, Volume 19, no. 6, November - December 1985 (JPRS-USB-86-001) p 17-25 19 Feb. 1986 refs Transl. into ENGLISH from Kosmicheskaya Biologiya i Aviakosmicheskaya Meditsina (Moscow, USSR), v. 19, no. 6, Nov. - Dec. 1985 p 15-20
Avail: NTIS HC A08/MF A01

Vestibular responses of 15 men (aged 42 to 50) to 30-day head-down tilt (-8 deg) were investigated. The test subjects showed atherosclerotic symptoms and neurocirculatory dystonia of the hypertensive type. They were exposed to the Fitzgerald-Hallpike caloric test, indirect otolithometry (eye counter-rolling reflex according to the method of successively presented images), and motion sickness according to Bryanov. In the pretest period vestibular changes were seen at the level of labyrinths and central formations (change in the nystagmic pattern, dissociation of the components of the caloric reaction, vestibular asymmetry, negative counter-rolling). During head-down tilt cupular reflexes remained essentially unaltered, except for the asymmetry and enhancement of the sensory and autonomic components of the caloric reaction. The otolith function was modified in all the test subjects. After exposure tolerance to motion sickness was not deteriorated.

CHARACTERISTICS OF ACCELERATIONS IN AEROBATIC FLIGHT AS A SPORT
V. G. VOLOSHIN, Y. I. BYKOVA, A. V. OPRYSHKO, and N. A. LAPSHINA *In its* USSR Report: Space Biology and Aerospace Medicine, Volume 19, no. 6, November - December 1985 (JPRS-USB-86-001) p 26-28 19 Feb. 1986 refs Transl. into ENGLISH from Kosmicheskaya Biologiya i Aviakosmicheskaya Meditsina (Moscow, USSR), v. 19, no. 6, Nov. - Dec. 1985 p 20-22
Avail: NTIS HC A08/MF A01

Thirty well-qualified flying sportsmen, aged 22 to 42, who performed 210 aerobatic flights, onboard a sporting airplane Yak-50, were examined, using an automatic monitoring system. The flyers were exposed to +9 Gz and -6 Gz as a maximum the duration of which was 10 s and 5 s, respectively. The onset rate varied from 0.5 to 2.5 G/s (with the mean rate 1 G/s), reaching 4.2 G/s as a maximum. On the average, the training flight lasts 25 min, 45 to 50% of which the pilot experiences acceleration of

various values and different sign. The most common acceleration values are: +6 and +7 Gz or -4 and -5 Gz. Author

DISTINCTIONS IN REACTIONS TO ACTIVE ORTHOSTATIC AND WATER-LOADING TESTS OF SUBJECTS DIFFERING IN TOLERANCE TO POSITIVE GZ ACCELERATIONS
I. G. DLUSSKAYA and M. N. KHOMENKO *In its* USSR Report: Space Biology and Aerospace Medicine, Volume 19, no. 6, November - December 1985 (JPRS-USB-86-001) p 29-35 19 Feb. 1986 refs Transl. into ENGLISH from Kosmicheskaya Biologiya i Aviakosmicheskaya Meditsina (Moscow, USSR), v. 19, no. 6, Nov. - Dec. 1985 p 22-27
Avail: NTIS HC A08/MF A01

Thirty-seven healthy male test subjects, aged 19 to 21, with different +Gz acceleration tolerance were examined. Their blood pressure (BP) and heart rate (HR) during 5-min tilt tests and 2% water loading tests were measured 2 to 3 weeks prior to centrifugation. Quantitative evaluation of orthostatic tolerance using an orthostatic index and BP and HR responses to tilt tests before and after water loading revealed specific features of cardiovascular regulation in the subjects with high and low +G acceleration tolerance. The negative predictive indicators include: decreased BP, HR and cardiac index in the supine position in combination with high orthostatic tolerance, as well as decreased orthostatic tolerance in combination with a lower function of vasoconstrictor mechanisms in the upright position and a lower sensitivity of carotid sinus reflexes to blood volume changes during tilt and water loading tests. EFFECT OF IMMERSION HYPOKINESIA ON CHARACTERISTICS OF PROGRAMMED VOLUNTARY MOVEMENTS
A. V. KIRENSKAYA, I. B. KOZLOVSKAYA, and M. G. SIROTA *In its* USSR Report: Space Biology and Aerospace Medicine, Volume 19, no. 6, November - December 1985 (JPRS-USB-86-001) p 36-43 19 Feb. 1986 refs Transl. into ENGLISH from Kosmicheskaya Biologiya i Aviakosmicheskaya Meditsina (Moscow, USSR), v. 19, no. 6, Nov. - Dec. 1985 p 27-32
Avail: NTIS HC A08/MF A01

The effect of immersion hypokinesia on the precision of program-type voluntary movements was investigated using standard test movements and quanitative analytical methods. The exposure did not cause disorders in the programme mechanisms but reduced significantly the precision range of the motor control system. The loss of precision was at its maximum (by 100% and over) on immersion day 3. The universality and consistency of the above changes indicated their close association with the specific exposure while the fast rate of their development suggested their reflex nature. FORCED EXPIRATION PARAMETERS IN HEALTHY MAN SUBMITTED TO SIMULATED WEIGHTLESSNESS
N. M. ASYAMOLOVA, V. G. SHABELNIKOV, V. M. BARANOV, A. N. KOTOV, and M. Y. VOLKOV *In its* USSR Report: Space Biology and Aerospace Medicine, Volume 19, no. 6, November - December 1985 (JPRS-USB-86-001) p 48-52 19 Feb. 1986 refs Transl. into ENGLISH from Kosmicheskaya Biologiya i Aviakosmicheskaya Meditsina (Moscow, USSR), v. 19, no. 6, Nov. - Dec. 1985 p 34-37
Avail: NTIS HC A08/MF A01

Lung volumes and forced expiratory volumes during 3-hour water immersion as well as in the upright and supine positions were measured. Water immersion up to the neck decreased the functional residual capacity, peak and maximum velocities of air flows during inspiration and expiration with various lung volumes and increased the forced expiratory time and pulmonary time constant. These changes seem to be produced by a higher inelastic resistance as well as additional hydrostatic pressure upon the chest and abdomen. During the transfer from the upright to the supine position these changes were identical but of smaller magnitude. Author

EFFECT OF RESTRICTED MOTOR ACTIVITY ON ALANINE LEVEL IN HUMAN PLASMA
T. F. VLASOVA, Y. B. MIROSHNIKOVA, and A. S. USHAKOV *In its* USSR Report: Space Biology and Aerospace Medicine, Volume 19, no. 6, November - December 1985 (JPRS-USB-86-001) p 53-57 19 Feb. 1986 refs Transl. into ENGLISH from Kosmicheskaya Biologiya i Aviakosmicheskaya Meditsina (Moscow, USSR), v. 19, no. 6, Nov. - Dec. 1985 p 37-40
Avail: NTIS HC A08/MF A01

The plasma alanine concentration was measured in 28 healthy male test subjects exposed to head-down tilt of various duration (2-hour exposure at -12 deg, 7-day exposure at -6 deg, 49-day exposure at -4 deg, and 120-day exposure at -4 deg). Head-down tilt led to alanine changes that correlated with exposure time. These results suggest that alanine concentrations in blood reflect to a certain extent the rate of hepatic gluconeogenesis and depend significantly on the hypokinetic time. The findings can be clinically used as a measure of hepatic gluconeogenesis in bed-ridden patients that may require preventive or therapeutic treatment. Author

Mechanical properties (stress and strain) of bones from rats of different ages exposed to weightlessness, hypodynamia or hypokinesia were examined upon torsion. As compared to the controls, the femur of Cosmos-1129 rats showed high deformability. Also, skeletal bones of young rats proved more sensitive to hypodynamia than those of adult animals. Author

ROLE OF VITAMIN D3 ACTIVE METABOLITES IN REGULATION OF CALCIUM METABOLISM IN HYPOKINETIC RATS
I. N. SERGEYEV, B. V. AFONIN, N. V. BLAZHEYEVICH, B. V. MORUKOV, and M. S. BELAKOVSKIY *In its* USSR Report: Space Biology and Aerospace Medicine, Volume 19, no. 6, November - December 1985 (JPRS-USB-86-001) p 66-71 19 Feb. 1986 refs Transl. into ENGLISH from Kosmicheskaya Biologiya i Aviakosmicheskaya Meditsina (Moscow, USSR), v. 19, no. 6, Nov. - Dec. 1985 p 46-50
Avail: NTIS HC A08/MF A01

The rats exposed to prolonged hypokinesia showed hypocalcemia, lower PTH and higher calcitonin concentrations in the serum, decreased calcium absorption in the small intestine, and a trend toward nephro- and arteriocalcinosia. Prophylactic administration of 24,25-hydroxy D sub 3, 1,25-hydroxy D sub 3 and their combinations enhanced calcium absorption and alleviated hypocalcemia. The changes in the hormonal regulation of calcium homeostasis can be viewed as a factor responsible for calcium metabolic disorders associated with hypokinesia. Author

COMPARISON OF BONE REACTIONS OF RATS SUBMITTED TO CLINOSTATIC AND ANTIORTHOSTATIC HYPOKINESIA
V. N. SHVETS, A. S. PANKOVA, O. Y. KABITSKAYA, and Z. Y. VNUKOVA *In its* USSR Report: Space Biology and Aerospace Medicine, Volume 19, no. 6, November - December 1985 (JPRS-USB-86-001) p 72-78 19 Feb. 1986 refs Transl. into ENGLISH from Kosmicheskaya Biologiya i Aviakosmicheskaya Meditsina (Moscow, USSR), v. 19, no. 6, Nov. - Dec. 1985 p 50-54
Avail: NTIS HC A08/MF A01

Examination of spongy bones of rats exposed to clino- and antiorthostatic hypokinesia showed that changes in bone mass, bone cells and their precursors were similar in both cases. The bone resorption-bone formation process remained balanced. However, bone responses to clino- and antiorthostatic hypokinesia exhibited certain differences. Clinostatic hypokinesia produced greater osteo-porosis in the femoral bone, whereas bone losses in the humerus, sternum and pelvis were identical. Antiorthostatic hypokinesia led to osteoporosis that was identical in every bone examined. In addition, clino- and antiorthostatic hypokinesia caused different reactions of stromal precursor cells, the latter model producing a greater effect on them. It is concluded that immobilization-induced skeletal disorders are associated with a decreased rate of bone histogenesis which proceeds at a lower level rather than with the stress-reaction. Author

CONDITION OF THYROID GLAND AND C CELLS DURING LONG-TERM ROTATION (MORPHOLOGICAL AND BIOCHEMICAL INVESTIGATION)
G. I. PLAKHUTA-PLAKUTINA, Y. A. SAVINA, and B. V. AFONIN *In its* USSR Report: Space Biology and Aerospace Medicine, Volume 19, no. 6, November - December 1985 (JPRS-USB-86-001) p 79-83 19 Feb. 1986 refs Transl. into ENGLISH from Kosmicheskaya Biologiya i Aviakosmicheskaya Meditsina (Moscow, USSR), v. 19, no. 6, Nov. - Dec. 1985 p 54-57
Avail: NTIS HC A08/MF A01

The thyroid and parathyroid glands of 65 Wistar rats centrifuged for 30 days at 1.1 and 2.0 G were examined histologically and biochemically. The centrifugation led to a higher activity to C cells, an increased rate of thyro-calcitonin (TCT) synthesis and excretion, i.e., C-cell degranulation, and a significant (twofold) increase of TCT in plasma. The stimulation effect of the TCT-producing system persisted during 7-postrotation days and was very distinct in the animals exposed to 2.0 G. There were no morphological changes in the parathyroid glands or in the PTH concentration in the plasma. Author

CONDITION OF CARDIOVASCULAR SYSTEM IN PRESENCE OF ACUTE MOUNTAIN SICKNESS
M. M. MIRRAKHIMOV, R. O. KHAMZAMULIN, and V. A. LARKOV *In its* USSR Report: Space Biology and Aerospace Medicine, Volume 19, no. 6, November - December 1985 (JPRS-USB-86-001) p 84-90 19 Feb. 1986 refs Transl. into ENGLISH from Kosmicheskaya Biologiya i Aviakosmicheskaya Meditsina (Moscow, USSR), v. 19, no. 6, Nov. - Dec. 1985 p 57-62
Avail: NTIS HC A08/MF A01

Fifteen subjects with uneventful adaptation and 28 subjects with acute high mountain sickness were kept at an altitude of 3600 m. Prior to the exposure all the test subjects, aged 18 to 20, were essentially healthy. As compared to the controls, the subjects with acute high mountain sickness showed a greater increment in heart rate, blood pressure in the brachial artery, pulmonary hypertension and vasoconstriction. It was found that the subjects susceptible to acute high mountain sickness exhibited (at sea level) higher values of heart rate and R wave in the ECG II lead and lower systolic pressure in the brachial artery. These findings can serve as predictors of acute high mountain sickness. Author

The cortical impedance of the large hemispheres of nembutal-anesthetized rats exposed to a constant magnetic field of 0.1, 0.4 and 1.6 T was investigated. During 20 min. exposure the impedance decreased (at the expense of a decrease in both of its components--capacity and active resistance). The impedance decrease was more pronounced (up to 93%) and statistically significant in a field of 1.6 T. After exposure the impedance decrease persisted for 10 min. Author

EVALUATION OF CONDITION OF HUMAN SKIN IN A CLOSED ENVIRONMENT BY MEANS OF CHROMATOGRAPHY
D. M. DUBININ, V. P. NAYDINA, and S. N. ZALOGUYEV *In its* USSR Report: Space Biology and Aerospace Medicine, Volume 19, no. 6, November - December 1985 (JPRS-USB-86-001) p 102-108 19 Feb. 1986 refs Transl. into ENGLISH from Kosmicheskaya Biologiya i Aviakosmicheskaya Meditsina (Moscow, USSR), v. 19, no. 6, Nov. - Dec. 1985 p 69-73
Avail: NTIS HC A08/MF A01

Gas-liquid chromatography was used to study the skin and sebum cutaneum of 6 male test subjects (aged 45 to 55) before and after 30-day enclosure. The greatest changes were seen in the composition of free fatty acids of lipids of the facial skin

(increase of palmito-oleic acid). The lipid composition of the sebum cutaneum of the healthy subjects differed from that of the acne-bearing subjects. It is recommended to use the ratio of palmitic acid to palmito-oleic acid as a measure of changes of fatty acids in the sebum cutaneum of healthy people in an unusual environment. Author

The purpose of this study was to investigate the composition and toxicity of fluoroplastic F-40 thermodestruction products at 300 to 500 C and to identify the maximally allowable temperature for their safe use. When heated over 400 C, the products of fluoroplastic F-40 evolution included such compounds as hydrogen fluoride, fluoroorganic compounds, carbon monoxide, formaldehyde. When heated at 500 C, the thermodestruction products caused the highest mortality rate of mice. The pathogenesis and clinical development of fluoroplastic F-40 poisoning are primarily associated with fluoro-compounds. It is concluded that the temperature 300 C is the maximum temperature at which tetrafluoroethylenebased polymers can be used. Author

DEVICE FOR COMBINED STUDY OF VISUAL TRACKING AND VERBAL ACTIVITY
B. A. KARPOV and A. I. PUDOV *In its* USSR Report: Space Biology and Aerospace Medicine, Volume 19, no. 6, November - December 1985 (JPRS-USB-86-001) p 120-123 19 Feb. 1986 refs Transl. into ENGLISH from Kosmicheskaya Biologiya i Aviakosmicheskaya Meditsina (Moscow, USSR), v. 19, no. 6, Nov. - Dec. 1985 p 80-82
Avail: NTIS HC A08/MF A01

The diverse forms of industrial and research work often require that man combine intensive visual tracking with verbal activity. A pilot or cosmonaut may be compelled to keep attentive watch over relatively mobile reference points, targets and other objects and, at the same time, hold responsible conversations, receive or give orders, receive important information orally, etc. It is necessary to make synchronous records of the subject's eye movements, his speech as well as speech addressed to him for a quantitative evaluation of tracking distinctions associated with a verbal load. An experimental device designed to solve this problem should meet the following conditions: (1) eye movements must be recorded by a rather sensitive method, so that all elements of functional significance to tracking of eye movements in the macro- and microrange (with the exception of tremor) are distinctly recorded, (2) the test signals delivered for tracking must be few in number and standard, typical, and (3) the tracing obtained as a result of the examination must provide a clear idea about the oculomotor and verbal activity of the subject, as well as the speech of individuals with whom he converses. A device for simultaneous and combined recording of two processes in graphic form--eye movements when tracking visual stimuli and concomitant conversation is described. B.W.

EFFECT OF ACTIVE ANTIORTHOSTATIC CONDITIONING ON TOLERANCE TO CRANIAL REDISTRIBUTION OF BLOOD
A. F. ZAVADOVSKIY, M. M. KOROTAYEV, S. V. KOPANEV, I. A. PLYASOVA-BAKUNINA, and Y. N. VAVAKIN *In its* USSR Report: Space Biology and Aerospace Medicine, Volume 19, no. 6, November - December 1985 (JPRS-USB-86-001) p 126-129 19 Feb. 1986 refs Transl. into ENGLISH from Kosmicheskaya Biologiya i Aviakosmicheskaya Meditsina (Moscow, USSR), v. 19, no. 6, Nov. - Dec. 1985 p 83-85
Avail: NTIS HC A08/MF A01

At the present time, antiorthostatic position of the body is used extensively in aerospace medicine as a model for investigation of reactions of the cardiovascular system to gravity-caused redistribution of blood. In particular, one can predict, to some extent, tolerance of the circulatory system to weightlessness, particularly in the acute period of adaptation, by means of the antiorthostatic test an angles of -15 and -30 deg. A distinction is made between active and passive orthostatic tests. In the active form, the subject assumes an antiorthostatic position by himself and voluntary muscular tension is mandatory; in the passive form, the position is usually obtained by means of a turntable. Under these conditions one observes muscular relaxation. The objective here was to investigate the flexibility of regulatory mechanisms of the cardiovascular system and the possibility of enhancing the body's tolerance to gravity-related redistribution of blood by using active antiorthostatic tests. SOME ASPECTS OF HUMAN AMINO ACID METABOLISM AT HIGH ALTITUDE
Y. A. SINYAVSKIY, T. F. VLASOVA, M. S. BELAKOVSKIY, Y. A. SENKEVICH, and B. I. KIM *In its* USSR Report: Space Biology and Aerospace Medicine, Volume 19, no. 6, November - December 1985 (JPRS-USB-86-001) p 130-133 19 Feb. 1986 refs Transl. into ENGLISH from Kosmicheskaya Biologiya i Aviakosmicheskaya Meditsina (Moscow, USSR), v. 19, no. 6, Nov. - Dec. 1985 p 85-87
Avail: NTIS HC A08/MF A01

The problem of adaptation to altitude hypoxia has become particularly timely recently in view of the active economic development of mountainous regions and the need to perform difficult forms of physical and intellectual work at high altitudes. In addition, high-altitude climate is used extensively for prevention and treatment of cardiovascular and pulmonary pathology, as well as for holding training meets for representatives of different sports. But stays at high altitudes and concomitant hypoxial lead to functional changes in different systems of the body, eliciting changes in energy, protein and amino acid metabolism, yet the latter has not been sufficiently investigated. This study was undertaken in order to assess amino acid metabolism as related to hypoxic conditions and physical exercise in top-ranking sport mountain climbers, who were candidates for an expedition to Mount Everest, at the time of their adaptation to high-altitude conditions and after an ascent to more than 4000 m above sea level.

ELECTROCARDIOGRAM IN NEHB TYPE LEADS OF MACACA MULATTA MONKEYS
V. P. MELNICHENKO, M. D. GOLDOVSKAYA, I. O. GIRYAYEVA, Y. V. SHEVCHENKO, G. G. CHAMURLIYEV, and V. S. MAGEDOV *In its* USSR Report: Space Biology and Aerospace Medicine, Volume 19, no. 6, November - December 1985 (JPRS-USB-86-001) p 134-138 19 Feb. 1986 refs Transl. into ENGLISH from Kosmicheskaya Biologiya i Aviakosmicheskaya Meditsina (Moscow, USSR), v. 19, no. 6, Nov. - Dec. 1985 p 87-89
Avail: NTIS HC A08/MF A01

Macaca mulatta (rhesus) monkeys are used extensively in model experiments, which reproduce various physiological and pathological states, including cardiovascular diseases 6. There are a considerable number of publications dealing with the normal

electrocardiogram (ECG) of lower primates, including Macaca mulatta, which were recorded in standard and amplified monopolar leads from the extremities. At the same time, when monitoring the heart's bioelectric activity in chronic experiments there are some advantages to using the system of bipolar precardiac leads of Nehb, since it permits recording the ECG when there is a high signal level in several projection planes of the resultant vector of the heart's electromotive force with a minimum of implanted exploring electrodes. However, there is no information in the literature concerning the standard features of the ECG in the Nehb leads for monkeys. The objective here was to examine the ECG distinctions of monkeys as recorded in the leads of Nehb using chronically implanted electrodes. Author

VECTION-INDUCED GASTRIC DYSRHYTHMIAS AND MOTION SICKNESS Annual Report, 1 May 1985 - 30 Apr. 1986
K. L. KOCH and R. M. STERN 1 Apr. 1986 64 p refs
(Contract NAG9-118)
(NASA-CR-176620; NAS 1.26:176620; AR-1) Avail: NTIS HC A04/MF A01 CSCL 06S

Gastric electrical and mechanical activity during vection-induced motion sickness was investigated. The contractile events of the antrum and gastric myoelectric activity in healthy subjects exposed to vection were measured simultaneously. Symptomatic and myoelectric responses of subjects with vagotomy and gastric resections during vection stimuli were determined. And laboratory based computer systems for analysis of the myoelectric signal were developed. Gastric myoelectric activity was recorded from cutaneous electrodes, i.e., electrogastrograms (EGGs), and antral contractions were measured with intraluminal pressure transducers. Vection was induced by a rotating drum. gastric electromechanical activity was recorded during three periods: 15 min baseline, 15 min drum rotation (vection), and 15 to 30 min recovery. Preliminary results showed that catecholamine responses in nauseated versus symptom-free subjects were divergent and pretreatment with metoclopramide HC1 (Reglan) prevented vection-induced nausea and reduced tachygastrias in two previously symptomatic subjects. ELECTRODERMAL CHANGES CORRESPONDING TO THE DEGREE OF DISCOMFORT INDUCED BY MOTION SICKNESS
1985 19 p refs In JAPANESE; ENGLISH summary
(NAL-TR-880; ISSN-0389-4010) Avail: NTIS HC A02/MF A01

The qualitative correspondence between the degree of discomfort induced by motion sickness and the following electrodermal changes was examined; skin potential level (SPL), skin resistance level (SRL), and skin potential reflex (SPR). A depolarizing change in SPL and a lowering of SRL were observed which corresponded to lasting discomfort. These changes were detected in the thermal sweat areas. It was suggested that the change in SPL also occured in the arousal sweat area. Arousal response appears in the arousal sweet area rather than in the sweat areas. SPL showed better correspondence than SRL, especially in the time required for recovery after the discomfort stimulation. On the other hand, SPR was observed in the arousal sweat area accompanied by transient discomfort induced by Corioils stimulus. It was indicated that the amplitude of the positive wave (P wave) in SPR might correlate quantitatively to the degree of discomfort. SPR was not remarkably detected in the thermal sweat areas. TOXIC HAZARDS RESEARCH UNIT ANNUAL TECHNICAL REPORT: 1985 Report, Jun. 1984 - May 1985
J. D. MACEWEN and E. H. VERNOT Sep. 1985 202 p
(Contract F33615-80-C-0512)
(AD-A161558; AAMRL-TR-85-058; REPT-22) Avail: NTIS HC A10/MF A01 CSCL 06T

The research program of the Toxic Hazards Research Unit (THRU) for the period of June 1984 through May 1985 is reviewed in this report. Chronic toxicity and oncogenic studies were carried out with hydrazine, JP-4, and JP-8. Results of histopathologic examination became available for a number of studies including chronic inhalation exposures to monomethylhydrazine, methylcyclohexane, and Otto Fuel II; and subchronic to petroleum and oil shale diesel fuel marine. These studies are now complete. Other investigations are complete except for histopathologic results. These include chronic exposures to petroleum JP-4, RJ-5, JP-7, JP-TS, and JP-10; subchronic exposures to petroleum JP-4 and JP-8; and weekly exposures to hydrazine. Three studies have concluded the exposure phases and are now being held postexposure - 90 day continuous exposures to shale JP-4 and dimethyl methylphosphonate and rat strain susceptibility to shale JP-4. A series of short-term toxicity studies was conducted on a variety of chemicals and chemical agents used by the Army, Air Force, and Navy. GRA

(AD-A161678; NAVHLTHRSCHC-85-19) Avail: NTIS HC A03/MF A01 CSCL 06P

Studies over the past several years have identified limitations of substrate utilization as a primary determinant of physical endurance capacity. These studies have shown that muscles have a preference and a great capacity to utilize fats as a source of energy. However, the prepoderance of these studies have been directed at extending endurance by increasing glucose availability through increasing muscle glycogen stores or supplementing endogenous glucose supplies during exercise with various forms of sugar containing solutions. Some studies have shown that oral administration of glucose solutions during exercise can improve performance, while prefeeding with glucose decreases endurance performance. However, physical training and adaption to low carbohydrate diets drive the system toward greater fatty acid oxidation during exercise. The main problem appears to be integration of the observed effects of training and dietary manipulation into a comprehensive solution for maximizing physical endurance under a variety of circumstances. This report presents

a brief review of information of the mechanisms which regulate cellular substrate metabolism in the central nervous system, liver, muscles, and adipose tissue. The concepts are organized into a systematic metabolic model which interlaces the mechanisms at work within each subsystem. Examples of regulation of substrate flows is presented for exercise under three conditions: fasted, post-prandial, and after adaptation to a low carbohydrate diet. By using the proposed scheme of integrative metabolism, complex dietary and physical training programs for extending endurance performance are suggested. GRA

DEVELOPMENT OF AN ULTRAFAST-CURING WOUND DRESSING Annual Report, 30 Sep. 1983 - 30 Sep. 1984
M. SZYCHER and J. L. ROLFE 15 Mar. 1985 31 p
(Contract DAMD17-83-C-3240; DA PROJ. 3S1-62775-A-825)
(AD-A162471; TE4337-53-85) Avail: NTIS HC A03/MF A01 CSCL 06L

This document describes a second-generation, drug-dispensing wound dressing. The wound dressing, which can be applied by the wounded soldier himself, incorporates thrombin as a coagulant to stop bleeding, and gentamycin sulfate as a wide-spectrum antibiotic to prevent bacterial infection. The new would dressing is a trilaminate composite. The air side of the trilaminate is a fabric impregnated with an aliphatic, medical grade polyurethane elastomer; the middle laminate is a controlled release layer, containing the microencapsulated pharmacoactive agents, and the third laminate is a 1.0-mil-thick layer of acrylic-based, pressure-sensitive adhesive. The middle layer is fabricated from a mixture of urethane and silicone oligomers, which are precompounded with pharmacoactive agents, and is subsequently solidified (cured) upon mere exposure to low-intensity UV radiation at room temperature. Solidification at room temperature is a vital consideration, because most drugs are rapidly inactivated upon mild heating. Once cured, the oligomer layer containing pharmacoactive agents becomes a controlled-release monolith, capable of dispensing drugs at a continuous and predictable rate. GRA

In order to investigate the pathophysiological role of endogenous morphine-like substances (endorphins) in shock, we studied cynomolgus monkeys and dogs subjected to hemorrhagic or endotoxic shock. Blockade of opiate receptors with naloxone improved cardiovascular function and survival in both species and both models but requires correction of acidosis and hypothermia. Shock is associated with elevations in plasma levels of endorphins. Using different sites of injection and various anatomical and pharmacological ablations, we have shown that naloxone's beneficial effects in hemorrhagic shock are due to potentiation of the effect of released catecholamines on cardiac opiate receptors. The myocardial depression found in shock is due to an endorphin-mediated attenuation of catecholamine activity on the heart. We believe this is mediated by interaction with cardiac receptors and is expressed via G-protein activation of adenylate cyclase and cyclic-AMP. This hypothesis needs to be tested by biochemical determination of these substances, and our observations need to be extended to endotoxic shock. Nevertheless, naloxone and other antiendorphin substances may be important in the treatment of shock by reversing one of the important pathophysiological mechanisms of cardiovascular depression. GRA

INCORPORATION OF ACTIVE ELEMENTS INTO THE ARTICULATED TOTAL BODY MODEL Final Report, 26 Sep. 1983 - 30 Jun. 1985
A. FREIVALDS 30 Jun. 1985 113 p
(Contract F33615-83-C-0506)
(AD-A162518; AAMRL-TR-85-061) Avail: NTIS HC A06/MF A01 CSCL 06P

The Articulated Total Body (ATB) Model, based on rigid-body dynamics with Euler equations of motion and Lagrange type constraints, is used by the Harry G. Armstrong Aerospace Medical Research Laboratory to predict the forces and motions experienced by air crew personnel in typical flight operations. To provide a more realistic representation of human dynamics, active neuromusculature was added to the ATB Model using elements of the newly developed advanced harness system. A lumped three-parameter muscle model with a contractile element, a damping element and a parallel elastic element was developed. The contractile element included a length-tension relationship, a force-velocity relationship and an active state function. The basic fiber mechanisms were integrated into muscle systems utilizing motor unit organization, orderly recruitment of motor units and adjustments in force due to fatigue and reflex action. The complete muscle systems were then used to replicate the human neuromusculature of the trunk and neck and for the elbow, shoulder, hip and knee joints. GRA

Five highly trained distance runners (DR) were observed during controlled 90-min thermoregulation trials in spring and late summer to document the extent of heat acclimatization developed during summer running in Northeastern United States. These trials simulated environmental and exercise stresses encountered by DR during daily training. Between spring and late summer, DR trained outdoors for weeks but consequently showed few physiological adaptations classically associated with HA. Statistical comparison indicated no significant differences in mean heart rate, rectal temperature, sweat, plasma, or change in plasma, volume during exercise; mean weighted skin temperature was unchanged (except at 50 min of exercise) and sweat rate was also unchanged (except during the initial 30 min segments). Significant decreases in submaximal oxygen uptake were observed, at treadmill speeds of 80, 120, and 200 m min respectively. It is conclude that distance runners did not require summer heat exposure to adequately thermoregulate during the spring trial, which simulated the hottest summer days recorded during this study. ADVANCED CLINICAL RESEARCH IN SHOCK AND TRAUMA Final Report, 1976 - Feb 1985
R. M. PETERS Feb. 1985 6 p
(Contract N00014-76-C-0282)
(AD-A162730) Avail: NTIS HC A02/MF A01 CSCL 06E

This final report covers the years from 1976 through February, 1985. The overall subject of this research has been the best methods of resuscitation and maintaining patients who have hypovolemic shock of major surgery, particularly the support of the cardiac and the respiratory function. The number of subjects covered is described with the years in which those projects were completed and their conclusion. Table I lists the publications that have resulted from these investigations. AN AUTOMATED SYSTEM FOR COMPREHENSIVE ASSESSMENT OF VISUAL FIELD SENSITIVITY
J. L. KOBRICK, A. R. LUSSIER, S. MULLEN, and C. WITT Apr. 1985 19 p
(AD-A162755; USARIEM-T10/85) Avail: NTIS HC A02/MF A01 CSCL 06P

A device for comprehensive assessment of the capability of operators for detection and location of visual signals throughout the functional visual field is described. The system is completely automated and computerized, and provides documentation files and graphic descriptions of each operator performance immediately upon completion of testing. Sensitivity can be measured for three stimulus colors (red, yellow, green), in a testing situation which mimics commonplace viewing. An abbreviated listing of the main operating program software is provided. GRA

MODELING ELECTROCARDIOGRAMS USING INTERACTING MARKOV CHAINS
P. C. DOERSCHUK, R. R. TENNEY, and A. S. WILLSKY Jul. 1985 64 p
(Contract AF-AFOSR-0258-82)
(AD-A162758; LIDS-P-1491; AFOSR-85-1118TR) Avail: NTIS HC A04/MF A01 CSCL 06E

A methodology for the statistical modeling of cardiac behavior and electrocardiograms (ECG's) is developed that emphasizes a) the physiological event/detailed waveform hierarchy; and b) the importance of control and timing in describing the interactions among the several anatomical subunits of the heat. This methodology has been motivated by a desire to develop improved algorithms for statistical rhythm analysis that capture cardiac behavior in a more fundamental way but that stops short of complete accuracy in order to highlight decompositions that can be exploited to simplify statistical inference based on these models. The models consist of interacting finite-state processes, where a very few of the transition probabilities for each process can take on a small number of different values depending upon the states of neighboring processes. Each finite-state process is constructed from a very small set of elementary structural elements. The methodology is illustrated by describing models for three cardiac rhythms and include simulation results for one of these, namely the rhythm known as Wenckebach. GRA

AXIOMATIC AND NUMERIC CONJOINT MEASUREMENT - A COMPARISON OF THREE METHODS FOR OBTAINING SUBJECTIVE WORKLOAD (SWAT) RANKINGS
T. E. NYGREN (Ohio State University, Columbus) IN: NAECON 1985; Proceedings of the National Aerospace and Electronics Conference, Dayton, OH, May 20-24, 1985. Volume 2 . New York, Institute of Electrical and Electronics Engineers, 1985, p. 878-883. refs

A study comparing three different conjoint scaling data collection methods was done using CMSCAL, the general axiomatic and numerical conjoint measurement algorithms underlying the Subjective Workload Assessment Technique (SWAT). Subjects rank ordered stimulus combinations from a 3 x 3 x 3 factorial design. They did this twice, once as either (1) a full sort of all 27 combinations, or as (2) a partial half set, consisting of a subset of 15 of the 27 stimulus combinations, or (3) as tradeoff combinations of pairs of the three factors. For each of 84 subjects, a CMSCAL conjoint scaling analysis was done on both of their data sets. When the three procedures were compared, the half set method produced significantly better additive solutions than did the full sorting method. Implications of these findings for the applied researcher are discussed. Author

THE DISSOCIATION BETWEEN SUBJECTIVE AND PERFORMANCE-BASED MEASURES OF OPERATOR WORKLOAD
W. L. DERRICK (U.S. Air Force Academy, Colorado Springs, CO) IN: NAECON 1985; Proceedings of the National Aerospace and Electronics Conference, Dayton, OH, May 20-24, 1985. Volume 2 . New York, Institute of Electrical and Electronics Engineers, 1985, p. 1020-1025. refs

A study is reported of workload dissociation, in which different estimates of workload are obtained for the same task performed by the same people according to whether system performance data or operator opinions are used in the determination. Findings are discussed from a program of research attempting to explain the measure dissociation in terms of a cognitive model of processing resources. The implications of this dissociation for system design are summarized. D.H.

EFFECTS OF TASK DIFFICULTY AND LEARNING STRATEGIES IN MULTIPLE-TASK TRAINING
P. S. WINNE (Norfolk General Hospital, VA), R. B. MOE, and B. B. MORGAN, JR. (Old Dominion University, Norfolk, VA) IN: NAECON 1985; Proceedings of the National Aerospace and Electronics Conference, Dayton, OH, May 20-24, 1985. Volume 2 . New York, Institute of Electrical and Electronics Engineers, 1985, p. 1026-1031. refs

In two experiments, dual-task acquisition of mental arithmetic skills was investigated. In Experiment I, subjects practiced single-digit math under one of two dual-task combinations differing in functional similarity. In Experiment II, subjects practiced two-digit math under four combinations load and variety. The results indicated that learning was influenced by the task load imposed and specific-task characteristics. Analysis of the performance strategies involved provided a useful means for diagnosing sources of task overload. Author

VISUAL SCANNING BEHAVIOR
R. L. HARRIS, SR. and A. A. SPADY, JR. (NASA, Langley Research Center, Hampton, VA) IN: NAECON 1985; Proceedings of the National Aerospace and Electronics Conference, Dayton, OH, May 20-24, 1985. Volume 2 . New York, Institute of Electrical and Electronics Engineers, 1985, p. 1032-1039. refs

This report summarizes the results and knowledge of scan behavior gained in various simulation and laboratory studies. Results were obtained through various analysis techniques such as real-time viewing of the pilot's scanning behavior and quantitative analysis of scan behavior performance parameters (average dwell time, dwell percentages, instrument transition paths, dwell percentages, instrument transition paths, dwell histograms, and entropy rate measures). Pilot scan behavior is discussed in the following areas; scanning is a subconscious conditioned activity, scanning is situation dependent, pilots' scanning pattern is centered around a home base. Scanning behavior data nave been shown to be useful in determining pilot's workload, evaluating pilot's strategy and role, determining the rate of information transfer of various displays, and aiding in pilot training. PSYCHOLOGICAL AND INTERPERSONAL ADAPTATION TO MARS MISSIONS
A. A. HARRISON (California, University, Davis) and M. M. CONNORS (NASA, Ames Research Center, Moffett Field, CA) IN: The case for Mars II . San Diego, CA, Univelt, Inc., 1985, p. 643-654. refs
(AAS 84-186)

The crucial importance of a thorough understanding of the psychological and interpersonal dimensions of Mars flights is indicated. This is necessary both to reduce the chances that psychological problems or interpersonal frictions will threaten the success of Mars missions and to enhance the quality of life of the people involved. Adaptation to interplanetary flight will depend on an interplay of the psychological stresses imposed by the missions and the psychological strengths and vulnerabilities of the crewmembers involved. Stresses may be reduced through environmental engineering, manipulating crew composition, and the structuring of situations and tasks. Vulnerabilities may be reduced through improving personnel selection procedures, training personnel in psychological and group dynamics, and providing mechanisms for emotional support. It is essential to supplement anecdotal evidence regarding the human side of space travel with the results of carefully conducted scientific research. D.H.

A86-28814
PSYCHOLOGICAL CONSIDERATIONS IN LONG-DURATION SPACE MISSIONS AN OVERVIEW
V. M. LITTLEFIELD (Minnesota, University, Morris) IN: The case for Mars II . San Diego, CA, Univelt, Inc., 1985, p. 665-680. refs
(AAS 84-188)

Practical and potential contributions of psychology and the behavioral sciences to space missions to improve their chances of success are examined. Previous contributions have been minimal. Increase contributions have been suggested, such as selecting personnel who possess unique psychological characteristics and interpersonal skills appropriate to space missions. To this end, behavior has been studied in earth analogs that appear to model space mission environments. Denying that space missions are unique, other researchers have suggested a 'business-as-usual' perspective. Consideration of long-duration space missions, such as Mars missions, as routine phenomena opens the door to a previously excluded body of general individual and social psychological literature. This broader viewpoint is exemplified in (1) the presentation of an environmental learning view of individual psychology and (2) examination of social psychological research in group structure and processes from a primary group perspective. EVALUATION OF 16 MEASURES OF MENTAL WORKLOAD USING A SIMULATED FLIGHT TASK EMPHASIZING MEDIATIONAL ACTIVITY
W. W. WIERWILLE, M. RAHIMI, and J. G. CASALI (Virginia Polytechnic Institute and State University, Blacksburg) Human Factors (ISSN 0018-7208), vol. 27, Oct. 1985, p. 489-502. Research supported by the Virginia Polytechnic Institute and State University. refs
(Contract NAG2-17)

As aircraft and other systems become more automated, a shift is occurring in human operator participation in these systems. This shift is away from manual control and toward activities that tap the higher mental functioning of human operators. Therefore, an experiment was performed in a moving-base flight simulator to assess mediational (cognitive) workload measurement. Specifically, 16 workload estimation techniques were evaluated as to their sensitivity and intrusion in a flight task emphasizing mediational behavior. Task loading, using navigation problems presented on a display, was treated as an independent variable, and workload-measure values were treated as dependent variables. Results indicate that two mediational task measures, two rating scale measures, time estimation, and two eye behavior measures were reliably sensitive to mediational loading. The time estimation measure did, however, intrude on mediational task performance. Several of the remaining measures were completely insensitive to mediational load. Author

ON SCALING PERFORMANCE OPERATING CHARACTERISTICS - CAVEAT EMPTOR
B. H. KANTOWITZ and M. WELDON (Purdue University, West Lafayette, IN) Human Factors (ISSN 0018-7208), vol. 27, Oct. 1985, p. 531-547. refs
(Contract NCC2-228)

Problems associated with scaling and normalizing empirical performance operating characteristics (POCs) are examined. Normalization methods proposed by Wickens (1980) and by Mountford and North (1980) are critically evaluated. Computer simulations are used to generate raw-score and normalized POCs. The interpretation of transformed empirical POCs (Wickens, Mountford, and Schreiner, 1981) is shown to contain inconsistencies. The normalization techniques reviewed fail to resolve POC scaling problems. Caution must be exercised when interpreting transformed POCs. Author

A REVIEW OF THE PSYCHOLOGICAL ASPECTS OF SPACE FLIGHT
J. M. CHRISTENSEN (Federation of American Societies for Experimental Biology, Bethesda, MD; Universal Energy Systems, Inc., Dayton, OH) and J. M. TALBOT (Federation of American Societies for Experimental Biology, Bethesda, MD) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, March 1986, p. 203-212. refs

The major observations and conclusions of the FASEB's ad hoc Working Group's report to NASA on the aspects of human behavior and performance related to the Shuttle Program and to the planned U.S. Space Station are presented. The report focuses on the performance requirements for the long-term manned missions; human perceptual, cognitive, and motor capabilities and limitations in space; crew composition, individual competences, selection criteria, and special training; and environmental factors influencing behavior. Consideration is also given to the psychosocial aspects of multi-person spacecrews on long-term missions; career determinants in NASA; investigational methodology and equipment; and psychological support. Suggestions for near-term planning cover uses of the Shuttle onboard video and audio resources for the behavioral observations, and include the perceptual, cognitive, and psychomotor parameters and group dynamics into space station mock-up studies. For the long-term research, the need of methodology and instrumentation for objective measurements of psychophysiological processes, status, and performance is emphasized. I.S.

PERFORMANCE OVERNIGHT IN SHIFTWORKERS OPERATING A DAY-NIGHT SCHEDULE
R. G. BORLAND, A. S. ROGERS, A. N. NICHOLSON, P. A. PASCOE, and M. B. SPENCER (RAF, Institute of Aviation Medicine, Farnborough, England) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, March 1986, p. 241-249. refs

Performance was measured during the day (0800-1700 hours) and during the night (1700-0800 hours) of a day-night schedule, and the effect of caffeine (300 mg) was studied during the overnight periods of work. The sleep electroencephalogram was recorded together with oral temperature and urinary electrolyte excretion.

Impairment of performance within 9 h after the beginning of the daytime work period was minimal, and was limited to a test of continuous performance, but impairment of performance within 9 h after the beginning of the overnight work period was more pronounced and included lowered vigilance. Impaired performance overnight was related to time on task and circadian rhythmicity, and was alleviated to some extent by the use of caffeine.

THE DISSOCIATION OF SUBJECTIVE MEASURES OF MENTAL WORKLOAD AND PERFORMANCE Final Report
Y. H. YEH and C. D. WICKENS Oct. 1984 98 p
(Contract NAG2-169)
(NASA-CR-176609; NAS 1.26:176609; EPL-84-2/NASA-84-2)
Avail: NTIS HC A05/MF A01 CSCL 05I

Dissociation between performance and subjective workload measures was investigated in the theoretical framework of the multiple resources model. Subjective measures do not preserve the vector characteristics in the multidimensional space described by the model. A theory of dissociation was proposed to locate the sources that may produce dissociation between the two workload measures. According to the theory, performance is affected by every aspect of processing whereas subjective workload is sensitive to the amount of aggregate resource investment and is dominated by the demands on the perceptual/central resources. The proposed theory was tested in three experiments. Results showed that performance improved but subjective workload was elevated with an increasing amount of resource investment. Furthermore, subjective workload was not as sensitive as was performance to differences in the amount of resource competition between two tasks. The demand on perceptual/central resources was found to be the most salient component of subjective workload. Dissociation occurred when the demand on this component was increased by the number of concurrent tasks or by the number of display elements. However, demands on response resources were weighted in subjective introspection as much as demands on perceptual/central resources. The implications of these results for workload practitioners are described. Author

THE EFFECT OF ACCELERATION STRESS ON HUMAN WORKLOAD
W. B. ALBERY, S. L. WARD, and R. T. GILL May 1985 26 p
(Contract AF PROJ. 7231)
(AD-A156770; AMRL-TR-85-039) Avail: NTIS HC A03/MF A01 CSCL 06S

The effects of +Gz stress on operator task performance and workload are assessed. Subjects were presented a two-dimensional maze on a CRT, and were required to solve it as rapidly as possible while under G-stress at levels from +Gz to +6Gz. The G-stress was provided by a human centrifuge. The effects of this stress were assessed by two techniques: objective performance measures on the primary maze - solving task, and subjective workload measures obtained using the Subjective Workload Assessment Technique (SWAT). It was found that while neither moderate (+3Gz) nor high (+5Gz and +6Gz) levels of G stress affected maze solving performance, the high G levels did significantly increase the subjective workload of the maze task.

ATTENTION ALLOCATION, DISTRACTION, AND THE TYPE A/TYPE B BEHAVIOR PATTERN M.S. Thesis
A. J. GUARDINO Aug. 1985 100 p
(AD-A160671; AFIT/CI/NR-85-109T) Avail: NTIS HC A05/MF A01 CSCL 05J

This thesis sought to determine whether individuals identified as having a Type A or Type B behavior pattern allocate attention differently in the presence of a distractor. Thirty-seven university students, grouped by type through use of the Jenkins Activity survey, and further divided into distractor and control groups, performed two discrete tasks for eight blocks under single- then dual-task conditions. The distractor was presented during the dual-task condition on Blocks 6 and 7. While the results did not support the hypothesized relation, this study did support previous findings of a differential effect of noise on multiple-task performance: Both quiet groups' performance improved on both tasks, whereas both noise groups' performance improved on the primary task but leveled off on the secondary task during and after the distractor. Further research is required. GRA

PRINCIPLES OF INSTRUCTION FOR SUCCESSFUL ASSEMBLY AND REPAIR Final Report, 1 Nov. 1983 - 31 Nov. 1984
P. BAGGETT 31 Nov. 1984 14 p
(Contract N00014-84-C-0112)
(AD-A161280) Avail: NTIS HC A02/MF A01 CSCL 05I

In this one-year project the aim was to continue the previous three years' research on designing multimedia instructions for procedures so that people could use and learn from them more easily. There were both theoretical and practical aspects to the work. We viewed the conceptual structure of a task as a (hierarchical) tree (later a directed acyclic graph) with nodes representing information from different modalities (motoric, visual, and linguistic). The overview will be preceded by a short summary, stating the five main studies, the total number of subject hours run, stimulus materials used, and computer programming done. At the end are listed technical reports, conference papers, and publications. Main Studies: (1) Transforming a task's tree structure to lessen short term memory load in instructions, (2) Developing generic and functional terminology, (3) Theoretical hypotheses about what narration in dual media presentations should consists of, (4) Transfer of learning in assembly tasks, and (5) Empirical investigation of adequacy of knowledge representation for repair in a computerized tutor. (AD-A161362) Avail: NTIS HC A02/MF A01 CSCL 05J

The objective of this research is to construct a computationally sufficient, biologically plausible, and behaviorally adequate account of human information processing skills in visual and auditory language processing. We have the following specific research goals for our contract: (1) To implement a model of reading printed text through a series of fixations. The model is intended to account for the integration of visual information over successive fixations, and the interaction of visual and contextual information in reading. (2) To implement a new version of our model of speech perception (TRACE), using programmable connections to allow the model to tune itself, in the course of processing, to changes in global parameters such as rate. This new model (which we will call the Programmable TRACE) is intended to account for human sensitivity to global as well as local contextual influences on the speech signal while retaining all the virtures of the present version of TRACE. (3) To begin work on the development of simulation models designed to capture aspects of interactions between lexical, syntactic, and semantic constraints on the construction of syntactic and functional representations of sentences. A PROCEDURE-BASED APPROACH TO HUMAN INFORMATION PROCESSING MODELS
K. L. BOETTCHER and R. R. TENNEY Nov. 1985 37 p
(Contract N00014-77-C-0532; N00014-84-K-0519)
(AD-A162454; LIDS-P-1499) Avail: NTIS HC A03/MF A01 CSCL 05J

An approach is suggested for modeling human processing time in routine tasks. The existence of mental processing methods, or procedures, is presumed and the approach uses information theoretic concepts to develop a functional relationship between task variables and processing time for a given procedure. The resulting model contains parameters that must be estimated using processing time data. In addition to considering the single-procedure model, the modeling framework is extended to include situations where multiple procedures are used in an alternate fashion. The information theoretic framework provides a specific model form for the extra time required for switching to, or activating, a procedure. The modeling approach is tested experimentally in two ways. First, a single procedure task is devised for which a model is developed. Second, a multiple procedure task is devised to test the model for switching. Experimental results in both cases give evidence in support of the approach as a method for describing task processing time in terms of task variables. Author (GRA)

ON INTERACTING POPULATIONS THAT DISPERSE TO AVOID CROWDING: THE EFFECT OF A SEDENTARY COLONY
M. BERTSCH, M. E. GURTIN (Carnegie-Mellon Univ., Pittsburgh, Pa.), D. HILHORST, and L. A. PELETIER Mar. 1983 30 p refs
(REPT-4) Avail: NTIS HC A03/MF A01

A population model in which a finite number of interacting groups attempt to avoid crowding is considered. A habitat containing a mobile and a sedantary species is studied. It is shown that when the mobile population is sufficiently large relative to the sedentary population, the mobile species eventually populates the entire habitat. However, when mobile species density is less than that of the sedentary species, the mobile individuals do not reach the portion of the habitat that lies to the other side of the sedentary colony. VISUAL PERCEPTION IN CORRELATED NOISE Ph.D. Thesis
K. J. MYERS 1985 149 p
Avail: Univ. Microfilms Order No. DA8522817

The ability of human observers to perform detection tasks in medical images that contain structured noise was investigated. Physical measures of image quality, such as signal-to-noise ratio (SNR), resolution, modulation transfer function (MTF), and contrast, do not accurately predict how well an observer can detect lesions in an image. For images with equal pixel SNR, humans can detect a low contrast object more readily in images that have a low-pass noise structure, as opposed to a high-pass noise structure. This finding is important in the comparison of images generated by a classical pinhole-imaging system with images generated by a computed tomography imager. A figure of merit was wanted for imaging systems that is more than an evaluation of the physician's performance, measured using human observers and an accepted method such as receiver operating characteristic techniques. The hypothesis is that the human observe acts approximately as an ideal observer who does not have the ability to prewhiten the noise in an image. Without this ability, the ideal observer's detection performance for even a simple task is degraded substantially in correlated noise. This is just the effect found for human observers. Dissert. Abstr.

PERSONALITY TYPE ANALYSIS OF AIR FORCE INSTITUTE OF TECHNOLOGY SCHOOL OF SYSTEMS AND LOGISTICS GRADUATE DEGREE 85S CLASS USING MYERS-BRIGGS TYPE-INDICATOR M.S. Thesis
R. A. CARTER Sep. 1985 146 p
(AD-A161053; AFIT/GLM/LSM/85S-11) Avail: NTIS HC A07/MF A01 CSCL 05J

The objective of this research was to identify significant learning differences in the AFIT School of Systems and Logistics (AFIT/LS) using the personality type theory developed by psychologist Jung and identified by the Myers-Briggs Type Indicator (MBTI). The data were collected from graduate students of AFIT/LS through the MBTI and a Preferred Academic Environment Questionnaire. Results of the MBTI categorized each of the subjects into personality types. The Preferred Academic Environment Questionnaire determined student habits test taking preferences: AFIT situations which the student felt improved academic performance; and AFIT learning situations which were important to the student. The data were analyzed according to the distribution of MBTI type, the effect of MBTI type upon grade point average, and student preference for instructional technique and learning styles as they related to MBTI type. THE EFFECTS OF COLOR-CODING IN GEOSIT DISPLAYS. 1: COLOR AS A REDUNDANT CODE Interim Report
A. R. JACOBSEN, D. F. NERI, and W. H. ROGERS 13 Sep. 1985 20 p
(AD-A161107; NSMRL-1061) Avail: NTIS HC A02/MF A01 CSCL 05H

The effect of color-coding symbols in geographical situation (GEOSIT) displays on response time was studied using 12 observers. Three levels of the threat dimension (friendly, unknown, and hostile) were redundantly coded by both color and shape, while the three levels of the platform dimension (submerged, surface, and airborne) were coded only by shape. Compared to the standard monochrome coding scheme, response time on the color-coded threat dimension was enhanced by over 100%. Performance on the noncolor-coded platform dimension was unaffected by color-coding of the threat dimension. Several other significant effects were also found. This study demonstrates that the use of color in GEOSIT displays can dramatically improve performance without any decrement in performance on noncolor-coded information. GRA

HEALTH AND PERFORMANCE OF ANTARCTIC WINTER-OVER PERSONNEL: A FOLLOW-UP STUDY Final Report
L. A. PALINKAS Jun. 1985 15 p
(AD-A161773; NAVHLTHRSCHC-85-18) Avail: NTIS HC A02/MF A01 CSCL 06J

Despite extensive previous research on the health and performance of Antarctic winter-over personnel while they are on the ice, little is known about the long-term effects of the winter-over experience. Using the records of enlisted personnel who applied to the Operation Deep Freeze program between 1963 and 1973, the health and service history data available on these individuals at the Naval health Research Center were examined to determine if incidence rates and performance criteria were significantly different between a group of winter-over personnel and a control group of enlisted personnel who were rated as acceptable by a screening team but who did not winter over. Results indicated that the overall incidence rate for the winter-over group was significantly lower than the rate for the control group. The winter-over group also had significantly fewer first hospitalizations for neoplasms, endocrine, nutritional, and metabolic disorders, and diseases of the musculoskeletal system. Results suggest that wintering over does not adversely affect subsequent health and performance of enlisted personnel, and that the screening program has been successful in selecting the best candidates in terms of these criteria. THE ROLE OF VIBRATION AND RATTLE IN HUMAN RESPONSE TO HELICOPTER NOISE Final Report
P. D. SCHOMER and R. D. NEATHAMMER Sep. 1985 161 p
(AD-A162486; CERL-TR-N-85/14) Avail: NTIS HC A08/MF A01 CSCL 05J

Our understanding of community reaction to helicopter noise remains incomplete. A technique called A-weighting appears to produce realistic data outdoors and at modest noise levels, and the community response in terms of percentage of population highly annoyed can be correlated with respect to the Day/Night Average Sound Level (DNL) descriptor. However, questions remain as to the effect of perceived building vibrations and rattle in human response to helicopter noise. To answer these questions, this study examined the role of vibration and rattle in human response to helicopter noise. Many volunteer subjects were tested under real noise conditions. The helicopter noise was generated by an Army UH-1H (Huey) helicopter. Subjects were located either in the living room of a new mobile home, outdoors, or in the living room or dining room of an old frame farmhouse near Champaign IL. The control or comparison sound was generated electronically through loudspeakers at each location using a 500-Hz octave band of white noise. By performing paired comparison tests between the helicopter and control noises, it was possible to establish equivalency between these two stimuli. Author (GRA)

ATTENTION WITHIN AUDITORY WORD PERCEPTION Final Report, 1 Jan. 1982 - 31 Dec. 1983
A. G. SAMUEL and W. H. RESSLER Nov. 1985 58 p
(Contract N00014-82-C-0160)
(AD-A162550; REPT-85-1-ONR) Avail: NTIS HC A04/MF A01 CSCL 06P

Phonemic restoration is a powerful auditory illusion that arises when a phoneme is removed from a word and replaced with noise, resulting in a percept which sounds like the intact word with a spurious bit of noise. It is hypothesized that the configurational properties of the word impair attention to the individual phonemes and thereby induce perceptual restoration of the missing phoneme. If so, this impairment might be unlearned if listeners can process individual phonemes within a word selectively. Subjects received training with the potentially restorable stimuli (972 trials with feedback); in addition, the presence or absence of an attentional cue, contained in a visual prime preceding each trial, was varied between groups of subjects. Cueing the identity and location of the critical phoneme of each test word allowed subjects to attend to the critical phoneme, thereby inhibiting the illusion, but only when the prime also identified the test word itself. When the prime only provided the identity or location of the critical phoneme, or only the identity of the word, subjects performed identically to those subjects for whom the prime contained no information at all about the test word. Furthermore, training did not produce any generalized learning about the types of stimuli used. A limited interactive model of auditory word perception is discussed, in which attention operates through the lexical level. GRA

TELEROBOTICS FOR THE SPACE STATION
M. M. CLARKE and M. A. BRONEZ (Rockwell International Corp., Space Station Systems Div., Downey, CA) Mechanical Engineering (ISSN 0025-6501), vol. 108, Feb. 1986, p. 66-72.

An evaluation is made of the configurational possibilities of the NASA Space Station, with a view to the range of EVA efforts that will have to be undertaken by Space Shuttle-based construction crews, and with emphasis on the character and effectiveness of the remote operation, or 'teleoperator' and robotic systems that such construction crews may employ to more effectively conduct Space Station assembly. Teleoperators are dexterous, general purpose man/machine systems that project human vision and manipulation capabilities across distances and through physical barriers. Telerobots are teleoperators to which cybernetic sensor and control systems have imparted a degree of autonomy from human direction. Attention is given to the sensor and actuation systems proposed for implementation of teleoperators and telerobots. O.C.

KINEMATICS AND REACTION MOMENT COMPENSATION FOR A SPACEBORNE ELBOW MANIPULATOR
R. E. LINDBERG, R. W. LONGMAN, and M. F. ZEDD (U.S. Navy, Naval Research Laboratory, Washington, DC) AIAA, Aerospace Sciences Meeting, 24th, Reno, NV, Jan. 6-9, 1986. 26 p.
(AIAA PAPER 86-0250)

When a robot arm is mounted on a satellite, the commanded arm motions induce motions of the satellite and therefore of the robot base. As a result, the robot joint angles that would normally be commanded to produce a prescribed robot end effector position and orientation will result in missing the target. Also as a result of uncontrolled base motion, the terminal end effector state is not a function of terminal joint angles, but is rather determined by the entire joint angle history. The kinematics of the system is therefore coupled with the dynamics of system, and the inverse kinematics problem cannot be solved in closed form. This paper develops a new type of robot kinematic equation set that computes joint angle commands that account for base translation, under the assumption that base rotation is negated by a momentum compensation system mounted on the satellite. MODELING OF PERCEPTION AND DECISION-MAKING PROCESSES [MODELIROVANIE PROTSESSOV VOSPRIIATIIA I PRINIATIIA RESHENII]
V. O. KURT-UMEROV and O. I. KHOMA Otbor i Peredacha Informatsii (ISSN 0474-8662), no. 72, 1985, p. 54-61. In Russian.

A model of perception and decision making with the description of functional blocks is proposed. The model relies on the concept of a thesaurus, consisting of three set-images, analysis and synthesis methods, and action algorithms. Other principles include the novel information concept, and the time constants of image adaptation to sequence monotonicity and self-learning in the class of images analyzed. Appropriate schematics are presented. B.J.

A86-27500
A MODEL FOR THE FORMATION OF THE STRUCTURE OF THE EXTERNAL ELECTRIC FIELD OF HUMANS [OB ODNOI MODELI FORMIROVANIIA STRUKTURY VNESHNEGO ELEKTRICHESKOGO POLIA CHELOVEKA]
IU. V. TORNUEV (Institut Fiziologii, Novosibirsk, USSR) Bionika (ISSN 0374-6569), no. 19, 1985, p. 97-100. In Russian. refs

The frequency and spatial characteristics of the external electric field (EEF) of humans are analyzed. A model for the formation of the EEF structure is proposed which is based on the representation of the human body in the form of a complex system of dielectrics with a complex permittivity. Experimental data obtained for various physiological states confirm the validity of the model. B.J.

A86-27671
VESTIBULAR AND VISUAL CONTROL ON POSTURE AND LOCOMOTOR EQUILIBRIUM
M. IGARASHI, ED. and F. O. BLACK, ED. Basel and New York, Karger, 1985, 375 p. No individual items are abstracted in this volume.

The topics discussed include conceptual and biomechanical models of postural control, quantitative analysis of postural control mechanisms, visual and vestibular control of equilibrium function, space environment and equilibrium psychophysiology, neurophysiology in relation to postural and motor control, developmental and oculomotor studies, and pathological disorders and postural control. Papers are presented on conceptual models of human postural control, analysis of labyrinthine equilibrium disturbances by fitting a five-dimensional feedback model, four steps of application of postural control mechanism to clincial diagnosis, habituation of postural readjustments induced by motion of visual scenes, and subjective vertical in weightlessness. Consideration is also given to mechanisms of posture maintenance in weightlessness, otolith-spinal reflexes, contribution of peripheral vision to vestibulo-ocular reflex suppression, and postural control in four classes of vestibular abnormalities. I.S.

DESIGN TECHNIQUES FOR ROBOTS - SPACE APPLICATIONS
R. J. HAMANN (Fokker, Schiphol, Netherlands) Robotics (ISSN 0167-8493), vol. 1, Dec. 1985, p. 223-250.

Analytical techniques and technologies required for the design and development of robotic manipulators in space are defined and investigated. A space manipulator system is defined and described, and manipulator kinematics and dynamics, methods for path construction, obstacle avoidance techniques, and robot languages are discussed. Control aspects are investigated, including robot control methods, the selection of a Manipulator Arm control system, and the definition of simulation cases. Manipulator Arm functions to be performed and their requirements in terms of processing power, memory size, and data flows are listed and used to define the electrical architecture, bus requirements, and software organization. A program for future design studies for the Manipulator Arm is briefly discussed. C.D.

EUROPEAN ANNUAL CONFERENCE ON HUMAN DECISION MAKING AND MANUAL CONTROL, 4TH, ZEIST, NETHERLANDS, MAY 28-30, 1984, PROCEEDINGS
Soesterberg, Netherlands, Institute for Perception TNO, 1985, 294 p. No individual items are abstracted in this volume.

Various papers on human decision making and manual control are presented. The general topics addressed include: rehabilitation, artificial intelligence, fault management and decision making, industrial processes, human behavior in aircraft piloting and car driving, information and control. Some individual topics discussed include: information processing and driving ability of patients with diffuse brain injury, theory and tests in fault management, development of individual assembly strategies, gravitational torques in manual control, the dynamics of a car driver's lane-keeping behavior, systems ergonomic analysis of ship engine control tasks, using time-series information in an optimization task, evaluation of overview pictures for process supervision, and internal models of process dynamics in slow human-machine systems. C.D.

COMPARISON OF TRANSIENT AND STEADY STATE CORTICAL EVOKED POTENTIALS
A. M. JUNKER (USAF, Aerospace Medical Research Laboratories, Wright-Patterson AFB, OH), K. M. KENNER (Synergy, Inc., Washington, DC), D. L. KLEINMAN (Connecticut, University, Storrs), and T. D. MCCLURG (Systems Research Laboratories, Inc., Dayton, OH) IN: NAECON 1985; Proceedings of the National Aerospace and Electronics Conference, Dayton, OH, May 20-24, 1985. Volume 2 . New York, Institute of Electrical and Electronics Engineers, 1985, p. 854-860. refs
(Contract AF TASK 2312V2)

To better describe the linear-dynamic properties of the human visual-cortical response system, transient and steady state visual evoked response potentials (VERP) were observed. The stimulus presentation device provides both the evoking stimulus (flickering or pulsing lights) and a video task display. The steady state stimulus was modulated by a complex, ten-frequency, sum-of-sines, wave. The transient VERP is the time-locked averaged of the EEG to a series of narrow light pulses (pulse width of 10 msec). The Fourier transform of the averaged pulses has properties that approximate band limited white noise, i.e. a flat spectrum over the frequency region spanned by the 10 sum of sines. The Fourier transform of both the steady-state and the transient evoked potentials yields measures of: output/input gain ratios, phase differences, and background EEG. The transfer function from the transient VERP corresponds to the steady-state VERP transfer function. Author

A86-28432
A LINEAR, DYNAMIC MODEL FOR THE VISUAL-CORTICAL EVOKED RESPONSE SYSTEM
K. M. KENNER (Synergy, Inc., Washington, DC), A. M. JUNKER (USAF, Aerospace Medical Research Laboratories, Wright-Patterson AFB, OH), and W. H. LEVISON (Bolt Beranek, and Newman, Inc., Cambridge, MA) IN: NAECON 1985; Proceedings of the National Aerospace and Electronics Conference, Dayton, OH, May 20-24, 1985. Volume 2 . New York, Institute of Electrical and Electronics Engineers, 1985, p. 861-867. refs

A technique for developing an unobtrusive workload metric based upon steady-state EEG may be useful for in-flight crew monitoring. In the process of developing this technique, linear-dynamic properties of the human visual-cortical response system have been observed. Mathematical modeling has been successfully applied to these observations. The development of this model indicates the potential for applying the control-theoretic perspective to neurosensory functioning. Further statistical analysis of an expanded data-base could lead to the development of an unobtrusive workload metric. Author

A86-28433
A WORKLOAD INDEX FOR ITERATIVE CREWSTATION EVALUATION
R. A. NORTH (Honeywell Systems and Research Center, Minneapolis, MN) IN: NAECON 1985; Proceedings of the National Aerospace and Electronics Conference, Dayton, OH, May 20-24, 1985. Volume 2 . New York, Institute of Electrical and Electronics Engineers, 1985, p. 868-872. refs

A crewstation design tool is reviewed which allows the human factors engineer to assess the attentional demands that will be imposed on the human operator given the tasks, times of performance, time-sharing demands, individual task difficulties, and human interfaces to be used. Attention and performance theories used in the workload model are discussed. A crewstation design problem example is used to illustrate the utility of the tool in pointing to automation needs and potential reallocation of tasks to display/control surfaces. Author

WORKLOAD ASSESSMENT TECHNIQUES IN SYSTEM REDESIGN
W. H. ACTON (Systems Research Laboratories, Inc., Dayton, OH) and M. S. CRABTREE (Universal Energy Systems, Inc., Dayton, OH) IN: NAECON 1985; Proceedings of the National Aerospace and Electronics Conference, Dayton, OH, May 20-24, 1985. Volume 2 . New York, Institute of Electrical and Electronics Engineers, 1985, p. 873-877. refs

This paper describes the workload assessment portion of a human factors effort to help develop an improved version of an existing military command, control, and communications system. In the phase, the current system was studied in order to identify specific design features that detrimentally affected operator performance and workload. Both subjective and objective workload data were collected. In the second phase of the effort, a mock-up version of the modified system (currently being developed) was evaluated for workload using a projective technique for subjective workload assessment (ProSWAT). Workload levels for the new system appeared acceptable, and operator acceptance was favorable. The paper emphasizes important considerations for the selection and application of workload metrics. COMPUTER-BASED TOOLS FOR COCKPIT DESIGN
L. C. BUTTERBAUGH, J. K. MCBRIDE (USAF, Wright Aeronautical Laboratories, Wright-Patterson AFB, OH), and P. W. GRIFFITH (BDM Corp., Dayton, OH) IN: NAECON 1985; Proceedings of the National Aerospace and Electronics Conference, Dayton, OH, May 20-24, 1985. Volume 2 . New York, Institute of Electrical and Electronics Engineers, 1985, p. 886-891. refs

A collection of computer-based human factor design tools is described that can assist crew system engineers to evaluate various cockpit layouts in the preliminary design phase. The current capabilities include: reach analysis, workload analysis, system modeling, and display format design. The tools are accessed through a common interface called the User-Interface Module or UIM. A key feature of the UIM is its user-friendly menu-driven series of prompts to access a tool. The combined set of tools and the UIM make up the Computer-Aided Design and Evaluation (CADET) system. D.H.

A86-28437
A METHODOLOGY FOR ADDRESSING SYSTEM OPERABILITY ISSUES
R. N. CHARETTE and R. H. WALLACE (SofTech, Inc., Middletown, RI) IN: NAECON 1985; Proceedings of the National Aerospace and Electronics Conference, Dayton, OH, May 20-24, 1985. Volume 2 . New York, Institute of Electrical and Electronics Engineers, 1985, p. 900-905. refs

A methodology has been developed to deal with the 'system operability problem', which results from the exclusion of the human resource from the systems engineering process with the consequence that new systems often exhibit only marginal gains in effectiveness. The new methodology is called SOEM, for System Operability Evaluation Methodology. It consists of three methods: the U.S. Air Force's IDEF (Integrated Computer Aided Manufacturing Definition Method), the U.S. Navy Research Laboratory's SCRP (Software Cost Reduction Project) techniques, and the U.S. Air Force's simulation language and methodology SAINT (System Analysis of Integrated Networks of Tasks). SOEM is a fully integrated methodology which models the human, equipment, mission and operating environment aspects of a system. D.H.

A86-28438
INCORPORATING HUMAN OPERATOR CONSIDERATIONS INTO EXISTING WEAPON SYSTEM ANALYSIS AND QUANTIFICATION CAPABILITIES
C. M. HOYLAND, K. H. EVERS (SofTech, Inc., Dayton, OH), and D. E. SNYDER (USAF, Aerospace Medical Research Laboratories, Wright-Patterson AFB, OH) IN: NAECON 1985; Proceedings of the National Aerospace and Electronics Conference, Dayton, OH, May 20-24, 1985. Volume 2 . New York, Institute of Electrical and Electronics Engineers, 1985, p. 911-916. refs

An approach is discussed for combining two existing models to provide an analysis and simulation capability that combines the effects of the hardware/software as well as the human operator components of a weapon delivery system. A specific example is considered, based on an existing hardware/sofware simulation called SAMS (Surface-to-Air Missile Simulation) and a digital simulation of a human operator of a SAM system called SPAMSS (SAINT Performance Assessment Model of a SAM System). Through an integration process, the system's hardware/software and human operator components can be simulated without redesigning the simulations that already exist. D.H.

TARGET DESIGNATION BY SPEECH, JOYSTICK, AND TOUCH CONTROL FORMAT DESIGN IMPLICATIONS
D. G. CURRY, J.M. REISING, and J. P. ZENYUH (USAF, Flight Dynamics Laboratory, Wright-Patterson AFB, OH) IN: NAECON 1985; Proceedings of the National Aerospace and Electronics Conference, Dayton, OH, May 20-24, 1985. Volume 2 . New York, Institute of Electrical and Electronics Engineers, 1985, p. 923-928. refs

This paper discusses an experiment comparing three different methods of positioning cursors on an interactive display device for use in future aircraft cockpits. The methods evaluated include standard joysticks, touch sensitive overlays, and an unconstrained voice recognition system. All comparisons were performed with subjects wearing both normal flight gear and equipment from the aircrew chemical protective ensemble, with all subjects performing a primary loading task similiar in nature to flying a single-seat fighter. Format design implications for each control mode are discussed, with particular attention being focused on the difficulties involved in developing an effective voice cursor format. Author

A86-28440
EVALUATION OF HELMET DISPLAY FORMATS
J. DE MAIO, C. HARMAN, T. STRYBEL, R. PENNER, and J. BROCK (Honeywell Systems and Research Center, Minneapolis, MN) IN: NAECON 1985; Proceedings of the National Aerospace and Electronics Conference, Dayton, OH, May 20-24, 1985. Volume 2 . New York, Institute of Electrical and Electronics Engineers, 1985, p. 929-936. refs

Research was performed to evaluate the readability of flight control, navigation, and sensor pointing symbology on monocular, helmet-mounted display. Display readability was evaluated under two task-loading conditions: (1) single-task display reading only; and (2) multitask, head-down panel I/O task plus head-up target detection plus display reading. Two helmet display formats were evaluated. Configuration 1 was essentially of current attack helicopter symbology. Configuration 1 used reformatted symbology designed to reduce obscuration of the outside visual scene and to enhance readability. In the single-task conditions subjects scanned a static display for a target deviation of one parameter from a pre-assigned value. Dependent measures were error rate

and reaction time. In the multi-task experiment, reaction time was measured from completion of the detection task. Display reading accuracy was high for both display configurations. Results are discussed in terms of display readability. Author

A86-28441
UTILIZING COMPUTER GRAPHICS DISPLAY TECHNOLOGY
J. P. YORCHAK and J. E. ALLISON (Martin Marietta Corp, Denver, CO) IN: NAECON 1985; Proceedings of the National Aerospace and Electronics Conference, Dayton, OH, May 20-24, 1985. Volume 2 . New York, Institute of Electrical and Electronics Engineers, 1985, p. 937-942. refs

A review is given of recently published research concerned with cognition and computer graphics. Lessons learned from two experiments conducted at Martin Marietta Denver Aerospace, using complex interactive computer graphics displays, are discussed. In the first experiment, subjects tailored a tilted platter display of the earth (an azimuthal equidistant projection) to make it to their liking; they then had to make a true-false decision about a statement describing the altitude and coverage area of a particular satellite on each display. In the second experiment, some subjects were given additional cues in the form of polar and equatorial views from space of a satellite orbiting the earth (supplementing the standard Mercator projection showing the ground track). D.H.

A86-28442
AUDITORY SIGNALS IN MILITARY AIRCRAFT - ERGONOMIC PRINCIPLES VERSUS PRACTICE
T. J. DOLL and D. J. FOLDS (Georgia Institute of Technology, Atlanta) IN: NAECON 1985; Proceedings of the National Aerospace and Electronics Conference, Dayton, OH, May 20-24, 1985. Volume 2 . New York, Institute of Electrical and Electronics Engineers, 1985, p. 958-965. refs
(Contract F33615-82-D-0601)

The complete ensembles of auditory signals in selected USAF aircraft (the F-4D, F-15, two models of the F-16, the C-5, and the C-141) are described and evaluated. Human factors research related to the design of speech and non-speech auditory signals is reviewed. Major findings are: that auditory signals are not well standardized among the aircraft, even between those with similar combat roles; that a relatively large number of non-speech auditory signals are used, which may make it difficult for the aircrew to recall the meanings of all the signals; that some non-speech signals are sufficiently similar that they may be confused, particularly in high workload and stressful conditions; and that the criticality of the warnings is not reliably indicated by any characteristics of the signals. Four problem areas requiring further research are discussed: reduction of signal loudness, enhancement of the distinctiveness and masking resistance of non-speech signals, effects of concurrent warning signals on aircrew performance, and additional uses of auditory information. Author

A86-28444
DYNAMIC RETRAINING APPROACHES FOR AN AIRBORNE SPEECH RECOGNITION SYSTEM
R. A. NORTH and K. GRAFFUNDER (Honeywell Systems and Research Center, Minneapolis, MN) IN: NAECON 1985; Proceedings of the National Aerospace and Electronics Conference, Dayton, OH, May 20-24, 1985. Volume 2 . New York, Institute of Electrical and Electronics Engineers, 1985, p. 970-974.
(Contract F33615-83-C-3608)

Results of a preliminary investigation of the viability of dynamic updating of a word recognizer are reported. An isolated word recognizer was used to capture original templates and task oriented utterances for an aircraft cockpit radio frequency selection task performed by a group of student pilots. The task-oriented utterances were produced in low and high workload conditions to represent differing operational stress. Match scores between original templates and real-time utterances were compared with match scores between real-time vs. real-time utterances. Two strategies were formulated for improvement of match scores using certain real-time utterances as new templates, and one is demonstrated with laboratory data. Author

A86-28445
SPEECH COMPRESSION AS A POTENTIAL AID TO AUTOMATED VOICE WARNINGS IN THE COCKPIT
K. M. DRESEL (Boeing Military Airplane Co., Wichita, KS), D. J. GARDNER, A. APRILL, D. DEFRUITER, M. KEITH (Kearney State College, NE) et al. IN: NAECON 1985; Proceedings of the National Aerospace and Electronics Conference, Dayton, OH, May 20-24, 1985. Volume 2 . New York, Institute of Electrical and Electronics Engineers, 1985, p. 975-978.

Previous research has investigated compressed speech in the continuous speed context but has not investigated the effect of compression on short phrases such as might be uttered by an automated voice warning system. The potential benefits of this technology are decreased system memory requirements, decreased message transmission time or increased message length. Undergraduates (N = 137) were tested in small groups to determine intelligibility of aviation-related short phrases. The design involved three rates of speech compression, three levels of pitch adjustment, male or female speaker, and male or female listeners. Significant differences were found for amount of compression, amount of pitch adjustment and the compression x pitch x sex of speaker interaction. These results are interpreted as supporting the use of compressed speech for automated voice warning systems in the cockpit. Author

SELECTING COCKPIT FUNCTIONS FOR SPEECH I/O TECHNOLOGY
C. A. SIMPSON (Psycho-Linguistic Research Associates, Menlo Park, CA) IN: NAECON 1985; Proceedings of the National Aerospace and Electronics Conference, Dayton, OH, May 20-24, 1985. Volume 2 . New York, Institute of Electrical and Electronics Engineers, 1985, p. 979-986. Army-supported research. refs
(Contract NAS2-11341)

A general methodology for the initial selection of functions for speech generation and speech recognition technology is discussed. The SCR (Stimulus/Central-Processing/Response) compatibility model of Wickens et al. (1983) is examined, and its application is demonstrated for a particular cockpit display problem. Some limits of the applicability of that model are illustrated in the context of predicting overall pilot-aircraft system performance. A program of system performance measurement is recommended for the evaluation of candidate systems. It is suggested that no one measure of system performance can necessarily be depended upon to the exclusion of others. Systems response time, system accuracy, and pilot ratings are all important measures. Finally, these measures must be collected in the context of the total flight task environment. D.H.

A86-28453
WICKENS' RESOURCE ALLOCATION MODEL - IMPLICATIONS FOR THE DESIGN OF HUMAN-MACHINE SYSTEMS
L. A. WHITAKER (Missouri-St. Louis, University, St. Louis) IN: NAECON 1985; Proceedings of the National Aerospace and Electronics Conference, Dayton, OH, May 20-24, 1985. Volume 2 . New York, Institute of Electrical and Electronics Engineers, 1985, p. 1040-1044. refs

A fundamental question of systems design is examined: can one person operate a given system or will it take two? The answer depends on the load that the system imposes on the operator. The model of Wickens, Sandry and Vidulich (1983) suggests that a single operator can draw from a number of separate internal resources to perform a complex task (such as fly an aircraft, provide air traffic control, or execute underwater maintenance tasks). If this model is correct, then systems can be designed to make optimal use of these separate resources within a single operator. The model is discussed and available evidence tending to support or refute it is examined. Implications for the design of air traffic control communications are noted. D.H.

A86-28513
IMPROVING INTELLIGIBILITY IN AUDIO DISTRIBUTION SYSTEMS
P. J. GRECO (Telephonics Corp., Huntington, NY) IN: NAECON 1985; Proceedings of the National Aerospace and Electronics Conference, Dayton, OH, May 20-24, 1985. Volume 2 . New York, Institute of Electrical and Electronics Engineers, 1985, p. 1564-1569. refs

Some of the most current techniques for increasing intelligibility in audio distribution systems operating in high ambient noise environments (engine noise, weapons launch, helicopter rotor slap, etc.) are examined. As part of a program to develop the new Tri-Service Digital Audio Distribution System (DADS), a systems approach has been taken to improving intelligibility. The solutions include better noise canceling microphones, active signal enhancement at the audio input, and both passive and active noise canceling devices as the headset. Initial data show that intelligibility scores of better than 75 percent in pink noise environments greater than 115 dB SPL have been achieved.

A86-28801
ADVANCED SPACESUIT GLOVE DESIGN
W. M. CLAPP (MIT, Cambridge, MA) IN: The case for Mars II . San Diego, CA, Univelt, Inc., 1985, p. 469-488. refs
(AAS 84-175)

A lightweight pressure suit glove for the Martian environment has been developed based on the elastic pressurization concept. Elastic pressurization makes it possible to apply a mechanical counterpressure to the hand which is equal to the pressure of the air that a human would breathe in a conventional pressure suit. It is shown that the glove offers superior dexterity and tactile feedback in comparison with the Apollo A7L-B glove, and is less fatiguing to wear. Covering the glove with a protective layer to guard against micrometeoroids and radiation was found to be unneccessary in the case of the Martian environment, and the hand need only be protected from the comparatively moderate extremes of temperature. It is suggested that a full-length pressure suit could be developed on the basis of the elastic pressurization concept.

THE RETRIEVAL, STORAGE, AND RECYCLING OF WATER FOR A MANNED BASE ON MARS
D. JONES, M. R. LAPOINTE, H. M. HART, A. LARSON (Colorado, University, Boulder), and C. F. WEBB (General Electric Co., Beverly, MA) IN: The case for Mars II . San Diego, CA, Univelt, Inc., 1985, p. 537-556. refs
(AAS 84-180)

A system is described for supplying fresh water - a resource of primary importance to the success of a permanently manned base on Mars - for a 12-18 person base located in the Martian northern hemisphere. The integrated system provides scavenging of all water from waste gases, production of liberal quantities of buffer gas, the supply of water ice from the remnant northern cap during northern hemisphere summers, and efficient water usage and recycling. The scavenging system captures moisture with a molecular sieve and removes argon and oxygen from the atmosphere and airlock gases. Ice is shipped from a polar outpost via robot rovers to provide for expansion of water resources. The water recycling system is based on a Thermoelectric Integrated Membrane Evaporation system which purifies wastewater to drinking water standards. The load on the purification system is reduced through the use of a gray water system for washwater applications. Although no single system is enough to fulfill the water requirements of a permanently manned base on Mars, the integrated system can efficiently close the water cycle of the base.

A86-28807
WATER SUPPLY FOR A MANNED MARS BASE
W. M. CLAPP (MIT, Cambridge, MA) IN: The case for Mars II . San Diego, CA, Univelt, Inc., 1985, p. 557-566. refs
(AAS 84-181)

A water supply system for a manned Mars base is designed. Water is extracted from the Martian air by compressing it, then refrigerating it at constant pressure. When a compression ratio of 1.66 is selected, the energy required to produce one kilogram of water is minimized at 69.92 kw-Hr, of which 30.70 kw-Hr is used for the compression in an single-stage axial compressor of efficiency 0.98, and 39.22 kw-Hr is used for refrigeration in a vapor-cycle refrigerator using subcooling to achieve a coefficient of performance of 1.85. The system mass is approximately 20 kilograms, and the capacity of the system to produce water can be expanded by operating it for longer periods of time than the six hours per day upon which the above calculations are based.

MASS-BALANCE MODEL FOR A CONTROLLED ECOLOGICAL LIFE SUPPORT SYSTEM ON MARS
T. R. CAUDILL (Colorado, University, Boulder) IN: The case for Mars II . San Diego, CA, Univelt, Inc., 1985, p. 611-626. refs
(AAS 84-184)

The colonization of Mars is an instrumental step in the future expansion of the human race into the outer reaches of the solar system. One of the most difficult problems facing long term colonization of Mars is the supply of vital resources. This paper describes a model using a Controlled Ecological Life Support System (CELSS) which would help alleviate many logistical problems. The model outlines the usage of available Martian resources to maintain life. The results show that a closed system is theoretically feasible but there are many technical problems which must be solved before such a system can be utilized.

REVIEW AND EVALUATION OF EMPIRICAL RESEARCH IN TROUBLESHOOTING
N. M. MORRIS and W. B. ROUSE (Search Technology, Inc., Norcross, GA) Human Factors (ISSN 0018-7208), vol. 27, Oct. 1985, p. 503-530. refs
(Contract N66001-83-R-0340)

Following an analysis of task requirements for successful troubleshooting, this paper considers human abilities, limitations, and inclinations with respect to troubleshooting. Research on the effects of various approaches to the training of troubleshooting is reviewed. The extent to which troubleshooting performance is influenced by instruction is highly related to the level of explicitness of action-related information provided. An approach that forces people to use their system knowledge explictly is a promising alternative to explicit instruction in algorithms or diagnostic heuristics, but such an approach is not supported by data from transfer studies. A combination of the two approaches may be the most effective means of teaching troubleshooting, and research evaluating the soundness of this idea should be conducted.

HEAD-UP/HEAD-DOWN TRANSITION - MEASUREMENT OF TRANSITION TIMES
J.-P. R. MENU (Centre d'Etudes et de Recherches de Medecine Aerospatiale, Paris, France) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, March 1986, p. 218-222. DRET-supported research. refs

A method to measure transition times between a head-up display (HUD) signal and a response given to a head-down display (HDD) was developed, using a three-segmented paradigm and testing various vocal and manual arrangements in a fighter aircraft mock-up. The shortest transition times were obtained for voice responses (1600 msec between a HUD signal and a simple response to the HDD). A comparison of the perception and

transition times of a 'positive' contrast (green symbols on black background) with a 'negative' contrast (black symbols on green) has indicated both shorter perception and shorter transition times for the positive contrast. This method permits of the effects evaluation of changes in psychological conditions (such as heavier information processing) and physiological conditions (changing accommodation, gaze axis, and convergence) of a dynamic aeronautical environment on the speeds of acquisition and processing of information. PROCESSING AND PACKAGING - PREPARATION TECHNIQUES ENHANCE MEALS ON THE SHUTTLE
C. PREBLE Commercial Space (ISSN 8756-4831), vol. 1, Winter 1986, p. 58, 59, 61.

In addition to being nutritious, NASA Space Shuttle menu items are expected to be appealing and easily digestible. It it noted that it is not easy to predict how foods will taste in space; space food is also subject to engineering restrictions concerning its weight and compactibility, as well as its resistance to temperature and pressure changes, acceleration, and vibration. Packaging must protect and stabilize food for up to 30 days, as well as facilitiate meal preparation and disposal of leftovers. Typical space foods encompass rehydratable beverages and solids, together with irradiated, freeze-dried, and thermostabilized solids. Meal components are held onto trays by friction fit, and magnets keep the utensils from floating away. O.C.

EVALUATION OF MATERIALS FOR THERMAL PROTECTION
J. I. MARTIN *In* Department of Defense Explosives Safety Board Minutes of the 21st Explosives Safety Seminar, Volume 2 p 1671-1687 Aug. 1984
(AD-P004901) Avail: NTIS HC A99/MF E03 CSCL 13L

An on-going program to provide improved thermal protection for pyrotechnic operators is described. The critical first step in providing improved personal protection is to insure that the best available materials is used to provide the outer shield. Researchers and manufacturers are continually introducing new materials, but they have not been tested against the special kind of thermal threat presented by pyrotechnics. A method of comparative testing of fabrics and other materials is described, and the results obtained with some of the latest available varieties of fabrics are discussed. Author (GRA)

RADIOPROTECTION UPDATE
J. LECLERCQ 14 Nov. 1985 19 p Transl. into ENGLISH from Epure (France), no. 7, Jul. 1985 p 49-57
(BLL-CE-TRANS-8223-(9022-09)) Avail: British Library Lending Div., Boston Spa, Engl.

The problems involved in the radiation protection of nuclear power plant workers are illustrated. It is shown how and the safety of these workers, which is already ensured by the strict observance of public health requirements relating to occupational irradiation, can be improved by means of rational management. Radiation dosage, radiation distribution in the plants, reactor coolant chemistry, shutdown procedures, and nuclear fuels are among the topics discussed. R.J.F.

MOBILE REMOTE MANIPULATOR VEHICLE SYSTEM Patent Application
H. G. BUSH, M. M. MIKULAS, JR., R. E. WALLSOM, and J. K. JENSEN, inventors (to NASA) 31 Jul. 1985 27 p
(NASA-CASE-LAR-13393-1; NAS 1.71:LAR-13393-1; US-PATENT-APPL-SN-760799) Avail: NTIS HC A03/MF A01 CSCL 05H

A mobile remote manipulator system is disclosed for assembly, repair and logistics transport on, around and about a space station square bay truss structure. The vehicle is supported by a square track arrangement supported by guide pins integral with the space station truss structure and located at each truss node. Propulsion is provided by a central push-pull drive mechanism that extends out from the vehicle one full structural bay over the truss and locks drive rods into the guide pins. The track switches allow the vehicle to travel in two (2) orthogonal directions over the truss structure which coupled with the bi-directional drive, allow movement in four (4) directions on one plane. The top layer of this tri-layered vehicle is a logistics platform. This platform is capable of 360 degrees of rotation and will have two (2) astronaut foot restraint platforms 18 and a space crane integral. NASA

INSTRUMENT LIGHTING LEVELS AND AN/AVS-6 USAGE Final Report
W. M. SLUSHER Aug. 1985 48 p
(Contract AF PROJ. 718-4)
(AD-A161538; AAMRL-TR-85-055) Avail: NTIS HC A03/MF A01 CSCL 14B

Two experimental investigations were performed to determine the effects of the AN/AVS-6 Aviators Night Vision Imaging System (ANVIS) display luminance on the setting of instrument lighting levels. In a laboratory study using a simulated A-10 night lighting mockup, eight subjects adjusted instrument lighting levels to what they judged to be the minimum required for safe readability of instruments. Prior to the adjustment of instrument lighting, the subjects were preadapted to various ambient lighting conditions, including a simulated ground luminance of a full moonlit night and two simulated ANVIS display luminances. Results show primary instrument lighting levels were set higher, by a factor of 1.6 following adaptation to the 1.0 foot lambert (ft-L) ANVIS luminance test condition when compared to lighting levels set following adaptation to a 0.00065 ft-L ambient luminance condition. HUMAN ENGINEERING GUIDELINES FOR THE EVALUATION AND ASSESSMENT OF VIDEO DISPLAY UNITS
W. E. GILMORE Jul. 1985 537 p
(TI85-016435; NUREG/CR-4227) Avail: NTIS HC A23/MF A01

The Nuclear Regulatory Commission is provided with a single source that documents known guidelines for conducting formal Human Factors evaluation of Video Display Units (VDUs). The handbook is a cookbook of acceptance guidelines for the reviewer faced with the task of evaluating VDUs already designed or planned for service in the control room. The areas addressed are video displays, controls, control/display integration, and workplace layout. Guidelines relevant to each of those areas are presented. The existance of supporting research is also indicated for each guideline. A Comment section and Method for Assessment section are provided for each set of guidelines. Author

DROP FOOT CORRECTIVE DEVICE Patent
B. C. DEIS, inventor (to NASA) 28 Jan. 1986 5 p Continuation of US-Patent-Appl-SN-876298, filed 9 Feb. 1978, abandoned
(NASA-CASE-LAR-12259-2; US-PATENT-4,566,447; US-PATENT-APPL-SN-280152; US-PATENT-CLASS-128-80-E)
Avail: US Patent and Trademark Office CSCL 05H

A light weight, economical device to alleviate a plurality of difficulties encountered in walking by a victim suffering from a drop foot condition is discussed. A legband girdles the leg below the knee and above the calf providing an anchor point for the upper end of a ligament having its lower end attached to a toe of a shoe or a toe on the foot. The ligament is of such length that the foot is supported thereby and retained in a normal position during walking.

DIRECT MODEL REFERENCE ADAPTIVE CONTROL OF A FLEXIBLE ROBOTIC MANIPULATOR
D. R. MELDRUM 15 Dec. 1985 90 p refs
(Contract NAS7-918)
(NASA-CR-176659; JPL-PUB-85-100; NAS 1.26:176659) Avail: NTIS HC A05/MF A01 CSCL 05H

Quick, precise control of a flexible manipulator in a space environment is essential for future Space Station repair and satellite servicing. Numerous control algorithms have proven successful in controlling rigid manipulators wih colocated sensors and actuators; however, few have been tested on a flexible manipulator with noncolocated sensors and actuators. In this thesis, a model reference adaptive control (MRAC) scheme based on command generator tracker theory is designed for a flexible manipulator. Quicker, more precise tracking results are expected over nonadaptive control laws for this MRAC approach. Equations of motion in modal coordinates are derived for a single-link, flexible manipulator with an actuator at the pinned-end and a sensor at the free end. An MRAC is designed with the objective of controlling the torquing actuator so that the tip position follows a trajectory that is prescribed by the reference model. An appealing feature of this direct MRAC law is that it allows the reference model to have fewer states than the plant itself. Direct adaptive control also adjusts the controller parameters directly with knowledge of only the plant output and input signals. Author

RECONFIGURABLE WORK STATION FOR A VIDEO DISPLAY UNIT AND KEYBOARD Patent Application
N. L. SHIELDS (Essex Corp.), M. F. FAGG (Essex Corp.), D. E. HENDERSON (Essex Corp.), and F. D. ROE, inventors (to NASA) 5 Dec. 1985 17 p
(NASA-CASE-MFS-26009-1SB; NAS 1.71:MFS-26009-1SB; US-PATENT-APPL-SN-805011) Avail: NTIS HC A02/MF A01 CSCL 05H

A reconfigurable workstation is illustrated having video, keyboard, and hand operated motion controller capabilities. The workstation includes main side panels between which a primary work panel is pivotally carried in a manner in which primary work panel may be adjusted and set in a negatively declined or positively inclined position for proper forearm support while operating hand controllers. A keyboard table supports a keyboard in such a manner that the keyboard is set in a positively inclined position with respect to the negatively declined work panel. Various adjustable devices are provided for adjusting the relative declinations and inclinations of the work panels, tables, and visual display panels. NASA

A MULTIPLE-REGRESSION MODEL OF PILOT PERFORMANCE IN VERTICAL AND TRANSLATIONAL FLIGHT
J. WIEDEMANN and S. N. ROSCOE May 1985 102 p
(Contract N00014-81-K-0439)
(AD-A161364; BEL-85-2/ONR-85-2) Avail: NTIS HC A06/MF A01 CSCL 01D

An experiment was conducted to advance the development of a multiple regression model of VTOL pilot performance as a function of various control/display system and flight mission variables. Second-order response surfaces as a function of two control system design variables (translational control order and vertical control gain reduction factor) and three downward-looking display design variables (horizontal position error magnification, translational prediction time, and translational tracking mode) were derived from Pilot performances on each of three mission scenarios. The optimum values for each of the five system design variables were determined for each scenario independently using the same central composite experimental design with three groups of four subjects each. Comprehensive analyses of variance and canonical analyses were used to refine the fitted surfaces to determine the true nature of the pilot performance effects for each flight scenario and to select a single set of system design parameters that would yield near-optimum performances on all three scenarios. EVALUATION OF A PASSENGER MASK MODIFIED WITH A REBREATHER BAG FOR PROTECTION FROM SMOKE AND FUMES
E. A. HIGGINS, J. T. SALDIVAR, P. J. LYNE, and G. E. FUNKHOUSER Oct. 1985 25 p
(AD-A162473; DOT/FAA/AM-85-10) Avail: NTIS HC A02/MF A01 CSCL 06K

A series of experiments were conducted in an altitude chamber at ground level, 8,000 ft, 14,000 ft, and 21,500 ft, both with and without exercise, to evaluate the potential for providing protection from smoke and fumes for airline passengers while wearing a standard continuous-flow passenger mask modified by the addition of a rebreather bag. It was determined that it would provide increased protection for those individuals who had tidal volumes of 1.5 L or less. However, it would not function properly for those individuals who had tidal volumes greater than 1.5 L. Either the carbon dioxide levels were too great (above 15 mm Hg partial pressure) or the rebreather bag collapsed. These results indicate that the addition of the rebreather bag to the passenger mask has the potential for providing protection from smoke and fumes, but the system must have appropriately balanced valve resistances and appropriately sized valve openings. This critical balance has not yet been achieved for those individuals with large tidal volumes. GRA

PHOTOMETRIC AND PHOTO ACOUSTIC MEASUREMENT OF THE ABSORBANCE OF MICRO-ORGANISMS AND ITS RELATION TO THE MICRO-ORGANISM-GRAIN HYPOTHESIS
S. YABUSHITA, K. WADA (Kyoto University, Japan), T. INAGAKI (Osaka Kyoiku University, Tennoji, Japan), and T. ITO (Tokyo, University, Japan) Astrophysics and Space Science (ISSN 0004-640X), vol. 117, no. 2, Dec. 1985, p. 401-406. refs

Absorption of E. Coli and other microorganisms are measured by standard optical spectroscopy and by the photoacoustic method. The former method does not yield an extinction peak at 220 nm

but yields a weak one at 270 nm, while with the latter method absorption peaks at 220 nm and a weaker one at 270 nm have been found for the spore of Bacillus subtilis. The well-known amino acid tryptophan shows absorption peaks at 220 and 280 nm. It is tentatively concluded that for the microorganism model of interstellar grains to be viable, they may have to be spores rather than ordinary cells. Author

PHOTOCHEMICAL REACTIONS IN INTERSTELLAR GRAINS PHOTOLYSIS OF CO, NH3, AND H2O
V. K. AGARWAL, J. P. FERRIS (Rensselaer Polytechnic Institute, Troy, NY), W. SCHUTTE, J. M. GREENBERG (Leiden, Rijksuniversiteit, Netherlands), R. BRIGGS (New York State, Dept. of Health, Albany) et al. Origins of Life (ISSN 0302-1688), vol. 16, no. 1, 1985, p. 21-40. refs
(Contract NGR-33-018-148)

The interstellar grains are currently considered to be the basic building blocks of comets and, possibly, meteorites. To test this theory, a simulation of the organic layer accreted onto interstellar dust particles was prepared by slow deposition of a CO:NH3:H2O gas mixture on an Al block at 10 K, with concomitant irradiation with vacuum UV. The results of the HPLC and IR analyses of the nonvolatile residue formed by photolysis at 10 K are compared with those observed at 77 K and 298 K. Some of the compounds that may be present on the surfaces of interstellar dust particles have been identified, and some specific predictions concerning the types of molecular species present in comets could be drawn. The results also suggest that photochemical reactions may have been important for the formation of meteorite components. The implication of the findings to the questions of the source of organic matter on earth and the origin of life are discussed. Author

TRACE ELEMENTS IN CHEMICAL EVOLUTION. I. II - SYNTHESIS OF AMINO ACIDS UNDER SIMULATED PRIMITIVE EARTH CONDITIONS IN THE PRESENCE OF TRACE ELEMENTS
K. KOBAYASHI and C. PONNAMPERUMA (Maryland, University, College Park) Origins of Life (ISSN 0302-1688), vol. 16, no. 1, 1985, p. 41-55, 57-67. refs

Studies concerned with the importance of trace elements in biochemical evolution are presented together with some new experimental evidence on the role of metals in the synthesis of biomolecules. The role of individual elements as either integral parts of the enzyme active centers, as the constituents of redox complexes, or as Lewis acids in enzymatic reactions is discussed. The reasons for the universal essentiality of Fe, Zn, Mo, and some other elements are seen in the combination of the relative abundance of these elements in the primeval ocean and their useful bioorganic characteristics. In an electric discharge experiment, the presence of trace metals was shown to significantly increase yields of complex amino acids (e.g., valine and glutamic acid) in the primordial-like atmosphere of CH4, NH3, and H2O, compared with the metal-less condition. The mechanism for this metal-effected promotion is seen in the first fixation of some organic compounds by Fe and Mo in a gas phase, thus facilitating their transfer into aqueous phase, where Zn may have catalyzed reactions in the water phase. I.S.

RATIONALIZATION OF SOME GENETIC ANTICODONIC ASSIGNMENTS
J. C. LACEY, JR., L. M. HALL, and D. W. MULLINS, JR. (Alabama, University, Birmingham) Origins of Life (ISSN 0302-1688), vol. 16, no. 1, 1985, p. 69-79. refs
(Contract NGR-01-010-001)

The hydrophobicity of most amino acids correlates well with that of their anticodon nucleotides, with Trp, Tyr, Ile, and Ser being the exceptions to this rule. Using previous data on hydrophobicity and binding constants, and new data on rates of esterification of polyadenylic acid with several N-acetylaminoacyl imidazolides, several of the anticodon assignments are rationalized. Chemical reasons are shown supporting the idea of the inclusion of the Ile in the catalog of biological amino acids late in the evolution, through a mutation of the existing tRNA and its aminoacyl-tRNA-synthetase. It was found that an addition of hexane increases the incorporation of hydrophobic Ac-Phe into poly-A, in support of the Fox (1965) and Oparin (1965) emphasis on the biogenetic importance of phase-separated systems. I.S.

A86-28724
LIMITS ON ASYMMETRIC ORTHOPOSITRONIUM FORMATION IN HIGH Z OPTICALLY ACTIVE MOLECULES
J. VAN HOUSE, A. RICH (Michigan, University, Ann Arbor), and P. W. ZITZEWITZ (Michigan, University, Dearborn) Origins of Life (ISSN 0302-1688), vol. 16, no. 1, 1985, p. 81-87. refs

New experimental results are presented for testing the Vester-Ulbricht (V-U) hypothesis, which states that the observed signs of biological chirality in the amino acids and sugars are caused by asymmetric radiolysis by beta particles. The experimental asymmetries, expressed in terms of A(Ps) values, created in amino acid samples by bombardment by a beam of low-energy positrons with a net helicity, were correlated with theoretically predicted values of A(Ps). The A(Ps) values for two high-Z amino acids, selenocystine and thyroxine, were found to be below the value of 0.0003, excluding the part of the theoretically predicted range of A(Ps). The experimental limit on the A(R) value, derived from the values of A(Ps), was found to be above 10 to the -9th, thirty times lower than a previous measurement in leucine (Z = 6), but still not small enough to rule out the V-U hypothesis. I.S.

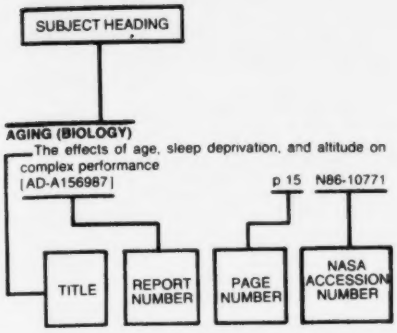
A bibliography of NASA exobiology programs is given. Planetary environments; chemical evolution; organic geochemistry; extraterrestrial intelligence; and the effect of planetary solar and astrophysical phenomena on the evolution of complex life in the universe are among the topics listed. R.J.F.

Typical Subject Index Listing



The subject heading is a key to the subject content of the document. The title is used to provide a description of the subject matter. When the title is insufficiently descriptive of the document content, the title extension is added, separated from the title by three hyphens. The (NASA or AIAA) accession number and the page number are included in each entry to assist the user in locating the abstract in the abstract section. If applicable, a report number is also included as an aid in identifying the document. Under any one subject heading, the accession numbers are arranged in sequence with the AIAA accession numbers appearing first.

[AD-A161773] p 182 N86-22109

ANTHROPOMETRY
Device for rapid quantification of human carotid baroreceptor-cardiac reflex responses p 162 A86-28125

ANTIBIOTICS
Development of an ultrafast-curing wound dressing
[AD-A162471] p 177 N86-22099
ANTIBODIES
Suppression of antibody forming cells by muramyl Di-peptides
[AD-A162400] p 159 N86-22084
Development and use of anucleated bacterial cells to assay the in vivo activity of pollutants
[AD-A162727] p 160 N86-22089
ANTIGENS
Suppression of antibody forming cells by muramyl Di-peptides
[AD-A162400] p 159 N86-22084
Studies on the mechanism of suppression of the immune response by synthetic, non-toxic adjuvants
[AD-A162444] p 160 N86-22085
ARCHITECTURE
Problems of city planning --- meteorological parameters p 169 N86-21049
ARMED FORCES (UNITED STATES)
Health and performance of antarctic winter-over personnel: A follow-up study
[AD-A161773] p 182 N86-22109
ARRHYTHMIA
Experimental arrhythmia and its prevention p 174 N86-21129
ARTIFICIAL INTELLIGENCE
Modeling of perception and decision-making processes p 183 A86-27094
ASSEMBLING
Principles of instruction for successful assembly and repair
[AD-A161280] p 180 N86-21142
ASTHMA
Weather and asthma symptoms p 166 N86-21029
Height-dependent reduction of airborne pollen and effects on children and teenagers affected by bronchial asthma p 167 N86-21036
ASTRODYNAMICS
Kinematics and reaction moment compensation for a spaceborne elbow manipulator
[AIAA PAPER 86-0250] p 182 A86-26616
ATMOSPHERIC CIRCULATION
Temperature wind speed humidity (TWH): A biometeorological index testing p 166 N86-21028
ATMOSPHERIC COMPOSITION
The state of man's organism under conditions of elevated atmospheric carbon dioxide p 163 A86-29306
ATMOSPHERIC EFFECTS
What in human biometeorology can contribute to assessment of the effects of hazardous substances on health? p 168 N86-21043
ATMOSPHERIC ELECTRICITY
Investigations of the possible influence of air electrical phenomena on dulling and ghost aching in amputated patients p 167 N86-21033
ATMOSPHERIC HEAT BUDGET
Study of a meteorological prediction of acute myocardial infarction incidence p 166 N86-21030
ATMOSPHERIC TEMPERATURE
Human bioclimatic classification methods illustrated with examples of selected countries p 169 N86-21058
ATMOSPHERICS
Meteorological adaptation research at biology institute p 158 N86-20890
ATOMIC STRUCTURE
Experimental, structural and theoretical models of bacteriochlorophylls a, d and g
[DE86-001727] p 158 N86-21101
ATTENTION
Attention allocation, distraction, and the type A/Type B behavior pattern
[AD-A160671] p 180 N86-21141
AUDIO EQUIPMENT
Improving intelligibility in audio distribution systems p 186 A86-28513
AUDITORY DEFECTS
Hysterical deafness - An unusual presentation of stress in an air traffic control officer p 180 A86-29098
AUDITORY PERCEPTION
Attention within auditory word perception
[AD-A162550] p 182 N86-22111
AUDITORY SIGNALS
Auditory signals in military aircraft - Ergonomic principles versus practice p 185 A86-28442
Interactive activation models of perception and comprehension
[AD-A161362] p 181 N86-21143
AUSTRIA
The Austrian biometeorological service p 167 N86-21034
AUTOMOBILE ACCIDENTS
Meteorotropic determinants of road collisions and accidents p 165 N86-21022
AUTONOMIC NERVOUS SYSTEM
Stimulus specificity and individual stereotypy of autonomic responses to motion stressors
[NASA-CR-176543] p 171 N86-21107
AVIATION PSYCHOLOGY
Effects of physiological and mental stress on crew members in relatively long flight by C-1 jet transport aircraft p 161 A86-28100
AVIONICS
Target designation by speech, joystick, and touch control Format design implications p 184 A86-28439
AXIAL STRAIN
Head-spine structure modeling: Enhancements to secondary loading path model and validation of head-cervical spine model
[AD-A161425] p 172 N86-21112

B

BACTERIA
Effect of cosmoheliogeophysical factors on bacterial agglutionation in vitro p 155 A86-27473
Experimental, structural and theoretical models of bacteriochlorophylls a, d and g
[DE86-001727] p 158 N86-21101
Studies on the mechanism of suppression of the immune response by synthetic, non-toxic adjuvants
[AD-A162444] p 160 N86-22085
Molecular and biological properties of an immunopotentiating complex polysaccharide adjuvant produced by a gliding bacterium
[AD-A162664] p 160 N86-22086
Development and use of anucleated bacterial cells to assay the in vivo activity of pollutants
[AD-A162727] p 160 N86-22089
BARORECEPTORS
Device for rapid quantification of human carotid baroreceptor-cardiac reflex responses p 162 A86-26125
BIBLIOGRAPHIES
The human factor: Biomedicine in the manned space program to 1980
[NASA-SP-4213] p 158 N86-21097

A model for the formation of the structure of the external electric field of humans p 183 A86-27500
Electrical enhancement of healing p 156 A86-28449
Electrical activity of cerebellum in the wakefulness-sleep cycle p 157 A86-29255
The interface between atmosphere and organism p 164 N86-21014
Rat brain impedance in stationary magnetic field p 174 N86-21128
BIOFEEDBACK
Shuttle flight experiment 30-day summary report
[NASA-CR-176539] p 171 N86-21109
BIOGEOCHEMISTRY
Stromatolites from the 3,300-3,500-Myr Swaziland Supergroup, Barberton Mountain Land, South Africa p 155 A86-26490
BIOINSTRUMENTATION
Device for rapid quantification of human carotid baroreceptor-cardiac reflex responses p 162 A86-26125
BIOLOGICAL EFFECTS
Effect of cosmoheliogeophysical factors on bacterial agglutionation in vitro p 155 A86-27473
Effect of low-power millimeter-range monochromatic electromagnetic radiation on biological processes p 155 A86-27475
Meteorological adaptation research at biology institute p 158 N86-20890
Weather sensitivity as discomfort p 165 N86-21025
Aerospace medicine and biology: A continuing bibliography with indexes (supplement 282)
[NASA-SP-7011(282)] p 176 N86-22093
BIOLOGICAL EVOLUTION
Trace elements in chemical evolution. I, II - Synthesis of amino acids under simulated primitive earth conditions in the presence of trace elements p 189 A86-28722
BIOLOGICAL MODELS (MATHEMATICS)
Interaction between the otolithic organ and the semicircular canals of the vestibular apparatus in the system of spatial angular stabilization in humans p 161 A86-27474
A model for the formation of the structure of the external electric field of humans p 183 A86-27500
Wickens' resource allocation model - Implications for the design of human-machine systems p 185 A86-28453
On interacting populations that disperse to avoid crowding: The effect of a sedentary colony
[REPT-4] p 181 N86-21145
BIOMASS
Comparative analysis of biomass pyrolysis condensates
[DE86-001773] p 159 N86-21102
BIOMEDICAL DATA
The human factor: Biomedicine in the manned space program to 1980
[NASA-SP-4213] p 158 N86-21097
Biomedical and environmental sciences at Oak Ridge National Laboratory
[DE86-001639] p 161 N86-22091
BIOMETEOROLOGY
The influence of heliometeorologic factors on circulation and some vegetative functions p 165 N86-21021
Environmental factors and infant mortality p 168 N86-21041
What in human biometeorology can contribute to assessment of the effects of hazardous substances on health? p 168 N86-21043
Problems in city climate evaluation in human biometeorological terms p 169 N86-21050
Human bioclimatic classification methods illustrated with examples of selected countries p 169 N86-21058
Comparison between meteorological complex values and a model of man's energy budget p 169 N86-21059
Application of meteorological and solar data in health resort climatherapy p 170 N86-21067
BIOPROCESSING
Salyut-7 electrophoresis experiments aid medical research p 158 N86-20445
BIOSYNTHESIS
Theoretical prerequisites for the possible use of bacteria which split organophosphates in order to increase the yield of nutrient yeast and its nitrogen and phosphorous content
[AD-A161811] p 159 N86-22083
Lymphocyte activation - regulatory substances
[AD-A162683] p 160 N86-22087
BIOTECHNOLOGY
Biomedical and environmental sciences at Oak Ridge National Laboratory
[DE86-001639] p 161 N86-22091
Japanese Technology Evaluation Program (JTECH): Biotechnology Panel
[PB88-109366] p 181 N86-22092
BIOTELEMETRY
Circadian variation in host defense
[AD-A161702] p 158 N86-21098
BLOOD
Research opportunities on immunocompetence in space
[NASA-CR-176462] p 180 N86-21138
BLOOD CIRCULATION
The influence of heliometeorologic factors on circulation and some vegetative functions p 165 N86-21021
Cerebral circulation and oxygenation in healthy man during graded exercise in antiorthostatic position p 173 N86-21120
BLOOD PLASMA
Effect of restricted motor activity on alanine level in human plasma p 173 N86-21122

BLOOD PRESSURE
Meteorotropic changes of cardiac patients' blood pressure and pulse frequency during a complex bath cure p 166 N86-21031
Analysis techniques for continuous twenty four hour ambulatory blood pressure patterns p 170 N86-21103
BLUE GREEN ALGAE
Characterization and optimization of hydrogen production by a salt water blue-green alga Oscillatoria sp. Miami BG 7. II Use of immobilization for enhancement of hydrogen production p 156 A86-28860
BODY FLUIDS
Cardiovascular receptors and fluid volume control (1985 Armstrong Lecture) p 157 A86-29099
BODY TEMPERATURE
Afterdrop of body temperature during rewarming - An alternative explanation p 162 A86-28122
Circadian variation in host defense
[AD-A161702] p 158 N86-21098
Heat acclimatization developed during summer running in northeastern United States
[AD-A162728] p 177 N86-22102
BODY WEIGHT
Effects of body mass and morphology on thermal responses in water p 162 A86-28123
BONES
Effect of weightlessness and some of its models on mechanical properties of animal bones submitted to torsion p 173 N86-21123
Comparison of bone reactions of rats submitted to clinostatic and antiorthostatic hypokinesia p 174 N86-21125
BRAIN
Cerebral circulation and oxygenation in healthy man during graded exercise in antiorthostatic position p 173 N86-21120
Rat brain impedance in stationary magnetic field p 174 N86-21128
Effect of active antiorthostatic conditioning on tolerance to cranial redistribution of blood p 175 N86-21135
BREATHING APPARATUS
Evaluation of a passenger mask modified with a rebreather bag for protection from smoke and fumes
[AD-A162473] p 188 N86-22116
BROMINE COMPOUNDS
Bimane derivatives as fluorescent probes for biological macromolecules
[AD-A162725] p 160 N86-22088

C

CAFFEINE
Performance overnight in shiftworkers operating a day-night schedule p 179 A86-29095
CALCIUM
Role of Ca(2+)/calmodulin in phosphorylation of proteins in plants
[DE86-001804] p 158 N86-21099
Role of vitamin D3 active metabolites in regulation of calcium metabolism in hypokinetic rats p 174 N86-21124
CALCIUM METABOLISM
Mechanisms of calcium permeability changes in the sarcolemma of vascular smooth-muscle cells during hypoxia p 157 A86-29257
CARBOHYDRATE METABOLISM
Changes in glycolytic intermediates in rat erythrocytes during exposure to simulated high altitude p 156 A86-29097
CARBON DIOXIDE CONCENTRATION
The state of man's organism under conditions of elevated atmospheric carbon dioxide p 163 A86-29306
CARBON MONOXIDE
Photochemical reactions in interstellar grains photolysis of CO, NH3, and H2O p 189 A86-28721
Foliage plants for indoor removal of the primary combustion gases carbon monoxide and nitrogen dioxide p 156 A86-29089
Effects of carbon monoxide on personnel
[AD-P004882] p 163 N86-20628
Effects of air pollution on man p 167 N86-21038
CARDIOLOGY
Exploratory studies of physiological components of motion sickness: Cardiopulmonary differences between high and low susceptibles
[NASA-CR-176541] p 171 N86-21108
CARDIOVASCULAR SYSTEM
Cardiovascular receptors and fluid volume control (1985 Armstrong Lecture) p 157 A86-29099
Cerebral circulation and oxygenation in healthy man during graded exercise in antiorthostatic position p 173 N86-21120
Condition of cardiovascular system in presence of acute mountain sickness p 174 N86-21127
Experimental arrhythmia and its prevention p 174 N86-21129
Effect of active antiorthostatic conditioning on tolerance to cranial redistribution of blood p 175 N86-21135
Electrocardiogram in NEHB type leads of Macaca mulatta monkeys p 175 N86-21137
The role of endorphins in the pathophysiology of hemorrhagic and endotoxic shock in the subhuman primate
[AD-A162483] p 177 N86-22100
CAROTID SINUS REFLEX
Device for rapid quantification of human carotid baroreceptor-cardiac reflex responses p 162 A86-28125
CASE HISTORIES
Hysterical deafness - An unusual presentation of stress in an air traffic control officer p 180 A86-29098
CATALYTIC ACTIVITY
Polyribonucleic acids as enzymes p 155 A86-27051
CATECHOLAMINE
Changes in catecholamine excretion during physical and mental workload p 161 A86-28099
The role of endorphins in the pathophysiology of hemorrhagic and endotoxic shock in the subhuman primate
[AD-A162483] p 177 N86-22100
CELLS (BIOLOGY)
Condition of thyroid gland and C cells during long-term rotation (morphological and biochemical investigation) p 174 N86-21126
Research opportunities on immunocompetence in space
[NASA-CR-176482] p 180 N86-21138
Proceedings: Protons and Membrane Reactions held at Santa Barbara, California on 28 January - 1 February 1985
[AD-A161331] p 159 N86-22082
Suppression of antibody forming cells by muramyl Di-peptides
[AD-A162400] p 159 N86-22084
Molecular and biological properties of an immunopotentiating complex polysaccharide adjuvant produced by a gliding bacterium
[AD-A162664] p 160 N86-22086
Development and use of anucleated bacterial cells to assay the in vivo activity of pollutants
[AD-A162727] p 160 N86-22089
CEREBELLUM
Electrical activity of cerebellum in the wakefulness-sleep cycle p 157 A86-29255
CEREBRAL CORTEX
Comparison of transient and steady state cortical evoked potentials p 183 A86-28431
CHEMICAL COMPOSITION
Comparative analysis of biomass pyrolysis condensates
[DE86-001773] p 159 N86-21102
CHEMICAL EVOLUTION
Trace elements in chemical evolution. I. II - Synthesis of amino acids under simulated primitive earth conditions in the presence of trace elements p 189 A86-28722
CHEMICAL REACTIONS
Development and use of anucleated bacterial cells to assay the in vivo activity of pollutants
[AD-A162727] p 160 N86-22089
CHEMORECEPTORS
Stimulation of brain muscarinic acetylcholine receptors acutely reverses radiogenic hypodipsia p 156 A86-29096
CHILDREN
Weather and asthma symptoms p 166 N86-21029
Height-dependent reduction of airborne pollen and effects on children and teenagers affected by bronchial asthma p 167 N86-21036
Group diagnosis as risk assessment in environment hygiene p 167 N86-21039
Immission and weather effects on children's airway illnesses in Berlin (1979-1982): Methodology and result summary p 168 N86-21040
Environmental factors and infant mortality p 168 N86-21041
Immission and weather effects on children's airway troubles in Berlin (1979-1982). Time series investigations: Croup syndrome and asthmatic airway troubles p 168 N86-21044
Emmission and weather effects on children's airway troubles in Berlin (1979-1982). Comparison of two different immissions: Loaded residential areas in West Berlin polluted areas p 168 N86-21045
CHIRAL DYNAMICS
Limits on asymmetric orthopositronium formation in high Z optically active molecules p 189 A86-28724
CHLOROPHYLLS
Experimental, structural and theoretical models of bacteriochlorophylls a, d and g
[DE86-001727] p 158 N86-21101
Particulate models of photosynthesis
[DE86-001625] p 160 N86-22090
CIRCADIAN RHYTHMS
Circadian variation in host defense
[AD-A161702] p 158 N86-21098
CITIES
Airway infections related to city climate and local immission load p 158 N86-21042
The biological efficiency of dust emmission: Determination based on the withering degree of exposed lichens p 169 N86-21047
CIVIL AVIATION
The history of aeronautical medicine in Venezuela
[NASA-TM-77709] p 176 N86-22094
CLINICAL MEDICINE
Advanced clinical research in shock and trauma
[AD-A162730] p 177 N86-22103
CLOSED ECOLOGICAL SYSTEMS
Mass-balance model for a controlled ecological life support system on Mars
[AAS 84-184] p 186 A86-28810
COAGULATION
Development of an ultrafast-curing wound dressing
[AD-A162471] p 177 N86-22099
COCKPITS
Computer-based tools for cockpit design p 184 A86-28436
Target designation by speech, joystick, and touch control Format design implications p 184 A86-28439
Speech compression as a potential aid to automated voice warnings in the cockpit p 185 A86-28445
Selecting cockpit functions for speech I/O technology p 185 A86-28446
COLD FRONTS
The influence of heliometeorologic factors on circulation and some vegetative functions p 165 N86-21021
Study of a meteorological prediction of acute myocardial infarction incidence p 166 N86-21030
The Austrian biometeorological service p 167 N86-21034
COLD TOLERANCE
Man's thermal budget under various climates p 164 N86-21016
Climatic cure on a practical level p 164 N86-21019
COLD WEATHER
Weather sensitivity as discomfort p 165 N86-21025
Study of a meteorological prediction of acute myocardial infarction incidence p 166 N86-21030
Investigations of the possible influence of air electrical phenomena on dulling and ghost aching in amputated patients p 167 N86-21033
Immission and weather effects on children's airway troubles in Berlin (1979-1982). Time series investigations: Croup syndrome and asthmatic airway troubles p 168 N86-21044
Health and performance of antarctic winter-over personnel: A follow-up study
[AD-A161773] p 182 N86-22109
COLLOIDS
Colloidal and meteorological in vitro reactions p 165 N86-21024
COLOR CODING
The effects of color-coding in geosit displays. 1: Color as a redundant code
[AD-A161107] p 181 N86-22108
COLOR VISION
An automated system for comprehensive assessment of visual field sensitivity
[AD-A162755] p 178 N86-22104
COMBUSTION PRODUCTS
Foliage plants for indoor removal of the primary combustion gases carbon monoxide and nitrogen dioxide p 156 A86-29089
COMPARISON
Comparison of bone reactions of rats submitted to clinostatic and antiorthostatic hypokinesia p 174 N86-21125
COMPENSATORS
Kinematics and reaction moment compensation for a spaceborne elbow manipulator
[AIAA PAPER 86-0250] p 182 A86-26616
COMPUTER AIDED DESIGN
Computer-based tools for cockpit design p 184 A86-28436
COMPUTER AIDED TOMOGRAPHY
Visual perception in correlated noise p 181 N86-22106
COMPUTER GRAPHICS
Utilizing computer graphics display technology --- for aerospace systems p 185 A86-28441
A multiple-regression model of pilot performance in vertical and translational flight
[AD-A161364] p 188 N86-22115
COMPUTER PROGRAMMING
Design techniques for robots - Space applications p 183 A86-28074

COMPUTER PROGRAMS

Interactive activation models of perception and comprehension
[AD-A161362] p 181 N86-21143

COMPUTER PROGRAMS
New roles for computation in the life sciences
[DE85-017542] p 158 N86-21100

COMPUTER TECHNIQUES
New roles for computation in the life sciences
[DE85-017542] p 158 N86-21100

CONDENSATES
Comparative analysis of biomass pyrolysis condensates
[DE86-001773] p 159 N86-21102

CONFERENCES
European Annual Conference on Human Decision Making and Manual Control, 4th, Zeist, Netherlands, May 28-30, 1984, Proceedings p 183 A86-28285

CONFIGURATION MANAGEMENT
Reconfigurable work station for a video display unit and keyboard
[NASA-CASE-MFS-26009-1SB] p 188 N86-22114

CONSUMABLES (SPACECREW SUPPLIES)
Processing and packaging - Preparation techniques enhance meals on the Shuttle p 187 A86-29497

CONTAMINANTS
Development and use of anucleated bacterial cells to assay the in vivo activity of pollutants
[AD-A162727] p 160 N86-22089

CONTAMINATION
Development and use of anucleated bacterial cells to assay the in vivo activity of pollutants
[AD-A162727] p 160 N86-22089

CONTROL EQUIPMENT
Target designation by speech, joystick, and touch control Format design implications p 184 A86-28439

CONTROLLERS
Reconfigurable work station for a video display unit and keyboard
[NASA-CASE-MFS-26009-1SB] p 188 N86-22114

CONVECTIVE HEAT TRANSFER
Physical causes of air draft phenomena, new facts p 164 N86-21018

COOLING
Physical causes of air draft phenomena, new facts p 164 N86-21018
On the importance of cooling in climatic therapy p 165 N86-21020
Comparison between meteorological complex values and a model of man's energy budget p 169 N86-21059
Spatial distribution of heat and cold stress in the Federal Republic of Germany p 170 N86-21065

CORIOLIS EFFECT
The effective intensity of Coriolis, cross-coupling stimulation is gravitoinertial force dependent - Implications for space motion sickness p 163 A86-29093

CORROSION
Radioprotection update
[BLL-CE-TRANS-8223-(9022-09] p 187 N86-21146

COSMIC RAYS
Effect of cosmoheliogeophysical factors on bacterial agglutionation in vitro p 155 A86-27473

CREW STATIONS
A workload index for iterative crewstation evaluation p 184 A86-28433

CROWDING
On interacting populations that disperse to avoid crowding: The effect of a sedentary colony
[REPT-4] p 181 N86-21145

CURES
Climatic cure on a practical level p 164 N86-21019
On the importance of cooling in climatic therapy p 165 N86-21020
Meteorotropic changes of cardiac patients' blood pressure and pulse frequency during a complex bath cure p 166 N86-21031

CYSTEINE
Development and use of anucleated bacterial cells to assay the in vivo activity of pollutants
[AD-A162727] p 160 N86-22089

CYTOLOGY
Characterization and optimization of hydrogen production by a salt water blue-green alga Oscillatoria sp. Miami BG 7. II Use of immobilization for enhancement of hydrogen production p 156 A86-28860
Effect of weightlessness on the development of neurosecretory structures of the hypothalamo-hypophyseal system of the rat brain (Electron-microscope study) p 157 A86-29174

D

DARK ADAPTATION
Instrument lighting levels and AN/AVS-6 usage
[AD-A161538] p 187 N86-21148

DARKNESS
Circadian variation in host defense
[AD-A161702] p 158 N86-21098

DATA ACQUISITION
Local climatic particularities and their importance for recreation area (example, Saarland-lower Bliestal) p 170 N86-21064

DATA PROCESSING
A procedure-based approach to human information processing models
[AD-A162454] p 181 N86-21144

DECISION MAKING
Modeling of perception and decision-making processes p 183 A86-27094
European Annual Conference on Human Decision Making and Manual Control, 4th, Zeist, Netherlands, May 28-30, 1984, Proceedings p 183 A86-28285
Problems of city planning --- meteorological parameters p 169 N86-21049
Problems in city climate evaluation in human biometeorological terms p 169 N86-21050

DEOXYRIBONUCLEIC ACID
New roles for computation in the life sciences
[DE85-017542] p 158 N86-21100
Lymphocyte activation - regulatory substances
[AD-A162683] p 160 N86-22087

DETECTION
Device for combined study of visual tracking and verbal activity p 175 N86-21133

DIAGNOSIS
Group diagnosis as risk assessment in environment hygiene p 167 N86-21039

DIASTOLIC PRESSURE
Analysis techniques for continuous twenty four hour ambulatory blood pressure patterns p 170 N86-21103

DIETS
Mechanisms of bioenergetic homeostasis during exercise: A general model
[AD-A161678] p 176 N86-22098

DIFFERENTIAL EQUATIONS
Incorporation of active elements into the articulated total body model
[AD-A162518] p 177 N86-22101

DIGITAL SIMULATION
Incorporating human operator considerations into existing weapon system analysis and quantification capabilities p 184 A86-28438

DIRECT CURRENT
Electrical enhancement of healing p 156 A86-28449

DISEASES
Health and performance of antarctic winter-over personnel: A follow-up study
[AD-A161773] p 182 N86-22109

DISPLAY DEVICES
Utilizing computer graphics display technology --- for aerospace systems p 185 A86-28441
Human engineering guidelines for the evaluation and assessment of video display units
[TI85-016435] p 187 N86-21149
The effects of color-coding in geosit displays. 1: Color as a redundant code
[AD-A161107] p 181 N86-22108
A multiple-regression model of pilot performance in vertical and translational flight
[AD-A161364] p 188 N86-22115

DISSOCIATION
The dissociation of subjective measures of mental workload and performance
[NASA-CR-176609] p 180 N86-21139

DISTANCE
Heat acclimatization developed during summer running in northeastern United States
[AD-A162728] p 177 N86-22102

DIURNAL VARIATIONS
Analysis techniques for continuous twenty four hour ambulatory blood pressure patterns p 170 N86-21103

DOSIMETERS
Application of meteorological and solar data in health resort climatherapy p 170 N86-21067

DRAFT (GAS FLOW)
Physical causes of air draft phenomena, new facts p 164 N86-21018

DRUGS
Experimental arrhythmia and its prevention p 174 N86-21129
The role of endorphins in the pathophysiology of hemorrhagic and endotoxic shock in the subhuman primate
[AD-A162483] p 177 N86-22100

DUST
The biological efficiency of dust emmission: Determination based on the withering degree of exposed lichens p 169 N86-21047

DYNAMIC RESPONSE
Head-spine structure modeling: Enhancements to secondary loading path model and validation of head-cervical spine model
[AD-A161425] p 172 N86-21112
The effects of color-coding in geosit displays. 1: Color as a redundant code
[AD-A161107] p 181 N86-22108

E

EARPHONES
Improving intelligibility in audio distribution systems p 186 A86-28513

ECOLOGY
Biomedical and environmental sciences at Oak Ridge National Laboratory
[DE86-001639] p 161 N86-22091

ECONOMIC ANALYSIS
Medical technology in space - Foreseeable economic issues p 155 A86-27878

EDUCATION
Climatic cure on a practical level p 164 N86-21019
Principles of instruction for successful assembly and repair
[AD-A161280] p 180 N86-21142
Personality type analysis of Air Force Institute of Technology School of Systems and Logistics graduate degree 85S class using Myers-Briggs Type-Indicator
[AD-A161053] p 181 N86-22107

ELASTIC BODIES
Incorporation of active elements into the articulated total body model
[AD-A162518] p 177 N86-22101

ELASTOMERS
Development of an ultrafast-curing wound dressing
[AD-A162471] p 177 N86-22099

ELECTRIC FIELDS
A model for the formation of the structure of the external electric field of humans p 183 A86-27500

ELECTRIC STIMULI
Vection-induced gastric dysrhythmias and motion sickness
[NASA-CR-176620] p 176 N86-22095

ELECTROCARDIOGRAPHY
Electrocardiogram in NEHB type leads of Macaca mulatta monkeys p 175 N86-21137
Modeling electrocardiograms using interacting Markov chains
[AD-A162758] p 178 N86-22105

ELECTROMAGNETIC RADIATION
Effect of low-power millimeter-range monochromatic electromagnetic radiation on biological processes p 155 A86-27475

ELECTRON PARAMAGNETIC RESONANCE
Experimental, structural and theoretical models of bacteriochlorophylls a, d and g
[DE86-001727] p 158 N86-21101

ELECTROPHORESIS
Salyut-7 electrophoresis experiments aid medical research p 158 N86-20445
Development and use of anucleated bacterial cells to assay the in vivo activity of pollutants
[AD-A162727] p 160 N86-22089

ELECTROPHYSIOLOGY
Electrical enhancement of healing p 156 A86-28449

EMERGENCIES
Light-Weight Radioisotope Heater Unit Safety Analysis Report (LWRHU-SAR). Volume 1. A. Introduction and executive summary. B. Reference Design Document (RDD)
[DE86-001457] p 172 N86-21113

EMISSION
Toxicological evaluation of gas emission from heat-stable tetrafluoroethylene-based polymers when heated p 175 N86-21131

ENDOCRINE SECRETIONS
Effect of weightlessness on the development of neurosecretory structures of the hypothalamo-hypophyseal system of the rat brain (Electron-microscope study) p 157 A86-29174

ENERGY BUDGETS
Application of a nonstationary energy budget model to determine thermal comfort p 164 N86-21017
Comparison between meteorological complex values and a model of man's energy budget p 169 N86-21059

ENVIRONMENT POLLUTION
Group diagnosis as risk assessment in environment hygiene p 167 N86-21039

ENVIRONMENTAL CHEMISTRY
Environmental factors and infant mortality p 168 N86-21041

ENVIRONMENTAL LABORATORIES
Biomedical and environmental sciences at Oak Ridge National Laboratory
[DE86-001639] p 161 N86-22091
ENVIRONMENTAL MONITORING
Biomedical and environmental sciences at Oak Ridge National Laboratory
[DE86-001639] p 161 N86-22091
ENVIRONMENTAL QUALITY
Group diagnosis as risk assessment in environment hygiene p 167 N86-21039
ENZYME ACTIVITY
Role of Ca(2+)/calmodulin in phosphorylation of proteins in plants
[DE86-001804] p 158 N86-21099
ENZYMES
Polyribonucleic acids as enzymes p 155 A86-27051
EQUATIONS OF MOTION
Head-spine structure modeling: Enhancements to secondary loading path model and validation of head-cervical spine model
[AD-A161425] p 172 N86-21112
EQUILIBRIUM
Vestibular and visual control on posture and locomotor equilibrium --- Book p 183 A86-27671
ERYTHROCYTES
Changes in glycolytic intermediates in rat erythrocytes during exposure to simulated high altitude p 156 A86-29097
ETHYLENE
Toxicological evaluation of gas emission from heat-stable tetrafluoroethylene-based polymers when heated p 175 N86-21131
ETIOLOGY
Hysterical deafness - An unusual presentation of stress in an air traffic control officer p 180 A86-29098
EULER-LAGRANGE EQUATION
Incorporation of active elements into the articulated total body model
[AD-A162518] p 177 N86-22101
EVALUATION
Workload assessment techniques in system redesign p 184 A86-28434
Review and evaluation of empirical research in troubleshooting p 186 A86-28865
EVOKED RESPONSE (PSYCHOPHYSIOLOGY)
Comparison of transient and steady state cortical evoked potentials p 183 A86-28431
A linear, dynamic model for the visual-cortical evoked response system p 183 A86-28432
Weather and subjective health complications in cardiac patients p 167 N86-21032
EXCRETION
Changes in catecholamine excretion during physical and mental workload p 161 A86-28099
EXERCISE PHYSIOLOGY
The effects of circuit weight training and G experience on +Gz tolerance p 161 A86-28098
Skeletal muscle lactate release and glycolytic intermediates during hypercapnia p 155 A86-28124
Comparison between meteorological complex values and a model of man's energy budget p 169 N86-21059
Heat acclimatization developed during summer running in northeastern United States
[AD-A162728] p 177 N86-22102
EXOBIOLOGY
Shklovskiy discusses possibility of extraterrestrial intelligence p 157 N86-20444
USSR report: Space Biology and Aerospace Medicine, volume 19, no. 6, November - December 1985
[JPRS-USB-86-001] p 172 N86-21114
Publications of the exobiology program for 1984: A special bibliography
[NASA-TM-88382] p 189 N86-21150
Aerospace medicine and biology: A continuing bibliography with indexes (supplement 282)
[NASA-SP-7011(282)] p 176 N86-22093
EXPIRATION
Estimating the small airways resistance from measurements of the upstream resistance of several gas mixtures p 162 A86-28448
EXPLOSIONS
An examination of injury criteria for potential application to explosive safety studies
[AD-P004883] p 163 N86-20629
EXPLOSIVES
An examination of injury criteria for potential application to explosive safety studies
[AD-P004883] p 163 N86-20629
EXPOSURE
Rat brain impedance in stationary magnetic field p 174 N86-21128
EXTRATERRESTRIAL INTELLIGENCE
Shklovskiy discusses possibility of extraterrestrial intelligence p 157 N86-20444
EXTRATERRESTRIAL LIFE
Photometric and photo acoustic measurement of the absorbance of micro-organisms and its relation to the micro-organism-grain hypothesis p 198 A86-26671
EXTRATERRESTRIAL RESOURCES
The retrieval, storage, and recycling of water for a manned base on Mars
[AAS 84-180] p 186 A86-28806
Mass-balance model for a controlled ecological life support system on Mars
[AAS 84-184] p 186 A86-28810

F

FABRICS
Evaluation of materials for thermal protection
[AD-P004901] p 187 N86-20638
FACTOR ANALYSIS
Weather as a physical process and parameterization of the effects as a meteorological contribution for investigating the correlation between weather and man p 166 N86-21026
FAILURE ANALYSIS
Light-Weight Radioisotope Heater Unit Safety Analysis Report (LWRHU-SAR). Volume 1. A. Introduction and executive summary. B. Reference Design Document (RDD)
[DE86-001457] p 172 N86-21113
FATIGUE (BIOLOGY)
The state of man's organism under conditions of elevated atmospheric carbon dioxide p 163 A86-29306
Mechanisms of bioenergetic homeostasis during exercise: A general model
[AD-A161678] p 176 N86-22098
FEET (ANATOMY)
Drop foot corrective device
[NASA-CASE-LAR-12259-2] p 188 N86-22112
FEMALES
Comparison of male and female maximum lifting capacity
[AD-A160687] p 171 N86-21111
FLEXIBILITY
Direct model reference adaptive control of a flexible robotic manipulator
[NASA-CR-176659] p 188 N86-22113
FLIGHT CONTROL
A multiple-regression model of pilot performance in vertical and translational flight
[AD-A161364] p 188 N86-22115
FLIGHT CREWS
Effects of physiological and mental stress on crew members in relatively long flight by C-1 jet transport aircraft p 161 A86-28100
Incorporation of active elements into the articulated total body model
[AD-A162518] p 177 N86-22101
FLIGHT INSTRUMENTS
A multiple-regression model of pilot performance in vertical and translational flight
[AD-A161364] p 188 N86-22115
FLIGHT SIMULATION
Evaluation of 16 measures of mental workload using a simulated flight task emphasizing mediational activity p 179 A86-28864
FLIGHT STRESS (BIOLOGY)
Effects of physiological and mental stress on crew members in relatively long flight by C-1 jet transport aircraft p 161 A86-28100
FLOW RESISTANCE
Estimating the small airways resistance from measurements of the upstream resistance of several gas mixtures p 162 A86-28448
FLUORESCENCE
Bimane derivatives as fluorescent probes for biological macromolecules
[AD-A162725] p 160 N86-22088
FLUOROPOLYMERS
Toxicological evaluation of gas emission from heat-stable tetrafluoroethylene-based polymers when heated p 175 N86-21131
FOLIAGE
Foliage plants for indoor removal of the primary combustion gases carbon monoxide and nitrogen dioxide p 156 A86-29089
FOOD PROCESSING
Processing and packaging - Preparation techniques enhance meals on the Shuttle p 187 A86-29497
FOOD PRODUCTION (IN SPACE)
Mass-balance model for a controlled ecological life support system on Mars
[AAS 84-184] p 186 A86-28810
FORMS (PAPER)
Weather and migraine p 166 N86-21027
FRAGMENTATION
An examination of injury criteria for potential application to explosive safety studies
[AD-P004883] p 163 N86-20629
FRONTS (METEOROLOGY)
Meteorotropic determinants of road collisions and accidents p 165 N86-21022

G

GALILEO SPACECRAFT
Light-Weight Radioisotope Heater Unit Safety Analysis Report (LWRHU-SAR). Volume 1. A. Introduction and executive summary. B. Reference Design Document (RDD)
[DE86-001457] p 172 N86-21113
GAS MIXTURES
Estimating the small airways resistance from measurements of the upstream resistance of several gas mixtures p 162 A86-28448
GASTROINTESTINAL SYSTEM
Vection-induced gastric dysrhythmias and motion sickness
[NASA-CR-176620] p 176 N86-22095
GENETIC CODE
Rationalization of some genetic anticodonic assignments p 189 A86-28723
GEOGRAPHY
The effects of color-coding in geosit displays. 1: Color as a redundant code
[AD-A161107] p 181 N86-22108
GLIDING
Molecular and biological properties of an immunopotentiating complex polysaccharide adjuvant produced by a gliding bacterium
[AD-A162664] p 160 N86-22086
GLOVES
Advanced spacesuit glove design
[AAS 84-175] p 186 A86-28801
GLYCOLYSIS
Skeletal muscle lactate release and glycolytic intermediates during hypercapnia p 155 A86-28124
Changes in glycolytic intermediates in rat erythrocytes during exposure to simulated high altitude p 156 A86-29097
GRAVITATIONAL EFFECTS
The effective intensity of Coriolis, cross-coupling stimulation is gravitoinertial force dependent - Implications for space motion sickness p 163 A86-29093
GRAVITATIONAL PHYSIOLOGY
The effects of circuit weight training and G experience on +Gz tolerance p 161 A86-28098
The effective intensity of Coriolis, cross-coupling stimulation is gravitoinertial force dependent - Implications for space motion sickness p 163 A86-29093
Effect of weightlessness on the development of neurosecretory structures of the hypothalamo-hypophyseal system of the rat brain (Electron-microscope study) p 157 A86-29174
In vivo nuclear magnetic resonance imaging
[NASA-CR-171928] p 170 N86-21105
GREENHOUSES
Greenhouses with curvilinear planting surface p 159 N86-21132
GROUP DYNAMICS
Attention allocation, distraction, and the type A/Type B behavior pattern
[AD-A160671] p 180 N86-21141

H

HEAD-UP DISPLAYS
Head-up/head-down transition - Measurement of transition times p 186 A86-29092
HEADACHE
Weather and migraine p 166 N86-21027
HEALING
Electrical enhancement of healing p 156 A86-28449
HEALTH
Health and performance of antarctic winter-over personnel: A follow-up study
[AD-A161773] p 182 N86-22109
HEALTH PHYSICS
Health and performance of antarctic winter-over personnel: A follow-up study
[AD-A161773] p 182 N86-22109
HEART
Modeling electrocardiograms using interacting Markov chains
[AD-A162758] p 178 N86-22105
HEART DISEASES
Advanced clinical research in shock and trauma
[AD-A162730] p 177 N86-22103

HEART RATE
Device for rapid quantification of human carotid baroreceptor-cardiac reflex responses
p 162 A86-28125
Analysis techniques for continuous twenty four hour ambulatory blood pressure patterns p 170 N86-21103
Heat acclimatization developed during summer running in northeastern United States
[AD-A162728] p 177 N86-22102

HEAT ACCLIMATIZATION
Heat acclimatization developed during summer running in northeastern United States
[AD-A162728] p 177 N86-22102

HEAT BUDGET
Man's thermal budget under various climates
p 164 N86-21016
Weather sensitivity as discomfort p 165 N86-21025

HEAT STORAGE
Application of a nonstationary energy budget model to determine thermal comfort p 164 N86-21017

HEAT STROKE
Man's thermal budget under various climates
p 164 N86-21016
Application of a nonstationary energy budget model to determine thermal comfort p 164 N86-21017

HEAT TOLERANCE
Heat acclimatization developed during summer running in northeastern United States
[AD-A162728] p 177 N86-22102

HEAT TRANSFER
Afterdrop of body temperature during rewarming - An alternative explanation p 162 A86-28122
Man's thermal budget under various climates
p 164 N86-21016

HEATERS
Light-Weight Radioisotope Heater Unit Safety Analysis Report (LWRHU-SAR). Volume 1. A. Introduction and executive summary. B. Reference Design Document (RDD)
[DE86-001457] p 172 N86-21113

HEATING
Afterdrop of body temperature during rewarming - An alternative explanation p 162 A86-28122

HELICOPTERS
The role of vibration and rattle in human response to helicopter noise
[AD-A162486] p 182 N86-22110
A multiple-regression model of pilot performance in vertical and translational flight
[AD-A161364] p 188 N86-22115

HELIUM
Estimating the small airways resistance from measurements of the upstream resistance of several gas mixtures p 162 A86-28448

HELMET MOUNTED DISPLAYS
Evaluation of helmet display formats
p 184 A86-28440

HEMODYNAMIC RESPONSES
On the importance of cooling in climatic therapy
p 165 N86-21020

HIGH ALTITUDE
Changes in glycolytic intermediates in rat erythrocytes during exposure to simulated high altitude
p 156 A86-29097
Condition of cardiovascular system in presence of acute mountain sickness p 174 N86-21127
Some aspects of human amino acid metabolism at high altitude p 175 N86-21136

HISTOLOGY
Mechanisms of calcium permeability changes in the sarcolemma of vascular smooth-muscle cells during hypoxia p 157 A86-29257

HOMEOSTASIS
Man's thermal budget under various climates
p 164 N86-21016
Mechanisms of bioenergetic homeostasis during exercise: A general model
[AD-A161678] p 176 N86-22098

HORIZONTAL FLIGHT
A multiple-regression model of pilot performance in vertical and translational flight
[AD-A161364] p 188 N86-22115

HORMONES
Cardiovascular receptors and fluid volume control (1985 Armstrong Lecture) p 157 A86-29099

HOSPITALS
Medical technology in space - Foreseeable economic issues p 155 A86-27878

HUMAN BEHAVIOR
Visual scanning behavior p 178 A86-28452
A review of the psychological aspects of space flight
p 179 A86-29090
Attention allocation, distraction, and the type A/Type B behavior pattern
[AD-A160671] p 180 N86-21141

HUMAN BEINGS
Interactive activation models of perception and comprehension
[AD-A161362] p 181 N86-21143
A procedure-based approach to human information processing models
[AD-A162454] p 181 N86-21144
Suppression of antibody forming cells by muramyl Di-peptides
[AD-A162400] p 159 N86-22084
Incorporation of active elements into the articulated total body model
[AD-A162518] p 177 N86-22101

HUMAN BODY
Effects of air pollution on man p 167 N86-21038
What in human biometeorology can contribute to assessment of the effects of hazardous substances on health? p 168 N86-21043
Head-spine structure modeling: Enhancements to secondary loading path model and validation of head-cervical spine model
[AD-A161425] p 172 N86-21112

HUMAN FACTORS ENGINEERING
A workload index for iterative crewstation evaluation
p 184 A86-28433
Workload assessment techniques in system redesign
p 184 A86-28434
Computer-based tools for cockpit design
p 184 A86-28436
Incorporating human operator considerations into existing weapon system analysis and quantification capabilities p 184 A86-28438
Auditory signals in military aircraft - Ergonomic principles versus practice p 185 A86-28442
Advanced spacesuit glove design
[AAS 84-175] p 186 A86-28801
On scaling performance operating characteristics - Caveat emptor p 179 A86-28866
Human engineering guidelines for the evaluation and assessment of video display units
[TI85-016435] p 187 N86-21149

HUMAN PERFORMANCE
European Annual Conference on Human Decision Making and Manual Control, 4th, Zeist, Netherlands, May 28-30, 1984, Proceedings p 183 A86-28285
A workload index for iterative crewstation evaluation
p 184 A86-28433
Workload assessment techniques in system redesign
p 184 A86-28434
Effects of task difficulty and learning strategies in multiple-task training p 178 A86-28451
Review and evaluation of empirical research in troubleshooting p 186 A86-28865
On scaling performance operating characteristics - Caveat emptor p 179 A86-28866
POCs and performance decrements - A reply to Kantowitz and Weldon p 179 A86-28867
A review of the psychological aspects of space flight
p 179 A86-29090
Meteorotropic determinants of road collisions and accidents p 165 N86-21022
Attention allocation, distraction, and the type A/Type B behavior pattern
[AD-A160671] p 180 N86-21141
Visual perception in correlated noise
p 181 N86-22106
Health and performance of antarctic winter-over personnel: A follow-up study
[AD-A161773] p 182 N86-22109

HUMAN REACTIONS
The role of vibration and rattle in human response to helicopter noise
[AD-A162486] p 182 N86-22110

HUMIDITY
Weather as a physical process and parameterization of the effects as a meteorological contribution for investigating the correlation between weather and man
p 166 N86-21026
Weather and asthma symptoms p 166 N86-21029
Meteorotropic changes of cardiac patients' blood pressure and pulse frequency during a complex bath cure p 166 N86-21031
Weather and subjective health complications in cardiac patients p 167 N86-21032
Immission and weather effects on children's airway troubles in Berlin (1979-1982). Time series investigations: Croup syndrome and asthmatic airway troubles
p 168 N86-21044

HUMIDITY MEASUREMENT
Human bioclimatic classification methods illustrated with examples of selected countries p 169 N86-21058

HYDRAULIC FLUIDS
Toxic hazards research unit annual technical report: 1985
[AD-A161558] p 176 N86-22097

HYDRAZINES
Toxic hazards research unit annual technical report: 1985
[AD-A161558] p 176 N86-22097

HYDROGEN PRODUCTION
Characterization and optimization of hydrogen production by a salt water blue-green alga Oscillatoria sp. Miami BG 7. II Use of immobilization for enhancement of hydrogen production p 156 A86-28860

HYOSCINE
Transdermal scopolamine - Human performance and side effects p 163 A86-29094

HYPERCAPNIA
Skeletal muscle lactate release and glycolytic intermediates during hypercapnia p 155 A86-28124

HYPOKINESIA
Vestibular function in older individuals submitted to antiorthostatic hypokinesia for 30 days
p 172 N86-21116
Effect of immersion hypokinesia on characteristics of programmed voluntary movements p 173 N86-21119
Effect of restricted motor activity on alanine level in human plasma p 173 N86-21122
Effect of weightlessness and some of its models on mechanical properties of animal bones submitted to torsion p 173 N86-21123
Role of vitamin D3 active metabolites in regulation of calcium metabolism in hypokinetic rats
p 174 N86-21124
Comparison of bone reactions of rats submitted to clinostatic and antiorthostatic hypokinesia
p 174 N86-21125

HYPOTHALAMUS
Stimulation of brain muscarinic acetylcholine receptors acutely reverses radiogenic hypodipsia
p 156 A86-29096
Effect of weightlessness on the development of neurosecretory structures of the hypothalamo-hypophyseal system of the rat brain (Electron-microscope study) p 157 A86-29174

HYPOTHERMIA
Afterdrop of body temperature during rewarming - An alternative explanation p 162 A86-28122
Ship/rig personnel abandonment and helicopter crew/passenger immersion suits - The requirements in the North Atlantic p 187 A86-29100
The role of endorphins in the pathophysiology of hemorrhagic and endotoxic shock in the subhuman primate
[AD-A162483] p 177 N86-22100

HYPOXIA
Changes in glycolytic intermediates in rat erythrocytes during exposure to simulated high altitude
p 156 A86-29097
Mechanisms of calcium permeability changes in the sarcolemma of vascular smooth-muscle cells during hypoxia p 157 A86-29257
Some aspects of human amino acid metabolism at high altitude p 175 N86-21136

I

ILLUMINATING
Instrument lighting levels and AN/AVS-6 usage
[AD-A161538] p 187 N86-21148

IMAGE PROCESSING
Visual perception in correlated noise
p 181 N86-22106

IMAGING TECHNIQUES
In vivo nuclear magnetic resonance imaging
[NASA-CR-171928] p 170 N86-21105

IMMOBILIZATION
Characterization and optimization of hydrogen production by a salt water blue-green alga Oscillatoria sp. Miami BG 7. II Use of immobilization for enhancement of hydrogen production p 156 A86-28860
Comparison of bone reactions of rats submitted to clinostatic and antiorthostatic hypokinesia
p 174 N86-21125

IMMUNITY
Research opportunities on immunocompetence in space
[NASA-CR-176482] p 180 N86-21138
Suppression of antibody forming cells by muramyl Di-peptides
[AD-A162400] p 159 N86-22084

IMMUNOLOGY
Immunological analyses of U.S. Space Shuttle crewmembers p 162 A86-29091
Research opportunities on immunocompetence in space
[NASA-CR-176482] p 180 N86-21138
Suppression of antibody forming cells by muramyl Di-peptides
[AD-A162400] p 159 N86-22084

Studies on the mechanism of suppression of the immune response by synthetic, non-toxic adjuvants
[AD-A162444] p 160 N86-22085

IMPEDANCE
Rat brain impedance in stationary magnetic field
p 174 N86-21128

INDOOR AIR POLLUTION
Foliage plants for indoor removal of the primary combustion gases carbon monoxide and nitrogen dioxide p 156 A86-29089

INERTIA
The effective intensity of Coriolis, cross-coupling stimulation is gravitoinertial force dependent - Implications for space motion sickness p 163 A86-29093

INFARCTION
Study of a meteorological prediction of acute myocardial infarction incidence p 166 N86-21030

INFORMATION THEORY
A procedure-based approach to human information processing models
[AD-A162454] p 181 N86-21144

INJURIES
An examination of injury criteria for potential application to explosive safety studies
[AD-P004883] p 163 N86-20629
Development of an ultrafast-curing wound dressing
[AD-A162471] p 177 N86-22099

INSOLATION
Local climatic particularities and their importance for recreation area (example, Saarland-lower Bliestal)
p 170 N86-21064

INTERPLANETARY FLIGHT
Psychological and interpersonal adaptation to Mars missions
[AAS 84-186] p 179 A86-28812
Countermeasures for the effects of prolonged weightlessness
[AAS 84-187] p 162 A86-28813

INTERSTELLAR CHEMISTRY
Photochemical reactions in interstellar grains photolysis of CO, NH3, and H2O p 189 A86-28721

INTERSTELLAR MATTER
Photometric and photo acoustic measurement of the absorbance of micro-organisms and its relation to the micro-organism-grain hypothesis p 188 A86-26671
Photochemical reactions in interstellar grains photolysis of CO, NH3, and H2O p 189 A86-28721

J

JAPAN
Japanese Technology Evaluation Program (JTECH): Biotechnology Panel
[PB86-109386] p 161 N86-22092

JP-4 JET FUEL
Toxic hazards research unit annual technical report: 1985
[AD-A161558] p 176 N86-22097

JP-8 JET FUEL
Toxic hazards research unit annual technical report: 1985
[AD-A161558] p 176 N86-22097

K

KEYING
Reconfigurable work station for a video display unit and keyboard
[NASA-CASE-MFS-26009-1SB] p 188 N86-22114

L

LACTATES
Skeletal muscle lactate release and glycolytic intermediates during hypercapnia p 155 A86-28124

LEARNING
Effects of task difficulty and learning strategies in multiple-task training p 178 A86-28451

LEG (ANATOMY)
Drop foot corrective device
[NASA-CASE-LAR-12259-2] p 188 N86-22112

LEGIBILITY
Evaluation of helmet display formats
p 184 A86-28440

LEVEL (QUANTITY)
Instrument lighting levels and AN/AVS-6 usage
[AD-A161538] p 187 N86-21148

LICENSING
The history of aeronautical medicine in Venezuela
[NASA-TM-77709] p 176 N86-22094

LICHENS
The biological efficiency of dust emmission: Determination based on the withering degree of exposed lichens p 169 N86-21047

LIFE SCIENCES
Critical life science issues for a Mars base
[AAS 84-167] p 156 A86-28793
New roles for computation in the life sciences
[DE85-017542] p 158 N86-21100

LIFE SUPPORT SYSTEMS
Mass-balance model for a controlled ecological life support system on Mars
[AAS 84-184] p 186 A86-28810

LIFT
Comparison of male and female maximum lifting capacity
[AD-A160687] p 171 N86-21111

LIGANDS
Particulate models of photosynthesis
[DE86-001625] p 160 N86-22090

LIGHT EMITTING DIODES
An automated system for comprehensive assessment of visual field sensitivity
[AD-A162755] p 178 N86-22104

LIGHTING EQUIPMENT
Instrument lighting levels and AN/AVS-6 usage
[AD-A161538] p 187 N86-21148

LIPIDS
Proceedings: Protons and Membrane Reactions held at Santa Barbara, California on 28 January - 1 February 1985
[AD-A161331] p 159 N86-22082
Studies on the mechanism of suppression of the immune response by synthetic, non-toxic adjuvants
[AD-A162444] p 160 N86-22085

LIPOPROTEINS
New roles for computation in the life sciences
[DE85-017542] p 158 N86-21100

LOCOMOTION
Vestibular and visual control on posture and locomotor equilibrium --- Book p 183 A86-27671

LONG DURATION SPACE FLIGHT
Countermeasures for the effects of prolonged weightlessness
[AAS 84-187] p 162 A86-28813
Psychological considerations in long-duration space missions An overview
[AAS 84-188] p 179 A86-28814
Concerns are being raised about living in the space environment p 163 A86-29499

LUNGS
Forced expiration parameters in healthy man submitted to simulated weightlessness p 173 N86-21121

LYMPHOCYTES
Lymphocyte activation - regulatory substances
[AD-A162683] p 160 N86-22087

M

MAGNETIC FIELDS
Rat brain impedance in stationary magnetic field
p 174 N86-21128

MAGNETIC STORMS
Effect of cosmoheliogeophysical factors on bacterial agglutination in vitro p 155 A86-27473

MAINTENANCE
Principles of instruction for successful assembly and repair
[AD-A161280] p 180 N86-21142

MALES
Comparison of male and female maximum lifting capacity
[AD-A160687] p 171 N86-21111
Distinctions in reactions to active orthostatic and water-loading tests of subjects differing in tolerance to positive Gz accelerations p 173 N86-21118
Cerebral circulation and oxygenation in healthy man during graded exercise in antiorthostatic position
p 173 N86-21120
Effect of restricted motor activity on alanine level in human plasma p 173 N86-21122
Evaluation of condition of human skin in a closed environment by means of chromatography
p 174 N86-21130
Electrocardiogram in NEHB type leads of Macaca mulatta monkeys p 175 N86-21137

MAN ENVIRONMENT INTERACTIONS
The influence of the initial value of a parameter on its change under the action of external factors --- individual physiological responses of organization to external factors p 157 A86-29275

MAN MACHINE SYSTEMS
Modeling of perception and decision-making processes p 183 A86-27094
A methodology for addressing system operability issues --- of military systems p 184 A86-28437
Target designation by speech, joystick, and touch control Format design implications p 184 A86-28439
Auditory signals in military aircraft - Ergonomic principles versus practice p 185 A86-28442
Dynamic retraining approaches for an airborne speech recognition system p 185 A86-28444
Speech compression as a potential aid to automated voice warnings in the cockpit p 185 A86-28445
Selecting cockpit functions for speech I/O technology
p 185 A86-28446
The dissociation between subjective and performance-based measures of operator workload
p 178 A86-28450
Wickens' resource allocation model - Implications for the design of human-machine systems
p 185 A86-28453
Evaluation of 16 measures of mental workload using a simulated flight task emphasizing mediational activity
p 179 A86-28864
Review and evaluation of empirical research in troubleshooting p 186 A86-28865
A multiple-regression model of pilot performance in vertical and translational flight
[AD-A161364] p 188 N86-22115

MANIPULATORS
Kinematics and reaction moment compensation for a spaceborne elbow manipulator
[AIAA PAPER 86-0250] p 182 A86-26616

MANNED SPACE FLIGHT
Psychological and interpersonal adaptation to Mars missions
[AAS 84-186] p 179 A86-28812
Countermeasures for the effects of prolonged weightlessness
[AAS 84-187] p 162 A86-28813
The human factor: Biomedicine in the manned space program to 1980
[NASA-SP-4213] p 158 N86-21097
Research opportunities on immunocompetence in space
[NASA-CR-176482] p 180 N86-21138

MANUAL CONTROL
European Annual Conference on Human Decision Making and Manual Control, 4th, Zeist, Netherlands, May 28-30, 1984, Proceedings p 183 A86-28285

MAPPING
Investigations of the possible influence of air electrical phenomena on dulling and ghost aching in amputated patients p 167 N86-21033

MARKOV CHAINS
Modeling electrocardiograms using interacting Markov chains
[AD-A162758] p 178 N86-22105

MARKOV PROCESSES
Modeling electrocardiograms using interacting Markov chains
[AD-A162758] p 178 N86-22105

MARS (PLANET)
Psychological and interpersonal adaptation to Mars missions
[AAS 84-186] p 179 A86-28812

MARS ENVIRONMENT
The retrieval, storage, and recycling of water for a manned base on Mars
[AAS 84-180] p 186 A86-28806
Water supply for a manned Mars base
[AAS 84-181] p 186 A86-28807
Mass-balance model for a controlled ecological life support system on Mars
[AAS 84-184] p 186 A86-28810

MARS SURFACE
Critical life science issues for a Mars base
[AAS 84-167] p 156 A86-28793
Advanced spacesuit glove design
[AAS 84-175] p 188 A86-28801

MATHEMATICAL MODELS
New roles for computation in the life sciences
[DE85-017542] p 158 N86-21100
Experimental, structural and theoretical models of bacteriochlorophylls a, d and g
[DE86-001727] p 158 N86-21101
Head-spine structure modeling. Enhancements to secondary loading path model and validation of head-cervical spine model
[AD-A161425] p 172 N86-21112
Incorporation of active elements into the articulated total body model
[AD-A162518] p 177 N86-22101
Modeling electrocardiograms using interacting Markov chains
[AD-A162758] p 178 N86-22105

MECHANICAL DRIVES
Mobile remote manipulator vehicle system
[NASA-CASE-LAR-13393-1] p 187 N86-21147

MECHANICAL PROPERTIES
Effect of weightlessness and some of its models on mechanical properties of animal bones submitted to torsion p 173 N86-21123

MEDICAL EQUIPMENT
Drop foot corrective device
[NASA-CASE-LAR-12259-2] p 188 N86-22112
MEDICAL SCIENCE
Salyut-7 electrophoresis experiments aid medical research p 158 N86-20445
MEMBRANES
Proceedings: Protons and Membrane Reactions held at Santa Barbara, California on 28 January - 1 February 1985
[AD-A161331] p 159 N86-22082
MENTAL HEALTH
The history of aeronautical medicine in Venezuela
[NASA-TM-77709] p 176 N86-22094
MENTAL PERFORMANCE
European Annual Conference on Human Decision Making and Manual Control, 4th, Zeist, Netherlands, May 28-30, 1984, Proceedings p 183 A86-28285
Effects of task difficulty and learning strategies in multiple-task training p 178 A86-28451
Wickens' resource allocation model - Implications for the design of human-machine systems p 185 A86-28453
Evaluation of 16 measures of mental workload using a simulated flight task emphasizing mediational activity p 179 A86-28864
On scaling performance operating characteristics - Caveat emptor p 179 A86-28866
Transdermal scopolamine - Human performance and side effects p 163 A86-29094
The state of man's organism under conditions of elevated atmospheric carbon dioxide p 163 A86-29306
The dissociation of subjective measures of mental workload and performance
[NASA-CR-176609] p 180 N86-21139
A procedure-based approach to human information processing models
[AD-A162454] p 181 N86-21144
METABOLISM
Role of vitamin D3 active metabolites in regulation of calcium metabolism in hypokinetic rats p 174 N86-21124
Some aspects of human amino acid metabolism at high altitude p 175 N86-21136
Mechanisms of bioenergetic homeostasis during exercise: A general model
[AD-A161678] p 176 N86-22098
METEOROLOGICAL INSTRUMENTS
Air quality determination in health resorts p 169 N86-21046
METEOROLOGICAL PARAMETERS
Meteorological adaptation research at biology institute p 158 N86-20890
Problems of city planning --- meteorological parameters p 169 N86-21049
METEOROLOGICAL SERVICES
The Austrian biometeorological service p 167 N86-21034
MICE
Toxicological evaluation of gas emission from heat-stable tetrafluoroethylene-based polymers when heated p 175 N86-21131
Molecular and biological properties of an immunopotentiating complex polysaccharide adjuvant produced by a gliding bacterium
[AD-A162664] p 160 N86-22086
MICROCLIMATOLOGY
Local climatic particularities and their importance for recreation area (example, Saarland-lower Bliestal) p 170 N86-21064
MICROORGANISMS
Photometric and photo acoustic measurement of the absorbance of micro-organisms and its relation to the micro-organism-grain hypothesis p 188 A86-26671
MICROPHONES
Improving intelligibility in audio distribution systems p 186 A86-28513
MILITARY AIRCRAFT
Auditory signals in military aircraft - Ergonomic principles versus practice p 185 A86-28442
MILITARY TECHNOLOGY
A methodology for addressing system operability issues --- of military systems p 184 A86-28437
MILLIMETER WAVES
Effect of low-power millimeter-range monochromatic electromagnetic radiation on biological processes p 155 A86-27475
MINERALOGY
Stromatolites from the 3,300-3,500-Myr Swaziland Supergroup, Barberton Mountain Land, South Africa p 155 A86-26490
MINICOMPUTERS
Analysis techniques for continuous twenty four hour ambulatory blood pressure patterns p 170 N86-21103
MOBILITY
On interacting populations that disperse to avoid crowding: The effect of a sedentary colony
[REPT-4] p 181 N86-21145
Mobile remote manipulator vehicle system
[NASA-CASE-LAR-13393-1] p 187 N86-21147
MODELS
Particulate models of photosynthesis
[DE86-001625] p 160 N86-22090
MOLECULAR BIOLOGY
Limits on asymmetric orthopositronium formation in high Z optically active molecules p 189 A86-28724
Calmodulin, a second messenger - History of investigation and physiological importance p 157 A86-29256
The 10th Meeting of the International Society for Neurochemistry held at Riva del Garda, Italy on 19-24 May 1985
[AD-A160668] p 171 N86-21110
MOLECULAR STRUCTURE
Experimental, structural and theoretical models of bacteriochlorophylls a, d and g
[DE86-001727] p 158 N86-21101
MOLECULES
Bimane derivatives as fluorescent probes for biological macromolecules
[AD-A162725] p 160 N86-22088
MONKEYS
Electrocardiogram in NEHB type leads of Macaca mulatta monkeys p 175 N86-21137
MONOCHROMATIC RADIATION
Effect of low-power millimeter-range monochromatic electromagnetic radiation on biological processes p 155 A86-27475
MORPHOLOGY
USSR report: Space Biology and Aerospace Medicine, volume 19, no. 6, November - December 1985
[JPRS-USB-86-001] p 172 N86-21114
Condition of thyroid gland and C cells during long-term rotation (morphological and biochemical investigation) p 174 N86-21126
MORTALITY
Environmental factors and infant mortality p 168 N86-21041
MOTION
Weather and migraine p 166 N86-21027
MOTION PERCEPTION
Contributions to workload of rotational optical transformations
[NASA-CR-176542] p 171 N86-21106
MOTION SICKNESS
Stimulus specificity and individual stereotypy of autonomic responses to motion stressors
[NASA-CR-176543] p 171 N86-21107
Exploratory studies of physiological components of motion sickness: Cardiopulmonary differences between high and low susceptibles
[NASA-CR-176541] p 171 N86-21108
Shuttle flight experiment 30-day summary report
[NASA-CR-176539] p 171 N86-21109
Vection-induced gastric dysrhythmias and motion sickness
[NASA-CR-176620] p 176 N86-22095
Electrodermal changes corresponding to the degree of discomfort induced by motion sickness
[NAL-TR-880] p 176 N86-22096
MOTION SICKNESS DRUGS
Transdermal scopolamine - Human performance and side effects p 163 A86-29094
MOTION STABILITY
Interaction between the otolithic organ and the semicircular canals of the vestibular apparatus in the system of spatial angular stabilization in humans p 161 A86-27474
MOUNTAINS
Condition of cardiovascular system in presence of acute mountain sickness p 174 N86-21127
MOVING TARGET INDICATORS
Device for combined study of visual tracking and verbal activity p 175 N86-21133
MUSCULAR FUNCTION
Skeletal muscle lactate release and glycolytic intermediates during hypercapnia p 155 A86-28124
Mechanisms of calcium permeability changes in the sarcolemma of vascular smooth-muscle cells during hypoxia p 157 A86-29257
MUSCULAR STRENGTH
Comparison of male and female maximum lifting capacity
[AD-A160687] p 171 N86-21111
MUSCULOSKELETAL SYSTEM
Health and performance of antarctic winter-over personnel: A follow-up study
[AD-A161773] p 182 N86-22109
MYOELECTRICITY
Vection-induced gastric dysrhythmias and motion sickness
[NASA-CR-176620] p 176 N86-22095

N

NAVIGATION
A multiple-regression model of pilot performance in vertical and translational flight
[AD-A161364] p 188 N86-22115
NECK (ANATOMY)
Incorporation of active elements into the articulated total body model
[AD-A162518] p 177 N86-22101
NERVOUS SYSTEM
Neurophysiological activity and psychophysical effectiveness of environmental factors p 164 N86-21013
The 10th Meeting of the International Society for Neurochemistry held at Riva del Garda, Italy on 19-24 May 1985
[AD-A160668] p 171 N86-21110
NEUROLOGY
The 10th Meeting of the International Society for Neurochemistry held at Riva del Garda, Italy on 19-24 May 1985
[AD-A160668] p 171 N86-21110
NEUROMUSCULAR TRANSMISSION
Incorporation of active elements into the articulated total body model
[AD-A162518] p 177 N86-22101
NEUROPHYSIOLOGY
Neurophysiological activity and psychophysical effectiveness of environmental factors p 164 N86-21013
The role of endorphins in the pathophysiology of hemorrhagic and endotoxic shock in the subhuman primate
[AD-A162483] p 177 N86-22100
NEUROTRANSMITTERS
Calmodulin, a second messenger - History of investigation and physiological importance p 157 A86-29256
NEUTRON IRRADIATION
The effect of equally effective neutron and X-ray radiation doses on the epithelial cells of the hair bulb
[BLL-CE-TRANS-8221-(9022.09] p 170 N86-21104
NIGHT
Performance overnight in shiftworkers operating a day-night schedule p 179 A86-29095
NIGHT VISION
Instrument lighting levels and AN/AVS-6 usage
[AD-A161538] p 187 N86-21148
NITRATES
Environmental factors and infant mortality p 168 N86-21041
NITROGEN DIOXIDE
Foliage plants for indoor removal of the primary combustion gases carbon monoxide and nitrogen dioxide p 156 A86-29089
NITROGEN METABOLISM
Theoretical prerequisites for the possible use of bacteria which split organophosphates in order to increase the yield of nutrient yeast and its nitrogen and phosphorous content
[AD-A161811] p 159 N86-22083
NOISE (SOUND)
Attention allocation, distraction, and the type A/Type B behavior pattern
[AD-A160671] p 180 N86-21141
NOISE SPECTRA
Improving intelligibility in audio distribution systems p 186 A86-28513
NOSE (ANATOMY)
The interface between atmosphere and organism p 164 N86-21014
NUCLEAR MAGNETIC RESONANCE
In vivo nuclear magnetic resonance imaging
[NASA-CR-171928] p 170 N86-21105
NUCLEAR POWER PLANTS
Radioprotection update
[BLL-CE-TRANS-8223-(9022-09] p 187 N86-21146
Human engineering guidelines for the evaluation and assessment of video display units
[TI85-016435] p 187 N86-21149
NUCLEAR RADIATION
Radioprotection update
[BLL-CE-TRANS-8223-(9022-09] p 187 N86-21146

O

OCCURRENCES
Investigations of the possible influence of air electrical phenomena on dulling and ghost aching in amputated patients p 167 N86-21033

OPERATOR PERFORMANCE
The dissociation between subjective and performance-based measures of operator workload p 178 A86-28450
Transdermal scopolamine - Human performance and side effects p 163 A86-29094
Performance overnight in shiftworkers operating a day-night schedule p 179 A86-29095

OPERATORS (PERSONNEL)
Incorporating human operator considerations into existing weapon system analysis and quantification capabilities p 184 A86-28438
Evaluation of materials for thermal protection [AD-P004901] p 187 N86-20638
The effect of acceleration stress on human workload [AD-A156770] p 180 N86-21140

OPTICAL ACTIVITY
Limits on asymmetric orthopositronium formation in high Z optically active molecules p 189 A86-28724

ORBITAL ASSEMBLY
Telerobotics for the Space Station p 182 A86-26493
Design techniques for robots - Space applications p 183 A86-28074

ORBITAL MANEUVERING VEHICLES
Mobile remote manipulator vehicle system [NASA-CASE-LAR-13393-1] p 187 N86-21147

ORBITAL SERVICING
Mobile remote manipulator vehicle system [NASA-CASE-LAR-13393-1] p 187 N86-21147

ORGANIC PHOSPHORUS COMPOUNDS
Theoretical prerequisites for the possible use of bacteria which split organophosphates in order to increase the yield of nutrient yeast and its nitrogen and phosphorous content [AD-A161811] p 159 N86-22083

ORTHOSTATIC TOLERANCE
Distinctions in reactions to active orthostatic and water-loading tests of subjects differing in tolerance to positive Gz accelerations p 173 N86-21118

OTOLITH ORGANS
Interaction between the otolithic organ and the semicircular canals of the vestibular apparatus in the system of spatial angular stabilization in humans p 161 A86-27474

OXIDATION-REDUCTION REACTIONS
Proceedings: Protons and Membrane Reactions held at Santa Barbara, California on 28 January - 1 February 1985 [AD-A161331] p 159 N86-22082

OXYGEN
Estimating the small airways resistance from measurements of the upstream resistance of several gas mixtures p 162 A86-28448

OXYGEN CONSUMPTION
Heat acclimatization developed during summer running in northeastern United States [AD-A162726] p 177 N86-22102

OXYGEN MASKS
Evaluation of a passenger mask modified with a rebreather bag for protection from smoke and fumes [AD-A162473] p 188 N86-22116

P

PARAMETER IDENTIFICATION
Weather as a physical process and parameterization of the effects as a meteorological contribution for investigating the correlation between weather and man p 166 N86-21026

PARTICULATES
Particulate models of photosynthesis [DE86-001625] p 160 N86-22090

PASSENGERS
Evaluation of a passenger mask modified with a rebreather bag for protection from smoke and fumes [AD-A162473] p 188 N86-22116

PATHOLOGICAL EFFECTS
Effects of carbon monoxide on personnel [AD-P004882] p 163 N86-20628
Objective investigations and subjective observations of sensitivity to weather p 165 N86-21023

PATIENTS
Advanced clinical research in shock and trauma [AD-A162730] p 177 N86-22103

PATTERN RECOGNITION
Modeling of perception and decision-making processes p 183 A86-27094
New roles for computation in the life sciences [DE85-017542] p 158 N86-21100

PERCEPTION
Modeling of perception and decision-making processes p 183 A86-27094
Interactive activation models of perception and comprehension [AD-A161362] p 181 N86-21143

PERFORMANCE TESTS
Evaluation of helmet display formats p 184 A86-28440

PERIPHERAL VISION
An automated system for comprehensive assessment of visual field sensitivity [AD-A162755] p 178 N86-22104

PERSONALITY TESTS
Personality type analysis of Air Force Institute of Technology School of Systems and Logistics graduate degree 85S class using Myers-Briggs Type-Indicator [AD-A161053] p 181 N86-22107

PERSONNEL
Effects of carbon monoxide on personnel [AD-P004882] p 163 N86-20628
Health and performance of antarctic winter-over personnel: A follow-up study [AD-A161773] p 182 N86-22109

PERSPIRATION
Heat acclimatization developed during summer running in northeastern United States [AD-A162726] p 177 N86-22102

PHARMACOLOGY
Development of an ultrafast-curing wound dressing [AD-A162471] p 177 N86-22099

PHONEMES
Attention within auditory word perception [AD-A162550] p 182 N86-22111

PHOSPHORUS 32
Role of Ca(2+)/calmodulin in phosphorylation of proteins in plants [DE86-001804] p 158 N86-21099

PHOSPHORYLATION
Role of Ca(2+)/calmodulin in phosphorylation of proteins in plants [DE86-001804] p 158 N86-21099

PHOTOCHEMICAL REACTIONS
Photochemical reactions in interstellar grains photolysis of CO, NH3, and H2O p 189 A86-28721

PHOTOSYNTHESIS
Greenhouses with curvilinear planting surface p 159 N86-21132
Particulate models of photosynthesis [DE86-001625] p 160 N86-22090

PHYSICAL EXERCISE
The effects of circuit weight training and G experience on +Gz tolerance p 161 A86-28098
Mechanisms of bioenergetic homeostasis during exercise: A general model [AD-A161678] p 176 N86-22098
Heat acclimatization developed during summer running in northeastern United States [AD-A162726] p 177 N86-22102

PHYSICAL FITNESS
Mechanisms of bioenergetic homeostasis during exercise: A general model [AD-A161678] p 176 N86-22098

PHYSIOCHEMISTRY
Calmodulin, a second messenger - History of investigation and physiological importance p 157 A86-29256

PHYSIOLOGICAL EFFECTS
Transdermal scopolamine - Human performance and side effects p 163 A86-29094
Stimulation of brain muscarinic acetylcholine receptors acutely reverses radiogenic hypodipsia p 156 A86-29096
Effect of weightlessness on the development of neurosecretory structures of the hypothalamo-hypophyseal system of the rat brain (Electron-microscope study) p 157 A86-29174
The influence of the initial value of a parameter on its change under the action of external factors — individual physiological responses of organization to external factors p 157 A86-29275
Neurophysiological activity and psychophysical effectiveness of environmental factors p 164 N86-21013
The influence of heliometeorologic factors on circulation and some vegetative functions p 165 N86-21021
Spatial distribution of heat and cold stress in the Federal Republic of Germany p 170 N86-21065
USSR report: Space Biology and Aerospace Medicine, volume 19, no. 6, November - December 1985 [JPRS-USB-86-001] p 172 N86-21114
Characteristics of accelerations in aerobatic flight as a sport p 172 N86-21117
Effect of immersion hypokinesia on characteristics of programmed voluntary movements p 173 N86-21119

PHYSIOLOGICAL RESPONSES
Effects of body mass and morphology on thermal responses in water p 162 A86-28123
Device for rapid quantification of human carotid baroreceptor-cardiac reflex responses p 162 A86-28125
Immunological analyses of U.S. Space Shuttle crewmembers p 162 A86-29091
The influence of the initial value of a parameter on its change under the action of external factors — individual physiological responses of organization to external factors p 157 A86-29275
The state of man's organism under conditions of elevated atmospheric carbon dioxide p 163 A86-29306
Research opportunities on immunocompetence in space [NASA-CR-176482] p 180 N86-21138
Studies on the mechanism of suppression of the immune response by synthetic, non-toxic adjuvants [AD-A162444] p 160 N86-22085

PILOT ERROR
A multiple-regression model of pilot performance in vertical and translational flight [AD-A161364] p 188 N86-22115

PILOT PERFORMANCE
Effects of physiological and mental stress on crew members in relatively long flight by C-1 jet transport aircraft p 161 A86-28100
Visual scanning behavior p 178 A86-28452
Head-up/head-down transition - Measurement of transition times p 186 A86-29092
Spatial illusions of vestibular genesis during flights in aircraft p 172 N86-21115
A multiple-regression model of pilot performance in vertical and translational flight [AD-A161364] p 188 N86-22115

PITUITARY GLAND
Effect of weightlessness on the development of neurosecretory structures of the hypothalamo-hypophyseal system of the rat brain (Electron-microscope study) p 157 A86-29174

PLANETARY ENVIRONMENTS
Publications of the exobiology program for 1984: A special bibliography [NASA-TM-88382] p 189 N86-21150

PLANETARY EVOLUTION
Shklovskiy discusses possibility of extraterrestrial intelligence p 157 N86-20444

PLANTS (BOTANY)
Role of Ca(2+)/calmodulin in phosphorylation of proteins in plants [DE86-001804] p 158 N86-21099
Greenhouses with curvilinear planting surface p 159 N86-21132

PLUTONIUM OXIDES
Light-Weight Radioisotope Heater Unit Safety Analysis Report (LWRHU-SAR). Volume 1: A. Introduction and executive summary. B. Reference Design Document (RDD) [DE86-001457] p 172 N86-21113

POISONING
Effects of carbon monoxide on personnel [AD-P004882] p 163 N86-20628

POISONS
Toxicological evaluation of gas emission from heat-stable tetrafluoroethylene-based polymers when heated p 175 N86-21131

POLLEN
Height-dependent reduction of airborne pollen and effects on children and teenagers affected by bronchial asthma p 167 N86-21036

POLLUTION MONITORING
What in human biometeorology can contribute to assessment of the effects of hazardous substances on health? p 168 N86-21040

POLYSACCHARIDES
Molecular and biological properties of an immunopotentiating complex polysaccharide adjuvant produced by a gliding bacterium [AD-A162664] p 160 N86-22086

POLYURETHANE RESINS
Development of an ultrafast-curing wound dressing [AD-A162471] p 177 N86-22099

POPULATION THEORY
On interacting populations that disperse to avoid crowding: The effect of a sedentary colony [REPT-4] p 181 N86-21145

POSITION (LOCATION)
Proceedings: Protons and Membrane Reactions held at Santa Barbara, California on 28 January - 1 February 1985 [AD-A161331] p 159 N86-22082

POSITRONIUM
Limits on asymmetric orthopositronium formation in high Z optically active molecules p 189 A86-28724
POSTURE
Vestibular and visual control on posture and locomotor equilibrium --- Book p 183 A86-27671
PRECIPITATION (CHEMISTRY)
Development and use of anucleated bacterial cells to assay the in vivo activity of pollutants [AD-A162727] p 160 N86-22089
PREDICTIONS
A multiple-regression model of pilot performance in vertical and translational flight [AD-A161364] p 188 N86-22115
PREFLIGHT OPERATIONS
Shuttle flight experiment 30-day summary report [NASA-CR-176539] p 171 N86-21109
PRESSURE GRADIENTS
Weather as a physical process and parameterization of the effects as a meteorological contribution for investigating the correlation between weather and man p 166 N86-21026
Meteorotropic changes of cardiac patients' blood pressure and pulse frequency during a complex bath cure p 166 N86-21031
The Austrian biometeorological service p 167 N86-21034
PROCEDURES
A procedure-based approach to human information processing models [AD-A162454] p 181 N86-21144
PRODUCT DEVELOPMENT
Colloidal and meteorological in vitro reactions p 165 N86-21024
PROJECT PLANNING
Japanese Technology Evaluation Program (JTECH): Biotechnology Panel [PB86-109386] p 161 N86-22092
PROTECTIVE CLOTHING
Evaluation of materials for thermal protection [AD-P004901] p 187 N86-20638
Evaluation of a passenger mask modified with a rebreather bag for protection from smoke and fumes [AD-A162473] p 188 N86-22116
PROTEIN METABOLISM
Calmodulin, a second messenger - History of investigation and physiological importance p 157 A86-29256
Theoretical prerequisites for the possible use of bacteria which split organophosphates in order to increase the yield of nutrient yeast and its nitrogen and phosphorous content [AD-A161811] p 159 N86-22083
PROTEINS
Salyut-7 electrophoresis experiments aid medical research p 158 N86-20445
Role of Ca(2+)/calmodulin in phosphorylation of proteins in plants [DE86-001804] p 158 N86-21099
Bimane derivatives as fluorescent probes for biological macromolecules [AD-A162725] p 160 N86-22088
Development and use of anucleated bacterial cells to assay the in vivo activity of pollutants [AD-A162727] p 160 N86-22089
PSYCHOACOUSTICS
Hysterical deafness - An unusual presentation of stress in an air traffic control officer p 180 A86-29098
PSYCHOLOGICAL EFFECTS
Temperature wind speed humidity (TWH): A biometeorological index testing p 166 N86-21028
PSYCHOLOGICAL FACTORS
The dissociation between subjective and performance-based measures of operator workload p 178 A86-28450
Psychological and interpersonal adaptation to Mars missions [AAS 84-186] p 179 A86-28812
Psychological considerations in long-duration space missions An overview [AAS 84-188] p 179 A86-28814
PSYCHOMETRICS
A linear, dynamic model for the visual-cortical evoked response system p 183 A86-28432
Axiomatic and numeric conjoint measurement - A comparison of three methods for obtaining subjective workload (SWAT) rankings p 178 A86-28435
Personality type analysis of Air Force Institute of Technology School of Systems and Logistics graduate degree 85S class using Myers-Briggs Type-Indicator [AD-A161053] p 181 N86-22107
PSYCHOMOTOR PERFORMANCE
Neurophysiological actvity and psychophysical effectiveness of environmental factors p 164 N86-21013
PSYCHOSOMATICS
Investigations of the possible influence of air electrical phenomena on dulling and ghost aching in amputated patients p 167 N86-21033
PULMONARY CIRCULATION
Exploratory studies of physiological components of motion sickness: Cardiopulmonary differences between high and low susceptibles [NASA-CR-176541] p 171 N86-21108
PULMONARY FUNCTIONS
Estimating the small airways resistance from measurements of the upstream resistance of several gas mixtures p 162 A86-28448
PUPILLOMETRY
On the importance of cooling in climatic therapy p 165 N86-21020
PYROLYSIS
Comparative analysis of biomass pyrolysis condensates [DE86-001773] p 159 N86-21102
PYROTECHNICS
Evaluation of materials for thermal protection [AD-P004901] p 187 N86-20638

Q

QUALIFICATIONS
Personality type analysis of Air Force Institute of Technology School of Systems and Logistics graduate degree 85S class using Myers-Briggs Type-Indicator [AD-A161053] p 181 N86-22107

R

RABBITS
Development and use of anucleated bacterial cells to assay the in vivo activity of pollutants [AD-A162727] p 160 N86-22089
RADIATION DOSAGE
Stimulation of brain muscarinic acetylcholine receptors acutely reverses radiogenic hypodipsia p 156 A86-29096
The effect of equally effective neutron and X-ray radiation doses on the epithelial cells of the hair bulb [BLL-CE-TRANS-8221-(9022.09] p 170 N86-21104
Light-Weight Radioisotope Heater Unit Safety Analysis Report (LWRHU-SAR). Volume 1. A. Introduction and executive summary. B. Reference Design Document (RDD) [DE86-001457] p 172 N86-21113
Radioprotection update [BLL-CE-TRANS-8223-(9022-09] p 187 N86-21146
RADIATION EFFECTS
The influence of heliometeorologic factors on circulation and some vegetative functions p 165 N86-21021
Application of meteorological and solar data in health resort climatherapy p 170 N86-21067
Radioprotection update [BLL-CE-TRANS-8223-(9022-09] p 187 N86-21146
RADIATION HAZARDS
Light-Weight Radioisotope Heater Unit Safety Analysis Report (LWRHU-SAR). Volume 1. A. Introduction and executive summary. B. Reference Design Document (RDD) [DE86-001457] p 172 N86-21113
RADIATION PROTECTION
Radioprotection update [BLL-CE-TRANS-8223-(9022-09] p 187 N86-21146
Suppression of antibody forming cells by muramyl Di-peptides [AD-A162400] p 159 N86-22084
RADIOACTIVE DECAY
Limits on asymmetric orthopositronium formation in high Z optically active molecules p 189 A86-28724
RADIOIMMUNOASSAY
Development and use of anucleated bacterial cells to assay the in vivo activity of pollutants [AD-A162727] p 160 N86-22089
RADIOLYSIS
Limits on asymmetric orthopositronium formation in high Z optically active molecules p 189 A86-28724
RANK TESTS
Axiomatic and numeric conjoint measurement - A comparison of three methods for obtaining subjective workload (SWAT) rankings p 178 A86-28435
RATS
Circadian variation in host defense [AD-A161702] p 158 N86-21098
Effect of weightlessness and some of its models on mechanical properties of animal bones submitted to torsion p 173 N86-21123
Role of vitamin D3 active metabolites in regulation of calcium metabolism in hypokinetic rats p 174 N86-21124
Comparison of bone reactions of rats submitted to clinostatic and antiorthostatic hypokinesia p 174 N86-21125
Condition of thyroid gland and C cells during long-term rotation (morphological and biochemical investigation) p 174 N86-21126
Rat brain impedance in stationary magnetic field p 174 N86-21128
REACTION TIME
The effects of color-coding in geosit displays. 1: Color as a redundant code [AD-A161107] p 181 N86-22108
REACTION WHEELS
Kinematics and reaction moment compensation for a spaceborne elbow manipulator [AIAA PAPER 86-0250] p 182 A86-26616
REACTOR SAFETY
Radioprotection update [BLL-CE-TRANS-8223-(9022-09] p 187 N86-21146
RECEPTORS (PHYSIOLOGY)
Cardiovascular receptors and fluid volume control (1985 Armstrong Lecture) p 157 A86-29099
RECORDING
Analysis techniques for continuous twenty four hour ambulatory blood pressure patterns p 170 N86-21103
RECREATION
Human bioclimatic classification methods illustrated with examples of selected countries p 169 N86-21058
Local climatic particularities and their importance for recreation area (example, Saarland-lower Bliestal) p 170 N86-21064
REDUCED GRAVITY
Greenhouses with curvilinear planting surface p 159 N86-21132
REFLEXES
Incorporation of active elements into the articulated total body model [AD-A162518] p 177 N86-22101
REMOTE MANIPULATOR SYSTEM
Mobile remote manipulator vehicle system [NASA-CASE-LAR-13393-1] p 187 N86-21147
Direct model reference adaptive control of a flexible robotic manipulator [NASA-CR-176659] p 188 N86-22113
RESEARCH AND DEVELOPMENT
Review and evaluation of empirical research in troubleshooting p 186 A86-28865
RESIDENTIAL AREAS
Emmission and weather effects on children's airway troubles in Berlin (1979-1982). Comparison of two different immissions: Loaded residential areas in West Berlin polluted areas p 168 N86-21045
RESOURCE ALLOCATION
Wickens' resource allocation model - Implications for the design of human-machine systems p 185 A86-28453
RESOURCES
The dissociation of subjective measures of mental workload and performance [NASA-CR-176609] p 180 N86-21139
RESPIRATION
Forced expiration parameters in healthy man submitted to simulated weightlessness p 173 N86-21121
RESPIRATORY DISEASES
Effects of air pollution on man p 167 N86-21038
Immission and weather effects on children's airway illnesses in Berlin (1979-1982): Methodology and result summary p 168 N86-21040
Airway infections related to city climate and local immission load p 168 N86-21042
Immission and weather effects on children's airway troubles in Berlin (1979-1982). Time series investigations: Croup syndrome and asthmatic airway troubles p 168 N86-21044
Emmission and weather effects on children's airway troubles in Berlin (1979-1982). Comparison of two different immissions: Loaded residential areas in West Berlin polluted areas p 168 N86-21045
RESPIRATORY PHYSIOLOGY
Skeletal muscle lactate release and glycolytic intermediates during hypercapnia p 155 A86-28124
RESPIRATORY SYSTEM
Advanced clinical research in shock and trauma [AD-A162730] p 177 N86-22103
RETINAL ADAPTATION
Contributions to workload of rotational optical transformations [NASA-CR-176542] p 171 N86-21106
RETRAINING
Dynamic retraining approaches for an airborne speech recognition system p 185 A86-28444
RHYTHM (BIOLOGY)
Modeling electrocardiograms using interacting Markov chains [AD-A162758] p 178 N86-22105

RIBONUCLEIC ACIDS
Polyribonucleic acids as enzymes p 155 A86-27051
RIGIDITY
Incorporation of active elements into the articulated total body model
[AD-A162518] p 177 N86-22101
RISK
Group diagnosis as risk assessment in environment hygiene p 167 N86-21039
ROBOTICS
Direct model reference adaptive control of a flexible robotic manipulator
[NASA-CR-176659] p 188 N86-22113
ROBOTS
Telerobotics for the Space Station
p 182 A86-26493
Kinematics and reaction moment compensation for a spaceborne elbow manipulator
[AIAA PAPER 86-0250] p 182 A86-26616
Design techniques for robots - Space applications
p 183 A86-28074
ROTATING ENVIRONMENTS
Exploratory studies of physiological components of motion sickness: Cardiopulmonary differences between high and low susceptibles
[NASA-CR-176541] p 171 N86-21108
Shuttle flight experiment 30-day summary report
[NASA-CR-176539] p 171 N86-21109
Vection-induced gastric dysrhythmias and motion sickness
[NASA-CR-176620] p 176 N86-22095
ROTATION
Contributions to workload of rotational optical transformations
[NASA-CR-176542] p 171 N86-21106
Condition of thyroid gland and C cells during long-term rotation (morphological and biochemical investigation)
p 174 N86-21126
RUNNING
Heat acclimatization developed during summer running in northeastern United States
[AD-A162728] p 177 N86-22102
RURAL LAND USE
Local climatic particularities and their importance for recreation area (example, Saarland-lower Bliestal)
p 170 N86-21064

S

SAFETY
An examination of injury criteria for potential application to explosive safety studies
[AD-P004883] p 163 N86-20629
Evaluation of materials for thermal protection
[AD-P004901] p 187 N86-20638
Characteristics of accelerations in aerobatic flight as a sport p 172 N86-21117
Biomedical and environmental sciences at Oak Ridge National Laboratory
[DE86-001639] p 161 N86-22091
SCANNING
Visual scanning behavior p 178 A86-28452
SEDIMENTARY ROCKS
Stromatolites from the 3,300-3,500-Myr Swaziland Supergroup, Barberton Mountain Land, South Africa
p 155 A86-26490
SELENIUM
Experimental arrhythmia and its prevention
p 174 N86-21129
SEMICIRCULAR CANALS
Interaction between the otolithic organ and the semicircular canals of the vestibular apparatus in the system of spatial angular stabilization in humans
p 161 A86-27474
SEMICONDUCTORS (MATERIALS)
Instrument lighting levels and AN/AVS-6 usage
[AD-A161538] p 187 N86-21148
SENSITIVITY
Weather and migraine p 166 N86-21027
SENSORIMOTOR PERFORMANCE
Head-up/head-down transition - Measurement of transition times p 186 A86-29092
SENSORS
Direct model reference adaptive control of a flexible robotic manipulator
[NASA-CR-176659] p 188 N86-22113
SENSORY PERCEPTION
Investigations of the possible influence of air electrical phenomena on dulling and ghost aching in amputated patients p 167 N86-21033
SEQUENCING
New roles for computation in the life sciences
[DE85-017542] p 158 N86-21100
SEX FACTOR
Objective investigations and subjective observations of sensitivity to weather p 165 N86-21023
SHOCK (PHYSIOLOGY)
The role of endorphins in the pathophysiology of hemorrhagic and endotoxic shock in the subhuman primate
[AD-A162483] p 177 N86-22100
Advanced clinical research in shock and trauma
[AD-A162730] p 177 N86-22103
SIGNAL PROCESSING
Interactive activation models of perception and comprehension
[AD-A161362] p 181 N86-21143
SIMULATION
Modeling electrocardiograms using interacting Markov chains
[AD-A162758] p 178 N86-22105
SKIN (ANATOMY)
The interface between atmosphere and organism
p 164 N86-21014
Application of meteorological and solar data in health resort climatherapy p 170 N86-21067
Evaluation of condition of human skin in a closed environment by means of chromatography
p 174 N86-21130
Electrodermal changes corresponding to the degree of discomfort induced by motion sickness
[NAL-TR-880] p 176 N86-22096
SKIN TEMPERATURE (BIOLOGY)
Heat acclimatization developed during summer running in northeastern United States
[AD-A162728] p 177 N86-22102
SLEEP
Electrical activity of cerebellum in the wakefulness-sleep cycle p 157 A86-29255
SMOG
Effects of air pollution on man p 167 N86-21038
SMOKE
Evaluation of a passenger mask modified with a rebreather bag for protection from smoke and fumes
[AD-A162473] p 188 N86-22116
SOLAR ACTIVITY EFFECTS
Effect of cosmoheliogeophysical factors on bacterial agglutionation in vitro p 155 A86-27473
Colloidal and meteorological in vitro reactions
p 165 N86-21024
SOLAR RADIATION
The influence of heliometeorologic factors on circulation and some vegetative functions p 165 N86-21021
Weather and asthma symptoms p 166 N86-21029
Application of meteorological and solar data in health resort climatherapy p 170 N86-21067
SOLAR TERRESTRIAL INTERACTIONS
Colloidal and meteorological in vitro reactions
p 165 N86-21024
SOOT
The biological efficiency of dust emmission: Determination based on the withering degree of exposed lichens p 169 N86-21047
SPACE ADAPTATION SYNDROME
The effective intensity of Coriolis, cross-coupling stimulation is gravitoinertial force dependent - Implications for space motion sickness p 163 A86-29093
Concerns are being raised about living in the space environment p 163 A86-29499
Stimulus specificity and individual stereotypy of autonomic responses to motion stressors
[NASA-CR-176543] p 171 N86-21107
Shuttle flight experiment 30-day summary report
[NASA-CR-176539] p 171 N86-21109
SPACE BASES
Critical life science issues for a Mars base
[AAS 84-167] p 156 A86-28793
Advanced spacesuit glove design
[AAS 84-175] p 186 A86-28801
The retrieval, storage, and recycling of water for a manned base on Mars
[AAS 84-180] p 186 A86-28806
Water supply for a manned Mars base
[AAS 84-181] p 186 A86-28807
Mass-balance model for a controlled ecological life support system on Mars
[AAS 84-184] p 186 A86-28810
SPACE COMMERCIALIZATION
Medical technology in space - Foreseeable economic issues p 155 A86-27878
SPACE FLIGHT FEEDING
Processing and packaging - Preparation techniques enhance meals on the Shuttle p 187 A86-29497
SPACE FLIGHT STRESS
Psychological considerations in long-duration space missions An overview
[AAS 84-188] p 179 A86-28814
A review of the psychological aspects of space flight
p 179 A86-29090
Immunological analyses of U.S. Space Shuttle crewmembers p 162 A86-29091
Concerns are being raised about living in the space environment p 163 A86-29499
USSR report: Space Biology and Aerospace Medicine, volume 19, no. 6, November - December 1985
[JPRS-USB-86-001] p 172 N86-21114
SPACE HEATING (BUILDINGS)
Problems of city planning — meteorological parameters p 169 N86-21049
Problems in city climate evaluation in human biometeorological terms p 169 N86-21050
SPACE MAINTENANCE
Telerobotics for the Space Station
p 182 A86-26493
Design techniques for robots - Space applications
p 183 A86-28074
SPACE PLATFORMS
Mobile remote manipulator vehicle system
[NASA-CASE-LAR-13393-1] p 187 N86-21147
SPACE PSYCHOLOGY
Psychological and interpersonal adaptation to Mars missions
[AAS 84-186] p 179 A86-28812
Psychological considerations in long-duration space missions An overview
[AAS 84-188] p 179 A86-28814
A review of the psychological aspects of space flight
p 179 A86-29090
SPACE SHUTTLE MISSIONS
Processing and packaging - Preparation techniques enhance meals on the Shuttle p 187 A86-29497
SPACE STATIONS
Telerobotics for the Space Station
p 182 A86-26493
Direct model reference adaptive control of a flexible robotic manipulator
[NASA-CR-176659] p 188 N86-22113
SPACE SUITS
Advanced spacesuit glove design
[AAS 84-175] p 186 A86-28801
SPACECRAFT CABIN ATMOSPHERES
Evaluation of condition of human skin in a closed environment by means of chromatography
p 174 N86-21130
SPACECRAFT ENVIRONMENTS
Concerns are being raised about living in the space environment p 163 A86-29499
SPACECRAFT EQUIPMENT
Kinematics and reaction moment compensation for a spaceborne elbow manipulator
[AIAA PAPER 86-0250] p 182 A86-26616
SPACECRAFT POWER SUPPLIES
Light-Weight Radioisotope Heater Unit Safety Analysis Report (LWRHU-SAR). Volume 1. A. Introduction and executive summary. B. Reference Design Document (RDD)
[DE86-001457] p 172 N86-21113
SPACECREWS
Psychological and interpersonal adaptation to Mars missions
[AAS 84-186] p 179 A86-28812
A review of the psychological aspects of space flight
p 179 A86-29090
Immunological analyses of U.S. Space Shuttle crewmembers p 162 A86-29091
SPATIAL DISTRIBUTION
Spatial distribution of heat and cold stress in the Federal Republic of Germany p 170 N86-21065
SPEECH BASEBAND COMPRESSION
Speech compression as a potential aid to automated voice warnings in the cockpit p 185 A86-28445
SPEECH RECOGNITION
Target designation by speech, joystick, and touch control Format design implications p 184 A86-28439
Dynamic retraining approaches for an airborne speech recognition system p 185 A86-28444
SPLEEN
Molecular and biological properties of an immunopotentiating complex polysaccharide adjuvant produced by a gliding bacterium
[AD-A162664] p 160 N86-22086
STANDARDS
Human engineering guidelines for the evaluation and assessment of video display units
[TI85-016435] p 187 N86-21149
STATISTICAL ANALYSIS
Meteorotropic determinants of road collisions and accidents p 165 N86-21022
Objective investigations and subjective observations of sensitivity to weather p 165 N86-21023
Modeling electrocardiograms using interacting Markov chains
[AD-A162758] p 178 N86-22105

STOCHASTIC PROCESSES

STOCHASTIC PROCESSES
Spatial distribution of heat and cold stress in the Federal Republic of Germany p 170 N86-21065

STRESS (PHYSIOLOGY)
Changes in catecholamine excretion during physical and mental workload p 161 A86-28099
Effects of physiological and mental stress on crew members in relatively long flight by C-1 jet transport aircraft p 161 A86-28100
On the importance of cooling in climatic therapy p 165 N86-21020
Stimulus specificity and individual stereotypy of autonomic responses to motion stressors [NASA-CR-176543] p 171 N86-21107
The effect of acceleration stress on human workload [AD-A156770] p 180 N86-21140
Heat acclimatization developed during summer running in northeastern United States [AD-A162728] p 177 N86-22102
Health and performance of antarctic winter-over personnel: A follow-up study [AD-A161773] p 182 N86-22109

STRESS (PSYCHOLOGY)
Changes in catecholamine excretion during physical and mental workload p 161 A86-28099
Effects of physiological and mental stress on crew members in relatively long flight by C-1 jet transport aircraft p 161 A86-28100
Hysterical deafness - An unusual presentation of stress in an air traffic control officer p 180 A86-29098
Objective investigations and subjective observations of sensitivity to weather p 165 N86-21023

STRUCTURAL ANALYSIS
Head-spine structure modeling: Enhancements to secondary loading path model and validation of head-cervical spine model [AD-A161425] p 172 N86-21112

SUBMERGING
Forced expiration parameters in healthy man submitted to simulated weightlessness p 173 N86-21121

SUITS
Ship/ng personnel abandonment and helicopter crew/passenger immersion suits - The requirements in the North Atlantic p 187 A86-29100

SULFUR DIOXIDES
Immission and weather effects on children's airway troubles in Berlin (1979-1982). Time series investigations: Croup syndrome and asthmatic airway troubles p 168 N86-21044
Emmission and weather effects on children's airway troubles in Berlin (1979-1982). Comparison of two different immissions: Loaded residential areas in West Berlin polluted areas p 168 N86-21045

SUMMER
Heat acclimatization developed during summer running in northeastern United States [AD-A162728] p 177 N86-22102

SUNLIGHT
Human bioclimatic classification methods illustrated with examples of selected countries p 169 N86-21058

SUPPORTS
Drop foot corrective device [NASA-CASE-LAR-12259-2] p 188 N86-22112

SURFACE GEOMETRY
Effects of body mass and morphology on thermal responses in water p 162 A86-28123

SURFACTANTS
Particulate models of photosynthesis [DE86-001625] p 160 N86-22090

SURVIVAL EQUIPMENT
Ship/ng personnel abandonment and helicopter crew/passenger immersion suits - The requirements in the North Atlantic p 187 A86-29100

SWEAT
Electrodermal changes corresponding to the degree of discomfort induced by motion sickness [NAL-TR-880] p 176 N86-22096

SYNTHESIS (CHEMISTRY)
Bimane derivatives as fluorescent probes for biological macromolecules [AD-A162725] p 160 N86-22088

SYSTEM EFFECTIVENESS
A methodology for addressing system operability issues --- of military systems p 184 A86-28437
The dissociation between subjective and performance-based measures of operator workload p 178 A86-28450

SYSTEMS ANALYSIS
A methodology for addressing system operability issues --- of military systems p 184 A86-28437
Incorporating human operator considerations into existing weapon system analysis and quantification capabilities p 184 A86-28438

SYSTEMS ENGINEERING
Wickens' resource allocation model - Implications for the design of human-machine systems p 185 A86-28453

SYSTOLE
Analysis techniques for continuous twenty four hour ambulatory blood pressure patterns p 170 N86-21103

T

TARGET ACQUISITION
Target designation by speech, joystick, and touch control Format design implications p 184 A86-28439

TARGET RECOGNITION
An automated system for comprehensive assessment of visual field sensitivity [AD-A162755] p 178 N86-22104

TASK COMPLEXITY
Effects of task difficulty and learning strategies in multiple-task training p 178 A86-28451
Wickens' resource allocation model - Implications for the design of human-machine systems p 185 A86-28453
Evaluation of 16 measures of mental workload using a simulated flight task emphasizing mediational activity p 179 A86-28864
On scaling performance operating characteristics - Caveat emptor p 179 A86-28866
POCs and performance decrements - A reply to Kantowitz and Weldon p 179 A86-28867
Head-up/head-down transition - Measurement of transition times p 186 A86-29092

TECHNOLOGY ASSESSMENT
Japanese Technology Evaluation Program (JTECH): Biotechnology Panel [PB86-109386] p 161 N86-22092

TELEOPERATORS
Telerobotics for the Space Station p 182 A86-26493

TEMPERATURE EFFECTS
The influence of heliometeorologic factors on circulation and some vegetative functions p 165 N86-21021
Weather and asthma symptoms p 166 N86-21029
Meteorotropic changes of cardiac patients' blood pressure and pulse frequency during a complex bath cure p 166 N86-21031
Weather and subjective health complications in cardiac patients p 167 N86-21032
Airway infections related to city climate and local immission load p 168 N86-21042

THERAPY
The Austrian biometeorological service p 167 N86-21034
Comparison between meteorological complex values and a model of man's energy budget p 169 N86-21059

THERMAL COMFORT
The interface between atmosphere and organism p 164 N86-21014
Application of a nonstationary energy budget model to determine thermal comfort p 164 N86-21017
Physical causes of air draft phenomena, new facts p 164 N86-21018
Climatic cure on a practical level p 164 N86-21019
Weather sensitivity as discomfort p 165 N86-21025
Temperature wind speed humidity (TWH): A biometeorological index testing p 166 N86-21026
Human bioclimatic classification methods illustrated with examples of selected countries p 169 N86-21058
Comparison between meteorological complex values and a model of man's energy budget p 169 N86-21059
Spatial distribution of heat and cold stress in the Federal Republic of Germany p 170 N86-21065

THERMAL ENVIRONMENTS
Neurophysiological activity and psychophysical effectiveness of environmental factors p 164 N86-21013
Application of a nonstationary energy budget model to determine thermal comfort p 164 N86-21017
Immission and weather effects on children's airway illnesses in Berlin (1979-1982): Methodology and result summary p 168 N86-21040

THERMAL PROTECTION
Evaluation of materials for thermal protection [AD-P004901] p 187 N86-20638
Problems of city planning --- meteorological parameters p 169 N86-21049

THERMOREGULATION
Afterdrop of body temperature during rewarming - An alternative explanation p 162 A86-28122
Effects of body mass and morphology on thermal responses in water p 162 A86-28123
Man's thermal budget under various climates p 164 N86-21016
Climatic cure on a practical level p 164 N86-21019
Weather sensitivity as discomfort p 165 N86-21025
Weather as a physical process and parameterization of the effects as a meteorological contribution for investigating the correlation between weather and man p 166 N86-21026
Weather and subjective health complications in cardiac patients p 167 N86-21032

THESAURI
Modeling of perception and decision-making processes p 183 A86-27094

THROMBIN
Development of an ultrafast-curing wound dressing [AD-A162471] p 177 N86-22099

THYROID GLAND
Condition of thyroid gland and C cells during long-term rotation (morphological and biochemical investigation) p 174 N86-21126

TIME DEPENDENCE
Performance overnight in shiftworkers operating a day-night schedule p 179 A86-29095

TIME MEASUREMENT
Head-up/head-down transition - Measurement of transition times p 186 A86-29092
A procedure-based approach to human information processing models [AD-A162454] p 181 N86-21144

TISSUES (BIOLOGY)
Proceedings: Protons and Membrane Reactions held at Santa Barbara, California on 28 January - 1 February 1985 [AD-A161331] p 159 N86-22082

TOLERANCES (PHYSIOLOGY)
Exploratory studies of physiological components of motion sickness: Cardiopulmonary differences between high and low susceptibles [NASA-CR-176541] p 171 N86-21108
Toxic hazards research unit annual technical report: 1985 [AD-A161558] p 176 N86-22097

TOMOGRAPHY
In vivo nuclear magnetic resonance imaging [NASA-CR-171928] p 170 N86-21105

TORSION
Effect of weightlessness and some of its models on mechanical properties of animal bones submitted to torsion p 173 N86-21123

TOXIC HAZARDS
Effects of carbon monoxide on personnel [AD-P004882] p 183 N86-20628
What in human biometeorology can contribute to assessment of the effects of hazardous substances on health? p 168 N86-21043
Toxic hazards research unit annual technical report: 1985 [AD-A161558] p 176 N86-22097

TOXICITY
Studies on the mechanism of suppression of the immune response by synthetic, non-toxic adjuvants [AD-A162444] p 160 N86-22085

TOXICOLOGY
Toxicological evaluation of gas emission from heat-stable tetrafluoroethylene-based polymers when heated p 175 N86-21131

TRACE ELEMENTS
Trace elements in chemical evolution. I. II - Synthesis of amino acids under simulated primitive earth conditions in the presence of trace elements p 189 A86-28722

TRAINING DEVICES
Principles of instruction for successful assembly and repair [AD-A161280] p 180 N86-21142

TRANSFER OF TRAINING
Principles of instruction for successful assembly and repair [AD-A161280] p 180 N86-21142

TRANSIENT RESPONSE
Comparison of transient and steady state cortical evoked potentials p 183 A86-26431

TYROSINE
Development and use of anucleated bacterial cells to assay the in vivo activity of pollutants [AD-A162727] p 160 N86-22089

U

URBAN PLANNING
Problems of city planning --- meteorological parameters p 169 N86-21049
Problems in city climate evaluation in human biometeorological terms p 169 N86-21050

V

VASCULAR SYSTEM
Mechanisms of calcium permeability changes in the sarcolemma of vascular smooth-muscle cells during hypoxia p 157 A86-29257
VENEZUELA
The history of aeronautical medicine in Venezuela [NASA-TM-77709] p 178 N86-22094
VERTICAL FLIGHT
A multiple-regression model of pilot performance in vertical and translational flight [AD-A161364] p 188 N86-22115
VERTICAL LANDING
A multiple-regression model of pilot performance in vertical and translational flight [AD-A161364] p 188 N86-22115
VERTICAL TAKEOFF AIRCRAFT
A multiple-regression model of pilot performance in vertical and translational flight [AD-A161364] p 188 N86-22115
VESTIBULAR NYSTAGMUS
Vestibular function in older individuals submitted to antiorthostatic hypokinesia for 30 days p 172 N86-21116
VESTIBULAR TESTS
Vestibular function in older individuals submitted to antiorthostatic hypokinesia for 30 days p 172 N86-21116
VESTIBULES
Interaction between the otolithic organ and the semicircular canals of the vestibular apparatus in the system of spatial angular stabilization in humans p 161 A86-27474
Vestibular and visual control on posture and locomotor equilibrium --- Book p 183 A86-27671
Spatial illusions of vestibular genesis during flights in aircraft p 172 N86-21115
VIBRATION EFFECTS
The role of vibration and rattle in human response to helicopter noise [AD-A162486] p 182 N86-22110
VIDEO COMMUNICATION
Principles of instruction for successful assembly and repair [AD-A161280] p 180 N86-21142
VIDEO EQUIPMENT
Human engineering guidelines for the evaluation and assessment of video display units [TI85-016435] p 167 N86-21149
Reconfigurable work station for a video display unit and keyboard [NASA-CASE-MFS-26009-1SB] p 188 N86-22114
VIRUSES
Salyut-7 electrophoresis experiments and medical research p 158 N86-20445
VISION
Neurophysiological activity and psychophysical effectiveness of environmental factors p 164 N86-21013
Interactive activation models of perception and comprehension [AD-A161362] p 181 N86-21143
VISUAL CONTROL
Vestibular and visual control on posture and locomotor equilibrium --- Book p 183 A86-27671
VISUAL DISCRIMINATION
Device for combined study of visual tracking and verbal activity p 175 N86-21133
VISUAL FIELDS
An automated system for comprehensive assessment of visual field sensitivity [AD-A162755] p 178 N86-22104
VISUAL PERCEPTION
Contributions to workload of rotational optical transformations [NASA-CR-176542] p 171 N86-21106
Spatial illusions of vestibular genesis during flights in aircraft p 172 N86-21115
Device for combined study of visual tracking and verbal activity p 175 N86-21133
An automated system for comprehensive assessment of visual field sensitivity [AD-A162755] p 178 N86-22104
Visual perception in correlated noise p 181 N86-22106
VISUAL SIGNALS
An automated system for comprehensive assessment of visual field sensitivity [AD-A162755] p 178 N86-22104
VISUAL STIMULI
Comparison of transient and steady state cortical evoked potentials p 183 A86-28431
A linear, dynamic model for the visual-cortical evoked response system p 183 A86-28432
VISUAL TASKS
Visual scanning behavior p 178 A86-28452
VOICE COMMUNICATION
Improving intelligibility in audio distribution systems p 186 A86-28513
VOICE CONTROL
Selecting cockpit functions for speech I/O technology p 185 A86-28446
VOICE DATA PROCESSING
Selecting cockpit functions for speech I/O technology p 185 A86-28446
VOLCANOLOGY
Stromatolites from the 3,300-3,500-Myr Swaziland Supergroup, Barberton Mountain Land, South Africa p 155 A86-26490

W

WAKEFULNESS
Electrical activity of cerebellum in the wakefulness-sleep cycle p 157 A86-29255
WALKING
Drop foot corrective device [NASA-CASE-LAR-12259-2] p 188 N86-22112
WARNING SYSTEMS
Speech compression as a potential aid to automated voice warnings in the cockpit p 185 A86-28445
WATER
Photochemical reactions in interstellar grains photolysis of CO, NH3, and H2O p 189 A86-28721
WATER BALANCE
Cardiovascular receptors and fluid volume control (1985 Armstrong Lecture) p 157 A86-29099
WATER CONSUMPTION
Stimulation of brain muscarinic acetylcholine receptors acutely reverses radiogenic hypodipsia p 156 A86-29096
WATER IMMERSION
Effects of body mass and morphology on thermal responses in water p 162 A86-28123
Ship/rig personnel abandonment and helicopter crew/passenger immersion suits - The requirements in the North Atlantic p 187 A86-29100
WATER RECLAMATION
The retrieval, storage, and recycling of water for a manned base on Mars [AAS 84-190] p 186 A86-28806
Water supply for a manned Mars base [AAS 84-181] p 186 A86-28807
WAVEFORMS
Modeling electrocardiograms using interacting Markov chains [AD-A162758] p 176 N86-22105
WEAPON SYSTEMS
Incorporating human operator considerations into existing weapon system analysis and quantification capabilities p 184 A86-28438
Effects of carbon monoxide on personnel [AD-P004882] p 183 N86-20628
WEATHER
Objective investigations and subjective observations of sensitivity to weather p 165 N86-21023
Colloidal and meteorological in vitro reactions p 165 N86-21024
Weather and migraine p 166 N86-21027
Weather and asthma symptoms p 166 N86-21029
Immission and weather effects on children's airway diseases in Berlin (1979-1982): Methodology and result summary p 168 N86-21040
What in human biometeorology can contribute to assessment of the effects of hazardous substances on health? p 168 N86-21043
WEATHER FORECASTING
Meteorological adaptation research at biology institute p 158 N86-20890
Study of a meteorological prediction of acute myocardial infarction incidence p 166 N86-21030
The Austrian biometeorological service p 167 N86-21034
WEIGHTLESSNESS
Countermeasures for the effects of prolonged weightlessness [AAS 84-187] p 162 A86-28813
Effect of weightlessness on the development of neurosecretory structures of the hypothalamo-hypophyseal system of the rat brain (Electron-microscope study) p 157 A86-29174
Concerns are being raised about living in the space environment p 163 A86-29499
WEIGHTLESSNESS SIMULATION
Cardiovascular receptors and fluid volume control (1985 Armstrong Lecture) p 157 A86-29099
Vestibular function in older individuals submitted to antiorthostatic hypokinesia for 30 days p 172 N86-21116
Effect of immersion hypokinesia on characteristics of programmed voluntary movements p 173 N86-21119
Cerebral circulation and oxygenation in healthy man during graded exercise in antiorthostatic position p 173 N86-21120
Forced expiration parameters in healthy man submitted to simulated weightlessness p 173 N86-21121
Comparison of bone reactions of rats submitted to clinostatic and antiorthostatic hypokinesia p 174 N86-21125
Condition of thyroid gland and C cells during long-term rotation (morphological and biochemical investigation) p 174 N86-21126
Effect of active antiorthostatic conditioning on tolerance to cranial redistribution of blood p 175 N86-21135
WEST GERMANY
Spatial distribution of heat and cold stress in the Federal Republic of Germany p 170 N86-21065
WIND VELOCITY
Weather and subjective health complications in cardiac patients p 167 N86-21032
WINTER
Health and performance of antarctic winter-over personnel: A follow-up study [AD-A161773] p 182 N86-22109
WORDS (LANGUAGE)
Attention within auditory word perception [AD-A162550] p 182 N86-22111
WORK CAPACITY
Comparison of male and female maximum lifting capacity [AD-A160887] p 171 N86-21111
WORK-REST CYCLE
Performance overnight in shiftworkers operating a day-night schedule p 179 A86-29095
Electrical activity of cerebellum in the wakefulness-sleep cycle p 157 A86-29255
WORKLOADS (PSYCHOPHYSIOLOGY)
Changes in catecholamine excretion during physical and mental workload p 161 A86-28099
A linear, dynamic model for the visual-cortical evoked response system p 183 A86-28432
A workload index for iterative crewstation evaluation p 184 A86-28433
Workload assessment techniques in system redesign p 184 A86-28434
Axiomatic and numeric conjoint measurement - A comparison of three methods for obtaining subjective workload (SWAT) rankings p 178 A86-28435
The dissociation between subjective and performance-based measures of operator workload p 178 A86-28450
Effects of task difficulty and learning strategies in multiple-task training p 178 A86-28451
Evaluation of 16 measures of mental workload using a simulated flight task emphasizing mediational activity p 179 A86-28864
The dissociation of subjective measures of mental workload and performance [NASA-CR-176609] p 180 N86-21139
The effect of acceleration stress on human workload [AD-A156770] p 180 N86-21140
WORKSTATIONS
Reconfigurable work station for a video display unit and keyboard [NASA-CASE-MFS-26009-1SB] p 188 N86-22114
WOUND HEALING
Development of an ultrafast-curing wound dressing [AD-A162471] p 177 N86-22099

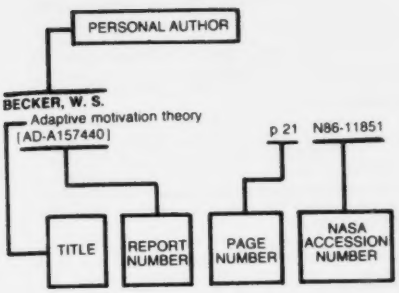
X

X RAY IRRADIATION
The effect of equally effective neutron and X-ray radiation doses on the epithelial cells of the hair bulb [BLL-CE-TRANS-8221-(9022.09)] p 170 N86-21104

Y

YEAST
Theoretical prerequisites for the possible use of bacteria which split organophosphates in order to increase the yield of nutrient yeast and its nitrogen and phosphorous content [AD-A161811] p 159 N86-22083
YIELD
Theoretical prerequisites for the possible use of bacteria which split organophosphates in order to increase the yield of nutrient yeast and its nitrogen and phosphorous content [AD-A161811] p 159 N86-22083

Typical Personal Author Index Listing



Listings in this index are arranged alphabetically by personal author. The title of the document provides the user with a brief description of the subject matter. The report number helps to indicate the type of document listed (e.g., NASA report, translation, NASA contractor report). The page and accession numbers are located beneath and to the right of the title. Under any one author's name the accession numbers are arranged in sequence with the AIAA accession numbers appearing first.

A

ACTON, W. H.
Workload assessment techniques in system redesign p 184 A86-28434

AFONIN, B. V.
Role of vitamin D3 active metabolites in regulation of calcium metabolism in hypokinetic rats p 174 N86-21124
Condition of thyroid gland and C cells during long-term rotation (morphological and biochemical investigation) p 174 N86-21126

AGARWAL, V. K.
Photochemical reactions in interstellar grains photolysis of CO, NH3, and H2O p 189 A86-28721

AGULOVA, L. P.
Effect of cosmoheliogeophysical factors on bacterial agglutionation in vitro p 155 A86-27473

ALBERY, W. B.
The effect of acceleration stress on human workload [AD-A156770] p 180 N86-21140

ALLISON, J. E.
Utilizing computer graphics display technology p 185 A86-28441

ALTUKHOV, V. G.
The state of man's organism under conditions of elevated atmospheric carbon dioxide p 163 A86-29306

APRILL, A.
Speech compression as a potential aid to automated voice warnings in the cockpit p 185 A86-28445

ARMSTRONG, L. E.
Heat acclimatization developed during summer running in northeastern United States [AD-A162728] p 177 N86-22102

ASYAMOLOVA, N. M.
Forced expiration parameters in healthy man submitted to simulated weightlessness p 173 N86-21121

ATKINSON, R. P.
Contributions to workload of rotational optical transformations [NASA-CR-176542] p 171 N86-21106

ATTIAS, J.
Transdermal scopolamine - Human performance and side effects p 163 A86-29094

B

BABICHENKO, I. I.
Effect of weightlessness on the development of neurosecretory structures of the hypothalamo-hypophyseal system of the rat brain (Electron-microscope study) p 157 A86-29174

BAGGETT, P.
Principles of instruction for successful assembly and repair [AD-A161280] p 180 N86-21142

BARANOV, V. M.
Forced expiration parameters in healthy man submitted to simulated weightlessness p 173 N86-21121

BARANOWSKA, M.
Meteorotropic determinants of road collisions and accidents p 165 N86-21022

BARCLAY, J. K.
Skeletal muscle lactate release and glycolytic intermediates during hypercapnia p 155 A86-28124

BARKIGIA, K. M.
Experimental, structural and theoretical models of bacteriochlorophylls a, d and g [DE86-001727] p 158 N86-21101

BECK, E. G.
Group diagnosis as risk assessment in environment hygiene p 167 N86-21039

BEISEL, W. R.
Research opportunities on immunocompetence in space [NASA-CR-176482] p 180 N86-21138

BEKAIA, G. L.
Electrical activity of cerebellum in the wakefulness-sleep cycle p 157 A86-29255

BELAKOVSKIY, M. S.
Role of vitamin D3 active metabolites in regulation of calcium metabolism in hypokinetic rats p 174 N86-21124
Some aspects of human amino acid metabolism at high altitude p 175 N86-21136

BELL, G. I.
New roles for computation in the life sciences [DE85-017542] p 158 N86-21100

BELYTSCHKO, T.
Head-spine structure modeling: Enhancements to secondary loading path model and validation of head-cervical spine model [AD-A161425] p 172 N86-21112

BERADZE, G. G.
Electrical activity of cerebellum in the wakefulness-sleep cycle p 157 A86-29255

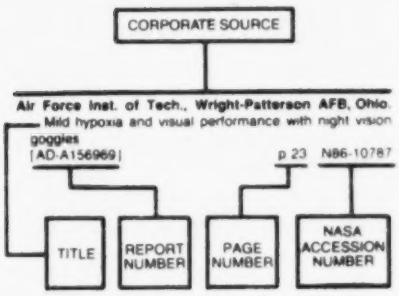
[AD-A160668] p 171 N86-21110

Typical Corporate Source Index Listing



Listings in this index are arranged alphabetically by corporate source. The title of the document is used to provide a brief description of the subject matter. The page number and the accession number are included in each entry to assist the user in locating the abstract in the abstract section. If applicable, a report number is also included as an aid in identifying the document.

A

Aerospace Medical Research Labs., Wright-Patterson AFB, Ohio.
The effect of acceleration stress on human workload
[AD-A156770] p 180 N86-21140
Instrument lighting levels and AN/AVS-6 usage
[AD-A161538] p 187 N86-21148

Air Force Inst. of Tech., Wright-Patterson AFB, Ohio.
Attention allocation, distraction, and the type A/Type B behavior pattern
[AD-A160671] p 180 N86-21141
Personality type analysis of Air Force Institute of Technology School of Systems and Logistics graduate degree 85S class using Myers-Briggs Type Indicator
[AD-A161053] p 181 N86-22107

Air Force Systems Command, Wright-Patterson AFB, Ohio.
Theoretical prerequisites for the possible use of bacteria which split organophosphates in order to increase the yield of nutrient yeast and its nitrogen and phosphorous content
[AD-A161811] p 159 N86-22083

Alabama Univ., Birmingham.
Rationalization of some genetic anticodonic assignments p 189 A86-28723

Arizona Univ., Tucson.
Visual perception in correlated noise
p 181 N86-22106

Army Construction Engineering Research Lab., Champaign, Ill.
The role of vibration and rattle in human response to helicopter noise
[AD-A162486] p 182 N86-22110

Army Materiel Command, Aberdeen Proving Ground, Md.
An examination of injury criteria for potential application to explosive safety studies
[AD-P004883] p 163 N86-20629

Army Missile Command, Redstone Arsenal, Ala.
Effects of carbon monoxide on personnel
[AD-P004882] p 163 N86-20628

Army Research Inst. of Environmental Medicine, Natick, Mass.
Comparison of male and female maximum lifting capacity
[AD-A160687] p 171 N86-21111
Heat acclimatization developed during summer running in northeastern United States
[AD-A162728] p 177 N86-22102
An automated system for comprehensive assessment of visual field sensitivity
[AD-A162755] p 178 N86-22104

Austrian Automobile Touring Club, Vienna.
Human bioclimatic classification methods illustrated with examples of selected countries p 169 N86-21058

B

Baylor Coll. of Medicine, Houston, Tex.
In vivo nuclear magnetic resonance imaging
[NASA-CR-171928] p 170 N86-21105

Brandeis Univ., Waltham, Mass.
The effective intensity of Coriolis, cross-coupling stimulation is gravitoinertial force dependent - Implications for space motion sickness p 163 A86-29093

Brookhaven National Lab., Upton, N. Y.
Experimental, structural and theoretical models of bacteriochlorophylls a, d and g
[DE86-001727] p 158 N86-21101

C

California Univ., Berkeley.
Molecular and biological properties of an immunopotentiating complex polysaccharide adjuvant produced by a gliding bacterium
[AD-A162664] p 160 N86-22086

California Univ., Davis.
Psychological and interpersonal adaptation to Mars missions
[AAS 84-186] p 179 A86-28812
Experimental, structural and theoretical models of bacteriochlorophylls a, d and g
[DE86-001727] p 158 N86-21101

California Univ., Irvine, Dayton, Ohio.
Toxic hazards research unit annual technical report 1985
[AD-A161558] p 176 N86-22097

California Univ., San Diego.
Interactive activation models of perception and comprehension
[AD-A161362] p 181 N86-21143

California Univ., San Diego, La Jolla.
Advanced clinical research in shock and trauma
[AD-A162730] p 177 N86-22103

California Univ., San Francisco.
Exploratory studies of physiological components of motion sickness: Cardiopulmonary differences between high and low susceptibles
[NASA-CR-176541] p 171 N86-21108
Shuttle flight experiment 30-day summary report
[NASA-CR-176539] p 171 N86-21109

Central Electricity Generating Board, London (England).
The effect of equally effective neutron and X-ray radiation doses on the epithelial cells of the hair bulb
[BLL-CE-TRANS-8221-(9022.09)] p 170 N86-21104
Radioprotection update
[BLL-CE-TRANS-8223-(9022-09)] p 187 N86-21146

Central Meteorological Service, Peking (China).
Study of a meteorological prediction of acute myocardial infarction incidence p 166 N86-21030

Charles F. Kettering Research Lab., Yellow Springs, Ohio.
Particulate models of photosynthesis
[DE86-001625] p 160 N86-22090

Colorado Univ., Boulder.
Principles of instruction for successful assembly and repair
[AD-A161280] p 180 N86-21142

D

Deutscher Wetterdienst, Freiburg (West Germany).
Weather as a physical process and parameterization of the effects as a meteorological contribution for investigating the correlation between weather and man
p 166 N86-21026
The biological efficiency of dust emission. Determination based on the withering degree of exposed lichens p 169 N86-21047
Spatial distribution of heat and cold stress in the Federal Republic of Germany p 170 N86-21065

Deutscher Wetterdienst, Offenbach am Main (West Germany).
Investigations of the possible influence of air electrical phenomena on dulling and ghost aching in amputated patients p 167 N86-21033
Problems of city planning p 169 N86-21049
Local climatic particularities and their importance for recreation area (example, Saarland-lower Bliestal) p 170 N86-21064

Dortmund Univ. (West Germany).
Neurophysiological activity and psychophysical effectiveness of environmental factors
p 164 N86-21013
Man's thermal budget under various climates
p 164 N86-21016

Duesseldorf Univ. (West Germany).
Effects of air pollution on man p 167 N86-21038

E

Edgerton, Germeshausen and Grier, Inc., Idaho Falls, Idaho.
Human engineering guidelines for the evaluation and assessment of video display units
[TI85-016435] p 187 N86-21149

F

Federal Aviation Administration, Washington, D.C.
Evaluation of a passenger mask modified with a rebreather bag for protection from smoke and fumes
[AD-A162473] p 188 N86-22116

Federation of American Societies for Experimental Biology, Bethesda, Md.
Research opportunities on immunocompetence in space
[NASA-CR-176482] p 180 N86-21138

Florida Univ., Gainesville.
Experimental, structural and theoretical models of bacteriochlorophylls a, d and g
[DE86-001727] p 158 N86-21101

Forschungsinstitut fuer Balneologie, Marianske Lazne (Czechoslovakia).
Meteorotropic changes of cardiac patients' blood pressure and pulse frequency during a complex bath cure p 166 N86-21031
Weather and subjective health complications in cardiac patients p 167 N86-21032

Fraunhofer-Inst. fuer Bauphysik, Stuttgart (West Germany).
Physical causes of air draft phenomena, new facts
p 164 N86-21014

Freie Univ., Berlin (West Germany).
Immission and weather effects on children's airway illnesses in Berlin (1979-1982). Methodology and result summary p 168 N86-21041
Immission and weather effects on children's airway troubles in Berlin (1979-1982). Time series investigations. Croup syndrome and asthmatic airway troubles
p 168 N86-21044

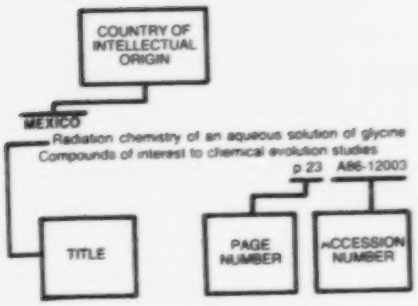
Environmental factors and infant mortality p 168 N86-21041
Comparison between meteorological complex values and a model of man's energy budget p 169 N86-21059

Typical Foreign Technology Index Listing



Listings in this index are arranged alphabetically by country of intellectual origin. The title of the document is used to provide a brief description of the subject matter. The page number and the accession number are included in each entry to assist the user in locating the citation in the abstract section.

A

AUSTRALIA
Analysis techniques for continuous twenty four hour ambulatory blood pressure patterns p 170 N86-21103

AUSTRIA
Objective investigations and subjective observations of sensitivity to weather p 165 N86-21023
Weather and migraine p 166 N86-21027
The Austrian biometeorological service p 167 N86-21034
Environmental factors and infant mortality p 168 N86-21041
Human bioclimatic classification methods illustrated with examples of selected countries p 169 N86-21058
Comparison between meteorological complex values and a model of man's energy budget p 169 N86-21059

C

CANADA
Skeletal muscle lactate release and glycolytic intermediates during hypercapnia p 155 A86-28124
Ship/rig personnel abandonment and helicopter crew/passenger immersion suits - The requirements in the North Atlantic p 187 A86-29100

CHINA, PEOPLE'S REPUBLIC OF
Study of a meteorological prediction of acute myocardial infarction incidence p 166 N86-21030

CZECHOSLOVAKIA
Meteorotropic changes of cardiac patients' blood pressure and pulse frequency during a complex bath cure p 166 N86-21031
Weather and subjective health complications in cardiac patients p 167 N86-21032

F

FRANCE
Head-up/head-down transition - Measurement of transition times p 186 A86-29092
Radioprotection update [BLL-CE-TRANS-8223-(9022-09] p 187 N86-21146

G

GERMANY,FEDERAL REPUBLIC OF
Neurophysiological activity and psychophysical effectiveness of environmental factors p 164 N86-21013
The interface between atmosphere and organism p 164 N86-21014
Man's thermal budget under various climates p 164 N86-21016
Application of a nonstationary energy budget model to determine thermal comfort p 164 N86-21017
Physical causes of air draft phenomena, new facts p 164 N86-21018
Climatic cure on a practical level p 164 N86-21019
Weather as a physical process and parameterization of the effects as a meteorological contribution for investigating the correlation between weather and man p 166 N86-21026
Weather and asthma symptoms p 166 N86-21029
Investigations of the possible influence of air electrical phenomena on dulling and ghost aching in amputated patients p 167 N86-21033
Height-dependent reduction of airborne pollen and effects on children and teenagers affected by bronchial asthma p 167 N86-21036
Effects of air pollution on man p 167 N86-21038
Group diagnosis as risk assessment in environment hygiene p 167 N86-21039
Immission and weather effects on children's airway illnesses in Berlin (1979-1982): Methodology and result summary p 168 N86-21040
Airway infections related to city climate and local immission load p 168 N86-21042
What in human biometeorology can contribute to assessment of the effects of hazardous substances on health? p 168 N86-21043
Immission and weather effects on children's airway troubles in Berlin (1979-1982). Time series investigations: Croup syndrome and asthmatic airway troubles p 168 N86-21044
Emmission and weather effects on children's airway troubles in Berlin (1979-1982). Comparison of two different immissions: Loaded residential areas in West Berlin polluted areas p 168 N86-21045
Air quality determination in health resorts p 169 N86-21046

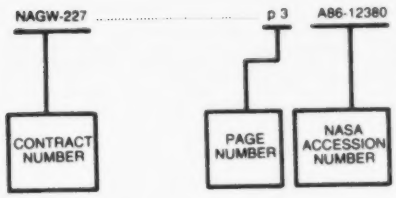
Typical Contract Number Index Listing



Listings in this index are arranged alpha-numerically by contract number. Under each contract number, the accession numbers denoting documents that have been produced as a result of research done under that contract are arranged in ascending order with the AIAA accession numbers appearing first. The accession number denotes the number by which the citation is identified in the abstract section. Preceding the accession number is the page number on which the citation may be found.

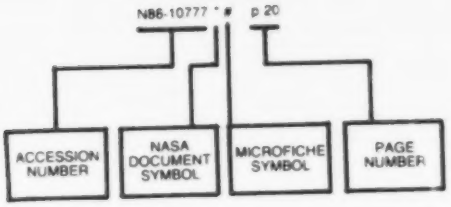
ACCESSION NUMBER INDEX

Typical Accession Number Index Listing



Listings in this index are arranged alphanumerically by accession number. The page number listed to the right indicates the page on which the citation is located. An asterisk (*) indicates that the item is a NASA report. A pound sign (#) indicates that the item is available on microfiche.

AVAILABILITY OF CITED PUBLICATIONS

IAA ENTRIES (A86-10000 Series)

Publications announced in *IAA* are available from the AIAA Technical Information Service as follows: Paper copies of accessions are available at $10.00 per document (up to 50 pages), additional pages $0.25 each. Microfiche[1] of documents announced in *IAA* are available at the rate of $4.00 per microfiche on demand. Standing order microfiche are available at the rate of $1.45 per microfiche for *IAA* source documents and $1.75 per microfiche for AIAA meeting papers.

Minimum air-mail postage to foreign countries is $2.50. All foreign orders are shipped on payment of pro-forma invoices.

All inquiries and requests should be addressed to: Technical Information Service, American Institute of Aeronautics and Astronautics, 555 West 57th Street, New York, NY 10019. Please refer to the accession number when requesting publications.

STAR ENTRIES (N86-10000 Series)

One or more sources from which a document announced in *STAR* is available to the public is ordinarily given on the last line of the citation. The most commonly indicated sources and their acronyms or abbreviations are listed below. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

Avail: NTIS. Sold by the National Technical Information Service. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code preceded by the letters HC or MF in the *STAR* citation. Current values for the price codes are given in the tables on NTIS PRICE SCHEDULES.

Documents on microfiche are designated by a pound sign (#) following the accession number. The pound sign is used without regard to the source or quality of the microfiche.

Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) is available at greatly reduced unit prices. For this service and for information concerning subscription to NASA printed reports, consult the NTIS Subscription Section, Springfield, Va. 22161.

NOTE ON ORDERING DOCUMENTS: When ordering NASA publications (those followed by the * symbol), use the N accession number. NASA patent applications (only the specifications are offered) should be ordered by the US-Patent-Appl-SN number. Non-NASA publications (no asterisk) should be ordered by the AD, PB, or other *report* number shown on the last line of the citation, not by the N accession number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy. The current price and order number are given following the availability line. (NTIS will fill microfiche requests, as indicated above, for those documents identified by a # symbol.)

Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Administration, Public Document Room (Room 126), 600 Independence Ave., S.W., Washington, D.C. 20546, or public document rooms located at each of the NASA research centers, the NASA Space Technology Laboratories, and the NASA Pasadena Office at the Jet Propulsion Laboratory.

(1) A microfiche is a transparent sheet of film, 105 by 148 mm in size containing as many as 60 to 98 pages of information reduced to micro images (not to exceed 26:1 reduction).

Avail: DOE Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts*. Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center - Its Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center.

Avail: Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation.

Avail: USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed in this introduction. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.

Avail: HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, California. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.

Avail: BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, inquiry should be addressed to the BLL.)

Avail: Fachinformationszentrum, Karlsruhe. Sold by the Fachinformationszentrum Energie, Physik, Mathematik GMBH, Eggenstein Leopoldshafen, Federal Republic of Germany, at the price shown in deutschmarks (DM).

Avail: Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.

Avail: U.S. Patent and Trademark Office. Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of $1.50 each, postage free.

Avail: ESDU. Pricing information on specific data, computer programs, and details on ESDU topic categories can be obtained from ESDU International Ltd. Requesters in North America should use the Virginia address while all other requesters should use the London address.

Other availabilities: If the publication is available from a source other than the above, the publisher and his address will be displayed entirely on the availability line or in combination with the corporate author line.

PUBLIC COLLECTIONS OF NASA DOCUMENTS

DOMESTIC: NASA and NASA-sponsored documents and a large number of aerospace publications are available to the public for reference purposes at the library maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

EUROPEAN: An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England for public access. The British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy or microfiche of NASA and NASA-sponsored documents, those identified by both the symbols # and * from ESA — Information Retrieval Service European Space Agency, 8-10 rue Mario-Nikis, 75738 CEDEX 15, France.

FEDERAL DEPOSITORY LIBRARY PROGRAM

In order to provide the general public with greater access to U.S. Government publications, Congress established the Federal Depository Library Program under the Government Printing Office (GPO), with 50 regional depositories responsible for permanent retention of material, inter-library loan, and reference services. At least one copy of nearly every NASA and NASA-sponsored publication, either in printed or microfiche format, is received and retained by the 50 regional depositories. A list of the regional GPO libraries, arranged alphabetically by state, appears on the inside back cover. These libraries are *not* sales outlets. A local library can contact a Regional Depository to help locate specific reports, or direct contact may be made by an individual.

STANDING ORDER SUBSCRIPTIONS

NASA SP-7011 and its supplements are available from the National Technical Information Service (NTIS) on standing order subscription as PB 86-912300 at the price of $8.00 domestic and $16.00 foreign, and at $14.00 domestic and $28.00 foreign for the annual index. Standing order subscriptions do not terminate at the end of a year, as do regular subscriptions, but continue indefinitely unless specifically terminated by the subscriber. Questions on the availability of the predecessor publications, *Aerospace Medicine and Biology* (Volumes I-XI), should be directed to NTIS.

Washington, DC

READEX FICHE best copy available

This supplement is available from the National Technical Information Service (NTIS), Springfield, Virginia 22161, price code A06.

INTRODUCTION

This Supplement to *Aerospace Medicine and Biology* lists 346 reports, articles and other documents announced during July 1986 in *Scientific and Technical Aerospace Reports (STAR)* or in *International Aerospace Abstracts (IAA).* The first issue of the bibliography was published in July 1964.

In its subject coverage, *Aerospace Medicine and Biology* concentrates on the biological, physiological, psychological, and environmental effects to which man is subjected during and following simulated or actual flight in the Earth's atmosphere or in interplanetary space. References describing similar effects of biological organisms of lower order are also included. Such related topics as sanitary problems, pharmacology, toxicology, safety and survival, life support systems, exobiology, and personnel factors receive appropriate attention. In general, emphasis is placed on applied research, but references to fundamental studies and theoretical principles related to experimental development also qualify for inclusion.

Each entry in the bibliography consists of a bibliographic citation accompanied in most cases by an abstract. The listing of the entries is arranged by *STAR* categories 51 through 55, the Life Sciences division. The citations, and abstracts when available, are reproduced exactly as they appeared originally in *IAA* or *STAR*, including the original accession numbers from the respective announcement journals. The *IAA* items will precede the *STAR* items within each category.

Seven indexes -- subject, personal author, corporate source, foreign technology, contract, report number, and accession number -- are included.

An annual index will be prepared at the end of the calendar year covering all documents listed in the 1986 Supplements.

TABLE OF CONTENTS

Page

Category 51 Life Sciences (General) 191
Includes genetics.

Category 52 Aerospace Medicine 213
Includes physiological factors; biological effects of radiation; and weightlessness.

Category 53 Behavioral Sciences 226
Includes psychological factors; individual and group behavior; crew training and evaluation; and psychiatric research.

Category 54 Man/System Technology and Life Support 236
Includes human engineering; biotechnology; and space suits and protective clothing.

Category 55 Planetary Biology 243
Includes exobiology; and extraterrestrial life.

Subject Index A-1
Personal Author Index B-1
Corporate Source Index C-1
Foreign Technology Index D-1

The major nutritional components of the green algae (Scenedesmus obliquus) grown in a Constant Cell density Apparatus were determined. Suitable methodology to prepare proteins from which three major undesirable components of these cells (i.e., cell walls, nucleic acids, and pigments) were either removed or substantially reduced was developed. Results showed that processing of green algae to protein isolate enhances its potential nutritional and organoleptic acceptability as a diet component in a Controlled Ecological Life Support System.

Ferredoxins are low-molecular-weight, nonheme, iron proteins which function as electron carriers in a wide variety of electron transport chains. Howard et al. (1983) have suggested that the amino end of Azotobacter vinelandii ferredoxin shows a greater similarity to the carboxyl end of ferredoxin from Chromatium vinosum and that their half-chain sequences are homologous when the half-chains of either species are considered in inverse order. Examination of this proposition has made it necessary to reevaluate previous conclusions concerning the evolution of bacterial ferredoxin. Attention is given to the properties of the bacterial ferredoxin sequences, and the evolution of the bacterial ferredoxins.

WHEAT FARMING IN A LUNAR BASE
F. B. SALISBURY and B. G. BUGBEE (Utah State University of Agriculture and Applied Science, Logan) IN: Lunar bases and space activities of the 21st century . Houston, TX, Lunar and Planetary Institute, 1985, p. 635-645. refs

An analysis of the parameters involved in the efficient operation of a lunar based wheat farm is presented along with recommendations on this operation. Wheat, with its vertical leaf orientation and excellent growth under continuous light, has been studied in the context of a bioregenerative life support system. Theoretical photosynthetic efficiencies suggest a maximum dry matter yield of 195 g/sq m/day when plants are irradiated with 1000 micromol photons/s/sq m, an irradiance high-pressure sodium lamps can readily achieve. In practice, yields may be affected by the harvest index, biomass digestibility, and lamp efficiency. Based on these factors, each person requires a minimum of 6 sq m of growing area and 3.55 kW of electrical energy. However, based on currently achieved yields, these minimum figures are 24 sq m and 13.4 kW/person. If these numbers are then doubled to provide a safety margin, a lunar farm could theoretically support 100 people in a 5000 sq m area. In addition, yields may be increased by manipulating temperature, humidity, nutrients, carbon dioxide and radiation; and by breeding suitable cultivars K.K.

A86-30166* National Aeronautics and Space Administration. Lyndon B. Johnson Space Center, Houston, Tex.
METABOLIC SUPPORT FOR A LUNAR BASE
R. L. SAUER (NASA, Johnson Space Center, Houston, TX) IN: Lunar bases and space activities of the 21st century . Houston, TX, Lunar and Planetary Institute, 1985, p. 647-651. refs

A review of the metabolic support systems used and the metabolic support requirements provided on past and current spaceflight programs is presented. This review will provide familiarization with unique constraints of space flight and technology as it relates to inflight metabolic support of astronauts. This information, along with a general review of the NASA effort to develop a Controlled Ecological Life Support System (CELSS) will define the general scenario of metabolic support for a lunar base. A phased program of metabolic support for a lunar base will be elucidated. Included will be discussion of the CELSS water reclamation and food recycling technology as it now exists and how it could be expected to be progressively incorporated into the lunar base. This transition would be from a relatively open system in the initial development period, when mechanical phase change water reclamation and minimal plant growth are incorporated, to the final period when practically total closure of the life support system will be proved through physicochemical and biological processes. Finally, a review of the estimated metabolic intake requirements for the occupants of a lunar base will be presented. Author

A86-30168
RADIATION TRANSPORT OF COSMIC RAY NUCLEI IN LUNAR MATERIAL AND RADIATION DOSES
R. SILBERBERG, C. H. TSAO, J. H. ADAMS, JR. (U.S. Navy, E. O. Hulburt Center for Space Research, Washington, DC), and J. R. LETAW (Severn Communications Corp., Severna Park, MD) IN: Lunar bases and space activities of the 21st century . Houston, TX, Lunar and Planetary Institute, 1985, p. 663-669. refs

The radiation environment on the lunar surface is inhospitable. The permanent settlers may work ten hours per 24-hour interval for the two-week-long lunar day on the lunar surface, or 20 percent of the total time. At moderate depths below the lunar surface (less than 200 g/sq cm) the flux of secondary neutrons exceeds considerably that in the upper atmosphere of the earth, due to cosmic-ray interactions with lunar material. The annual dose equivalent due to neutrons is about 20 or 25 rem within the upper meter of the lunar surface. The dose equivalent due to gamma rays generated by nuclear interactions near the lunar surface is only on the order of 1 percent of that due to neutrons. However, gamma-ray line emission from excited nuclei and nuclear spallation products generated by cosmic rays near the lunar surface is of considerable interest: these lines permit the partial determination of lunar composition by gamma spectroscopy. Author

A86-30376
INTERNATIONAL UNION OF PHYSIOLOGICAL SCIENCES, COMMISSION ON GRAVITATIONAL, PHYSIOLOGY, ANNUAL MEETING, 7TH, NIAGARA FALLS, NY, OCTOBER 13-18, 1985, PROCEEDINGS
O. E. REYNOLDS, ED. Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, 257 p. For individual items see A86-30377 to A86-30480.

Among the topics discussed are: fluid/electrolyte balance and cardiovascular function in response to weightlessness; gravireception in plants and animals; and gravity sensitive systems in animals. Consideration is also given to: gravitational effects on animal development; chronobiology; the effect of gravity on cardiovascular fluid dynamics; and scientific payload concepts for the Space Station. Additional topics discussed include Spacelab bioscience mission results on homeostasis and biological rhythms in rats during spaceflight; the distribution of Ca, S, Mg, and P in rat incisors in space; and hematologic parameters of astrorats flown on Spacelab-3. I.H.

A86-30377#
COMPARATIVE ANALYSIS OF HYPO - AND HYPER-GRAVITY EFFECTS ON PRENATAL DEVELOPMENT OF MAMMALS
L. V. SEROVA, L. A. DENISOVA, and A. M. PUSTYNNIKOVA (Institut Mediro-Biologicheskikh Problem, Moscow, USSR) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-5 to S-8. refs

The effects of hypergravity and microgravity on prenatal development in rats and mice is considered. Data from soviet space missions are compared to the results of ground based centrifugation experiments in order to study two types of physiological change associated with gravity effects: (1) nonspecific changes which develop as stress reactions; and specific changes which are related to alterations in the locations and function of

organs and tissues. The role of nonspecific and specific gravity effects in the process of copulation fertilization, and birth rate are considered detail. It is shown that the effects of microgravity and hypergravity (an adaptation period) appear to be almost the same. I.H.

A86-30378*# National Aeronautics and Space Administration. Ames Research Center, Moffett Field, Calif.
SPACEFLIGHT AND CALCIUM METABOLISM
E. R. MOREY-HOLTON and S. B. ARNAUD (NASA, Ames Research Center, Moffett Field, CA) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-9 to S-12. refs

Calcium metabolism data from spaceflight have been obtained primarily from Skylab astronauts, from Soviet Salyut-6 cosmonauts, and from growing rats flown either on the Soviet Cosmos series or Spacelab 3. In this report, the results from Skylab astronauts will be compared to data from bed rested subjects, and the results from Cosmos rats will be compared to data from a ground-based rat model, to help explain (1) how spaceflight or gravitational unloading alters calcium metabolism in adult humans and growing rats, (2) the relevance of the observations of bone dynamics in growing rats to the changes in adult man, and (3) the sequence of events leading to changes in calcium metabolism during spaceflight. A hypothetical scheme of the mechanisms causing altered bone mass during spaceflight will be proposed. Author

RESPONSES OF SKELETAL MUSCLE TO UNLOADING - A REVIEW
M. E. TISCHLER, S. R. JASPERS, E. J. HENRIKSEN, and S. JACOB (Arizona, University, Tucson) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-13 to S-16. Previously announced in STAR as N85-35594. refs
(Contract NAGW-227; NIH-AM-28647)

Suspension models were used to study muscle response to reduced activity. During 6 days of tail casting, the soleus (SOL) atrophies while the extensor digitorum longus grows relatively normally. After discounting those changes in both muscles due primarily to increased secretion of adrenal hormones, the following conclusions regarding the specific responses of the SOL could be drawn: (1) Atrophy is probably due primarily to increased protein degradation; (2) Decreased synthesis of glutamine may result from reduced availability of ammonia due to diminished use of ATP; (3) Greater muscle glycogen seems to reflect an increased response to insulin of glucose uptake which leads to greater glucose metabolism; and (4) Faster catabolism of branched-chain amino acids can be attributed to enhanced flux through ketoacid dehydrogenase. Studies by others using tail casted suspended rats showed in the SOL: (1) a gradual switch from type 1 to type 2 fibers; (2) increased acid protease activity; and (3) altered muscle function and contractile duration. Using harness suspended rats, others showed in the SOL: (1) significant atrophy; (2) increased numbers of glucocorticoid receptors; and (3) no change in muscle fatigability. Author

SKELETAL MASS CHANGE AS A FUNCTION OF GRAVITATIONAL LOADING
N. PACE, A. H. SMITH, and D. F. RAHLMANN (California, University, Berkeley) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-17 to S-20. refs
(Contract NSG-7336)

The hypothesis that increased loading on an animal by chronic centrifugation results in an increase in skeletal mass was tested, using metabolically mature hamsters, rats, guinea pigs, Dutch rabbits and New Zealand rabbits representing a body mass range from 0.15 to 3.8 kg. Groups of 12 male animals of each species were subjeted to 2.0 g for 6 weeks on a 2.74 radius centrifuge with one degree of freedom. Subsequently, six of the animals were killed to measure whole body composition, while the rest comprised the control group, recovering for four weeks at 1.0 g prior to composition analysis. Results show a significant increase in bone mineral mass at 2.0 g. These centrifuge experiment results were then compared with the results of the USSR Cosmos Biosatellite experiment, whereby five rats experienced osteoporosis after 18.5 days of weightlessness. The opposing nature of effects that occurred at 0 g and 2.0 g is indicated schematically of particular interest is the fact that the bone mineral mass of the Cosmos 1129 flight rats was 17 pct less than that of the 1.0 g controls; whereas the bone mineral mass of the centrifuge rats was 18 pct greater than that of their 1.0 g controls. It is concluded that the bone mineral mass of the rat is directly proportional to gravitational loading over the range of 0 g to 2.0 g. K.K.

INVESTIGATIONS OF HIGHER PLANTS UNDER WEIGHTLESSNESS
A. J. MERKYS, R. S. LAURINAVICIUS, D. V. SVEGZDIENE, and A. V. JAROSIUS (AN LSSR, Institut Botaniki, Vilnius, Lithuanian SSR) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-43 to S-46.

During the last three decades a number of experiments on higher plants have been performed under spaceflight conditions in the USSR. They include radiobiological and genetical investigations of dormant seeds and microspores, physiological investigations of seed germination, and experiments on the prolonged growth of plants in space undergoing a full cycle of development with the formation of biologically valuable seeds. They also include experiments on the spatial orientation of plants under microgravity conditions and in the field of centrifugal forces that have made it possible to determine the threshold of geotropic sensitiveness of plants. On the basis of the level of knowledge obtained, key tasks for the longterm investigations of gravitational plant physiology in space are outlined. Author

GRAVITY SENSING IN ANIMAL CELLS
A. COGOLI (Zuerich, Eidgenoessische Technische Hochschule, Zurich, Switzerland) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-47 to S-50. Research supported by the Swiss Federal Institutes of Technology. refs
(Contract SNSF-3,382,0,82)

Experimental results are reviewed concerning the sensitivity of animal cells to microgravity in space, low-gravity in a clinostat, and hypergravity in a centrifuge. Attention is given to the effects of low-g or micro-g environments on all phases of cell development and a variety of cell parameters including cell proliferation, motility, nuclear density, chromosome patterns, and morphology. Certain findings on the adaptation of human lymphocytes to microgravity may have practical applications to biotechnology. For example, the fact that lymphocytes increase their interferon production by reducing their proliferation rate may be common to other animals and could be exploited for in-vitro biosynthesis of pharmaceutical products. THE EFFECTS OF REAL AND SIMULATED MICROGRAVITY ON VESTIBULO-OCULOMOTOR INTERACTION
I. B. KOZLOVSKAIA, V. A. BARMIN, IU. V. KREIDICH, and A. A. REPIN (Institut Mediko-Biologicheskikh Problem, Moscow, USSR) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-51 to S-56. refs

The effects of microgravity on the characteristics of the vestibulo-oculomotor interaction were studied on the basis of pre-flight and post-flight tests of rapid gaze fixation in 22 cosmonauts from the Salyut-6 and Salyut-7 spacecraft. The subjects performed a motor task involving rapid catching of a 1 deg luminous target which was presented on a white screen 30 cm from the eye. The amplitude and velocity of eye and head movements in the horizontal direction were monitored, and the timing of the task performance was analyzed. In general, the data are consistent with those of model simulations which predicted an increase in the 'invasiveness' of optokinetic stimuli and a decrease in eye-head coordination in microgravity. VERTEBRATE GRAVITY SENSORS AS DYNAMIC SYSTEMS
M. D. ROSS (Michigan, University, Ann Arbor) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-57, S-58. refs
(Contract NAG2-325; NAS2-10535)

This paper considers verterbrate gravity receptors as dynamic sensors. That is, it is hypothesized that gravity is a constant force to which an acceleration-sensing system would readily adapt. Premises are considered in light of the presence of kinocilia on hair cells of vertebrate gravity sensors; differences in loading of the sensors among species; and of possible reduction in loading by inclusion of much organic material in otoconia. Moreover, organic-inorganic interfaces may confer a piezoelectric property upon otoconia, which increase the sensitivity of the sensory system to small accelerations. Comparisons with man-made accelerometers are briefly taken up. Author

CHRONIC ACCELERATION AND EGG PRODUCTION IN DOMESTIC FOWL
A. H. SMITH, E. L. BESCH, and R. R. BURTON (California, University, Davis) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-59, S-60. refs
(Contract NR PROJECT 102-448; NSG-7493)

A study of the influence of chronic acceleration on egg production of commercially raised hens placed on a large animal centrifuge at 90 days of age, was performed. S8 generation hens were stepped up from 1.25 G to 2 G, which was maintained for 30 days. Fifty percent ceased to be in the laying condition at 1.5 G, and 10.8 percent suffered oviduct prolapse above 1.8 G. S21 generation hens had no incidents of oviduct prolapse despite 170-day retention at 2 G, and, assuming a 30 percent population not in the laying condition, approximated the commercial production rate. Chronic acceleration did not appear to affect the relative sizes of albumen or yolk, but it did appear to reduce the relative shell size, consistent with a decrease in plasma calcium. Dry matter content was not affected. R.R.

ANIMAL MODELS OF MOTION SICKNESS - ARE NONEMETIC SPECIES AN APPROPRIATE CHOICE?
K.-P. OSSENKOPP and M. D. OSSENKOPP (Western Ontario, University, London, Canada) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-61, S-62. refs
(Contract NSERC-U-0151)

Indices of motion sickness (MS) in nonemetic species, with emphasis on the rat, are examined to determine whether these animals are appropriate choices for the study of MS. A body rotation-induced conditioned taste aversion experiment using guiñea pigs supports the generality of this phenomenon across a wide range of animal species, and demonstrates the utility of the conditioned taste aversion measure as an index of MS in nonemetic species. It is concluded that a multiindex approach, using several different indices, would provide a more phenomenally realistic method of describing and assessing MS. Easily quantifiable indices such as defecation levels during rotation, make the rata ideal for the study of the pharmacological treatment, and the neural mechanisms, of MS. R.R.

EFFECTS OF NON WEIGHT BEARING ON CALLUS FORMATION
J. R. SWEENEY, H. E. GRUBER, M. E. KIRCHEN, and G. J. MARSHALL (Los Angeles Orthopaedic Hospital, CA) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-63, S-64.

The inverted suspension cage of Morey (1981) is used to investigate the stages of callus formation and associated tissue repair in suspended rats. 9-11-month-old suspended and weight-bearing rats with fibular osteotomies were sacrificed at 9, 18, and 36 days, and fibulae were then processed for nondecalcified stained sections. A callus forms, but the size and progressive tissue formation are delayed, with dense irregular connective tissue remaining a prominent component until the 36th day. Chondrogenesis, osteogenesis, and the periosteal reaction and its accompanying neoangiogenesis are also delayed. Though the course of events in fracture healing of nonweight bearing rats is markedly delayed, may not be totally inhibited. R.R.

CORRELATED LIGHT AND ELECTRON MICROSCOPY OF THE VASCULATURE OF CORTICAL BONE IN RAT FEMORA AND TIBIAE
R. M. DILLAMAN and R. D. ROER (North Carolina, University, Wilmington) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-65, S-66. refs

An approach is developed permitting an overall and focused evaluation of the relevant features of bone vasculature as they may apply to spaceflight osteoporosis. Tibiae and femora from rats, some of which had been injected with markers, are frozen and fractured, and bone pieces are then fixed and prepared for examination. Scanning and transmission electron microscopy revealed excellent preservation of ultrastructural features such as the osteocytic processes, and permitted vascular classification, and measurement of vessel diameter. Using brightfield and epifluorescence microscopy it was possible to describe the distribution of markers. Overall features were best revealed in stereoscopic examination. The overlap of analyses permits verification of measurement and relationships. R.R.

EFFECTS OF GRAVITATIONAL AND MUSCULAR LOADING ON BONE FORMATION IN GROWING RATS
R. T. TURNER, B. W. SZUKALSKI (J. L. Pettis Memorial Veteran's Administration Hospital, Loma Linda, CA), and G. K. WAKLEY (Loma Linda University, CA) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-67, S-68. Research supported by Loma Linda University and USVA. refs
(Contract NIH-AM-35651)

To determine the relative importance of muscular versus gravitational loading on bone structure, bone formation was measured in tibial cross-sections from rats subjected to orbital space flight. This was compared with bone formation in rats whose muscular loading of the tibia was reduced by sciatic nerve section and with rats whose dynamic gravitational loading of the tibia was reduced by pelvic suspension. Our results show that (a) all three treatments inhibit bone formation; (b) inhibition of bone formation is site-specific in the tibia and, (c) inhibition of bone formation is characteristic of the treatment applied. ARE THERE CONDITIONS IN WHICH ADRENALECTOMY IMPEDES THE ATROPHYING EFFECTS OF DENERVATION?
R. R. ALMON and D. C. DUBOIS (New York, State University, Buffalo) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-69, S-70.

The results of previous work from this and other laboratories suggest the possibility that the atrophy of skeletal muscle may involve the muscle becoming hypersensitive to glucocorticoids. If this hypothesis is correct, then a possible test would be to remove the source of the hormone and such atrophy should not occur. The objective of this study was to evaluate the effects of diet on denervation atrophy in normal and adrenalectomized animals. The variations in diet ranged from a high-calorie liquid diet to starvation. The results clearly show that when the demand for amino acid carbon from the musculature is increased due to starvation, adrenalectomy protects the musculature from both starvation atrophy and denervation atrophy. In addition, we found that adrenalectomy does not entirely remove corticosterone from the animals. Stress will induce the presence of corticosterone in the serum of adrenalectomized animals. Author

MODIFICATION OF THE RESTING OXYGEN CONSUMPTION LEVEL OF BIOLOGICAL BODY AND ITS TISSUES, DURING PROLONGED HYPODYNAMICS EXPOSURE
H. SAIKI (St. Marianna University, Japan), Y. SAIKI (Saiki Institute, Japan), M. SUDOH, M. NAKAYA, K. SHIODA (Jikei University, Tokyo, Japan) et al. (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-73, S-74.

Human and animal experiments were performed to clarify whether it is possible to decrease the basal metabolic rate of the whole body and of the tissue cells by hypodynamic orthostatic conditioning. The daytime resting metabolic rates (RMR) of human subjects during six days of water immersion conditioning were analyzed to estimate the circadian rhythm. Similar analysis with rats undergoing 3-10 weeks of orthostatic suspensioh conditioning was performed, with some groups killed at days eight and 20 to measure tissue oxygen consumption. Daily average RMR values did not deviate over the testing periods, and though a gradual deformation of RMR curves was seen, they returned to baseline by the end of the periods. It is concluded that it is difficult to produce basal metabolic rate reduction during such conditioning durations. R.R.

EARLY MAMMALIAN DEVELOPMENT UNDER CONDITIONS OF REORIENTATION RELATIVE TO THE GRAVITY VECTOR
D. J. WOLGEMUTH and G. S. GRILLS (Columbia University, New York) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-75, S-76.
(Contract NAG2-324)

A clinostat was used to assess the effects of reorientation relative to the gravity vector on mammalian germ cells cultured in vitro. Previous studies using this system revealed an inhibition of meiotic maturation of mouse oocytes. In the present study, the effects of clinostat rotation on in vitro fertilization were examined. The frequency of fertilization of experimental cultures did not vary from that of the clinostat vertical control cultures at either of the rotation rates examined. Importantly, no abnormalities of fertilization, such as parthenogenetic activation, fragmentation, or polyspermy were seen. It is concluded that the initial events of fertilization were unaffected by this treatment, although the developmental potential of these embryos remains to be assessed. Author

GROWTH AND DIFFERENTIATION OF MAMMALIAN EMBRYONIC TISSUES EXPOSED TO HYPERGRAVITY IN VIVO AND IN VITRO
J. DUKE, L. JANER, and J. MOORE (Texas, University, Houston) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-77, S-78. refs
(Contract NAG2-332)

Decreased cartilage areas in embryonic limbs developing under excess g in vitro, is reported, as well as delayed skeletal development in embryos and fetuses exposed to excess g in utero. 12.5-day mouse limb buds were cultured at 2.6 g, and fixed at two days and six days of culture. In vivo experiments used alizarin-stained 18-day fetuses exposed to 2.3 g. In all studies, cartilage areas were determined using a digitized tablet. Form factor analysis determined that the main effect of in vitro centrifugation was a reduction in length of the limb elements, probably due to the precocious chondrogenesis seen in the upper regions of centrifuged limbs. Similar reductions in length of ossified areas was seen in the in utero studies. R.R.

SIMULATED HYPOGRAVITY AND SYNAPTOGENESIS IN CULTURE
R. GRUENER (Arizona, University, Tucson; Maryland, University, Baltimore) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-79, S-80. refs
(Contract NAG2-326; NIH-NS-07702)

A study on the effects of simulated microgravity on spinal neurons and myocytes cultured from X. laevis, is performed. Horizontal clinorotation at 1-10 rpm lasted from 16-36 hours, a sufficient time for cells to proceed through ontogenetic maturation. Late appearance of striations, retarded consumpton of yolk platelets and fewer and thinner neurites indicate subnormal expression of cell functions. Furthermore, these cells do not respond normally to environmental cues like trophic substances or surface contact. The observed delay in cell maturation is consistent with a hypothesis that cellular graviperception may effect the centriole and cytoskeleton. R.R.

EARLY POSTNATAL DEVELOPMENT OF RATS GESTATED DURING FLIGHT OF COSMOS 1514
J. R. ALBERTS (Indiana University, Bloomington), L. V. SEROVA, Z. APANASENKO (Institut Mediko-Biologicheskikh Problem, Moscow, USSR), and J. R. KEEFE (Case Western Reserve University, Cleveland, OH) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-81, S-82. refs

The role of gravity in mammalian ontogenesis is examined. The delivery and development of pups in rats exposed to 5 days of zero gravity on Cosmos 1514, in control rats exposed to identical conditions as the flight group except under gravity, and in viviarium control rats are studied. The data reveal that all the rats delivered their litters at the standard gestation age, the flight rats had a mortality of 19 percent, the control rats morbidity was insignificant, and all the rats displayed typical maternal care cycles and nest attendance patterns. The mean body weights for the pups one day after birth are measured as 6.25 gm for the flight pups, 6.02 gm in the synchronous control group, and 7.06 gm in the vivarium rats. It is observed that fur development and eye opening in all three groups is equivalent. The vestibular and factory functions, and tactile, auditory, and visual sensitivity are evaluated and similar responses are detected in all pups. I.F.

GROWTH AND DEVELOPMENT OF MICE AND RATS CONCEIVED AND REARED AT DIFFERENT G-INTENSITIES DURING CHRONIC CENTRIFUGATION
J. OYAMA, L. SOLGAARD, J. CORRALES, and C. B. MONSON (NASA, Ames Research Center, Moffett Field, CA) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-83, S-84. refs

Prenatal and postnatal growth of rats conceived and reared at different G-intensities from 1.0G (earth gravity) to a maximum of 2.03G were compared. Prenatal growth was not generally impaired but the lung/body mass ratio of 22-day old fetuses at 2.03G was decreased significantly compared to 1.06 controls. Survival of neonatal rats was substantially reduced at 1.71G and 2.03G. Postnatal growth was decreased at the higher G-intensities and showed smaller or no effects at the lower G-intensities. Comparisons of organ/body mass ratios of hyper-G and 1.0G rats at 9 wks of age showed relatively few differences at the lower G-intensities. Postnatal growth of mice at 2.03G was suppressed during the neonatal period but recovered later so that after 9 wks the body mass of females reached and of males approached controls. Results of this preliminary study clearly show the influence of body mass in scaling the effects of hyper-G on the growth and development of and between different animal species. Author

EFFECTS OF SIMULATED GRAVITY NULLIFICATION ON SHOOT-INVERSION RELEASE OF APICAL DOMINANCE IN PHARBITIS NIL
M. G. CLINE and T. K. PRASAD (Ohio State University, Columbus) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-97, S-98.

Inversion of upper shoot of Pharbitis nil induces outgrowth of the highest lateral bud adjacent to bend in stem. The objectives of this study are to determine whether simulated gravity nullification will (1) decrease ethylene production and 1-aminocyclopropane-1-carboxylic acid (ACC) synthase activity in inverted shoot, (2) restrict growth in inverted shoot and (3) affect outgrowth of highest lateral bud. Gravity nullification is simulated by rotating the plant (with its upper shoot inverted) in a vertical plane perpendicular to axis of a horizontal clinostat. Results indicate that clinostating does: (1) prevent release of apical dominance, (2) significantly decrease ACC synthase activity and ethylene production in inverted shoot and (3) reduce growth restriction of inverted shoot. These data are consistent with hypothesis that shoot inversion release of apical dominance is caused by ethylene-induced restriction of growth in inverted shoot. Author

GRAVISTIMULATION-INDUCED CHANGES IN CURRENT PATTERNS AROUND ROOT CAPS
T. BJORKMAN and A. C. LEOPOLD (Cornell University, Ithaca, NY) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-99, S-100. refs
(Contract NIH-P41-RR-01395-SSS; NAGW-3)

Changes in the electric current patterns around the root cap of corn following gravistimulation were determined using a vibrating probe. A transient increase in upward current in the cap was found following stimulation. The response began with a time lag similar to the presentation time, and was limited to the area of the root cap lateral to the statocytes. A pysiological response as rapid as that reported by Behrens et al. (1985) was not observed. C.D.

THE STRUCTURE AND DEVELOPMENT OF THE STARCH SHEATH IN PEA EPICOTYLS
D. F. SACK (Ohio State University, Columbus) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-105, S-106. refs
(Contract NAGW-780)

Graviperception in plant stems is thought to occur in endodermal cells differentiated as a starch sheath, but little is known about the ultrastructure of these cells in dicots. The structure of the pea starch sheath was studied with respect to gravity and to development in order to determine whether symplastic or apoplastic blockages exist and to describe any intracellular polarity. Amyloplasts increase in size towards the base of the epicotyl hook but are not consistently sedimented until the cells enter the zone exhibiting gravicurvature below the hook. The starch sheath cells are connected to each other and to cells of the cortex and the stele by plasmodesmata. A casparian strip exists in older endodermal cells but not at the stage that the endodermis is differentiated as a starch sheath. Amyloplasts were frequently observed in apparent contact with endoplasmic reticulum. Author

PLANT GROWTH RESPONSES TO ATMOSPHERE AND OTHER ENVIRONMENTAL VARIABLES IN THE SPACE SHUTTLE PLANT GROWTH UNIT
M. D. CUELLAR and C. A. MITCHELL (Purdue University, West Lafayette, IN) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-107, S-108.

Studies using a ground-based version of the Plant Growth Unit (PGU) are being conducted with mungbean (Phaseolus aureus Rosb. cv. Berken). Composition and turnover rate of atmosphere within four Plant Growth Chambers (PGCs) mounted in the PGU were investigated. Addition of Hoagland's No. 1 nutrient solution to the medium resulted in superior seedling growth over that using only water. Flowing atmosphere at 1 liter/h through the PGCs for 7 days had no significant effect on shoot dry weight relative to that in a static atmosphere, but did result in greater stem length. In a static atmosphere, ethylene accumulated to levels which retarded plant growth, as demonstrated using a technique designed to trap C2H4 over 7-day growth periods. Elevated levels of CO2 also accumulated in sealed PGCs lacking C2H4 traps, but a depletion of CO2 occurred when using such traps, while plants exhibited increased growth. Author

The oxidation and transport of indole-3-acetic acid (IAA) in Zea mays is examined towards an understanding of the gravity-influenced promotion of growth in plants. An enzyme that oxidizes IAA to a nongrowth-promoting species has been partially purified, and determined to be stimulated by a lipoidal factor. Data suggest that the upward transport of IAA in the stele and outward movement from the stele into the mesophyll cortex is metabolically mediated, and possibly affected by the gravitational stimulus. It is postulated that hormone assymmetries can arise by 'potential-gating' of the transport channels between the various plant tissues. R.R.

CYTOCHEMICAL LOCALIZATION OF CALCIUM IN CAP CELLS OF PRIMARY ROOTS OF ZEA MAYS L
R. MOORE (Baylor University, Waco, TX) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-113, S-114. NASA-supported research.

The cellular distribution of Ca in caps of primary roots of Zea mays was examined during the onset and early stages of gravicurvature to determine its possible role in root gravitropism. Staining becomes associated with the portion of the cell wall adjacent to the distal end of the cell after five minutes, and persists throughout the onset of gravicurvature. The outermost peripheral cells of roots oriented horizontally and vertically secrete Ca through plasmodesmata-like channels in their cell walls. Data suggest that Ca is not transported laterally through the columella tissue,but rather that the movement of Ca to the lower side of caps of horizontally-oriented roots is at least partially through and/or on the mucilage of the cap, and via an electrochemical gradient. An important role in root gravitropism is indicated for Ca secretion by peripheral cells. R.R.

THE CALCIUM DEPENDENCE OF AUXIN ACTION IN ROOTS
M. L. EVANS and K.-H. HASENSTEIN (Ohio State University, Columbus) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-119, S-120. refs

The inhibitory action of auxin on growth in roots of maize seedlings raised to contain variable levels of calcium is studied to investigate the interaction of calcium and auxin in the control of root elongation. Inhibition of root elongation by 10 micro-M of Indole-3-acetic acid (IAA) does not occur in roots of seedlings raised by inhibition and growth in distilled water to minimize their calcium content. The inhibition of root growth by 0.01 micro-M IAA resembles that of 0.5 mM CaCl2. These results are consistent with the suggestion that IAA action is coupled to IAA-induced calcium release from storage pools. The calcium-control hypothesis has application to microgravity studies, where gravity-induced calcium redistribution could establish a gradient in auxin activity without a gradient in auxin concentration. BONE LOSS DURING SIMULATED WEIGHTLESSNESS - IS IT GLUCOCORTICOID MEDIATED?
D. D. BIKLE, B. P. HALLORAN, C. M. CONE, and E. MOREY-HOLTON (NASA, Ames Research Center, Moffett Field; USVA, Medical Center, San Francisco, CA) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-123, S-124.

Elevating the hindquarters of a rat by the tail unweights the hind limbs but maintains normal weight-bearing by the forelimbs. This maneuver leads to a decrease in bone mass and calcium content in the unweighted bones (e.g., tibia and L1 vertebra), but not in the normally weighted bones (e.g., humerus and mandible). Potentially, the stress of the maneuver, mediated by increased glucocorticoid production and secretion, could explain the decreased bone formation, rather than the skeletal unweighting per se. To test this possibility, the effects of adrenalectomy on the response of bone to the unweighting of the hind limbs of normal rats were evaluated. Author

LOCALIZATION OF CALCIUM STIMULATED ADENOSINE TRIPHOSPHATASE ACTIVITY IN BLOOD VESSELS OF THE SKELETON
S. B. DOTY (Columbia University, New York) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-125, S-126. refs
(Contract NCC2-325)

Alkaline phosphatase is an enzyme found in bone forming cells which decreases in certain bones as a result of hypogravity or non-weight bearing. This enzyme can also hydrolyze adenosine triphosphate. Therefore, an effort was made to localize calcium-stimulated ATPase by cytochemistry to determine whether altered bone cell activity might be related to changing calcium levels which occur during hypogravity. The results indicate that Ca(++)-ATPase is largely found along the endothelium and basal lamina of blood vessels, and not found in bone forming cells. This suggests that calcium regulation in the vicinity of bone

formation may be modulated by the vasculature of the area.

EFFECT OF SIMULATED WEIGHTLESSNESS AND CHRONIC 1,25-DIHYDROXYVITAMIN D ADMINISTRATION ON BONE METABOLISM
B. P. HALLORAN, D. D. BIKLE, R. K. GLOBUS, M. J. LEVENS (California, University, San Francisco), T. J. WRONSKI (Florida, University, Gainesville), E. MOREY-HOLTON (NASA, Ames Research Center, Moffett Field, CA) et al. (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-127, S-128.

Weightlessness, as experienced during space flight, and simulated weightlessness induce osteopenia. Using the suspended rat model to simulate weightlessness, a reduction in total tibia Ca and bone formation rate at the tibiofibular junction as well as an inhibition of Ca-45 and H-3-proline uptake by bone within 5-7 days of skeletal unloading was observed. Between days 7 and 15 of unloading, uptake of Ca-45 and H-3-proline, and bone formation rate return to normal, although total bone Ca remains abnormally low. To examine the relationship between these characteristic changes in bone metabolism induced by skeletal unloading and vitamin D metabolism, the serum concentrations of 25-hydroxyvitamin D (25-OH-D), 24, 25-dihydroxyvitamin D (24,25(OH)2D) and 1,25-dihydroxyvitamin D (1,25(OH)2D) at various times after skeletal unloading were measured. The effect of chronic infusion of 1,25(OH)2D3 on the bone changes associated with unloading was also determined.

RESPONSE OF RAT HINDLIMB MUSCLES TO 12 HOURS RECOVERY FROM TAIL-CAST SUSPENSION
M. E. TISCHLER, E. J. HENRIKSEN, S. JACOB, P. COOK, and S. JASPERS (Arizona, University, Tucson) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-129, S-130. Previously announced in STAR as N85-35590. refs
(Contract NAGW-227)

Previous work has shown a number of biochemical changes which accompany atrophy or reduced muscle growth in hindlimb of tail-casted, suspended rats. These results clearly show that altered muscle growth was due to changes in protein turnover. Accordingly, the rise in soleus tyrosine following unloading reflects the more negative protein balance. Other major changes we found included slower synthesis of glutamine as indicated by lower ratios of glutamine/glutamate and reduced levels of aspartate which coincide with slower aspartate and ammonia metabolism in vitro. In conjunction with the study of SL-3 rats, which were subjected to 12 h of post-flight gravity, a study of the effects of 12 h eight bearing on metabolism of 6-day unloaded hindlimb muscles was carried out.

POSSIBLE MECHANISM FOR CHANGES IN GLYCOGEN METABOLISM IN UNLOADED SOLEUS MUSCLE
E. J. HENRIKSEN and M. E. TISCHLER (Arizona, University, Tucson) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-131, S-132. Previously announced in STAR as N85-35588. refs
(Contract NAGW-227)

Carbohydrate metabolism has been shown to be affected in a number of ways by different models of hypokinesia. In vivo glycogen levels in the soleus muscle are known to be increased by short-term denervation and harness suspension. In addition, exposure to 7 days of hypogravity also caused a dramatic increase in glycogen concentration in this muscle. The biochemical alterations caused by unloading that may bring about these increases in glycogen storage in the soleus were sought.

CHANGES IN SKELETAL MUSCLE PROPERTIES FOLLOWING HINDLIMB SUSPENSION
G. T. PATTERSON and W.-D. DETTBARN (Vanderbilt University, Nashville, TN) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-133, S-134.
(Contract NAG2-301)

Changes in AChE regulation, the functions of the sarcoplasmic reticulum (SR), and muscle fiber-type population in the extensor digitorium longus (EDL) and soleus of male rats suspended in a nonweight-bearing position are studied. Muscle weight, AChE activity, protein content, SR calcium loading rates, and muscle types in the suspended and control rats are evaluated and compared. It is observed that following 1-4 weeks of suspension the EDL is unaffected; however, the soleus muscle weight, and protein content decrease and the AChE activity increases. The SR calcium loading rates of EDL decrease 10 percent and the soleus increase 50 percent in the suspended rats. The data reveal that the population of muscle type 1 (slow fibers) decreases and type 2 (fast fibers) increases for the soleus, and the distribution is unchanged for the EDL of the suspended rats. It is detected that a nonweight-bearing position affects the soleus (a fast-twitch muscle), but not the EDL (a slow-twitch muscle).

CONTROL OF ARACHIDONIC ACID RELEASE IN CHICK MUSCLE CULTURES
G. H. TEMPLETON, M. PADALINO, and W. WRIGHT (Texas, University, Dallas) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-135, S-136. refs
(Contract NAGW-140)

Cultures from thigh muscles of 12 day old embryonic chicks are utilized to examine arachidonic release, prostaglandin (PG) biosynthesis, and protein synthesis. The preparation of the cultures is described. It is observed that exogenous arachidonic acid is formed into photsphatidylethanolamine and phosphatidylcholine, is released by a calcium ionosphere or phospholiphase simulator, and is the substrate for the biosynthesis of PG; the epidermal growth factor and PGF do not stimulate protein synthesis over the basal levels. The relationship between arachidonate release and melittin is studied. The data reveal that a change in intracellular calcium stimulates phospholiphase activity, arachidonate release, and PG synthesis in chick muscle culture.

CAGE-SIZE AND GENDER EFFECTS ON FATIGUE IN RATS
R. M. ENOKA, L. L. RANKIN, and D. G. STUART (Arizona, University, Tucson) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-137, S-138. refs

The effects of cage size during rearing and of gender on the physiological properties of adult rat muscles are investigated. Male and female rats were housed in cages 47 x 25 x 20 cm and 320 x 183 x 99 cm and separated by gender. The size, and contractile and electromyographic (EMG) characteristics of the soleus and extensor digitorin longus (EDL) of the caged rats are evaluated. It is observed that the soleus and EDL of the males are 0.23 g and 0.25 g respectively, and both muscles are 0.17 g in the females; the force exerted by the EDL in response to stimuli is 2.13 N in the males and 1.29 N in the females. It is noted that cage size and gender have minimal effects on changes in the EMG characteristics, gender influences whole body mass, and absolute force, and cage size and gender affect normalized force and fatigability.

ALTERED CARBOHYDRATE METABOLISM IN THE WHOLE BODY SUSPENDED RAT
J. M. STEFFEN, R. D. FELL, and X. J. MUSACCHIA (Louisville, University, KY) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-139, S-140. refs

Adjustments to seven days of hypokinesia/hypodynamia (H/H) in suspended rats include increased muscle fatigability and decreased oxidative capacity. The present studies investigated changes in carbohydrate metabolism which may regulate energy supply for contractile activity. Rats suspended for seven days and controls were used to determine: serum insulin, response to glucose loading, muscle sensitivity to insulin, and muscle glycogen at rest and following contractile activity. Serum insulin was comparable in control and H/H rats. Elevated plasma glucose and a greater hyperglycemia in response to oral glucose suggested loss of insulin sensitivity. This was confirmed by perfusion studies of hindlimb muscle glucose uptake. While atrophied muscles from H/H rats exhibited increased glycogen concentrations, glycogen was depleted to a greater extent during moderate intensity stimulation. These results suggest alterations in carbohydrate metabolism with whole body suspension. Author

OXYGEN CONSUMPTION DURING COLD EXPOSURE AT 2.1 G IN RATS ADAPTED TO HYPERGRAVIC FIELDS
J. HOROWITZ, S. PATTERSON, and C. MONSON (NASA, Ames Research Center, Moffett Field, CA; California, University, Davis) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-141, S-142. refs
(Contract NSG-2234)

The thermoregulation ability of rats exposed to various gravitational fields is examined. Male Sprague-Dawley rats were exposed to 22 C and 1 G, and 9 C and 2.1 G in experiment one, 1 G, 2.4 G, 5.8 G and 22 + or - 1.5 C in experiment two, and 1 G, 19-22 C, and 5 C in experiment three. It is observed that the core temperature in the control rats was 36.8 + or 0.4 C at 22C and 30.8 + or - 0.6 C at 9 C, and oxygen consumption dropped from 37 + or - 0.3 C core temperature at 22 C, 36.4 + or - 0.3 C at 9 C, 0.4 oxygen consumption was 8.18 + or - 0.9 ml/min at 22 C, and 14.2 + or - 0.4 ml/min at 9 C. The data from experiment two reveal that tail temperature in the control rats peaked at 2.4 G and at 5.8 G for the acclimated rats, and in experiment three a greater decrease in core temperature is detected in the 2.1-G rats. It is noted that prior acclimation to 2.1 G enhances the thermoregulation ability when exposed to the cold. I.F.

CHANGES IN FUNCTIONAL METABOLISM IN THE RAT CENTRAL NERVOUS SYSTEM FOLLOWING SPACEFLIGHT
D. M. MURAKAMI, J. D. MILLER, and C. A. FULLER (California, University, Davis) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-143, S-144. refs
(Contract NAG2-349; NAS2-10536)

The neuronal metabolism and soma size of neurons within the paraventricular nucleus (PVN) and the supraoptic nucleus of rats are analyzed. Five male Sprague-Dawley rats were flown on Spacelab 3 for 7 days under a 12:12 light/dark cycle and unlimited food and water, and a control group was kept on the ground under similar conditions. The preparation of the hypothalamus of the rats for microscopic examination using thionin or the cytochrome oxidase (CYOX) technique is described. CYOX activity and soma size within the PVN are evaluated. The effects of water drinking pattern and space flight on CYOX activity and soma size are investigated. The data reveal that the flight rats with normal drinking patterns display a decrease in neuronal metabolism within the vasopressin-containing neurons of the hypothalamus and this metabolic change may reflect fluid shifts caused by microgravity. I.F.

EFFECTS OF CLINOSTAT ROTATION ON AURELIA STATOLITH SYNTHESIS
D. SPANGENBERG, S. DAVIS, and H. ROSS-CLUNIS, III (Eastern Virginia Medical School, Norfolk) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-151, S-152. refs
(Contract NAG2-343)

Aurelia ephyrae develop eight graviceptors (rhopalia) during their metamorphosis from polyps, which are used for positional orientation with respect to gravity. In three experiments for each speed of 1/15, 1/8, 1/4, 1/2, 1, and 24 rpm, groups of six polyps were rotated in the horizontal or vertical plane (control) using clinostats. Other controls were kept stationary in the two planes. Ten ephyrae from each group were collected after 5-6 days at 27 C in iodine and the number of statoliths per rhopalium were counted. Statistical analyses of statolith numbers revealed that horizontal clinostat rotation at 1/4 and 1/2 rpm caused the formation of significantly fewer statoliths per rhopalium than were found in controls. The finding that these slow rates of rotation reduces statolith numbers suggests that the developing ephyrae were disoriented with respect to gravity at these speeds, causing fewer statocytes to differentiate or to mineralize. PROTEIN CONCENTRATION ELEVATIONS IN LUNGS OF MICE FOLLOWING SUDDEN, TRANSIENT CEPHALAD (+GZ) ACCELERATION
C. J. GUTIERREZ, D. J. CRITTENDEN, J. S. LYTLE, D. R. DUKESHERER, and C. DELMORAL (Central Florida, University, Orlando) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-153, S-154. refs

In order to examine effects of headward acceleration (+Gz) on pulmonary vasculature, mice were subjected to +Gz for 1.8 sec aboard a solid fuel rocket. Protein in bronchoalveolar lavage was measured for evidence of altered microvasculature. Experimental mice were launched and recovered from a parachute descent. Sham control mice were placed in the rocket but not launched. Protein content in control mice (N = 8) was 1.53 + or - 8 (SD) mg/gm wet lung tissue and in experimental mice (n = 11) was elevated to 13.09 + or - 8.31 (SD) mg/gm wet lung (p less than .001). Lung wet weight/body weight ratios were not changed. Sudden transient imposition of +6.22 Gz at liftoff may have induced hypervolemia of basilar microvessels subsequent to increased hydrostatic pressure. Possible stretching of endothelial

junctions may have permitted a small amount of fluid and protein transudation. Fluid may have entered bronchiolar airways subsequently gravitating toward alveoli. Lavage protein may have been recovered from alveolar and bronchiolar regions. Author

TRANSIENT DEHYDRATION OF LUNGS IN TAIL-SUSPENDED RATS
A. R. HARGENS, J. STESKAL, and E. R. MOREY-HOLTON (NASA, Ames Research Center, Moffett Field, CA; California, University; USVA, Medical Center, San Diego) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-155, S-156. NASA-USVA-supported research. refs

The fluid balance in the lungs of rats exposed to head-down tilt is examined. Six Munich-Wister rats were suspended for 7 days and 10 Sprague-Dawley rats for 14 days using the technique of Morey (1979). The water contents of the lungs of the suspended and a control group are calculated and compared. The data reveal that the two-days suspended rats had dehydrated lungs; however, the lungs of the 14-day suspended and control group rats were similar. It is noted that the dehydration in the 2-day suspended rats is caused by general dehydration not the head-tilt position. I.F.

INFLUENCE OF EXPOSURE TO A PROLONGED HYPERDYNAMIC FIELD ON BODY TEMPERATURE IN THE SQUIRREL MONKEY
C. A. FULLER (California, University, Davis) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-157, S-158. refs
(Contract NAG2-349; NAS2-10536)

The effect of gravitational loading on the regulation of body temperature is examined. Five adult male squirrel monkeys were exposed to a 2-G environment twice for 48 hours, once beginning in the middle of their light cycle and the second time in the middle of their dark cycle. It is observed that a reduction in body temperature occurs during the light cycle phase and at night there is an insignificant change in body temperature. The rhythmic characteristics of the light and dark cycles are analyzed. The data reveal that the body temperature in animals at 2 G is influenced more during the active phase of the animals 24-hour cycle. I.F.

CHANGES IN MUSCLE PROTEIN COMPOSITION INDUCED BY DISUSE ATROPHY - ANALYSIS BY TWO-DIMENSIONAL ELECTROPHORESIS
S. ELLIS (NASA, Ames Research Center, Moffett Field, CA), C. S. GIOMETTI (Argonne National Laboratory, IL), and D. A. RILEY (Wisconsin, Medical College, Milwaukee) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-159, S-160. refs

Using 320 g rats, a two-dimensional electrophoretic analysis of muscle proteins in the soleus and EDL muscles from hindlimbs maintained load-free for 10 days is performed. Statistical analysis of the two-dimensional patterns of control and suspended groups reveals more protein alteration in the soleus muscle, with 25 protein differences, than the EDL muscle, with 9 protein differences, as a result of atrophy. Most of the soleus differences reside in minor components. It is suggested that the EDL may also show alteration in its two-dimensional protein map, even though no significant atrophy occurred in muscle wet weight. It is cautioned that strict interpretation of data must take into account possible endocrine perturbations. R.R.

CONSIDERATIONS IN THE DESIGN OF LIFE SCIENCES RESEARCH FACILITIES FOR THE SPACE STATION
M. HEINRICH and C. E. RUDIGER (Lockheed Missiles and Space Co., Inc., Bioastronautics Div., Sunnyvale, CA) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-161, S-162.
(Contract NAS5-20400)

The facilities required for life science research on a permanent Space Station are examined. Specifications important to the designing of facilities and planning of activities on the Space Shuttle are: (1) the species to be tested, (2) the number and procedure for testing, (3) the number of specimens at each sampling time, (4) the analyses required, (5) the methods of preserving samples, instruments, and supplies, and (6) the amount of crew time required. Experiments which are relevant to understanding the effects of microgravity on living systems are to be performed on the Space Station. The design and instruments of a Space Station laboratory and specimen centrifuge are described. I.F.

(International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-163, S-164. refs

The effects of 5 days of space flight and 7 days of hypokenezia (HK) on the gastric acid secretion, blood pH level, and lactic dehydrogenase (LDH) izoenzymes of the gastric mucosa in nonpregnant, pregnant, and adrenalectomized rats are investigated. It is observed that there is a decrease in glicoprotein content and an increase in the LDH izoenzymes for all the rats after HK. The data reveal that despite the increase in gastric acid output (GAO) due to pregnancy the GAO and blood pH level decrease after HK; however, the GAO in nonpregnant rats is increased. The removal of the adrenal glands after HK does not affect GAO. I.F.

(International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-173, S-174. refs
(Contract PHS-R01-NU-001098-01)

The purpose of this study was to test the effects of caffeine ingestion, prior to surgery, on disruption of circadian rhythms following surgery. The study measured 20 male Sprague-Dawley rats' temperature and locomotor activity by short range, radio/telemetry and infrared-monitoring. Eight rats were subjected to surgical laparotomy using general anesthesia and then monitored until their activity had returned to presurgical levels. Two groups of six rats each, received either caffeine in distilled water or distilled water, orally for five days. On day six, animals were subjected to surgical laparotomy and data were recorded as before. Temperature cycles shifted during treatment only with caffeine. Both groups shifted their activity peaks during treatment. Shifts were more pronounced with caffeine. Following surgery, unmanipulated rats shifted their temperature peaks to inappropriate times of day. Animals which received water showed less disruption, while caffeine rats were not shifted following surgery. Activity results were similar. It is concluded that caffeine provides a cue to circadian timing which reduces disruption following surgery. Author

MORPHOLOGY OF HUMAN EMBRYONIC KIDNEY CELLS IN CULTURE AFTER SPACE FLIGHT
P. TODD, M. E. KUNZE, K. WILLIAMS, D. R. MORRISON, M. L. LEWIS, and G. H. BARLOW (NASA Johnson Space Center, Houston, TX; Bioprocessing and Pharmaceutical Research Center, Philadelphia; Pennsylvania State University, University Park, PA; Michael Reese Research Foundation, Chicago, IL) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-183, S-184.

The ability of human embyronic kidney cells to differentiate into small epithelioid, large epithelioid, domed, and fenestrated morphological cell types following space flight is examined. Kidney cells exposed to 1 day at 1 g, then 1 day in orbit, and a 12 minute passage through the electrophoretic separator are compared with control cultures. The data reveal that 70 percent of small epithelioid, 16 percent of large epithelioid, 9 percent of dome-forming, and 5 percent of fenestrated cells formed in the space exposed cells; the distributions correlate well with control data. The formation of domed cells from cells cultured from low electrophoretic mobility fractions and small epithelioid cells from high mobility fractions is unaffected by space flight conditions. It is concluded that storage under microgravity conditions does not influence the morphological differentiation of human embryonic kidney cells in low-passage culture. I.F.

RAT MAINTENANCE IN THE RESEARCH ANIMAL HOLDING FACILITY DURING THE FLIGHT OF SPACE LAB 3
T. FAST, R. GRINDELAND, L. KRAFT, M. RUDER, M. VASQUES (NASA, Ames Research Center, Moffett Field, CA) et al. (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-187, S-188.

To test the husbandry capabilities of the Research Animal Holding Facility (RAHF) during space flight, 24 male rats were flown on Spacelab 3 for 7 days. Twelve large rats (400 g, LF), 5 of which had telemetry devices implanted (IF), and 12 small rats (200 g, SF) were housed in the RAHF. Examination 3 hr after landing (R + 3) revealed the rats to be free of injury, well nourished, and stained with urine. At R + 10 the rats were lethargic and atonic with hyperemia of the extremities and well groomed except for a middorsal area stained with urine and food. Both LF and SF rats showed weight gains comparable to their IG controls; IF rats grew less than controls. Food and water consumption were similar for flight and control groups. Plasma concentrations of total protein, sodium, albumin and creatinine did not differ between flight and control groups. LF and SF rats had elevated plasma glucose, and SF rats had increased blood urea nitrogen, potassium and glutamic pyruvic transaminase. These observations indicate that rats maintained in the RAHF were healthy, well nourished and experienced minimal stress; physiological changes in the rats can thus be attributed to the effects of space flight Author

ELECTRON MICROPROBE ANALYSES OF CA, S, MG AND P DISTRIBUTION IN INCISORS OF SPACELAB-3 RATS
G. D. ROSENBERG (Purdue University, Indianapolis, IN) and D. J. SIMMONS (Washington University, St. Louis, MO) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-189, S-190.
(Contract NASA ORDER-A-21997-C)

The distribution of Ca, S, Mg and P was mapped within the incisors of Spacelab-3 rats using an electron microprobe. The data indicate that Flight rats maintained in orbit for 7 days have significantly higher Ca/Mg ratios in dentin due to both higher Ca and lower Mg content than in dentin of ground-based Controls. There is no statistical difference in distribution of either P or S within Fligth animals and Controls, but there is clear indication that, for P at least, the reason is the greater variability of the Control data. These results are consistent with those obtained on a previous NASA/COSMOS flight of 18.5 days duration, although they are not pronounced. The results further suggest that continuously growing rat incisors provide useful records of the effects of weightlessness on Ca metabolism. Author

RESPONSES OF AMINO ACIDS IN HINDLIMB MUSCLES TO RECOVERY FROM HYPOGRAVITY AND UNLOADING BY TAIL-CAST SUSPENSION
M. E. TISCHLER, E. J. HENRIKSEN, S. JACOB, and P. H. COOK (Arizona, University, Tucson) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-191, S-192. refs
(Contract NAGW-227)

Amino acids were assayed in muscles from rats exposed to 7 days of hypogravity and 12 h of gravity (F) or 6 days of suspension with (R) or without (H) 12 h of loading. In these groups, lower aspartate was common only to the soleus (SOL) relative to control muscles, the smallest difference being in group R. This difference in aspartate for F and H, but not for R, correlated with lower malate suggesting diminution of citric acid cycle intermediates. The R SOL value was increased over the H SOL. Therefore desite 12 h of loading, the F SOL was more comparable to the H SOL. The role of stress in preventing recovery of the F SOL was apparent from the ratios of glutamine/glutamate. Synthesis of glutamine is enhanced by glucocorticoids and is reflected by an increased ratio. In 5 of the 6 F muscles studied, this ratio was greater than in controls. In contrast, the ratio in all R muscles was similar to controls and showed recovery from the values in H muscles. Hence the post-flight treatment of F rats may have produced additional stress. Despite this stress, in some respects the SOL responses to hypogravity were similar to its responses to unloding by suspension. Author

MUSCLE PROTEIN AND GLYCOGEN RESPONSES TO RECOVERY FROM HYPOGRAVITY AND UNLOADING BY TAIL-CAST SUSPENSION
E. J. HENRIKSEN, M. E. TISCHLER, S. JACOB, and P. H. COOK (Arizona, University, Tucson) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-193, S-194. Previously announced in STAR as N85-35591. refs
(Contract NAGW-227)

Previous studies in this laboratory using the tail-bast hindlimb suspension model have shown that there are specific changes in protein and carbohydrate metabolism in the soleus muscle due to unloading. For example, 6 days of unloading caused a 27 percent decrease in mass and a 60 percent increse in glycogen content in the soleus muscle, while the extensor digitorum longus muscle was unaffected. Also, fresh tissue tyrosine and its in vitro release from the muscle are increased in the unloaded soleus, indicating that this condition causes a more negative protein balance. With these results in mind, studies to investigate the effect of hypogravity on protein and carbohydrate metabolism in a number of rat hindlimb muscles were carried out. G.L.C.

HEMATOLOGIC PARAMETERS OF ASTRORATS FLOWN ON SL-3
R. D. LANGE, R. B. ANDREWS, L. A. GIBSON, P. WRIGHT, C. D. R. DUNN (Tennessee, University, Knoxville) et al. (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-195, S-196. NASA-supported research. refs

Hematologic studies were performed on a group of large and small rats which were sacrificed after flying in life sciences shuttle engineering flight SL-3. The results are presented on flight (F) and control (C) 200 gm rats. The small flight animals demonstrated a significant increase in hematocrits, red blood cell counts, hemoglobins and peripheral blood percentages of neutrophils as well as a decrease in percentage of lymphocytes. Erythropoietin (Ep) determinations were similar for the two groups as were the bone marrow an spleen differential counts. In vitro cultures for erythroid colonies of bone marrow showed that in response to different doses of Ep, in all cases where differnces were statistically significant, the F rats had increased colony counts. The changes in red cell parameters could be caused by a decrease in plasma volume. However, no isotopic studies were possible on this flight and this lack points up the need for such studies to determine the red cell mass and plasma volume. Author

MICROGRAVITY ASSOCIATED CHANGES IN PITUITARY GROWTH HORMONE (GH) CELLS PREPARED FROM RATS FLOWN ON SPACE LAB 3
W. C. HYMER, M. FARRINGTON, C. HAYES (Pennsylvania State University, University Park), R. GRINDELAND, T. FAST (NASA, Ames Research Center, Moffett Field, CA) et al. (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-197, S-198. refs
(Contract NASA ORDER A-21991-C)

The effect of microgravity on the release of pituitary growth hormone (GH) in rats is studied. The pituitary glands from six adult rats exposed to microgravity are analyzed for in vitro and in vivo changes in pituitary growth hormone cells. The GH cell functions in the somatotrophs of flight rats are compared to a control group. The two assay procedures employed in the experiment are described. It is observed that intracellular levels of GH are two to three times greater in the flight rats than in the control group; however, the amount of GH released from the somatotrophs is 1.11 + or - 0.4 micrograms for the flight rats and 1.85 + or - 1.3 micrograms for the control rats. HOMEOSTASIS AND BIOLOGICAL RHYTHMS IN THE RAT DURING SPACEFLIGHT
C. A. FULLER (California, University, Davis) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-199, S-200. refs
(Contract NAG2-349; NAS2-10536)

The effects of microgravity on the physiological regulation of homeostatic systems is studied. The temperature and heart rate of rats exposed to seven days of microgravity and a 12:12 light/dark cycle are analyzed. A 24-hour nocturnal rhythmicity is observed in the control and in-flight heart rates and body temperatures. The preflight daytime body temperature was calculated as 37.2 + or - 0.03 C and in-flight as 37.4 + or 0.04 C; nighttime body temperature preflight daytime was determined as 38.0 + or - 0.02 C, and in-flight as 37.8 + or 0.06 C. The 24-hour mean heart rate was

depressed from 412 + or - 3.3 bpm preflight to 373 + or - 2.4 bpm in-flight; this change is noted in both dark and light conditions. It is detected that microgravity alters the steady state regulation of heart rate and body temperature. I.F.

A86-30461*# California Univ., Davis.
EARLY ADAPTATION TO ALTERED GRAVITATIONAL ENVIRONMENTS IN THE SQUIRREL MONKEY
C. A. FULLER (California, University, Davis) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-201, S-202.
(Contract NAG2-349; NAS2-10536)

The feeding behavior of two squirrel monkeys flown in Spacelab 3 is compared to that of six monkeys exposed to 1.5 G through centrifugation. The monkeys in the centrifugation study were housed unrestrained in cages, maintained at 25 C + or - 1 C, exposed to a 12:12 light/dark cycle, and had unrestrained access to food and water. The Spacelab monkeys were maintained at 26 C, exposed to a 12:12 light/dark cycle and had unlimited food and water. It is observed that the centrifuge rats displayed a change in feeding behavior for 4 days prior to resuming a normal pattern; one Spacelab monkey exhibited a 6 day depression before recover to control levels, and the feeding pattern of the second monkey was not influenced by the environment. It is noted that the effect of an altered dynamic environment is variable on the feeding behavior of individual monkeys. I.F.

THE EFFECT OF A HYPERDYNAMIC ENVIRONMENT ON THE DEVELOPMENT OF THE RAT RETINA
D. M. MURAKAMI and C. A. FULLER (California, University, Davis) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-205, S-206. refs
(Contract NAG2-349; NAS2-10536)

The effects of a 2 G field on the retinal development of the layers in the rat and central visual system nuclei are investigated. The thickness of the retinal layers, ganglion cells, and brains of male and female Wistar rats suspended from an 18 foot diameter centrifuge creating a 2 G field are evaluated and compared with a control group. A decrease in the thickness of the outer nuclear layer (ONL) of 37.1 percent, of 58.5 percent in the inner nuclear layer (INL), and of 28.8 percent in the inner plexiform layer (IPL), and a reduction in body weight are observed in the 2-G rats. The data reveal that the ganglion cells and visual system nuclei activity correspond well with the control data; however, the medial terminal nucleus (MTN) activity is inhibited in the 2-G rats. It is concluded that the differences in ONL and IPL are attributed to body weight reduction, but the INL and MTN are affected by the 2-G conditions. I.F.

MORPHOLOGICAL AND BIOCHEMICAL CHANGES IN SOLEUS AND EXTENSOR DIGITORUM LONGUS MUSCLES OF RATS ORBITED IN SPACELAB 3
D. A. RILEY, T. SLOCUM, J. L. W. BAIN, F. R. SEDLAK (Wisconsin, Medical College, Milwaukee), S. ELIS, and T. SATYANARAYANA (NASA, Ames Research Center, Moffett Field, CA) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-207, S-208. refs
(Contract NAS2-11305; NCC2-266; NASA ORDER A-21992-C)

Muscle atrophy in rats exposed to hypogravity for seven days aboard Spacelab 3 is examined. Hindlimb muscles were harvested 12-16 days postflight, and prepared for enzyme studies and electron microscopy. Simple cell shrinkage was found, with a mean fiber area decrease of 35.8 percent for soleus and 24.9 percent for extensor digitorum longus (EDL) flight muscle fibers, as compared with control muscle fibers. EDL and soleus muscles showed increases in alkaline myofibrillar ATPase, alpha glycerophosphate dehydrogenase, and glycogen, and a decrease in NADH dehydrogenase staining. The 26 percent increase in calcium activated protease suggests that the focal degradation of myofibrils is the key process of myofibril breakdown. The presence in the flight soleus muscles of one percent necrotic fibers is unexplained. The observed shift towards histochemical fast-muscle type properties is consistent with previous findings. R.R.

MICROGRAVITY CHANGES IN HEART STRUCTURE AND CYCLIC-AMP METABOLISM
D. E. PHILPOTT, A. FINE, K. KATO, R. EGNOR, L. CHENG (NASA, Ames Research Center, Moffett Field, CA; USVA, Medical Center, New York, NY; NIH, National Institute of Dental Research, Bethesda, MD) et al. (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-209, S-210.

The effects of microgravity on cardiac ultrastructure and cyclic AMP metabolism in tissues of rats flown on Spacelab 3 are reported. Light and electron microscope studies of cell structure, measurements of low and high Km phosphodiesterase activity, cyclic AMP-dependent protein kinase activity, and regulatory subunit compartmentation show significant deviations in flight animals when compared to ground controls. The results indicate that some changes have occurred in cellular responses associated with catecholamine receptor interactions and intracellular signal processing. C.D.

REDUCTION OF THE SPERMATOGONIAL POPULATION IN RAT TESTES FLOWN ON SPACE LAB-3
D. E. PHILPOTT, J. STEVENSON, R. CORBETT (NASA, Ames Research Center, Moffett Field, CA), W. SAPP, C. WILLIAMS (Tuskegee Institute, AL) et al. (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-211, S-212. refs

Quantization of the testicular spermatogonial population reduction in six rats is performed 12 hours after their return from seven days aboard Space Lab-3. The observed 7.1 percent organ weight loss, and 7.5 percent stage six spermatogonial cell population reduction in comparison with control rats correlate very

well. Accurate dosimetry was not conducted on board, but radiation can not be considered the primary cause of the observed change. The decrease in protein kinase in the heart of these rats indicates that stress from adapting to weightlessness, the final jet flight, or other sources, is an important factor. R.R.

EFFECT OF FLIGHT IN MISSION SL-3 ON INTERFERON-GAMMA PRODUCTION BY RATS
C. L. GOULD, J. A. WILLIAMS, A. D. MANDEL, and G. SONNENFELD (NASA, Ames Research Center, Moffett Field, CA; Louisville, University, KY) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-213, S-214. refs
(Contract NCC2-213)

Rats flown in Space Shuttle mission SL-3 were sacrificed after flight and spleens were removed. Cultures of spleen cells were challenged with the mitogen concanavalin-A to attempt to induce interferon-gamma. Most control, ground-based rats had spleen cells that produced moderate titers of interferon-gamma. Spleen cells from flown rats did not produce interferon-gamma in most cases, and one flown rat produced minimally detectable amounts of interferon. These data suggest that interferon-gamma production was inhibited in rats flown in mission SL-3 immediately upon return to earth. Author

BIOCHEMICAL AND MORPHOLOGICAL EVALUATION OF THE EFFECTS OF SPACE FLIGHT ON RAT SALIVARY GLANDS
M. I. MEDNIEKS and A. R. HAND (NIH, National Institute of Dental Research, Bethesda, MD) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-215, S-216. refs

Salivary gland tissues from rats from the Spacelab 3 flight were used for both cellular and molecular level analyses in conjunction with electron microscopic evaluation of tissue ultrastructure. Intracellular processes appear to be modified in salivary gland cells one day after space flight. Changes in cA-PK holoenzyme association and subcellular subunit distribution suggest alterations in reactions which are mediated via cyclic AMP. These observations are consistent with the reported decrease in circulating catecholamines during simulated weightlessness. Since no dramatic pathological changes were observed in the salivary glands, the effects may well be within the homeostatic or adaptational range of the animals. C.D.

MICROPROBE ANALYSIS OF EPIPHYSEAL PLATES FROM SPACELAB 3 RATS
J. DUKE, L. JANER, M. CAMPBELL, and J. MORROW (Texas, University, Houston) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-217, S-218. refs

Ultrastructural studies of growth plates from Cosmos 1129 rats showed delayed production and mineralization of matrix vesicles. To determine if differences in differentiation could be detected in seven days, proximal tibial growth plates were obtained from rats flown aboard Spacelab 3, and prepared by a freeze-substitution method for microanalysis. Concentration of elements was measured in the matrix of longitudinal septa of the growth plate in the resting, proliferative, hypertrophic, and calcifying zones. In control plates, all four zones had high levels of Na, and in unmineralized regions, low levels of Mg, P and Ca. K and S levels were high in the resting zone, and increased from the proliferative to the calcifying zones. The level of P rose in the mineralized regions and Ca/P ratios ranged from 1.0 to 1.6. Flight animals had low Na and K values, although Mg values seemed unaffected. S values were much less than controls, and Ca was less in unmineralized regions, with Ca/P ratios similar to controls. These data indicate that even a short space flight can alter bone mineralization. Author

OTOCONIAL MORPHOLOGY IN SPACE-FLOWN RATS
M. D. ROSS, K. DONOVAN, and O. CHEE (Michigan, University, Ann Arbor) (International Union of Physiolcgical Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-219, S-220. refs
(Contract NAS2-10535)

The inner ear maculas of rats exposed to space flight for seven days were studied, and the findings are discussed. It is concluded that exposure to weightlessness for short periods of time has no morphologically detectable degenerative effect on the macular receptors. The results suggest, however, that slight increases in otoconial mass may have occurred in flight animals compared to ground-based controls. C.D.

EFFECT OF SEVEN DAYS OF SPACEFLIGHT ON HINDLIMB MUSCLE PROTEIN, RNA AND DNA IN ADULT RATS
J. M. STEFFEN and X. J. MUSACCHIA (Louisville, University, KY) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-221, S-222. NASA-supported research. refs

Effects of seven days of spaceflight on skeletal muscle (soleus, gastrocnemius, EDL) content of protein, RNA and DNA were determined in adult rats. Whereas total protein contents were reduced in parallel with muscle weights, myofibrillar protein appeared to be more affected. There were no significant changes in absolute DNA contents, but a significant (P less than 0.05) increase in DNA concentration (microgram/milligram) in soleus muscles from flight rats. Absolute RNA contents were significantly (P less than 0.025) decreased in the soleus and gastrocnemius muscles of flight rats, with RNA concentrations reduced 15-30 percent. These results agree with previous ground-based observations on the suspended rat with unloaded hindlimbs and support continued use of this model. Author

1,25-DIHYDROXYVITAMIN D3 RECEPTORS IN SPACE-FLOWN VS. GROUNDED CONTROL RAT KIDNEYS
D. J. MANGELSDORF, S. L. MARION, J. W. PIKE, and M. R. HAUSSLER (Arizona, University, Tucson) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-223, S-224. refs
(Contract NIH-AM-15781-14)

The effects of microgravity on the ability of 1,25-Dihydroxyvitamin D3 receptors to retain calcium in kidneys is examined. Kidney samples from five space-flown and five ground control rats were studied. The analysis of the 1,25(OH)2D3 receptors using DEAE-filter binding assay is described. The quantity of receptors and binding dissociation constant are derived from the saturation curve of specific hormone-receptors binding by employing the Scatchard transformation. The data reveal that for the ground control rats the receptor number is 27.9 + or - 0.80 fmol/mg protein and the binding dissociation constant is 0.60 + or - 0.27 nM; for the space-flown rats the receptor number is 27.6 + or 10.1 fmol/mg protein and the constant is 0.27 + or - 0.08 nM. No significant difference is observed between the ground control and space-flown kidney 1,25(OH)2D3 receptors. I.F.

MORPHOLOGIC AND HISTOCHEMICAL STUDIES OF BONE CELLS FROM SL-3 RATS
S. B. DOTY (Columbia University, New York) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-225, S-226. refs
(Contract NCC2-325)

Previous studies of rat bone following space flight indicate a significant reduction in new bone formation as a result of hypogravity. In the present study of animals from SL-3 flight, the cellular activity of the bone forming cells, the osteoblasts, was investigated. Measurements of alkaline and acid phosphatase, Golgi activity, secretory granule size, and lysosomal activity, all indicated very little difference between flight and flight-simulated controls. However, there was a tendency for osteoblasts in compact bone of flight animals to show a smaller cytoplasmic volume compared to non-flight controls. If, as in previous studies, a significant reduction in bone formation occurred, it could be due to a normal level of procollagen degradation within these smaller osteoblasts, resulting in less collagen secretion per cell. ATRIOPEPTIN (AP-3) IN ATRIA AND PLASMA OF RATS ORBITED ABOARD NASA SPACELAB (SL3) FOR SEVEN DAYS
W. H. INGE and D. K. HARTLE (Emory University, Atlanta, GA) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-231, S-232. refs

Six male rats were orbited aboard Spacelab 3 for 7 days, landed in CA and flown to FL where they were anesthetized (halothane), decapitated, blood collected, and plasma separated. Ventricular samples and atria were resected. All samples were frozen at -70 C. Samples from 6 ground control animals were similarly prepared. Atriopeptin immunoreactivity (APir) was determined for plasma and both right and left atria. All plasma levels were an order of magnitude higher than unstressed basal levels, presumably due to anesthesia. Subsequent laboratory studies confirmed that plasma APir is 400 percent higher in rats anesthetized with halothane than in conscious controls. No differences between control and flight rat plasma APir were found. Both right and left atrial APir content in flight rats were slightly elevated over controls but not significantly. It is concluded that an adequate test of the effects of microgravity on AP-3 secretion requires serial inflight plasma sampling in conscious rats to avoid the confounding effects of reentry, postflight delays, and anesthesia. Author

PLASMA RENIN CONCENTRATION (PRC) OF RATS ORBITED FOR 7 DAYS ABOARD NASA SPACELAB 3
D. K. HARTLE and W. H. INGE (Emory University, Atlanta, GA) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-233, S-234. refs

PRC were determined in six rats (F) orbited aboard SL3 for 7-days and in six ground control rats (G). F were flown from CA to Kennedy Space Center (KSC). Both F and G rats were transported similarly from KSC to Kennedy Research Labs, anesthetized with halothane (HAL) and decapitated. Plasma was obtained from trunk blood and frozen at -70 C. PRC were estimated by measuring the conversion of rat renin substrate to angiotensin I (AI) using radioimmunoassay. PRC were also estimated in four groups of rats to assess the influences of HAL or decapitation on renin secretion in the F and G rats. No significant differences were found in PRC between F and G, although the F mean was lower. Neither HAL nor decapitation produced a significant increase in PRC above the levels measured in control conscious rats. Because of the 12-14 hour delay between reentry and sampling, all renin measured was probably secreted in the postflight period. So the PRC of F do not indicate levels during flight, but only the levels obtained by F 12-14 hrs after reentry, and subjected to HAL anesthesia and decapitation. Author

BONE MATURATION IN RATS FLOWN ON THE SPACELAB-3 MISSION
J. E. RUSSELL and D. J. SIMMONS (Washington University, St. Louis, MO) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-235, S-236. refs

The matrix/mineral maturational patterns in six male Sprague-Dawley rats exposed to 7 days of spaceflight are studied. The metaphyseal and cortical bone samples are separated into 1.3-1.7, 1.8-1.9, 2.0-2.1, and 2.2-2.9 specific gravity fractions. The calcium, inorganic phosphorous (Pi), and collagen hydroxyproline (HO-Pr) contents are calculated. It is detected that in the spaceflight metaphyseal bone there is a shift in the Ca, Pi, and HO-Pr profiles toward higher density fractions and a low Ca/Pi molar ratio; in the spaceflight cortical bone less Ca, Pi, HO-Pr are observed for lower specific gravity fractions and the Ca/Pi molar ratio is unchanged. The data reveal that spaceflight alters the quality of rat femur, and decreases osteoblast function, and bone mass in the axial and appendicular skeleton. I.F.

CAROTID BODIES ARE REQUIRED FOR VENTILATORY ACCLIMATIZATION TO CHRONIC HYPOXIA
C. A. SMITH, G. E. BISGARD, A. M. NIELSEN, L. DARISTOTLE, N. A. KRESSIN (Wisconsin, University, Madison; Wisconsin, Medical College, Milwaukee) et al. Journal of Applied Physiology (ISSN 0161-7567), vol. 60, March 1986, p. 1003-1010. Research supported by the University of Wisconsin. refs
(Contract NIH-HL-15469; NIH-HL-15473)

The effects of moderate and severe hypoxemia on the ventilatory responses of intact and carotid body-denervated (CBD) goats were investigated. In the intact group, both moderate and severe hypoxemia produced time-dependent decreases in arterial PCO2, which were largely complete by 8 hrs and were maintained throughout the 7 days of hypobaria. In contrast, the same levels of arterial hypoxemia produced no significant changes in arterial PCO2, H(+), or HCO3(-) in the CBD animals. While acute restoration of normoxia in chronically hypoxic intact animals produced time-dependent increases in arterial PCO2 over 2 h, acute restoration of normoxia in the chronically hypoxic CBD goats has caused hyperventilation. The results indicate that carotid bodies are required for any significant hyperventilatory response to hypoxemia, and suggest that brain H(+) does not play a crucial role in this ventilatory response. I.S.

ENERGY BALANCE IN EXERCISE-TRAINED RATS ACCLIMATED AT TWO ENVIRONMENTAL TEMPERATURES
D. RICHARD, J. ARNOLD, and J. LEBLANC (Universite Laval, Quebec, Canada) Journal of Applied Physiology (ISSN 0161-7567), vol. 60, March 1986, p. 1054-1059. refs

The effect of exercise training (by running on a motor-driven treadmill) on energy balance of rats acclimated at either 24 or 4 C was investigated. Resting and exercise oxygen consumption and the energy contents of diet and feces were measured throughout, and the carcass contents of energy, fat, protein, and carbohydrate, as well as mitochondrial guanosine 5'-diphosphate (GDP)-binding in brown adipose tissue (BAT), were determined after 45 days of training. While cold acclimation led to increased food intake in all rats, its effect on fat gain was seen only in the sedentary group. Cold acclimation has also increased BAT-bound GDP, indicating increased thermogenesis in the BAT, but exercise had no effect on BAT thermogenesis. The energy balance results suggested that energy training in rats does not cause any changes in energy expenditure other than the energy spent on physical activity. I.S.

THERMOENCEPHALOSCOPY [TERMOENTSEFALOSKOPIIA]
I. A. SHEVELEV, E. N. TSYKALOV, K. P. BUDKO, A. M. GORBACH, and G. A. SHARAEV (AN SSSR, Institut Vysshei Nervnoi Deiatel'nosti i Neirofiziologii, Moscow, USSR) Fiziologiia Cheloveka (ISSN 0131-1646), vol. 12, Jan.-Feb. 1986, p. 7-15. In Russian. refs

Infrared images of human and animal cerebral cortex were obtained by means of noninvasive thermoscopy, using an AGA-780 thermoscope. The thermal maps, obtained after stimulation by light and sound, electrical skin stimulation, direct electrical irritation of cortex, and motor cortex tests, display the presence of discrete focuses of warming, followed by cooling, in the respective reaction zones of the cerebral cortex. The space-time and amplitude characteristics of the thermograms suggest that changes of local blood flow are among the factors causing the observed thermal changes. The maps display a spatial resolution of 30 microns per element of thermal image, surpassing the resolution ranges provided by the more traditional methods of electroencephalography, radioisotope mapping and blood flow mapping. I.S.

HYPOBIOSIS AND FUNCTIONAL RESISTANCE TO COLD [GIPOBIOZ I FUNKTSIONAL'NAIA KHOLODOVAIA TERMOREZISTENTNOST']
N. N. TIMOFEEV (Institut Farmakologii, Moscow, USSR) Fiziologiia Cheloveka (ISSN 0131-1646), vol. 12, Jan.-Feb. 1986, p. 110-124. In Russian. refs

The subcellular biochemical mechanisms responsible for the maintenance of the viability of cells and organisms at prolonged exposures to low temperatures are discussed. It is believed that the primary changes take place at the level of cellular membranes, where the endogenous antioxidants are pumped from most of the membrane circumference to a specific 'locus' in the membrane. The resulting oxidation of arachidonic acid, accompanied by a sharp increase in the saturated fatty acid content in the membrane sections devoid of antioxidants leads to 'gelling' of most of the membrane, except for the antioxidant-rich 'locus', which remains fluid, insuring the membrane's ability to reverse the process. The gelled membrane preserves the membraneous proteins, and thus, the viability of the cell. At near-freezing temperatures the fluid locus can be protected by availability of high concentrations of either endogenous tocopherol (in hibernating animals) or injected antioxidants. I.S.

A86-31224
A BIDOMAIN MODEL FOR THE EXTRACELLULAR POTENTIAL AND MAGNETIC FIELD OF CARDIAC TISSUE
B. J. ROTH and J. P. WIKSWO, JR. (Vanderbilt University, Nashville, TN) IEEE Transactions on Biomedical Engineering (ISSN 0018-9294), vol. BME-33, April 1986, p. 467-469. refs
(Contract N00014-82-K-0107)

A bidomain volume conductor model is developed to represent cardiac muscle strands, enabling the magnetic field and extracellular potential to be calculated from the cardiac transmembrane potential. The model accounts for all action currents, including the interstitial current between the cardiac cells, and thereby allows quantitative interpretation of magnetic measurements of cardiac muscle. Author

ECTO-PROTEIN KINASE ACTIVITY ON THE EXTERNAL SURFACE OF NEURAL CELLS
Y. H. EHRLICH, T. B. DAVIS (Vermont, University. Burlington), E. BOCK (Copenhagen, University, Denmark), E. KORNECKI, and R. H. LENOX Nature (ISSN 0028-0836), vol. 320, March 6, 1986, p. 67-70. refs
(Contract AF-AFOSR-84-0331; NIH-MH-35735; NSF BNS-82-09265)

Direct evidence for the existence of an ectoprotein kinase (one which uses extracellular ATP to phosphorylate proteins localized at the external surface of the plasma membrane) is presented, and endogeneous substrates for its activity at the surface of intact neural cells are demonstrated. The phosphorylation of one of these surface proteins is selectively stimulated during cell depolarization. In addition, neuronal cell adhesion molecules appear to be among the substrates of ectoprotein kinase activity. These results suggest a role for surface protein phosphorylation in regulating specific functions of developing and mature neurones. C.D.

MICROPLANKTON SPECIES ASSEMBLAGES AT THE SCRIPPS PIER FROM MARCH TO NOVEMBER 1983 DURING THE 1982-1984 EL NINO EVENT
F. M. H. REID (California, University, Scripps Institution of Oceanography, La Jolla), C. B. LANGE (Museo Argentino de Ciencias Naturales, Buenos Aires, Argentina), and M. M. WHITE (California, University, Scripps Institution of Oceanography, La Jolla) Botanica Marina (ISSN 0006-8055), vol. 28, no. 10, 1985, p. 443-452. Previously announced in STAR as N85-21926. refs
(Contract DE-AT03-82ER-60031; NAGW-458)

A semiweekly sampling program at the Scripps Institution of Oceanography Pier was begun in 1983 during an El Nino event. Microplankton data for March to November 1983 show a temporal sequence of species assemblages of the 24 important taxa, with a residence time of 1 to 4 weeks. From March to early September, the assemblages consisted of typial neritic taxa. From mid-September to mid-November, the presence of oceanic warm-wave species was associated with positive temperature anomalies characteristic of the El Nino condition. During the period studied numerical abundances were low. Author

BIOLOGICAL EXTINCTION IN EARTH HISTORY
D. M. RAUP (Chicago, University, IL) Science (ISSN 0036-8075), vol. 231, March 28, 1986, p. 1528-1533. refs
(Contract NAG2-237)

Virtually all plant and animal species that have ever lived on the earth are extinct. For this reason alone, extinction must play an important role in the evolution of life. The five largest mass extinctions of the past 600 million years are of greatest interest, but there is also a spectrum of smaller events, many of which indicate biological systems in profound stress. Extinction may be episodic at all scales, with relatively long periods of stability alternating with short-lived extinction events. Most extinction episodes are biologically selective, and further analysis of the victims and survivors offers the greatest chance of deducing the proximal causes of extinction. A drop in sea level and climatic change are most frequently invoked to explain mass extinctions, but new theories of collisions with extraterrestrial bodies are gaining favor. Extinction may be constructive in a Darwinian sense or it may only perturb the system by eliminating those organisms that happen to be susceptible to geologically rare stresses. Author

EUKARYOTIC RIBOSOMES THAT LACK A 5.8S RNA
C. R. VOSSBRINCK and C. R. WOESE (Illinois, University, Urbana) Nature (ISSN 0028-0836), vol. 320, March 20, 1986, p. 287, 288. refs
(Contract NSG-7044)

The 5.8S ribosomal RNA is believed to be a universal eukaryotic characteristic. It has no (size) counterpart among the prokaryotes, although its sequence is homologous with the first 150 or so nucleotides of the prokaryotic large subunit (23S) ribosomal RNA. An exception to this rule is reported here. The microsporidian Vairimorpha necatrix is a eukaryote that has no 5.8S rRNA. As in the prokaryotes, it has a single large subunit rRNA, whose 5-prime region corresponds to the 5.8S rRNA. Author

THE REGULATORY MECHANISMS OF BLOOD SUPPLY IN SKELETAL MUSCLES [MEKHANIZMY REGULIATSII KROVOSNABZHENIIA SKELETNYKH MYSHTS]
A. F. BLIUGER, ED. Riga, Izdatel'stvo Zinatne (Eksperimental'naia Meditsina: Morfologiia, Fiziologiia, Biokhimiia, Immunologiia, No. 19), 1985, 151 p. In Russian. No individual items are abstracted in this volume.

Regulatory mechanisms of circulation in the resting and active skeletal muscles are discussed, together with clinical problems connected with regulatory disorders. Papers are presented on functional correlators of adaptive changes in arterial vessels of skeletal muscles in subjects with chronic arterial hypertension; the dynamics of filling and emptying the lower limb veins; and morphofunctional muscular characteristics as a factor affecting the progress of the pressor reaction caused by muscle contraction under static regimen. Consideration is given to the effect of reinnervation of skeletal muscles on their fatigue and blood supply; the characteristics of the spiroergometric parameters in patients with initial coronary lesions; and the effect of longitudinal stretching of a skeletal muscle on its blood supply at rest and under isometric tetanus. Additional topics include the expression of reactive hyperemia in skeletal muscles of dogs injected intravenously with catecholamines; factors that disrupt the mechanisms of bloodflow redistribution in skeletal muscles; and taxonomic and regional factors of the muscle circulation. I.S.

ACTIVATION OF CHOLESTEROGENESIS UNDER THE EFFECT OF IONIZING RADIATION ON A LIVING BODY [OB AKTIVATSII KHOLESTEROGENEZA PRI VOZDEISTVII IONIZIRUIUSHCHEI RADIATSII NA ZHIVOTNYI ORGANIZM]
I. K. KOLOMIITSEVA (AN SSSR, Institut Biologicheskoi Fiziki, Pushchino, Ukrainian SSR) Radiobiologiia (ISSN 0033-8192), vol. 26, Jan.-Feb. 1986, p. 3-10. In Russian. refs

An analysis of results concerning the effects of ionizing radiation on the biosynthesis of cholesterol and incorporation of lipids into cellular membranes of rat tissues is presented. The collected evidence indicates that the increase of cholesterol biosynthesis in both radiation-sensitive cells (intestinal epithelium cells, lymphocytes, and thymocytes) and liver cells is among the earliest responses to body irradiation. A scheme showing the role of lipogenesis in the regenerative response to radiation is proposed, according to which, the damage of the radiosensitive cells triggers the onset of increased cholesterol synthesis in both the damaged cells and the liver cells. The increasing amounts of lipoproteins synthesized in the liver are released into the blood to supply additional material for the synthesis of cellular membranes in the radiation-damaged cells, promoting cellular division and tissue regeneration I.S.

INVESTIGATION OF MECHANISMS OF THE RADIOPROTECTIVE EFFECT OF AGONISTS OF CATECHOLAMINE RECEPTORS - INVOLVEMENT OF BOTH SUBTYPES OF ALPHA-ADRENORECEPTORS IN THE RADIOPROTECTIVE EFFECT [ISSLEDOVANIE MEKHANIZMOV RADIOZASHCHITNOGO EFFEKTA AGONISTOV KATEKHOLAMINOVYKH RETSEPTOROV - VKLIUCHENIE V RADIOZASHCHITNYI EFFEKT OBOIKH PODTIPOV ALPHA-ADRENORETSEPTOROV]
V. I. KULINSKII, A. D. KLIMOVA, V. G. IASHUNSKII, and T. V. ALPATOVA (Krasnoiarskii Gosudarstvennyi Meditsinskii Institut, Krasnoyarski, Institut Biofiziki, Moscow, USSR) Radiobiologiia (ISSN 0033-8192), vol. 26, Jan.-Feb. 1986, p. 11-16. In Russian. refs

The radioprotective effect of arylalkylamine and imidazole-based stimulators of alpha-adrenoreceptors and the effect of nonstimulating chemical analogs were evaluated in mice irradiated by a 7.5 GR dose of X-rays. Injection of alpha-receptor stimulators, affecting both alpha and alpha 2 receptors, as well as selective stimulators of either the alpha 1 subtype (mesaton) or alpha 2 subtype (clonidine) of the adrenoreceptors was shown to increase survival rate by four to forty times. In contrast, the nonstimulating chemical analogs of mesaton failed to protect mice. Possible intracellular mechanisms of the radioprotection exerted by both types of adrenoreceptor stimulators are discussed. I.S.

A86-32699
STUDIES OF RADIOPROTECTIVE PROPERTIES OF ADETURON AND POLYANION, APPLIED SEPARATELY AND IN COMBINATION [IZLUCHENIE PROTIOVOLUCHEVYKH SVOISTV ADETURONA I POLIANIONA V USLOVIIAKH SAMOSTOIATEL'NOGO I SOCHETANNOGO PRIMENENIIA]
M. I. MINKOVA, T. P. PANTEV, I. T. NIKOLOV, and M. TALASH (Meditsinska Akademiia, Sofia, Bulgaria; Orszagos Sugarbiologiai es Sugaregeszsegugyi Kutato Intezet, Budapest, Hungary) Radiobiologiia (ISSN 0033-8192), vol. 26, Jan.-Feb. 1986, p. 70-75. In Russian. refs

The radioprotective efficiency of polyanion and adeturon, injected separately and in combination, were studied in mice exposed to a lethal dose (8.0 GR) of gamma rays from Cs-135. The effect of the injection regimens was assessed according to values of the survival rate and the haemopoietic indices (weight and cellularity of spleen, cellularity of the bone marrow, and the numbers of peripheral leukocytes), determined at the intervals of 3, 10, 20, and 30 days after irradiation. Both compounds were effective, although the biometric protection coefficients were significantly higher for adeturon. Combined application did not enhance the protective effect. I.S.

A86-33070
ROLE OF DOPAMINERGIC SYSTEMS OF NEOSTRIATUM DURING THE ACTIVITY OF THE CENTRAL NERVOUS SYSTEM IN MAN AND ANIMALS [ROL' DOFAMINERGICHESKIKH SISTEM NEOSTRIATUMA V PROTSESSAKH VYSSHEI NERVNOI DEIATEL'NOSTI ZHIVOTNYKH I CHELOVEKA]
N. F. SUVOROV and G. IU. VOLYNKINA (AN SSSR, Institut Fiziologii, Leningrad, USSR) Fiziologicheskii Zhurnal SSSR (ISSN 0015-329X), vol. 72, Jan. 1986, p. 48-55. In Russian. refs

Simple and complex behavioral patterns in man and rats were analyzed in conditions of the surplus and deficiency of dopamine. In rats, the development of situational reactions and conditioned reflexes at levels of increasing complexity correlated linearly with the contents of dopamine in neostriatum and with the dose of injected dopamine. In noninjected rats, the development of complex reflexes was accompanied by the increased biosynthesis of neostriatum dopamine. The time and the number of errors in the performance of simple psychomotor tasks by patients with drug-induced Parkinsonism were comparable to those of normal subjects. Complex psychomotor activity, however, was impaired in these patients. It is concluded that the dopaminergic system is engaged only in psychomotor activities requiring the cooperation of cerebral cortex. I.S.

A86-33071
CORTICORETICULAR INTERACTIONS IN THE MECHANISMS OF REFLEXOTHERAPY [KORKOVO-RETIKULIARNYE VZAIMOOTNOSHENIIA V MEKHANIZMAKH REFLEKSOTERAPII]
R. A. DURINIAN (Tsentralnyi Nauchno-Issledovatel'skii Institut Refleksoterapii, Moscow, USSR) Fiziologicheskii Zhurnal SSSR (ISSN 0015-329X), vol. 72, Jan. 1986, p. 56-60. In Russian. refs

Functional interactions between reticular formations of the brain stem and the cerebral cortex during transmissions of stimuli are discussed, together with the role of these interactions in the methodology of reflexotherapy. The stimulation of various acupuncture loci situated above afferent collectors (e.g., on the surfaces of the head, face, and concha auriculae) increases the general tonicity of the organism, stimulating its vegetative-endocrine functions and immune systems, and removing the feeling of fatigue. More local, specific corticorecticular activation by means of drugs or physical stimuli induces specific reflex reactions controlled by the corticofugal system. I.S.

THE THEORETICAL PRINCIPLES OF ADAPTATION [TEORETICHESKIE OSNOVY ADAPTATSII]
I. A. SAPOV and V. S. NOVIKOV Fiziologicheskii Zhurnal SSSR (ISSN 0015-329X), vol. 72, Jan. 1986, p. 78-82. In Russian. refs

The principle of adaptation is based on the inherited ability of an organism to maintain stable equilibrium with the environment and to make rapid adjustments in various physiological processes to accommodate environmental changes. The regulatory, energy-producing, and nonspecific components of the physiological adaptation complex are discussed. Activity of the central nervous system is believed to play the foremost role in physiological adaptation, correlating the environmental information with the internal activity of the organism and regulating other processes, including the energy-regulating activity of the sympathoadrenal system and the activity of nonspecific protective systems. I.S.

A86-33073
BLOOD TRANSPORT OF OXYGEN (THE ROLE OF ERYTHROCYTES) [TRANSPORT KISLORODA KROV'IU /ROL' ERITROTSITOV/]
O. I. MOISEEVA (AN SSSR, Institut Fiziologii, Leningrad, USSR) Fiziologicheskii Zhurnal SSSR (ISSN 0015-329X), vol. 72, Jan. 1986, p. 93-103. In Russian. refs

The factors determining blood transport of oxygen and its utilization by body tissues are described. Environmental changes (i.e., by smoking or hyperventilation), erythrocyte numbers and shape, and the factors determining the affinity of hemoglobin to oxygen are discussed. Quantitative differences exhibited by various body organs under oxygen deficiency are noted. Special consideration is given to changes in the oxygen affinity of hemoglobin caused by genetically determined faulty hemoglobin chains and by variations in the availability of 2,3-diphosphoglycerate, as well as to the mechanisms of adaptation to these changes. Corrective therapeutic measures include oxygenotherapy in cases of impaired ability of lungs to deliver oxygen, and hemotransfusion in conditions of erythrocyte shortage. Elevated oxygen affinity caused by genetically determined faulty hemoglobin cannot be treated. I.S.

ANALYSIS OF THE FUNCTIONAL STRUCTURE OF THERMOGENESIS ON THE BASIS OF PHARMACOLOGICAL TESTS [OPYT ANALIZA FUNKTSIONAL'NOI STRUKTURY TERMOGENEZA NA OSNOVE FARMAKOLOGICHESKOGO TESTIROVANIIA]
L. A. IUDANOVA, R. P. VALOV, and V. V. KHASKIN (Institut Fiziologii, Novosibirsk, USSR) Fiziologicheskii Zhurnal SSSR (ISSN 0015-329X), vol. 72, Jan. 1986, p. 109-115. In Russian. refs

The effects of noradrenaline and propranolol on total heat production and contractile thermogenesis were studied in cold-adapted and control rats and in lemmings caught on Wrangel Island. Oxygen consumption, rectal temperature, and the integrated

activity of the trapezius muscle were measured at different ambient temperatures. In rats, the regulatory and adaptive increases in heat production occur due to elevated noncontractile thermogenesis and to a significant extension of the adrenergically modulated fraction of contractile thermogenesis. Propranolol injections led to increases in noncontractile thermogenesis, which was 2.3 times greater in the cold-adapted rats than in the controls. In lemmings, the adaptability to cold is maintained chiefly by rapid activation of the beta-adrenergic control of chemical thermogenesis and causes no alterations in muscle energetics. I.S.

The fourth issue of NASA's USSR Space Life Science Digest includes abstracts for 42 Soviet periodical articles in 20 areas of aerospace medicine and space biology and published in Russian during the last third of 1985. Selected articles are illustrated with figures and tables from the original. In addition, translated introductions and tables of contents for 17 Russian books on 12 topics related to NASA's life science concerns are presented. Areas covered are: adaptation, biological rhythms, biospherics, body fluids, botany, cardiovascular and respiratory systems, cytology, developmental biology, endocrinology, exobiology, habitability and environmental effects, health and medical treatment, hematology, histology, human performance, immunology, mathematical modeling, metabolism, microbiology, musculoskeletal system, neurophysiology, nutrition, perception, personnel selection, psychology, and radiobiology. Two book reviews translated from the Russian are included and lists of additional relevant titles available in English with pertinent ordering information are given. Author

USE OF MEMBRANE VESICLES AS A SIMPLIFIED SYSTEM FOR STUDYING TRANSPORT OF AUXIN Progress Report
M. H. GOLDSMITH 1985 2 p refs
(Contract DE-FG02-85ER-13337)
(DE86-002264; DOE/ER-13337/1) Avail: NTIS HC A02/MF A01

The accumulation of indoleacetic acid (IAA) inside microsomal vesicles depends on the presence of a pH gradient and is reversible when the (DELTA)pH is collapsed by ionosphores. Accumulation is stimulated by either napthylphthalamic acid or TIBA. The accumulation of IAA by the vesicles can be saturated. At concentrations of 1 microns or less, IAA, synthetic auxins, or auxin antagonists do not affect the pH gradient, but decrease the accumulation of (3)H-IAA, and therefore compete specifically for uptake. Concentrations of 10 microns and above, uptake of either the auxins or weak acids is sufficient to overcome the buffering capacity of the solution within the vesicles. The collapse of the pH gradient by such high concentrations affects uptake of either (3)H-IAA or (14)C-BA to similar extents and thus is nonspecific. DOE

ANNUAL REPORT AND SUMMARIES OF FY 1985 ACTIVITIES SUPPORTED BY THE DIVISION OF BIOLOGICAL ENERGY RESEARCH
Nov. 1985 48 p
(DE85-009132; DOE/ER-0147/3) Avail: NTIS HC A03/MF A01

The Biological Energy Research (BER) program of the Office of future energy-related biotechnologies are discussed. The study of green plants as producers of renewable resources is a key aspect of the program. Plant productivity encompasses a broad array of processes, integrated to form a complex whole, the producing plant. Another major aspect of the research program examines microbiological conversions that yield fuels and/or chemicals. These bioconversion processes can provide a substitute for fossil energy resources directly or through energy conserving measures in which biological mechanisms displace industrial energy input requirements (e.g., biological nitrogen fixation, recovery of key resources from dilute concentrations, and conversion of noxious waste products to usable materials carbon monoxide to organic acids). In each instance, the research is aimed at understanding the fundamental mechanisms of conversion rather than a description or optimization of a process. One hundred twenty-five projects are described with subject and investigator indexes. DOE

EFFECTS OF 60 HZ ELECTRIC FIELDS ON OPERANT AND SOCIAL STRESS BEHAVIORS OF NONHUMAN PRIMATES Annual Report, 5 Aug. 1984 - 25 Oct. 1985
W. R. ROGERS, J. H. LUCAS, G. T. MOORE, and J. L. ORR 1985 51 p
(Contract DE-AC02-80RA-50219)
(DE86-002587; DOE/RA-50219/T6) Avail: NTIS HC A04/MF A01

Operant behavioral methods have been used to assess the aversiveness of intense electric fields. One aspect of the aversiveness of a stimulus is the ability to act as a negative reinforcer. A negative reinforcer is a stimulus whose response contingent termination maintains behavior. Baboons were trained to perform an operant task to obtain food rewards, determined that the addition of an intense electric field did not disrupt performance, measured the background level of responding in the absence of any primary reinforcers, assessed the ability of electric field termination to maintain operant responding, and verified that the electric field could serve as a discriminative stimulus. BIOCHEMICAL MODELS FOR STUDY OF NERVE CELL PROCESSES
In its USSR Report: Life Sciences. Biomedical and Behavioral Sciences (JPRS-UBB-86-002) p 2 8 Jan. 1986 Transl. into ENGLISH from Meditsinskaya Gazeta (Moscow, USSR), 18 Sep. 1985 p 3
Avail: NTIS HC A06

Biochemical models for the study of nerve cells were developed to obtain knowledge of the human brain. Neurochemistry studies the most important processes in living organism that are connected with neural control, memory and thinking. To understand the mechanism of these processes means to recognize the form in

which the nervous system receives external and internal information and reacts to it. Vitally important substances were isolated and studied. The information makes it possible to develop preparations for treating diseases of the nervous system, new anesthetics, and artificial memory systems built according to biological principles. E.A.K.

INTERACTION OF ASIALOGLYCOPROTEIN RECEPTOR OF HEPATOCYTES WITH CHEMICALLY GALACTOSILATED ACID ALPHA-GLUCOSIDASE Abstract Only
N. K. BYSTROVA *In its* USSR Report: Life Sciences. Biomedical and Behavioral Sciences (JPRS-UBB-86-002) p 3 8 Jan. 1986 Transl. into ENGLISH from Doklady Akademii Nauk SSSR (Moscow, USSR), v. 284, no. 4, Oct. 1985 p 994-996
Avail: NTIS HC A06

The interaction of a mouse hepatic asialoglycoprotein receptor with chemically galactosilated alphaglucosidase (AGC) was studied to determine the feasibility of using such receptors for introducing AGC into hepatic lysosomes. It was shown that binding was specific and predicated on the presence of the galactosyl residue in the AGC molecule. Various galactose-containing substances inhibited the binding to variable extent, with the greatest degree of inhibition exhibited by asialoorosomucoid. The EDTA inhibited binding by more than 79%, confirming the dependence of binding on the presence of calcium ions, a characteristic feature of asialoglycoprotein receptors. It is indicated that under in vitro conditions the receptor recognizes galactosilated AGC as a specific ligand, suggesting that such enzymes can be introduced in this way into hepatic parenchymal cells. This uggests a means of enzyme therapy in such cases as type II glycogenosis. E.A.K.

PROTEIN-PROTEIN INTERACTIONS IN SYSTEMS WITH SYNTHETIC POLYELECTROLYTES Abstract Only
A. L. MARGOLIN, S. F. SHERSTYUK, V. A. IZUMRUDOV, V. K. SHVYADAS, A. B. ZEZIN, and V. A. KABANOV *In its* USSR Report: Life Sciences. Biomedical and Behavioral Sciences (JPRS-UBB-86-002) p 4 8 Jan. 1986 Transl. into ENGLISH from Doklady Akademii Nauk SSSR (Moscow, USSR), v. 284, no. 4, Oct. 1985 p 997-1001
Avail: NTIS HC A06

The efficiency of interaction of alpha-chymotrypsin (ACT) with its basic pancreatic inhibitor on the basis of kinetic data was assessed by using free ACT and ALT covalently linked to polyelectrolytes. The association rate constants in pH 7.5 phosphate buffer at 25 was determined and shows that for the free enzyme in solution, ACT-polymethacrylate complex, and for the CH-agarose linked preparation of ACT, the following values are calculated: 2.8 x 1/10,000, 18.0 x 1/10,000, and 1.4 x 1/10,000 M1/sec-1. The inhibition constants for the three versions of ACT were 3.60 x 10 to the 8th power, 0.40 x 10 to the 8th power and 26.0 x 10 to the 8th power M. It is shown that the methods of enzyme linkage to polyelectrolyte carrier and the nature of the carrier have a profound effect on the binding behavior of the enzyme, and that such facts can be used to alter enzyme behavior toward desired final effects. E.A.K.

PRODUCTION OF GENE BANK FROM COTTON PLANT CHLOROPLAST DNA FOI HC/MF
M. KARIMOV, G. V. AFANASYEVA, and N. I. MATVIYENKO *In its* USSR Report: Life Sciences. Biomedical and Behavioral Sciences (JPRS-UBB-86-002) p 16-21 8 Jan. 1986 refs Transl. into ENGLISH from Doklady Akademii Nauk Tadzhiksoy SSR (Dushanbe, USSR), v. 28, no. 3, Mar. 1985 p 175-178
Avail: NTIS HC A06

The development of model systems that could make it possible to express eukaryotic genes is discussed. The symbiosis of Agrobacterium tumefaciens in higher plants is used to insert foreign genes into the plants. The plasma genes that are located in the cytoplasm organelles of higher plants, particularly in the chloroplasts are examined. Chloroplast DNA has enough information for the synthesis of a number of protein structures, and its amplification level relies on the expression of its own DNA and foreign DNA altered by genetic engineering techniques. Ribosomal RNA genes of plastids and a large subunit of riboso-diphospate carboxylase are encoded by a chloroplast gene. The insertion of strong promoters into these genes and their supplemental modification, affects the level of photosynthetic activity in plant tissue. One of the stages in changing a genetic program of agricultural plants is the creation of a gene bank of chloroplast DNA. It is demonstrated that the enzyme method of isolating protoplasts from cotton plant leaves followed by mechanical lysis and the lysis of chloropplasts in the presence of proteinase k and supplemental purification on biogel A-50, results in the separation of high polymerchloroplast DNA. E.A.K.

EFFECT OF PLASMIDS ON VIRULENCE OF PSEUDOMONAS AERUGINOSA STRAINS IN MOUSE EXPERIMENTS Abstract Only
A. S. YANENKO, V. N. KRYLOV, Y. S. STANISLAVSKIY, and Y. V. KHOLODKOVA *In its* USSR Report: Life Sciences. Biomedical and Behavioral Sciences (JPRS-UBB-86-002) p 34 8 Jan. 1986 Transl. into ENGLISH from Zhurnal Mikrobiologii, Epidemiologii i Immunobiologii (Moscow, USSR), no. 7, Jul. 1985 p 19-22
Avail: NTIS HC A06

The effect of plasmids on the virulence of P. aeruginosa PAO strain is reported. Antigen characteristics of P. aeruginosa strains were studied in agglutination reaction on glass with the aid of poly or monovalent agglutinating O-serums of 20 different types. The virulence of 21 strains was studied on white mice. It is shown that the plasmids in PAO strains reduced the virulence of the pathogen. The plasmids that reduce virulence were from various groups of incompatibility and coded various medical resistant determinants with various effects on the growth of P. aeruginosa. Mutations of rpm that stabilized RP4 support in PAO cells also reduced virulence significantly. Chromosome rpm mutations caused changes in cell surfaces of P. aeruginosa. E.A.K.

SEARCH FOR DNA HOST SPECIFICITY SYSTEMS IN SALMONELLA TYPHI Abstract Only
A. L. PASHENKOV, I. I. NIKOLSKAYA, T. G. NIGMATULLIN, and S. S. DEBOV *In its* USSR Report: Life Sciences. Biomedical and Behavioral Sciences (JPRS-UBB-86-002) p 57 8 Jan. 1986 Transl. into ENGLISH from Zhurnal Mikrobiologii, Epidemiologii i Immunobiologii (Moscow, USSR), no. 4, Apr. 1984 p 3-6
Avail: NTIS HC A06

Most specificity systems and their components-restriction and modification enzymes were studied. DNA host specificity systems (HSS) in Salmonella typhi, using O- and Vi-bacteriophages were examined. Reduced effectiveness in phage cultivation was regarded as evidence of a restriction system in a given race. During cloning

morphological features such as colony size and form, transparency and the size of negative colony centers and incomplete lysis were recorded. The 11 lines of Vi-phages and 6 lines of O-phages obtained are further classified according to size, transparency and titration potential. Test cross-titration showed DNA HSS in natural hosts and the test phages. It is shown that 10 strains among the titrated lines of S. typhi have DNA host specificity systems.

MODEL OF EXPERIMENTAL PIXUNA VIRUS INFECTION IN WHITE MICE
N. P. CHIZHOV and R. I. LUKYANOVA *In its* USSR Report: Life Sciences. Biomedical and Behavioral Sciences (JPRS-UBB-86-002) p 91-93 8 Jan. 1986 refs Transl. into ENGLISH from Voprosy Virusologii (Moscow, USSR), no. 2, Mar. - Apr. 1985 p 214-215
Avail: NTIS HC A06

Use of experimental models of virus-infected animals is an important prerequisite of evaluating the spectrum of action of promising antiviral drugs. The development and use of new experimental models of virus infections comparable or similar in pathogenesis to human diseases are significant in the determination of the preventive and therapeutic effectiveness of antiviral drugs. The development of a nonlethal model of experimental infection evoked by Pixuna alpha-virus which is suitable in the evaluation of the effectiveness of antiviral drugs is discussed. The model of nonlethal disease in white mice which is evoked by Pixuna alpha-virus can be used to evaluate the effectiveness of antiviral preparations and interferon inducers. The models critera for evaluating the effectivenss of antiviral preparations are heir influence on viruse reproduction in the spleen and brain. E.A.K.

EXPERIMENTAL EVALUATION OF PATHOGENICITY OF DIFFERENT VARIANTS OF LASSA VIRUS
A. S. VLADYKO, L. Y. SURIKOVA, T. A. VOVK, I. A. CHEREDNICHENKO, and A. V. TOROP *In its* USSR Report: Life Sciences. Biomedical and Behavioral Sciences 8 Jan. 1986 refs Transl. into ENGLISH from Voprosy Virusologii (Moscow, USSR), no. 4, Jul. - Aug. 1985 p 454-457
Avail: NTIS HC A06

Lasso, Machupo and Khunin belong to the highly pathogenic group of the arenavirus family. Research is conducted with the less-pathogenic lymphocytic choriomeningitis (LCM) virus. One of the directions of research on arenavirus infections is concerned with the problems of the attenuation--acquisition of both nonpathogenic viruses and viruses with reduced pathogenicity. The characteristics (markers) by which the degree of attenuation of the infectious agent can be evaluated was examined. It is established, using LCM virus as an example, that a phenotypic characteristic such as plaque morphology can be used as such a marker. It was discovered that the color of plaques in viruses that do not evoke death of newborn mice differs from the color of plaques created by the initial virus. A dependence between plaque phenotype and pathogenicity is not discovered in LCM virus. The Lassa virus was used to demonstrate the presence of a dependence between plaque phenotype and pathogenicity. The possibility of reducing pathogenicity by conducting a number of passages of the virus in cell culture and in animals is accounted for. Plaque size serves as the phenotypic characteristic of attenuation of Lassa virus. E.A.K.

Luminescent microscopy as a method for studying pathogenesis of human and animal viral infections is discussed. The dynamics of the intensity of imposed fluorescence of marked antibodies tied to the antigen of Japanese encephalitis in vitro were studied. Cells of various origins were tested a passive fluorescent antibody method. Procedures for standardization and perfection of methodology and statistical calculations are summarized. A direct linear correlation is found between pathogen activity of Japanese encephalitis and the intensity of imposed fluorescence of marked antibodies. Continuous Viro and L929 cell cultures are more suitable models for registering induced fluorescence than the HeLa line.

METEOROLOGICAL ADAPTATION RESEARCH AT BIOLOGY INSTITUTE Abstract Only
V. N. CHERNYAVSKIY *In its* USSR Report: Life Sciences. Biomedical and Behavioral Sciences (JPRS-UBB-86-002) p 108-109 8 Jan. 1986 Transl. into ENGLISH from Trud (Moscow, USSR), 26 Sep. 1985 p 3
Avail: NTIS HC A06

Natural mechanisms of anticipation of weather changes in animals and human beings, and effects of weather conditions on human behavior and working fitness were studied. A natural phenomenon, meteorological sounds noise of free atmosphere which is caused by turbulent motion of the air was discovered. The sound reflect the atmosphere properties in a certain area.

including the appearance of new air masses in the upper atmosphere. Living organisms unconsciously perceive these sounds, analyze them and modify their behavior accordingly. A hypothesis of human meteorological adaptation proposed that the organism perceives and remembers whole meteorological sound-images which occur at certain intervals in certain localities, and corresponding programs for the readjustment of functional systems of the organism. The biological forecasting mechanism may lead to the development of improved weather-forecasting methods and equipment. An acoustic weather-forecasting method was used in the Rostov-na-Donu area. A medical forecasting method using primary data, based on the meteorological-adaptation hypothesis was also developed. Ecological factors are considered in the forecasting and prevention of illness. (AD-A161867; WES/MP/A-85-3) Avail: NTIS HC A04/MF A01 CSCL 06F

Of the several controlled release herbicide formulations evaluated in FY83, two monolithic polycaprolactone fibers containing fluridone have been found to have significant potential. These fibers, designed to maintain herbicide-plant contact over a period of four to 6 weeks, were proven effective in controlling hydrilla (Hydrilla verticillata Royle) at 2.2 kg a.i./ha (active ingredient per hectare) in flowing water in large outdoor aquaria. Under the same conditions, the commercial formulation Sonar 4AS provided no hydrilla control. Two silicate capsules of dichlobenil showed promising results in the laboratory and were selected for evaluations in large outdoor aquaria in which long-term control of hydrilla regrowth was assessed. Research concerning application of glyphosate indicated that decreasing carrier volume increased phytotoxicity of glyphosate to waterhyacinth, mainly by enhancing herbicide retention and penetration. A treatment of 1.7 kg a.e./ha (acid equivalent per hectare) glyphosate in 438 L/ha water carrier resulted in faster and longer lasting control than did 2.8 kg a.e./ha in 935 L/ha. Long-term effects from glyphosate on torpedograss in standing water were significantly reduced compared to activity achieved on ditchbanks. Studies with 14C-glyphosate indicated that herbicide translocation was impeded in standing water. Sulfumeturon at 0.02 kg a.i./ha completely eradicated waterhyacinth in a 0.07-ha pond in Fort Lauderdale. Residue analyses indicated that levels of 1.3 to 1.6 microgram/L sulfumeturon were present in water 24 hr after application; then decreased rapidly. GRA

This report contains summaries of a conference on biosensors, along with the deliberations of the Commitee on Biotechology Applied to Naval Needs. For the purposes of this report, biosensors are defined as devices that utilize some principles or elements of biology, broadly defined, to generate a signal in response to a specific material substance or condition. The committee considered that the appropriate areas of biology to consider were the study of receptors, enzymology, the use of DNA as a detector, immunologly, and the development of synthetic analogs to the relevant natural biological reactions. In contrast to a recent report prepared by the NRC's Board on Army Science and Technology, entitled Assessment of Chemical and Biological Sensor Technologies, which was written in response to a very narrowly and sharply defined charge, the present report focuses on basic biology relevant to biosensors. CLONING AND ANALYSIS OF GENES FOR ANTHRAX TOXIN COMPONENTS
S. H. LEPPLA, D. L. ROBERTSON, S. L. WELKOS, L. A. SMITH, and M. H. VODKIN 29 Aug. 1985 6 p
(Contract S18-06)
(AD-A161901) Avail: NTIS HC A02/MF A01 CSCL 06O

Genetic analysis and DNA cloning techniques have been used to study the plasmids and genes which determine synthesis of the three protein components of anthrax toxin. After plasmid curing and transfer experiments showed that all three genes were probably located on the large B. anthracis plasmid pX01, DNA libraries of pX01 DNA were constructed. Five colonies containing at least part of the lethal factor gene and six colonies containing protective antigen DNA were identified, and their plasmids were mapped by restriction enzyme digestion. The absence of an equal number of edema factor (EF) recombinants was attributed to the possibility that the EF adenylate cyclase is toxic to the host E. coli.

IDENTIFICATION OF VACCINE RESISTANT ISOLATES OF BACILLUS ANTHRACIS
S. F. LITTLE and G. B. KNUDSON 13 Nov. 1985 23 p
(AD-A162002) Avail: NTIS HC A02/MF A01 CSCL 06M

Several strains of Bacillus anthracis have been reported previously to cause fatal infection in immunized guinea pigs. In this study, guinea pigs were immunized with either a protective antigen vaccine or a live Sterne strain spore vaccine, then challenged with virulent B. anthracis strains isolated from various host species from the United States and foreign sources. The authors concluded that antibodies to toxin components may not be sufficient to provide protection against all strains of B. anthracis, and that other antigens may play a role in active immunity. As a practical matter, it follows that the efficacy of anthrax vaccines must be tested by using vaccine-resistant isolates if protection against all possible challenge strains is to be assured. GRA

THE EFFECTS OF BIS (TRI-N-BUTYLTIN) OXIDE ON THREE SPECIES OF MARINE PHYTOPLANKTON Final Technical Report, Jun. - Jul. 1982
S. M. SALAZAR May 1985 19 p
(Contract DA PROJ. Z08-29; DA PROJ. ZR0-0001)
(AD-A162115; NOSC/TR-1039) Avail: NTIS HC A02/MF A01 CSCL 07B

The effects of three concentrations of bis (tri-n-butyltin) oxide (TBTO) 1.5, 3.0, and 6.0 ppb) on three species of marine

phytoplankton were assessed. Parameters measured were in vivo fluorescence and DCMU induced fluorescence. Fluorescence ratios were calculated from these values. The effects of TBTO exposure varied considerably from species to species. Gymnodinium splendens was the most sensitive, affected by all concentrations of TBTO. Dunaliella sp. demonstrated inhibition of growth at 3.0 and 6.0 TBTO after 3 days. No measurable effects were detected for Phaedactylum tricornutum at any of the TBTO exposures. These data indicate the effect of TBTO on marine phytoplankton may be species specific. GRA

(Contract AF PROJ. 723-1)

(AD-A162848; AAMRL-TR-85-060) Avail: NTIS HC A04/MF A01 CSCL 06O

Four young male Rhesus monkeys were exposed to intramuscular injections of ketamine anesthetic (15 mg/kg) on eight selected days of a 28 day experiment. The subjects were dosed with bone labeling compounds to determine the effect ketamine had on bone modeling/remodeling dynamics. Trabecular bone sections of T sub 9 and L sub 4, and cortical bone sections of proximal femur and midshaft femur were used for histomorphometric analysis. Urine creatinine and calcium, and serum alkaline phosphatase and calcium levels were determined. Vertebral centrum compression tests were conducted on selected thoracic and lumbar levels. Stiffness, ultimate load and modulus showed significant increases in the ketamine exposure group. The results of the trabecular histomorphometry showed a possible increase in mineralization lag time or slower mineralization. Cortical bone histomorphometry could indicate activation of the skeletal system. The experimental results lead to the conclusion that something affected the mechanical strength parameters and the bone remodeling dynamics of the ketamine exposure group. It is unclear as to whether these differences are strictly due to ketamine as stress and age difference were other influencing factors. GRA

BIOLOGICAL EFFECTS AND PHYSICAL SAFETY ASPECTS OF NMR IMAGING AND IN VIVO SPECTROSCOPY

T. S. TENFORDE and T. F. BUDINGER Aug. 1985 60 p refs Presented at the American Association of Physicists in Medicine Summer School, Portland, Ore., 4 Aug. 1985

(Contract DE-AC03-76SF-00098)

(DE86-002966; LBL-20053; CONF-8508145-1) Avail: NTIS HC A04/MF A01

An assessment is made of the biological effects and physical hazards of static and time-varying fields associated with the NMR devices that are being used for clinical imaging and in vivo spectroscopy. A summary is given of the current state of knowledge concerning the mechanisms of interaction and the bioeffects of these fields. Additional topics that are discussed include: (1) physical effects on pacemakers and metallic implants such as aneurysm clips, (2) human health studies related to the effects of exposure to nonionizing electromagnetic radiation, and (3) extant guidelines for limiting exposure of patients and medical personnel to the fields produced by NMR devices. On the basis of information available at the present time, it is concluded that the fields associated with the current generation of NMR devices do not pose a significant health risk in themselves. However, rigorous guidelines must be followed to avoid the physical interaction of these fields with metallic implants and medical electronic devices. DOE

HELICOPTER-CONTROL-REFERENCED STRENGTH CAPABILITIES OF SMALL INDIVIDUALS

A. W. SCHOPPER and G. R. MASTROIANNI (U.S. Army, Aeromedical Research Laboratory, Fort Rucker, AL) IN: Symposium on Aviation Psychology, 3rd, Columbus, OH, April 22-25, 1985, Proceedings . Columbus, OH, Ohio State University, 1985, p. 47-54. refs

An evaluation is made of helicopter control-referenced force exertion capabilities in a sample of U.S. Army males and females, with a view to the reevaluation of anthropometric criteria. These data were compared with the values cited as upper force limits for the design of helicopter controls. Due to their small size, these females of 152-167 cm stature and males of 159-167 cm stature represent the portion of the population least likely to meet 1961 strength limits for nonstandard flight maneuvers. Ten percent of the males and 27 percent of the females evaluated failed to achieve existing control force design limits, especially in the downward direction of collective control. O.C.

AEROSOL DEPOSITION ALONG THE RESPIRATORY TRACT AT ZERO GRAVITY - A THEORETICAL STUDY

B. E. LEHNERT, D. M. SMITH, L. M. HOLLAND, M. I. TILLERY (Los Alamos National Laboratory, NM), and R. G. THOMAS (Los Alamos National Laboratory, NM; DOE, Office of Health and Environmental Research, Washington, DC) IN: Lunar bases and space activities of the 21st century . Houston, TX, Lunar and Planetary Institute, 1985, p. 671-677. DOE-supported research. refs

Attention is given to the results of a study conducted to predict the ways in which particle deposition in the human respiratory tract at zero gravity may differ from that on earth. The aerosol deposition model of the Task Group on Lung Dynamics (1966) was used to assess the regional deposition of particles ranging from 0.01 to 10.0 microns in diameter at particulate density values of 1 and 4, during simulated tidal breathing as well as breathing during moderate-to-heavy exercise. The results suggest that the gas exchange regions of the lungs of space travelers and residents are afforded some protection, relative to their earthbound counterparts, against particle deposition in the absence of gravity; a reduction by a factor of approximately 2 to 10 is noted in collection efficiency for the case of particles greater than 0.5 microns in diameter. Deposition along the tracheobronchial tree is not significantly altered in the absence of gravity, indicating that airway

sites contributing to this structure remain susceptible to inhaled aerosols. O.C.

CRITICAL IMPACT AND ACCELERATION LOADING TO THE HEAD
W. GOLDSMITH (California, University, Berkeley) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-21 to S-24. refs
(Contract NIH-5-R01-AM-18284)

Various loads to the human head are of a few milliseconds duration are surveyed including nonpenetrating blunt impact to the cranium and rotational acceleration loading. Head impact during sporting events is also discussed along with loads experienced in a cannon-bearing military vehicle, whereby gunners are subjected to a direct blow to the head by gun recoil as well as to a wave transmitted through the seat. Experiments that would identify the threshold of very serious, frequently fatal cranial injury caused by blunt impact to the human head, were conducted using extrapolation, scaling, modeling and by extension of impact data from human replicas. Previous assertions equating skull fracture with concussion were proven invalid, as results indicated that skull fracture requires twice the acceleration levels for neutral trauma. It was noted that brain damage can also be caused by indirect loading and that primates exhibit a higher concussion tolerance when exposed to a given level of linear acceleration regardless of simultaneous angular acceleration. IS SPACE SICKNESS A FORM OF MOTION SICKNESS?
H. L. BORISON (Dartmouth College, Hanover, NH) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 12-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-25 to S-27. refs

A comparison is made of space sickness and terrestrial motion sickness with respect to stimulus properties, response properties and contributing mechanisms. Observations are restricted, as far as possible to spontaneous occurrences of space sickness free from extraneously occurrences of space sickness free from extraneously imposed test motions. Likewise, terrestrial motion sickness is examined under the simplest conditions for its evocation. Convincing differences are evident in some of the stimulus and response properties of the two sickness syndromes while others are equivocal. Possible mechanisms of space sickness are all unproved. It is concluded that decisive experiments on the vestibluar system and the emetic reflex mechanism must be performed in microgravity to erase reasonable doubts that space sickness is a form of motion sickness. EFFECTS OF GRAVITY ON THE FLUID BALANCE AND DISTRIBUTION IN MAN
D. LINNARSSON, B. TEDNER, and O. EIKEN (Karolinska Institutet, Stockholm, Sweden) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-28, S-29. refs

Marked fluid shifts have been observed during space flight and simulated microgravity. Three components can be identified: First, a rapid cephalad blood shift; second, a shift of extravascular fluids from the legs within hours; and third, a net loss of water within days. We have investigated the second phase in seven healthy men during 7 deg HDT. Segmental fluid distribution and changes in total body fluids were monitored by means of a tetrapolar impedance technique. Leg fluid volume was reduced as an exponentially decaying function of time, with time constants of 25-50 minutes. No simultaneous increase in the fluid volume of the trunk could be detected. This indicates that the fluid removed from the legs then is to be found in the blood. Our results also show the feasibility of the impedance technique to monitor fluid changes during microgravity. (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-30 to S-33. Research supported by DIGITAL France, CNES, DRET, and CNRS. refs

The decrease of hydrostatic pressure during space flights (microgravity state) or simulations of weightlessness (by immersion, bedrest or head-down tilt) results in body fluid shift and an engorgement of the central circulation where mechanoreceptors involved in plasma volume regulation are located. Their activation induces the initial (first hours) hormonal response with a decrease in plasma vasopressin, renin and aldosterone and an increase of natriuretic factor (Gauer reflex). The long term effects of weightlessness are linked to electrolyte disturbances, mainly a sodium loss which induces an increase in plasma renin and aldosterone and an amplification of the circadian rhythm renin activity. The discrepancies between the results of different studies could be explained by several factors (training level of subjects, diet, the subjects posture during the control period). Author

FLUID AND ELECTROLYTE CONTROL IN SIMULATED AND ACTUAL SPACEFLIGHT
C. S. LEACH and P. C. JOHNSON, JR. (NASA, Johnson Space Center, Houston, TX) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-34 to S-37. refs

Effects of microgravity on body fluid distribution and electrolyte and hormonal levels of astronauts have been studied since the early manned space missions. Bedrested subjects have been used as controls to separate effects of microgravity from those of hypokinesia. These investigations have led to documentation of the physiological effects of spaceflight and to a unified theory of response to microgravity. During flight, crewmembers have decreased thirst and a net loss of body water, sodium, and potassium. These changes seem to be initiated by passive transfer of extracellular fluid resulting in increased central venous pressure (CVP), to which the homeostatic mechanisms respond. A new equilibrium state is maintained during flight; it does not change in response to negative calcium and nitrogen balances during flight. On reexposure to gravity, profound water and salt retention occurs to replete extracellular fluid. Attempts to avoid cardiac deconditioning by repleting water and salt before leaving microgravity have somewhat ameliorated postural hypotension but have had little effect on CVP, cardiac chamber size or electrolyte dynamics. Author

MECHANISMS FOR NEGATIVE WATER BALANCE DURING WEIGHTLESSNESS IMMERSION OR BED REST?
J. E. GREENLEAF (NASA, Ames Research Center, Moffett Field, CA) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-38, S-39. refs

Results of bedrest and water immersion studies are of interest when formulating an hypothesis to explain inflight changes in water and electrolyte metabolism. A comparison of the two techniques is made, and it is found that the time course of fluid-electrolyte responses with bedrest occur more slowly than during weightlessness and faster with immersion. Hence, the head-down bedrest is the more appropriate model for simulation studies. The

facts lead to the following hypothesis: Because of the head-ward shift of fluid , there is a transient elevation of central venous pressure upon reaching weightlessness that is not sufficiently intense to significantly activate the vasopressin-diuresis mechanism. But the increased pressure is of significant intensity to release atrial natriuretic peptides. A hypotonic fluid moving into the cells contributes to edema and inhibits thirst. In this manner, astronauts gradually lose body water as a result of slightly increased urinary sodium coupled with decreased fluid intake. These responses continue until a new fluid-electrolyte steady state is attained at a reduced level of total body water. Author

CARDIORESPIRATORY RESPONSES TO LOWER BODY NEGATIVE PRESSURE AND TILT TESTS AFTER EXPOSURE TO SIMULATED WEIGHTLESSNESS
V. P. KATUNTSEV, V. E. KATKOV, V. M. BARANOV, I. F. VIL-VILIAMS, and A. M. GENIN (Institut Mediko-Biologicheskikh Problem, Moscow, USSR) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-40 to S-42. refs

Experimental results are presented concerning the cardiorespiratory responses of healthy male volunteers to -30 mm Hg lower body negative pressure (LBNP) and tilt tests following 6-7 day exposure to simulated weightlessness. In the first series of experiments (LBNP) tests, the magnitude of the responses was significantly smaller than in the second (tilt tests). During LNBP tests there were no syncopal and presyncopal subjects, whereas during tilt tests all subjects developed presyncopic reactions with a decrease of blood pressure. Syncopic reactions were observed in three subjects during the filt tests. Symptoms of imminent syntilation accompanied by a marked decrease of PaCO2 were also observed. The role of extracardiac mechanisms of circulation regulation and arterial hypocapnia in the development of orthostatic intolerance is discussed in detail. I.H.

CIRCADIAN VARIATION OF VOLUME AND CONCENTRATION OF ORTHOSTATICALLY SHIFTED FLUID
M. MOSER, F. VAUTI, H. PINTER, and T. KENNER (Graz, Universitaet, West Germany) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-169, S-170. Research supported by the Oesterreichische Nationalbank.

The volume and density of the fluid shift due to postural change from supine to standing was measured for six male students at eight times of the day. Earlobe capillary blood samples were measured for blood and plasma density changes, and hematocrit; and the protein content was calculated. A minimum for all parameters was seen at six PM, and there is a variation of -21 percent to +13 percent from the mean of 7.4 percent of the blood volume. The filtrate density of the shifted fluid, determined by the 'mechanical oscillator technique', varied from 1007.6 g/l (O AM) to 1004.5 g/l (6 PM). An elevated filtration permeability during the night and a decreased permeability in the late afternoon are observed, pointing to an increased lower body filtration coefficient during the night hours. DAY COURSE OF BLOOD AND PLASMA DENSITY IN RELATION TO OTHER HEMATOLOGICAL PARAMETERS
F. VAUTI, M. MOSER, H. PINTER, and T. KENNER (Graz, Universitaet, West Germany) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-171, S-172. Research supported by the Oesterreichische Nationalbank. refs

The mechanical oscillator technique (MOT) was used to investigate the relationship between blood composition and intercompartmental fluid shifts with respect to gravity and daytime dependence. In six healthy young men, capillary blood was sampled from both earlobes in supine and upright head-up tilt position at eight different times of day under conditions of normal daily activity. The results demonstrated pronounced circadian alterations of hematological parameters, including values for hemoglobin, hematocrit, erythrocyte count, leucocyte count, and mass density of whole blood and plasma, in supine as well as in standing position. Lower amplitudes occurred in standing than in reclined position. It is concluded that MOT is a very useful method for studying fluid distributions in the cardiovascular system. C.D.

S-175, S-176. USVA-supported research. refs
(Contract NIH-AM-25501)

Studies of both simulated and actual weightlessness document significant regional fluid shifts within the body. One manifestation of weightlessness is the accumulation of fluid in the face as a result of the fluid shift away from lower extremities. Blood flow in lip capillaries was investigated in order to determine the relationship between microvascular flow and varying degrees of postural inversion. The head-down tilt posture (reversal of the normal hydrostatic pressure gradient between head and heart) is commonly used to simulate weightlessness in humans. Author

(Contract NIH-RR-07143)

Exercise-induced changes in blood lactate, 2,3-diphosphoglycerate, fibrinolytic activity (FA), and hemostatic activities of factor VIII complex subunits were investigated, using human subjects exercising to maximum effort on a treadmill. All parameters, which were analyzed before, immediately postexercise (IP), and 8 min postexercise, were found to significantly increase postexercise. A positive correlation was found between the IP lactate with the IP FA and factor VIII coagulant activity, and the correlation was strengthened by including the preexercise value of blood high-density lipoprotein (HDL) concentration. It is suggested that the IP lactate concentration and the preexercise HDL content may be useful components of a predictive index for identifying individuals with fibrinolytic system impairments. SOMATOSTATIN INHIBITS THE VENTILATORY RESPONSE TO HYPOXIA IN HUMANS
D. L. MAXWELL, P. CHAHAL, K. B. NOLOP, and J. M. B. HUGHES (Royal Postgraduate Medical School, London, England) Journal of Applied Physiology (ISSN 0161-7567), vol. 60, March 1986, p. 997-1002. Research supported by the Wellcome Trust. refs

The effect of a 90-min infusion of somatostatin on ventilation and the ventilatory responses to hypoxia and hypercapnia were investiated in human subjects by measuring minute ventilation, arterial O2 saturation, and arterial PCO2. Somatostatin greatly attenuated the hypoxic response and caused a small fall in resting ventilation, but did not affect the hypercapnic response. When the progressive ventilatory responses and overall metabolism were measured, the somatotoxin responses were found to be similar (mean fall in hypoxic response but no change in hypercapnic response), and no changes in overall O2 consumption or in CO2 production were observed. The results show a hitherto-unsuspected inhibitory potential of somatostatin on the control of breathing; the sparing of the hypercapnic response is suggestive of an action on the carotid body but does not exclude a central effect. I.S.

I VREMENNOI FAKTOR V FORMIROVANII SUBKOMPLEKSOV SISTEMNYKH FIZIOLOGICHESKIKH POKAZATELEI DINAMIKI FUNKTSIONAL'NYKH SOSTOIANII I APPARATURNOE OBESPECHENIE ISSLEDOVANII]
V. A. ILIUKHINA and S. G DANKO (Institut Eksperimental'noi Meditsiny, Leningrad, USSR) Fiziologiia Cheloveka (ISSN 0131-1646), vol. 12, Jan.-Feb. 1986, p. 25-37. In Russian. refs

The complex method used to study the functional stability and adaptive systemic reactions in man is based on correlating the dynamics of ultraslow physiological processes registered in the brain (such as the omega potential and ultraslow potential oscillations in the tau and zeta waves) with changes in vegetative indices and in the adaptive psychological reactions of memory, attention, and emotional display. A multiparameter instrumental system, which permits simultaneous registration of the ultraslow reactions and of the correlated adaptive psychophysiological reactions is described. The method is illustrated by a study of the effect of nacom in patients with Parkinsonism. I.S.

THE ROLE OF HORMONAL CHANGES IN THE DEVELOPMENT OF MOTION SICKNESS IN MAN [O ROLI IZMENENII GORMONAL'NOGO STATUSA CHELOVEKA V RAZVITII BOLEZNI DVIZHENIIA]
A. I. GRIGOREV, I. A. NICHIPORUK, and G. S. ARZAMAZOV Fiziologiia Cheloveka (ISSN 0131-1646), vol. 12, Jan.-Feb. 1986, p. 76-81. In Russian. refs

Clinical symptoms of experimentally induced motion sickness were correlated with measured blood contents of adrenocorticotropin, somatotropin, vasopressin, prolactin, cortisone, and aldosterone. The onset of motion sickness was found to coincide with sharp increases in somatotropin, vasopressin, and prolactin in highly susceptible but not in resistant subjects. The endocrine reactions indicate the involvement of the hypophyseal-hypothalamic system in the adaptive reactions expressed by the motion sickness syndrome. The role of the endogenous opiate-like compounds, such as enkephalins, in interconnecting the endocrine system and the neuromediating system is suggested. I.S.

THE ALLEVIATING EFFECT OF ARBITRARY MOVEMENTS ON THE VESTIBULOMOTOR [OBLEGCHAIUSHCHEE DEISTVIE PROIZVOL'NYKH DVIZHENII NA VESTIBULOMOTORNUIU REAKTSIIU]
B. N. SMETANIN, V. IU. SHLYKOV, and M. P. KUDINOVA (AN SSSR, Institut Problem Peredachi Informatsii, Moscow, USSR) Fiziologiia Cheloveka (ISSN 0131-1646), vol. 12, Jan.-Feb. 1986, p. 133-140. In Russian. refs

The effects of various arbitrary movements on manifestations of the vestibulomotor reaction were studied in human subjects receiving electrical stimuli to the vestibular apparatus. Certain body maneuvers, such as rapid sideward head movements, forward body bending, or arm swinging, had little or no effect. On the other hand, the destabilizing movements specifically associated with spatial displacements of the body and with postural rearrangements, such as rapid squatting, rapidly repeated rising on one's toes, or walking in place, incerased the compensatory motor reaction and lowered the threshold of its appearance. The observed effect was not caused by induced instability per se but had to do with the volitional initiation of the destabilizing movements. I.S.

DYNAMICS OF THE SALIVARY ELECTROLYTE COMPOSITION AND RENAL EXCRETORY FUNCTION DURING HUMAN ADAPTATION TO AN ALTERED GASEOUS ENVIRONMENT [DINAMIKA ELEKTROLITNOGO SOSTAVA SLIUNY I EKSKRETORNOI FUNKTSII POCHEK PRI ADAPTATSII CHELOVEKA K IZMENENNOI GAZOVOI SREDE]
N. A. AGADZHANIAN, A. I. ELFIMOV, and Z. B. MININA Fiziologiia Cheloveka (ISSN 0131-1646), vol. 12, Jan.-Feb. 1986, p. 157-164. In Russian. refs

The effects of increasing atmospheric contents of O2 and CO2 on the renal excretory function and on salivary electrolyte composition were studied in men kept in a controlled atmosphere. Elevated CO2 has led to increases in salivary potassium, with hyperoxia reinforcing the effect, while the kidney water excretion was inversely proportional to atmospheric oxygen content. Hypercapnia was seen to adversely affect renal ion and osmoregulating functions, but both of these could be normalized

by increasing the atmospheric oxygen to 29 percent. Atmospheric changes have also affected the circadian rhythms of diuresis and electrolyte concentrations. I.S.

CATCHING ZZZS IN ZERO-G
D. PINE Space World (ISSN 0038-6332), vol. W-2-266, Feb. 1986, p. 27-29.

A discussion on zero-g sleep over the history of the space program is presented. On the early flights, astronauts slept in their seats, whereas beginning with Apollo 7, they could stretch out and free float in sleep restraints. Shuttle improvements include bunks which help block out noise. An ESA designed restraint with inflatable tubes on the exterior helps prevent the feeling of free fall during sleep. Early experiments on reorganizing sleep/wake patterns were unsuccessful. A Skylab test found that stage-three sleep increased during the flight but decreased on return home, and that REM increased only after return home, indicating that the astronauts were still adapting to space. This test also indicated that the crew did not awake more frequency than normal in space, despite complaints of insomnia. R.R.

CORRELATION OF CONSTANT FLOW RATE WITH FREQUENCY SPECTRUM OF RESPIRATORY SOUNDS WHEN MEASURED AT THE TRACHEA
C. S. LESSARD and W. C. WONG (Texas A&M University, College Station) IEEE Transactions on Biomedical Engineering (ISSN 0018-9294), vol. BME-33, April 1986, p. 461-463. refs
(Contract F33615-83-F-0602-001)

The relationship between the spectral composition of respiratory sounds and respiratory flow rates was studied in normal subjects during inspiration and expiration at six constant flow rates. Respiratory sounds were measured with an electronic stethoscope placed at the anterior cervical triangle, while the flow rates were measured by a pneumotachometer. From each sound spectrum, the variable parameters of the mean frequency of the power spectra (MPF), the frequency of the maximum power, and the highest frequency at which the power in the spectrum is at least 10 percent of maximum power, were calculated. The expiratory spectra had higher frequency values than the inspiratory spectra. Of all variable parameters, only the MPF values were seen to increase linearly with increasing flow rate, and that only to the flow rate of 0.75 liter/s. Above the rate of 0.75 liter/s, all spectral parameters appear to level off during both inspiration and expiration. I.S.

DISTURBANCES IN THE NIGHT SLEEP STRUCTURE AND ORGANIZATION AND THEIR SIGNIFICANCE IN THE ADAPTIVE-RECUPERATION PROCESSES
A. A. VARBANOVA and I. M. STOILOVA (B'lgarska Akademiia na Naukite, Tsentralna Laboratoriia za Izuchavane na Moz'ka, Sofia, Bulgaria) Bolgarskaia Akademiia Nauk, Doklady (ISSN 0366-8681), vol. 38, no. 12, 1985, p. 1721-1724. refs

Night sleep was recorded as part of an evaluation of the adaptive capacity of man exposed to prolonged hyperbaric influences. The results obtained for 22 individuals, placed for a continuous period of time (7-30 days) under conditions of an increased atmospheric pressure corresponding to depths of 200-450 m, indicate that a complex of hyberbaric factors significantly affects the structure and organization, but not the total duration, of night sleep. A considerable decrease in rapid eye movement (REM) sleep and a decrease in slow-wave sleep (stages 3 and 4) occurs, up to a total lack of the 4th stage. The percentage of superficial sleep (stages 1 and 2) rises, and the normal distribution of the stages during the night hours is disturbed, with a lack of well-formed cycles. The normal tendency towards a gradual deepening of the sleep and elongation of the REM periods which complete the sleep cycle are not evident. The REM stage, when present, is markedly broken up and frequently removed to the second half of sleep. C.D.

NEUROMAGNETISM - THEORY, TECHNIQUES, AND MEASUREMENTS
R. ILMONIEMI Espoo, Helsinki University of Technology, Doctor of Technology Thesis, 1985, 49 p. Research supported by the Academy of Finland, Emil Aaltonen Foundation, Cultural Foundation of Finland, and Instrumentarium Science Foundation. refs

The genesis, calculation, measurement, and interpretation of neutromagnetic fields are discussed. Electromagnetic fields of biological origin are addressed, including the cellular basis for EMF, the postsynaptic and action potentials, the forward problem, piecewise homogeneous and cylindrically symmetric conductors, the spherically symmetric head model. The neuromagnetic inverse problem is examined, including the current space, the lead field, the best estimate concept, minimum norm estimates, and the current dipole model. The SQUID magnetometer is discussed, and a collection of abstracts of publications in the field of neuromagnetism is presented. C.D.

DISCOVERY REGARDING ELECTRON REDISTRIBUTION AMONG CELL MEMBRANES Abstract Only
I. NOVODVORSKIY *In its* USSR Report: Life Sciences. Biomedical and Behavioral Sciences (JPRS-UBB-86-002) p 12 8 Jan. 1986 Transl. into ENGLISH from Izvestiya (Moscow, USSR), 27 Sep. 1985 p 3
Avail: NTIS HC A06

The transfer of electrons between individual membranes inside a cell and between cells in an organ or tissue. The process of redistribution of electrons between membranes combines all membranes into a single coordinated system. These chemical reactions are delayed and inhibited in a number of illnesses which involve changes in cells and constitute practical application of this discovery since it will help in the diagnosis of serious illnesses. PRODUCTION OF GAMMA- AND ALPHA-INTERFERON BY HUMAN BLOOD LEUKOCYTES UNDER SUCCESSIVE INDUCTION CONDITIONS
T. G. ORLOVA, L. V. ZHDANOVA, M. N. SOLOYEVA, and L. M. MENTKEVICH *In its* USSR Report: Life Sciences. Biomedical and Behavioral Sciences (JPRS-UBB-86-002) p 22-24 8 Jan. 1986 refs Transl. into ENGLISH from Voprosy Virusologii (Moscow, USSR), no. 2, Mar. - Apr. 1985 p 196-198
Avail: NTIS HC A06

Alpha and Gamma Interferons are produced by different blood cells--by B lymphocytes and T lymphocytes. This predetermines the possibility for simultaneous or successive induction of the same blood leukocytes by inducers eliciting formation of these types of interferon. When inducers interacting with different producer cells are used in this way, the interferon tolerance phenomenon is avoided. Successive induction means a savings of leukocytes, because the same cells can be used to obtain two yields of interferons. Favorable results in research on production of human gamma - and alpha-interferons involving successive use of gamma interferon inducers--phytohemagglutinin (PGA) and staphylococcal enterotoxin (SEA), and an alpha-interferon inducer--Newcastle disease virus (NDV)--are presented. It is concluded that the double successive induction method of the same human peripheral blood leukocytes allows yields of interferon from gamma and alpha interferons. E.A.K.

FARM ANIMALS AS SOURCE OF YERSINIOSIS Abstract Only
Y. N. KOLOS, I. N. GIUTOV, G. V. YUSHCHENKO, and V. I. DUNAYEV *In its* USSR Report: Life Sciences. Biomedical and Behavioral Sciences (JPRS-UBB-86-002) p 25-26 8 Jan. 1986 Transl. into ENGLISH from Zhurnal Mikrobiologii, Epidemiologii i Immunobiologii (Moscow, USSR), no. 4, Apr. 1985 p 77-80
Avail: NTIS HC A06

The role of farm animals as sources of yersiniosis in humans and as possible carriers was studied. The linear agglutination

method was used to study the disease in cattle, sheep and goats, and swine. Samples from mucous membranes, blood and meat and excrement were analyzed. The clinical course of the disease was like that of dysentery. Study of 252 workers at a meat packing plant showed that as many as 42.5% had antibodies of strain 09, while 39.7% had antibodies of strain 03 and 24.6% had antibodies of strain 05B. Similarly, 42.9% of the workers at a pork processing plant had 03 antibodies, while lesser incidence of other strains was noted. At a milk plant, 30.9% showed antibodies of 05 and 26%, those of strain 08. It is suggested that the likely method of human infection from sheep and swine was by contact, while for cattle it was also alimentary. The Y enterocolitica is considered to be an occupational disease. E.A.K.

TEST OF ERYTHROCYTE ANTIGEN DIAGNOSTIC AGENT FOR DETECTING ANTIBODIES TO COXIELLA BURNETTI Abstract Only
N. K. TOKAREVICH, S. SHRAMEK, and G. A. BAYAR *In its* USSR Report: Life Sciences. Biomedical and Behavioral Sciences (JPRS-UBB-86-002) p 26 8 Jan. 1986 Transl. into ENGLISH from Zhurnal Mikrobiologii, Epidemiologii i Immunobiologii (Moscow, USSR), no. 4, Apr. 1985 p 51-55
Avail: NTIS HC A06

The development of a diagnostic procedure and its testing on laboratory models, naturally infected humans and domestic animals is reported. Procedures include determination of the optimum sensitizing dose of lipopolysaccharides (LPS) and preparation of various test and control compounds, and analysis of the retarding effect of passive hemagglutination with a homologous antibody. Negative findings are reported for the serum of laboratory animals not infected with C. burnetti, and there are no false positive results with unsensitized LPS erthrocytes of sheep and data of passive hemagglutination reaction tests with the homologous pathogen. It is indicated that time of detection, titers and the duration of antibody circulation determined by various tests differ markedly. Combined use of complement fixation and passive hemagglutination tests increases the effectiveness of serological detection of Q-fever ricketsiosis, and helps n predicting the course of such infections. E.A.K.

DETECTION OF HBSAG IN FAMILIES OF CHILDREN WITH VIRAL HEPATITIS B Abstract Only
A. R. REYZIS, A. N. DRONDINA, A. A. ASRATYAN, M. Y. IVANOVA, and L. K. KOZHEVNIKOVA *In its* USSR Report: Life Sciences. Biomedical and Behavioral Sciences (JPRS-UBB-86-002) p 27 8 Jan. 1986 Transl. into ENGLISH from Zhurnal Mikrobiologii, Epidemiologii i Immunobiologii (Moscow, USSR), no. 4, Apr. 1985 p 48-51
Avail: NTIS HC A06

The incidence of viral hepatitis (VHB) iin a families of children with confirmed cases of the disease is reported. Over a period of 3 years 142 mothers, 81 fathers and 7 relatives of 162 sick children were studied. Control groups included 39 members of 30 children with HBs-negative VH. Serum studies and countercurrent electrophoresis, precipitation and modifications, and passive hemagglutination reaction tests were conducted. The presence of HbsAg was confirmed in 6.9% of the relatives of children with clinically and laboratory confirmed VHB. A lesser number of medical parental involvement was found in HBsAg-positive parents, which suggested domestic infection of the children by chronic carriers of VHB to be a common phenomenon. Use of passive hemagglutination and countercurrent electrophoresis increased the frequency of detection by a factor of 2.4. E.A.K.

HBEAG AND ITS ANTIBODIES IN CARRIERS OF HSSAG IN VARIOUS REGIONS OF USSR Abstract Only
M. I. MIKHAYLOV, S. A. ARAKELOV, T. Y. VOROZHBIYEVA, S. V. ZHAVORONOK, S. V. ZUBOV, A. Y. KOZHUKHAR, G. N. KHORVAT, and V. A. ANANYEV *In its* USSR Report: Life Sciences. Biomedical and Behavioral Sciences (JPRS-UBB-86-002) p 27-28 8 Jan. 1986 Transl. into ENGLISH from Zhurnal Mikrobiologii, Epidemiologii i Immunobiologii (Moscow, USSR), no. 7, Jul. 1985 p 71-74
Avail: NTIS HC A06

The surface antigen of hepatitus B (HBsAg), was studied in healthy carriers in regions showing various levels of incidence of the disease. Serum of 13,150 donors from the cities of Gorkiy, Vitebsk, Kishinev and Tashkent was studied by precipitation in gel and passive hemagglutination using a diagnostic approach. The HBeAg e-antigen and anti-HBe were determined and data indicate that regions with high incidence of HBsAg also have higher appearance of concentrations of the antigen which could be identified with gel precipitation procedures. The frequency of HBsAg appearance among carriers of the disease antigen is in direct relationship to the level of antigen incidence in a given region, while an inverse relationship is noted for HBeAg. While the level of HBsAg in Gorkiy, Kishinev and Tashkent is 1.4%, 5.0% and 9.0%, respectively, the corresponding figures for HBeAg are 5.5%, 12.3% and 13.3%. E.A.K.

Wild rodents caught on natural foci of hemorrhagic fever with renal syndrome (HFRS) in Ufa were analyzed for the presence of specific antigen of HFRS virus, for antibodies to this pathogenic agent and for native HFRS virus. A specific relationship was shown between the infection rate of bank voles with HFRS virus and the levels of circulating antigen and antibody to this virus. The immunity of test animals differed with age, older animals had higher immunity while, the younger animals showed more frequent presence of live virus. When selecting various age groups for isolation of viruses, the younger ones should be taken which have not manifested antibodies to the HFRS virus. E.A.K.

Avail: NTIS HC A06

The spectrum of antibiotic activity of Bifidobacterium adolescentis MS-42, isolated from the GI-tract of a nursing infant was tested to determine the potential use of this bifidobacterium in the production of dairy products. Growth inhibition studies on Petri dishes showed that B. adolescentis MS-2 yielded inhibitation zones of 26 to 28 mm on streak plates with Shigella flexneri, Sh. sonnei. Straphylococcus aureus 209-p, Proteus vulgaris, and Proteus mirabilis. The antibiotic effects were confirmed with tube-dilution studies, which also encompassed Escherichia coli. In general, B. adolescentis was shown to exhibit greater antibiotic activity than B. bifidum, which is commonly used for enrichment of various darily products. Dietetic and therapeutic darily products were devsed which contain B. adolescentis MS-2. E.A.K.

V. SAMOILOVA *In its* USSR Report: Life Sciences. Biomedical and Behavioral Sciences (JPRS-UBB-86-002) p 36-37 8 Jan. 1986 Repr. from Moscow News (Moscow, USSR), no. 33, 25 Aug. 1 Sep. 1985 p 10
Avail: NTIS HC A06

The creation of artificial vaccines and the possibility to produce an effective vaccine against any disease is discussed. Substances which could stimulate the organism's protective system, bypassing the gene patrol were examined. Such substances were found in some unsuitable polymeric molecules--polyelectrolytes. It is demonstrated that antigen-carrying polymer molecules include only those lymphocytes which can produce antibodies against the alien substance planted on the carrier. The new vaccines for preventing typhus in mice were tested. New vaccine injection into animals made it possible to save all of them from the disease. The dose of th eantigen was from 50 to 100 times less than in the usual vaccine. The virus has three main antigens two of them are proteins positioned on the surface of the virus particle, while the third is hidden int he membrane of the virus. The antigen planted on the polymeric molecule, ensures a strong generation of antibodies and protects the animals after they are infected with the virus.

ARTIFICIAL ANTIGENS, VACCINES REVIEWED
V. V. POKROVSKIY *In its* USSR Report: Life Sciences. Biomedical and Behavioral Sciences (JPRS-UBB-86-002) p 38-41 8 Jan. 1986 refs Transl. into ENGLISH from Zhurnal Mikrobiologii, Epidemiologii i Immunobiologii (Moscow, USSR), no. 7, Jul. 1985 p 106-111
Avail: NTIS HC A06

The chemical synthesis of molecular structures with the desired immunobiological characteristics of antigens to agents of infectious diseases in humans and animals is a new direction in constructing vaccine preparations and bacterial viral diagnostics. The artificial antigens which have a direct relationship to the agents of infectious diseases are examined. The artificial antigens the determinants are arranged in the form of offshoots from a polyacrylamide chain and these antigens possess the serological and immunoenic activity of he prototypes. The serological activity of the artificial antigen in a number of reactions is higher than the natural analog. The serological activity of artificial antigens was strictly group-specific. The unique properties of completely artificial antigens were used in creating highly specific diagnostic systems for immunoenzyme analysis. The artificial antigens activate specific immunity without using adjuvant and protective activity which keeps animals from becoming infected with virulent strains of salmonella. E.A.K.

OBTAINING HYBRIDOMAS THAT SYNTHESIZE MONOCLONAL ANTIBODIES TO POLYSACCHARIDE OF GROUP A STREPTOCOCCUS Abstract Only
Y. Y. PYTYEVA and E. I. DROBYSHEVSKAYA *In its* USSR Report: Life Sciences. Biomedical and Behavioral Sciences (JPRS-UBB-86-002) p 42 8 Jan. 1986 Transl. into ENGLISH from Zhurnal Mikrobiologii, Epidemiologii i Immunobiologii (Moscow, USSR), no. 7, Jul. 1985 p 35-39
Avail: NTIS HC A06

Production of monoclone antibodies (MCA) for A-polysaccharides for A-polysaccharides (A-PS) using group A streptocuccus as the immune agent, and treating the resulting culture with pepsin is reported. Details of cell line identification, screening and storage of clones and production of ascites are summarized. Mice subsequently immunized with the compounds had the lowest titers for A-PS and for the vaccine with lower doses, and the highest with doses of 50 mcg/mouse. Analysis of experiments on determining optimum conditions for forming hybrids of spleen and myeloma cells mice. Screening was done with pepsin created vaccines of group A streptococcus and A-PS. It is shown that three of the monoclonal antibodies have ecipitation properties. Hybrid formation depends on the presence of immune splenocytes, rather than on ratios of myeloma cells and lymphocytes. The hight yield of hybrids came with growth of cells in 80 to 100% of alveoli. FAB-FRAGMENT OF HETEROLOGIC IMMUNOGLOBULIN FOR FLU PROPHYLAXIS AND TREATMENT Abstract Only
V. I. DEGTYARENKO, V. F. ZEVAKOV, I. M. MAKSIMENKO, and V. A. DIVOCHA *In its* USSR Report: Life Sciences. Biomedical and Behavioral Sciences (JPRS-UBB-86-022) p 43 8 Jan. 1986 Transl. into ENGLISH from Zhurnal Mikrobiologii, Epidemiologii i Immunobiologii (Moscow, USSR), no. 4, Apr. 1984 p 114-115
Avail: NTIS HC A06

Enzyme breakdown of heterologic immunoglobulin, particularly the bivalent Fab-fragment of antibodies, were studied for prophylactic and treatment effects. A Rivanol-alcohol method was used to separate the antiinfluenza immunoglobulin. After immunication, hyperimmune antiinfluenza serum was obtained from calves and subjected to enzyme hydrolysis. The effectiveness in neutralizing viruses was assessed. It is indicated that fundamentally new preparations should be studied for serum prophylaxis and serotherapy based on the Fab-fragment. E.A.K.

Avail: NTIS HC A06

The capsule antigen (FI) plays an important role in the virulence of Y. pestis and is a leading component of antiplague vaccine. The antigen obtained under mild conditions from hydrolysates of animal protein cultivated at 37C for 38 to 46 hours described. The bacterial mass was separated, distilled and dialysed to obtain test materials for passive hemagglutination. Amino acids, sugars, proteins, nucleic acids, polysaccharides and nitrogen were measured, along with the immunochemical activity of FI in comparison to other antiserums. It is indicated that the physicochemical and immunochemical homogeneity and activity of the preparation, along with viscosity, molecular weight, sedimentation and the isoelectric point, are distinct from those of previously known FIA and FIB capsule antigens. The capsule antigen is pure protein and not a glucoproteide. EAK

Ribosomal vaccines offer maximum immunity and minimum secondary reactions. Group A29, M-type, streptococcus ribosomes collected in of antibodies to M-protein, lipoteichoic acid and A-polysaccharides was studied. Double immunodiffusion by the Ouchterlony method were included that immunization of animals with ribosomes of group A29, M-type streptococcus caused development of antibodies to A-polysaccharides and lipoteichoic acid. HYPOXIA PROPHYLAXIS AGAINST RADIATION INJURY
Y. SAMOILOV *In its* USSR Report: Life Sciences. Biomedical and Behavioral Sciences (JPRS-UBB-86-002) p 48-50 8 Jan. 1986 Repr. from Moscow News (Moscow, USSR), no. 32, 18-25 Aug. 1985 p 10
Avail: NTIS HC A06

A method which enables patients to breathe mountainous air was developed. The method also reduces side effects resulting from radiotherapy treatment of malignant tumors. Method for the protection from ionizing radiation was developed. Air similar to that found at the mountain altitudes of 5.3 to 5.5 thousand meters above the sea level is pumped in through a face mask. Its oxygen content is twice as low as that of normal air on the plain. The effectiveness of oxygen-poor air is outlined. The reduction of oxygen content is considered to be a universal way to increase the adaptability potential of the organism, and its survivability under extreme conditions. E.A.K.

MANY MEDICAL USES FORESEEN FOR ARTIFICIAL SKIN
A. POMINOV *In its* USSR Report: Life Sciences. Biomedical and Behavioral Sciences 8 Jan. 1986 Transl. into ENGLISH from Trud (Moscow, USSR), 25 Sep. 1985 p 4
Avail: NTIS HC A06

An artificial biological skin was developed. In 5 to 7 days the skin took, and no scars remained. Skin covering the burn was clear and normal, exhibiting only a color difference at first. The artificial skin is a mixture of two liquids a turbid yellow solution and a crystalline coligen, the main protein in connective tissue. The living water is used for burns, serious injuries, cuts, and scratches. E.A.K.

ASSESSMENT OF SELECTED PHYSIOLOGICAL INDICATORS IN ANTENNA OPERATORS AT SHORT-WAVE TRANSMITTING AND RECEIVING CENTERS
L. V. POKHODZEY *In its* USSR Report: Life Sciences. Biomedical and Behavioral Sciences (JPRS-UBB-86-002) p 67-68 8 Jan. 1986 Transl. into ENGLISH from Gigiyena Truda i Professionalnyye Zabolevaniya (Moscow, USSR), no. 7, Jul. 1985 p 36-39
Avail: NTIS HC A06

The effects of electromagnetic emission on personnel servicing antenna feeder systems at short-wave transmitting and receiving stations were assessed. The workers in question were employed at low intermediate, and high wattage stations. No general or long-lasting effects were found on psychological and most physiological parameters, with the different levels of exposure generating a pattern of similar changes which differed somewhat in intensity. Deviations from normal noted, however subsided by the intensity. Deviations from normal noted, however subsided by the end of a working day. The visual analyzer noted functional lability at the end of a day, particularly in workers exposed to the higher intensity fields. Moderate hypotension persisted in workers exposed to moderate and high intensity fields. In all groups hand strength diminished by 18.6 to 25.4% at the end of a working week while the level of reduction in a control--unexposed--group was 10%. Determination of safe levels of electromagnetic exposure requires djustment of radiation intensity. E.A.K.

STATUS OF CALCIUM METABOLISM IN COAL MINERS WITH VIBRATION SICKNESS Abstract Only
V. V. KOLOMIYETS *In its* USSR Report: Life Sciences. Biomedical and Behavioral Sciences (JPRS-UBB-86-002) p 75-76 8 Jan. 1986 Transl. into ENGLISH from Gigiyena Truda i Professionalnyye Zabolevaniya (Moscow, USSR), no. 9, Sep. 1985 p 13-16
Avail: NTIS HC A06

The status of calcium metabolism in coal miners with various degree of vibration sickness was with data from 32 healthy control males. Total and ionized serum calcium levels were significantly elevated in 94 coal miners with vibration sickness, the degree of elevation show a direct correlation with the clinical severity of the illness. The data show that renal calcium clearance and the calcium binding capacity of the serum in the patient group is diminished in comparison with the control subjects. Urine calcium levels did not show any statistical differences between these two gropus. It is indicated that vibration sickness is accompanied by a profound alteration in calcium homestasis, due in large to enhanced calcium resorption in the kidneys. E.A.K.

ESTIMATE OF EMOTIONAL STRESS DURING WORKING ACTIVITY BASED ON SYSTEMS ANALYSIS OF SKIN-GALVANIC REACTION Abstract Only
G. K. RAKOV and Y. A. FADEYEV *In its* USSR Report: Life Sciences. Biomedical and Behavioral Sciences (JPRS-UBB-86-004) p 101 12 Mar. 1986 Transl. into ENGLISH from Fiziologiya Cheloveka (Moscow, USSR), v. 11, no. 3, May - Jun. 1985 p 463-469
Avail: NTIS HC A07/MF A01

Emotional factors of labor and the nature of their relationship to emotional reactions of female electronics-industry workers during assembly and subsequent testing of the electronic-optical system of color kinescopes. Twenty healthy female workers 18 to 40 years of age were determined were studied during assembly of electronic equipment. Significant differences were found between three working stages: (1) pressing in of subassemblies; (2) testing of the capacitance of electron guns; and (3) attachment of cathods holders. It was found that the skin-galvanic reaction is an adequate indicator of emotional stress during working activity. Systems analysis of operations or pressing in assemblies in correlation with development of skin-galvanic responses revealed emotiogenic stages of activity. E.A.K.

INFLUENCE OF COMPLEXITY OF CONTROL TASK ON LEVEL OF ACTIVATION OF OPERATORS PHYSIOLOGICAL FUNCTIONS WHEN WORKING WITH WAITING Abstract Only
M. A. GRITSEVSKIY and Z. I. ZAYTSEVA *In its* USSR Report: Life Sciences. Biomedical and Behavioral Sciences (JPRS-UBB-86-004) p 102 12 Mar. 1986 Transl. into ENGLISH from Fiziologiya Cheloveka (Moscow, USSR), v. 11, no. 3, May - Jun. 1985 p 504-510
Avail: NTIS HC A07/MF A01

Experiments were conducted to answer two questions: (1) do model experiments reveal differences in the functional status in comparing operator's work with various degrees of complexity; and (2) are these changes similar in nature to those manifestations of differing intensity discovered under production conditions. Programs with various specific shares of single and multiple movement control tasks were used to model operators work of varying degrees of complexity. During the experiments, reaction time, EEG, skin-galanic reaction and pulse rate were continually recorded. Differences in bioenergetic activity of the cerebral cortex and differences in autonomic activity and regulations were observed. It is indicated that waiting for signals requiring complex processing is accompanied by higher mobilization of preparedness of the operator. Decreased attention level was observed at the beginning of the day and toward the end of long days. E.A.K.

METHOD OF CHANGES IN REVERSIBLE PATTERN MASKING AS FACTOR IN VISUAL PERCEPTION Abstract Only
V. M. KROL and Y. I. BONDAR *In its* USSR Report: Life Sciences. Biomedical and Behavioral Sciences (JPRS-UBB-86-004) p 122 12 Mar. 1986 Transl. into ENGLISH from Voprosy Psikhologii (Moscow, USSR), no. 3, May - Jun. 1985 p 162-164
Avail: NTIS HC A07/MFen1] A01

Temporal characteristics of form perception were analyzed in relation to masking patterns. It is demonstrated that different masks exert different effects on various stages of perception. Three stages were identified in form perception using stimuli consisting of alternating bands and lines arranged in horizontal patterns, and masking patterns consisting either of random curviiinear lines alone or supplemented with solid, short, bands. The different masking patterns exerted different effects (prolongation) on the threshold times for amorphous perception, approximate classification of test pattern, and on object identification. It is demonstrated that different masking patterns significantly affect different stages of form perception, and can be utilized in the analysis of the latter. E.A.K.

HUMAN HEAD/NECK/UPPER-TORSO MODEL RESPONSE TO DYNAMIC LOADING Ph.D. Thesis
Y. C. DENG 1985 282 p
Avail: Univ. Microfilms Order No. DA8524027

A human head/neck/upper-torso replica was constructed and instrumented to study its reponse to impact and dynamic loading. The model consists of a water-filled cadaver skull; plastic vertebrae, sternum and ribs; silicon rubber disks and ligaments: and fabric muscles. The static behavior of the system under sagittal plane and lateral loading was adjusted so as to correspond to that of cadaver behavior under similar loading. The tests conducted involved impulsive loading to the torso generated by means of a sled and track system and by direct head impact with a suspended steel ball. A three-dimensional lumped-parameter model of the human head/neck/upper-torso was developed in order to predict its motion for any specified initial conditions that could also be used to compare with other investigators' results. The simulation results indicate favorable comparison with the human volunteer test data for both flexion and lateral whiplash. However, the physical structure appeared to be more flexible than the numerical model. Dissert. Abstr.

A SURVEY OF SPEECH AUDIOMETRY IN THE NATIONAL HEALTH SERVICE
H. C. FULLER and I. K. MOSS Aug. 1985 52 p refs
(NPL-AC-105; ISSN-0143-7143) Avail: Issuing Activity

Nine clinics in the UK National Health Service (NHS) were visited to discuss with the audiologists the technique of speech audiometry and to observe how the tests were conducted. The information gained was used to construct a questionnaire which was then circulated to NHS hearing aid clinics throughout the UK. Topics covered included the frequency of use of speech audiometry, word lists, recordings, equipment and test procedures, criticisms of test material, and limitations on the use of speech audiometry. RADIATION INDUCTION OF CANCER OF THE SKIN
R. J. M. FRY, J. B. STORER, and F. J. BURNS 1985 13 p refs Presented at the Workshop on Radiation Damage To Skin: Fundamental and Practical Aspects, Paris, France, 9 Oct. 1985 Prepared in cooperation with New York Univ., N.Y.
(Contract DE-AC05-84OR-21400)
(DE86-002201; CONF-851065-1) Avail: NTIS HC A02/MF A01

The induction of epidermal tumors was studied using exposures to 25 kV X-rays with or without subsequent exposures to 12-0-tetradeconyl phorbol-13 acetate (TPA) or ultraviolet radiation (UVR) 280 to 400 nm. Fractionation regimens and total exposure up to 4000R produced no squamous cell carcinomas. When these regimes were followed by TPA an incidence of about 80% was obtained, and incidence of 60% when UVR exposures followed the x-irradiation. A dose-dependent increase in fibrosarcomas was

found when x-irradiation was followed by 24 weeks of topical treatment with TPA. These results support the contention that UVR can enhance the expression of cells initiated by X-rays. The experimental evidence is compared with the data from the tinea capitis patients treated with X-rays. In C3HF/He male mice exposed to 50, 100, 150 and 200 rads (137)Cs gamma rays the induction rate for fibrosarcomas was 2.9 x 10(-4) per cGy/per mouse. This result compares with 2.5 x 10(-6) transformations per surviving cell per cGy with 10T1/2 cells that are fibroblasts derived from C3H mice. DOE

EVALUATION OF RADIATION EXPOSURE FROM DIAGNOSTIC RADIOLOGY EXAMINATIONS: TECHNIQUE/EXPOSURE GUIDES FOR THE CRANIOCAUDAL PROJECTION IN MAMMOGRAPHY Final Report
Aug. 1985 10 p refs
(PB86-126075; DHHS/PUB/FDA-85-8244; FDA/CDRH-86/4)
Avail: NTIS HC A02/MF A01 CSCL 06E

Suggestions for appropriate Technique/Exposure guides for use with the mammographic craniocaudal projection are presented. This type of projection is the most commonly used mammographic view and much exposure data is available for it. Problems affecting radiation exposure and image quality with one projection often are problems affecting all projections conducted with a particular X-ray imaging systems. The use of T/E guides to detect and correct the problems with the craniocaudal projection will have a beneficial effect on exposure levels and image quality of other projections conducted on the same system. BEHAVIORAL EFFECTS OF MICROWAVE RADIATION ABSORPTION Final Report
J. C. MONAHAN and J. A. DANDREA Aug. 1985 173 p refs Prepared in cooperation with Utah Univ., Salt Lake City
(PB86-113735; HHS/PUB/FDA-85-8238; FDA/CDRH-85/72)
Avail: NTIS HC A08/MF A01 CSCL 06R

The need for an understanding of the biological effects induced by exposure to microwave radiation has increased in recent years because of increased usage and applications and also concerns about potential adverse health effects. Although many research studies have been conducted to examine the question of biological effects, the information is scattered in many diverse sources. This publication brings together in a single source the major research findings related to the behavioral consequences of microwave exposure. In addition it attempts to provide a critical assessment of this information and to provide a perspective upon which the reader can interpret the findings. This publication begins with a review of behavioral-microwave research in the Soviet Union and then proceeds to examine the work of researchers in the Western countries. Both learned and unlearned behaviors are examined in the context of microwave induced effects. GRA

SYSTEM FOR MEASUREMENT OF SMALL VIBRATIONS AT MATERIAL INTERFACES INDUCED BY ELECTROSTRICTIVE FORCES
J. S. ALI and W. T. JOINES Oct. 1985 157 p refs
(PB86-116530; EPA-600/1-85-021) Avail: NTIS HC A08/MF A01 CSCL 06B

The mechanisms of interaction of ELF and ELF-modulated RF fields with biological systems is presently an active area of research. Some models propose that field-induced forces may influence certain observed biological effects such as RF hearing and calcium ion efflux. To investigate the validity of the field-induced force model for the calcium-ion efflux effect, a system is needed which is capable of exposing samples to ELF fields or to ELF-modulated RF fields. At the same time the induced vibration caused by the forces of electrostriction must be monitored preferably by a non-contacting method. A microwave phase-sensitive receiver was designed to sense the small vibrations. Limitations on the receiver sensitivity imposed by phase noise is discussed. Phase noise measurement systems were designed and used to charactrize the key receiver components. A limiting amplifier in the IF section of the receiver eliminates the need for knowledge of the reflection coefficient of the object of interest for quantitative vibration measurements. GRA

HUMAN REACTIONS TO TRANSIENT ELECTRIC CURRENTS Final Report
J. P. REILLY and W. D. LARKIN Jun. 1985 172 p Sponsored in part by the Maryland Dept. of Natural Resources, Annapolis and the Canadian Electrical Association, Montreal, Quebec
(PB86-117280; PPSP/JHU/PPSE-T-34) Avail: NTIS HC A08/MF A01 CSCL 06P

Research carried out at the Johns Hopkins University Applied Physics Laboratory on aspects of human sensitivity to transient electrical stimulation is described. High-voltage short-duration currents of the kinds that may be encountered near power substations, transmission lines, or industrial apparatus are emphasized. Human sensitivity is measured for a variety of stimulating conditions, both at the threshold of perception and above it, up to the tolerance limit. A neural excitation model is invoked to account for a wide array of sensory effects, and to serve as a framework for predicting effects not studied. Among

the factors studied are: voltage, capacitance; polarity, waveshape, and duration of the stimulating waveforms; ac versus dc stimulating; electrode approach velocity and contact force;l skin temperature; skin resistance; skin hydration; electrode contact area; and stimulated body location. GRA

THE EFFECT OF HIGH FREQUENCY ELECTROMAGNETIC FIELDS ON HUMAN BEINGS (FREQUENCY RANGE BETWEEN 1 KHZ AND 1000 GHZ) [DIE WIRKUNG HOCHFREQUENTER ELEKTROMAGNETISCHER FELDER AUF DEN MENSCHEN (1KHZ UND 1000 GHZ)]
A. H. FRUCHT (Deutschen Zentralinstituts fuer Arbeitsmedizin, Berlin-Lichtenberg, West Germany), N. KRAUSE, G. NIMTZ (Technische Univ., Berlin), and H. SCHAEFER 1984 128 p refs In GERMAN
Avail: Issuing Activity

The biological effects of high frequency electromagnetic fields were investigated to provide information for industrial safety personnel. The high frequency radiation problem is described. Medicinal and technical applications of high frequency electromagnetic fields are presented. The interactions between high frequency electromagnetic waves and matter are explained. Health problems due to these fields are depicted. Diathermy as a source of danger is discussed. A case of death after extreme exposure to radar radiation is given. Tasks and possibilities for epidemiological research are presented. It is concluded that health damage due to high frequency electromagnetic fields do not occur as long as the known power thresholds are not exceeded. Author (ESA)

OPTICAL AND EVENT-DURATION VARIABLES AFFECTING SELF-MOTION PERCEPTION Interim Paper Jan. 1984 - Apr. 1985
D. H. OWEN Nov. 1985 198 p
(Contract F33615-83-K-0038)
(AD-A161836; AFHRL-TP-85-23) Avail: NTIS HC A09/MF A01 CSCL 01D

Four experiment sections are included in this paper. The first pair of experiments investigated the usefulness of optical flow acceleration in detecting descent. When sink rate and ground speed are constant, optical flow accelerates. Holding fractional loss in altitude constant throughout a descent ovent also holds flow rate invariant, eliminating flow acceleration as a potential source of information. Detection of descent was accomplished easily without flow acceleration, and it was found that at least one of the remaining functional optical variables specifying fractional loss in altitude must be highly salient. Also, the effect of optical texture density was optimal when linkages with other relevant variables were taken into account. The third experiment compared eyeheight and ground-unit size as metrics for global optical information specifying descent. Given that flow acceleration is not an essential source of information, the study focused on eyeheight-scaled change in optical display and ground-unit-scaled change in optical density as functional specifiers of fractional loss in altitude. The fourth experiment investigated the interation between global optical flow rate and duration of a constant-speed preview period. Of particular interest was the possibility that preview periods of different durations would differentially favor or interfere with sensitivity given particular optical conditions, e.g., different flow rates. THE ENERGY COST OF COMBAT ENGINEER TASKS
W. S. MYLES and T. T. ROMET Aug. 1985 20 p
(AD-A161861; DCIEM-85-R-31) Avail: NTIS HC A02/MF A01 CSCL 06S

Canadian combat engineers performed abatis (blocking a road by falling trees), minelaying and road cratering for 8 hours each day on four consecutive days. Energy expenditure was estimated from heart rate continuously recorded using the VITALOG personal monitoring system (PMS-8). The average heart rates were below 120 bpm for all three combat engineer tasks indicating that, for these subjects, energy expenditure did not exceed 35 to 40% of their VO2max. Since abatis, minelaying and cratering are considered to be the most physically demanding tasks performed by combat engineers, it seems safe to conclude that the average energy expenditure for sustained operations will be at, or below, this level. This experiment also provided an opportunity to evaluate the PMS-8 as a means of collecting physiological data in a nonintrusive manner during military maneuvers. The system proved to be very robust, reliable and, because data collection is continuous, ideal for intermittent work of varying intensity. In addition, the PMS-8 appears to have considerable potential as a means of monitoring the effect of sleep deprivation and fatigue on the work/recovery cycle in sustained operations. Author (GRA)

ENVIRONMENTAL STRESS AFTER ATROPINE TREATMENT
M. A. KOLKA, L. A. STEPHENSON, and R. R. GONZALEZ Oct. 1985 23 p
(Contract DA PROJ. 3M2-63764-D-995)
(AD-A161923) Avail: NTIS HC A02/MF A01 CSCL 06O

Atropine administration resulted in higher skin temperatures in both sensible and insensible environments and a higher core temperature in the hot environment, due to the reduction in whole body sweating. The effect of heat storage (significantly higher after atropine) was shown to be greater in the hot environment due to inadequate sweat secretion for subsequent evaporative cooling. In the warm environment, enhanced skin blood flow resulted in more effective thermoregulation. The results suggest that exercise in the heat can be accomplished during environmental stress at warm temperatures after atropine treatment. Author (GRA)

RESPIRATORY RESPONSE AND MUSCLE FUNCTION DURING ISOMETRIC HANDGRIP EXERCISE AT HIGH ALTITUDE
R. L. BURSE, A. CYMERMAN, and A. J. YOUNG 15 Jul. 1985 33 p
(AD-A162003; USARIEM-M-2/86) Avail: NTIS HC A03/MF A01 CSCL 06S

The purpose of this investigation was to determine if the hyperventilatory response to fatiguing isometric exercise at sea level could predict resting ventiliation and acute mountain sickness

(AMS) at 4300 m altitude. Exercise consisted of four successive endurance handgrips held to complete fatigue at 40% of maximum isometric handgrip strength (MHS). There was no relationship between the magnitude or pattern of exercise-induced hyperventiliation at sea level and the severity of AMS later at altitude. Sea level hyperventilatory response was not predictive of resting ventilation at altitude. Altitude exposure progressively increased both the incidence and magnitude of the hyperventilatory response to exercise and prolonged it for 60 to 90 s into the recovery period, providing support for the central command theory of ventilatory control during isometric exercise. MHS was significantly increased at altitude, by 11% on day 2 and 16% on day 6. Endurance times to fatigue were reduced, but not always significantly so. GRA

REMOTE SENSING OF BODY SIGNS AND SIGNATURES Final Report, 1 Aug. 1982 - 30 Sep. 1985

J. C. LIN and K. H. CHAN Oct. 1985 82 p

(Contract N00014-82-C-0659)

(AD-A162106; BES-5) Avail: NTIS HC A05/MF A01 CSCL 17I

This report describes the development of a microprocessor-based remote sensing system for noncontact detection of heart rate and respiration. Low power sinusoidal microwave signal at a frequency of 10.525 GHz is generated by a Gunn diode oscillator in an integrated Doppler transceiver. A standard gain horn is used to direct the microwave energy to the chest of a subject at a distance of a few centimeters. Since movements associated with the contraction of the heart and expansion of the lungs are translated into motions of the chest wall, the Doppler microwave reflected from the chest is processed to yield information on the frequency and regularity of these cardiopulmonary events. The microprocessor-based battery-powered system is designed to provide continuous operation for approximately one hour. It allows selection of heart rate or respiration to be displayed on a 3-digit LCD. An analog output jack is provided for oscilloscope display or chart recording. The design range of heart rates is from 40 to 200 beats per minute and that for respiration is from 3 to 30 breaths per minute. The signal acquisition times for heart rate and respiration determinations are 12 and 48 seconds. respectively. GRA

ANTIEMETIC DRUGS AND PILOT PERFORMANCE Interim Report, Feb. 1983 - Feb. 1984

H. L. TAYLOR, J. A. DELLINGER, M. H. WELLER, B. C. RICHARDSON, and F. C. HYMAN Nov. 1985 44 p Prepared in cooperation with Michigan Univ., Ann Arbor

(Contract F33615-83-K-0612)

(AD-A162109; USAFSAM-TR-84-52) Avail: NTIS HC A03/MF A01 CSCL 06O

This study evaluated the effects on human performance of three antiemetic drugs. The effects on pilot performance in a flight simulator were determined using the commonly prescribed dosages, standardized for a 70 kg person, of thiethylperazine (10 mg), promethazine hydrochloride (25 mg) cimetidine (300 mg), and a placebo control. Two tasks, a two-dimensional tracking task which part of an instrument landing system (ILS) approach and the Sternberg choice reaction time task, were used to generate pilot performance data. A Latin square design was used to balance treatment order effects, and each subject received each treatment condition. Log root mean square (RMS) deviation values, computed from the simulator flight data (altitude straight and level, altitude turning, localizer (lateral) tracking, glideslope (vertical tracking) were used in a multivariate analysis of variance to test the main effects. An approximate F-test, based on Wilk's criterion, resulted in $F(12,87) = 2.47$, ($P0.0008$) for the treatment main effect (drug). Univariate analyses resulted in a significant drug main effect on two primary task variables–altitude straight and level and localizer tracking. Contrasts between the three antiemetic drugs and the placebo were used to test the hypothesis of no significant difference between treatment pairs. The contrasts between promethazine hydrochloride and the control were significant for altitude straight and level and for glideslope tracking. The other contrasts were not significant except for the control-thiethylperazine contrast for the localizer tracking variable. GRA

CHARACTERISTICS OF MEDICALLY DISQUALIFIED AIRMAN APPLICANTS IN CALENDAR YEARS 1982 AND 1983

S. J. DARK Sep. 1985 23 p

(AD-A162209; DOT/FAA/AM-85/9) Avail: NTIS HC A02/MF A01 CSCL 06E

This study presents comprehensive data reflecting pertinent denial rates with respect to the medical and general attributes of those airmen denied medical certification in calendar years 1982 and 1983. The study updates previously reported data with respect to medical certification denials. The denial data were obtained from computer files as of July 1, 1983, for calendar year (CY) 1982 applicants and July 1, 1984, for CY 1983 applicants. The data were summed for the 2 calendar years to provide a larger group for comparison with the December 31, 1982, active airman population, the midpoint population date for the denied applicant group. The annual denial rate based on the airman applicants is 6.2 per 1,000 airmen. By class of certificate applied for, the annual denial rate per 1,000 applicants is 3.3 for first class, 3.8 for second class, and 8.6 for third class. As anticipated, general aviation and new applicants contribute greatly to total denials. The most significant causes for denial (regardless of class applied for) are cardiovascular, the miscellaneous pathology category (endocrinopathies, disqualifying medications, and administrative denials), neuropsychiatric, and at a substantially lower level, eye pathology. The updated data on medically disqualified applicants are consistent with expectations and previous findings, with cardiovascular diseases still the number one cause for denial. GRA

EFFECTS OF WEARING NBC (NUCLEAR, BIOLOGICAL AND CHEMICAL) PROTECTIVE CLOTHING IN THE HEAT ON DETECTION OF VISUAL SIGNALS

J. L. KOBRICK and L. A. SLEEPER Feb. 1985 26 p

(Contract DA PROJ. 3M1-61102-BS-10)

(AD-A162321; USARIEM-T7/85) Avail: NTIS HC A03/MF A01 CSCL 06P

Sensitivity for detection of visual signals distributed at various locations throughout the visual field was studied in 16 male subjects during degrees of ambient heat exposure (91F/61%RH; 70F/35%RH; 55F/35%RH), in combination with and without wearing of the Army NBC protective clothing system (MOPP-IV). Response time for signal detection increased systematically and significantly with peripheralization of stimulus locations, was most impaired in the superior and inferior visual field areas, and least affected along the horizontal axis area. The data support previous results obtained using this task. Both the heat and the heat+MOPP-IV exposure conditions produced highly significant systematic increases in response time to all signals; the worst performance occurred under the heat+MOPP-IV combination. Implications for visual performance while wearing chemical protective gear are discussed. GRA

AN EVALUATION OF TESTS OF ANAEROBIC POWER

J. F. PATTON and A. DUGGAN Dec. 1985 22 p

(AD-A162826; USARIEM-M7/86) Avail: NTIS HC A02/MF A01 CSCL 06P

The objectives of this study were to examine the relationship between two laboratory tests of anaerobic power (AnP) and to compare these tests to field measures of AnP. Fifteen Soldiers, aged 20 to 34 yrs, performed: (1) a 30S maximal cycle ergometer test (Wingate test, WT); (2) a 60S isokinetic knee extension test (isokinetic endurance test, IET); (3) a 50m spring; (4) a 200m

sprint; and (5) the Margaria stairclimb test. Significant correlations ranging from 0.52 to 0.76 were found between the WT and IET for peak and mean values of power and torque, respectively. Indices from both these tests also correlated significantly with the field tests of AnP. The best single index was mean power from the WT which had correlations of -0.79, -0.82, and 0.74 with the 50m and 200m sprint times and the Margaria test, respectively. The data suggest that both the WT and IET represent valid laboratory tests for evaluating high-intensity short-term exercise in which the muscle is primarily dependent upon anaerobic processes for energy release. CHANGES IN FITNESS AND SHIPBOARD TASK PERFORMANCE FOLLOWING CIRCUIT WEIGHT TRAINING PROGRAMS FEATURING CONTINUOUS OR INTERVAL RUNNING Final Report
E. J. MARCINIK, J. A. HODGDON, C. E. ENGLUND, and J. J. OBRIEN Aug. 1985 18 p
(AD-A163110; NAVHLTHRSCHC-85-33) Avail: NTIS HC A02/MF A01 CSCL 05I

This investigation compared physical fitness and work performance changes following participation in circuit weight training regimes featuring either interval or continuous running programs. Results indicated that participation in the circuit weight training/run regimes was associated with differential changes in fitness but not shipboard work performance. Furthermore, the association between training induced fitness gains and relative improvement in job performance appeared to be specific to the task modelled. Important predictors of criterion job performance included measures of both upper and lower torso muscular strength. Regression analyses yielded the following prediction equation: Composite shipboard performance(s) = 194.15097-1.59492 (arm curl)-, 18369 (leg press) r=0.74. GRA

L-TRYPTOPHAN ADMINISTERED TO CHRONIC SLEEP-ONSET INSOMIACS: LATE-APPEARING REDUCTION OF SLEEP LATENCY Final Report, Dec. 1980 - Nov. 1985
C. L. SPINWEBER 1 Nov. 1985 19 p
(AD-A163115; NAVHLTHRSCHC-85-42) Avail: NTIS HC A02/MF A01 CSCL 06P

The effects of 3 g 1-tryptophan on sleep, performance, arousal threshold, and brain electrical activity during sleep were assessed in 20 male, chronic sleep-onset insomniacs (mean age 20.3 + or - 2.4 years). Following a sleep laboratory screening night, all subjects received placebo for 3 consecutive nights (single-blind), 10 subjects received 1-tryptophan and 10 subjects received placebo on 2 withdrawal nights (single-blind). There was no effect of 1-tryptophan on sleep latency during the first 3 nights of administration. On the 4th-6th nights of administration, sleep latency was significantly reduced. Unlike benzodiazepine hypnotics, 1-tryptophan did not alter sleep stages, impair performance, elevate arousal threshold, or alter brain electrical activity during sleep. GRA

ANALYSIS OF HEALTH EFFECTS RESULTING FROM POPULATION EXPOSURES TO AMBIENT PARTICULATE MATTER. HEALTH AND ENVIRONMENTAL EFFECTS DOCUMENT, 1985
J. D. SPENGLER Sep. 1985 77 p refs
(Contract DE-AC02-81EV-10731)
(DE86-002161; DOE/EV-10731/5) Avail: NTIS HC A05/MF A01

Findings from our recent epidemiologic analyses reported here indicate variations in ambient fine particle mass (d sub a 2.5 (MU)m toxic substances include arsenic, cadmium, sulfur, and carbonaceous compounds). SO4 sup = mass are more important to public health than variations in the levels of particle mass measures which also include coarse particles (d sub a 2.5 (MU)m). Sulfates and FP mass wsere often very significant predictors of variations in residual mortality throughout the US, even after controlling for socio-economic factors. Analysis of 12 years of daily mortality and air pollution in New York City showed that aerosol extinction coefficient (b sub ext), a good surrogate for fine particles, is significantly associated with observed mortality. FIBEROPTICS IMMUNOFLUORESCENCE SPECTROSCOPY FOR CHEMICAL AND BIOLOGICAL MONITORING
T. VO-DINH, G. D. GRIFFIN, K. R. AMBROSE, M. J. SEPANIAK, and B. J. TROMBERG 1985 17 p Presented at the 10th International Symposium on Polynuclear Aromatic Hydrocarbons, Columbus, Ohio., 21 Oct. 1985 Prepared in cooperation with Tennessee Univ., Knoxville
(Contract DE-AC05-84OR-21400)
(DE86-002239; CONF-851068-2) Avail: NTIS HC A02/MF A01

The feasibility of the fluoroimmuno-sensor (FIS) detection of IgG proteins tagged with fluorescein isothiocynate was demonstrated. In view of the biotechnological advances in the area of monoclonal antibodies and the production of anti-hapten sera it is believed that fiberoptics-based FIS could be generally useful in a wide spectrum of biochemical and clinical analyses. Specifically, the FIS could be employed in the assessment of an individual's exposure to chemical PAH carcinogens, response to drug therapy, or in the characterization of naturally occurring biochemicals. For example, studies investigating the presence of carcinogens and carcinogen-DNA adducts in tissues and body fluids could be performed with the FIS using immunochemical techniques. An integration of fluorescence immunoassay principles with laser-based fiberoptics systems is planned in order to develop FIS which should be capable of providing reliable analytical data for such studies. EFFECTS: DOCUMENTATION AND VERIFICATION FOR A BEIR 3 CANCER RISK MODEL BASED ON AGE, SEX AND POPULATION DYNAMICS FOR BIOTRAN
W. J. WENZEL and A. F. GALLEGOS Sep. 1985 108 p refs
(Contract W-7405-ENG-36)
(DE86-003285; LA-10371-MS) Avail: NTIS HC A06/MF A01

The computer simulation code EFFECTS is coupled with the radionuclide uptake and environmental transport strategies of the BIOTRAN code to predict cancer risks and deaths in a dynamic human population. Total mortalities due to all causes are incorporated with projected radiation-induced cancer mortalities caused by all previous chronic or acute radiation exposures of the population as a function of age and sex. Superpositioning radiation-induced cancer mortalities on current total mortalities in each age group allows a realistic and dynamic estimate of cancer risks for complex radiation exposure scenarios. EFFECTS was developed on the CDC 7600 and can be executed on the Cray computer system at Los Alamos National Laboratory. EFFECTS can simulate the upper boundary of cancer risk estimates where population exposures occur over many years and where organ burdens are integrated over the lifetime of the individual. This report gives new insight on age-specific cancer risks. As part of the code verification, the simulated impacts to a small population from natural background uranium and an accidental release of airborne plutonium are compared. For the long-term continuous exposure to natural background uranium, the impact to the population is very small (2 x 10(-6) to 7 x 10(-6) deaths/10,000 people) with young adults receiving the largest bone doses and risks. For the long-term intakes following a simulated accidental air release of plutonium, young teenagers receive the highest bone doses while young adults receive the largest risk. Simulating these two scenarios, using BIOTRAN/HUMTRN/EFFECTS, illustrates sufficient resolution to predict the age/sex-specific response from human populations from contaminants in our environment. USING ASHFORD'S GENERAL MODEL TO AID IN THE UNDERSTANDING OF A PESTICIDE'S NEUROTOXIC EFFECT THROUGH PESTICIDE-DRUG MIXTURE EXPERIMENTS
D. J. SVENDSGAARD and K. M. CROFTON Nov. 1985 15 p
Prepared in cooperation with North Carolina Univ., Chapel Hill
(PB86-130028; EPA-600/D-85-241) Avail: NTIS HC A02/MF A01 CSCL 06T

A framework for interpreting the joint action of mixtures of drugs is discussed. The concepts are applied to the situation in which the mechanism of three drugs are fairly well understood and mixtures of pesticides and drugs are studied to aid in the understanding of the mechanism of certain types of pesticides. Laboratory data are fit by nonlinear regression to suggested models. The conclusions drawn from fitting these models and the implication of the design of experiments for further studies are discussed. GRA

SYMPOSIUM ON AVIATION PSYCHOLOGY, 3RD, COLUMBUS, OH, APRIL 22-25, 1985, PROCEEDINGS
R. S. JENSEN, ED. and J. ADRION, ED. (Ohio State University, Columbus) Symposium sponsored by the Ohio State University and Association of Aviation Psychologists. Columbus, OH, Ohio State University, 1985, 777 p. For individual items see A86-29852 to A86-29861, A86-29863 to A86-29936.

The present conference on the complex interactions between pilots and their cockpit environments discusses topics in such fields as cockpit design, voice data entry for avionics, cockpit displays, air traffic control automation, pilot workload monitoring and management, pilot judgment and reliability, cockpit communications and resource management, pilot selection and training, pilot visual perception, pilot physiology, and accident investigation. Specific attention is given to cockpit design and evaluation data bases, ergonomic principles for auditory signals in military aircraft, subjective assessments of workloads in an advanced fighter cockpit, time-sharing ability in zero-input tracking analyzer scores, cockpit speech interference considerations, psychosocial aspects of male and female pilot errors, test anxiety in cockpit simulators, fatigue, stress and preoccupation effects, and aircraft accident investigation psychological methods. C.D.

VISION IN SPATIAL DISORIENTATION (SDO) AND LOSS OF SITUTATIONAL AWARENESS
G. B. MCNAUGHTON (USAF, Life Support System Program Office, Wright-Patterson AFB, OH) IN: Symposium on Aviation Psychology, 3rd, Columbus, OH, April 22-25, 1985, Proceedings . Columbus, OH, Ohio State University, 1985, p. 25-38. refs

The pilot-vehicle interfaces (PVIs) of current fighter and attack aircraft are noted to have been designed without sufficient attention to pilot orientation factors and requirements. Pilots are accordingly denied important cues, or subjected to cues that under certain circumstances disorient, misorient, or otherwise fail to furnish critical control parameters in a way that enhances information acquisition. There has been an additional failure to design PVIs that provide the inputs needed by a pilot to maintain or quickly regain awareness of attitude and other critical flight parameters. Recommendations for future PVI designs are made. O.C.

THE EFFECT OF USING SPEECH GENERATION AND RECOGNITION SYSTEMS ON THE PERFORMANCE OF DISCRETE TASKS
D. DAMOS (Arizona State University, Tempe) IN: Symposium on Aviation Psychology, 3rd, Columbus, OH, April 22-25, 1985, Proceedings . Columbus, OH, Ohio State University, 1985, p. 127-133.
(Contract N00014-92-C-0179)

Twenty-eight male subjects performed a task combination consisting of a spatial short-term memory task and a verbal short-term memory task. Stimuli for the verbal task could be presented either visually on a CRT or auditorily through headphones. Subjects responded to the verbal task either manually using a keypad or vocally using a voice recognition system. Analyses revealed significantly more accurate dual-task performance with auditory rather than visual stimuli. However, there was no significant difference between speech responses and manual responses on measures of either speed or accuracy.

COMPARISON OF NOVICE AND EXPERIENCED PILOTS USING ANALOG AND DIGITAL FLIGHT DISPLAYS
J. M. KOONCE, M. GOLD, and M. MOROZE (Massachusetts, University, Amherst) IN: Symposium on Aviation Psychology, 3rd, Columbus, OH, April 22-25, 1985, Proceedings . Columbus, OH, Ohio State University, 1985, p. 143-149. refs

Attention is given to the differences in performance of flight-naive and experienced pilots in the acquisition of restrictive flight skills using both digital and analog flight display formats and in their performance under high cognitive workload stress. The results obtained indicate that the performance of basic flight tasks is superior when analog displays are used, in the cases of both the acquisition of those skills and their performance in the presence of a cognitively demanding side task. The naive subjects appeared to perform better than the experienced pilots with digital displays.

PITCH CHANGE THRESHOLDS AS INFLUENCED BY ANGULAR RATE AND DURATION OF THE APPARENT HORIZON'S DISPLACEMENT
R. F. HAINES (NASA, Ames Research Center, Moffett Field, CA) IN: Symposium on Aviation Psychology, 3rd, Columbus, OH, April 22-25, 1985, Proceedings . Columbus, OH, Ohio State University, 1985, p. 159-166. refs

The displacement threshold (DT) during voluntary visual tracking of a line and during fixation of a stable spot located at the initial stimulus position was determined to help in the modeling pilot manual dynamics during the nose-up 'flare' maneuver. Forty-six observers made paired comparison, forced choice judgments of the maximal downward displacements of a horizontal line moving at various speeds for the durations of 0.25, 0.50, and 1.00 sec. The results indicated that the DT is significantly lower, the confidence is higher, and the number of errors and guesses is smaller when a fixation dot is present; moreover, increasing both the stimulus velocity and duration significantly improves the accuracy of displacement discrimination and increases mean confidence.

PREDICTED VERSUS EXPERIENCED WORKLOAD AND PERFORMANCE ON A SUPERVISORY CONTROL TASK
V. BATTISTE and S. G. HART (NASA, Ames Research Center, Moffett Field, CA) IN: Symposium on Aviation Psychology, 3rd, Columbus, OH, April 22-25, 1985, Proceedings . Columbus, OH, Ohio State University, 1985, p. 255-262.

The multitask simulation of a supervisory control system was examined in order to evaluate the ability of operators to predict the workload and performance impact of unfamiliar task features, using their basic knowledge and specific information provided before each scenario. Task difficulty and experienced workload were varied by manipulating the number of elements per task, the number of tasks, task schedule, and availability of task elements for performance. The results have indicated that an operator might correctly predict the workload of a realistically complex task if (1) he is familiar with the basic system, and (2) the design, functional requirements, and operational procedures of the proposed modifications are described clearly. He is less able to predict unfamiliar rate or schedule complexity manipulations for which timing is an important element.

IN SEARCH OF A TIME-SHARING ABILITY IN ZERO INPUT TRACKING ANALYZER SCORES
G. D. SIERING and L. W. STONE (U.S. Army, Aeromedical Research Laboratory, Fort Rucker, AL) IN: Symposium on Aviation Psychology, 3rd, Columbus, OH, April 22-25, 1985, Proceedings . Columbus, OH, Ohio State University, 1985, p. 279-286. refs

The Zero Input Tracking Analyzer (ZITA) is a small psychomotor test that attempts to measure time-sharing ability by use of tracking tasks performed with and without a secondary task. Scores from a sample of Army aviators were intercorrelated and factor analyzed. Separate factors were identified for a time-sharing dimension and for a general ability to perform higher order tracking tasks. Three other factors were extracted and interpreted. The results are interpretable as demonstrating the existence of a time-sharing ability that is separate from the ability to perform various types of tracking tasks.

THE STERNBERG MEMORY SEARCH TASK AS AN INDEX OF PILOT WORKLOAD
C. D. WICKENS, F. HYMAN, J. DELLINGER, H. TAYLOR, and M. MEADOR (Illinois, University, Savoy) IN: Symposium on Aviation Psychology, 3rd, Columbus, OH, April 22-25, 1985, Proceedings . Columbus, OH, Ohio State University, 1985, p. 287-294. refs
(Contract DAMD17-83-C-3150; F33615-83-K-0612)

Studies of Taylor et al. (1985) concerning application of the Sternberg memory search task for evaluating pilot's mental work load and the residual capacity are reanalyzed and compared with earlier investigations. Based on the results, a number of recommendations is offered with respect to some particular details in the Sternberg task procedure. In particular, it is proposed to (1) minimize peripheral input-output delays, (2) avoid using the memory sets (MSETs) of 1 point, and avoid using the same fixed MSET for too many consecutive trials, (3) avoid running different MSETs on different days or blocks, and (4) collect data on large number of subjects. Statistically, presentation of raw data points, rather than derived statistics from regression equations, is recommended.

RELIABILITY OF MILITARY PILOTS - PROBLEMS AND PROSPECTS
B. O. HARTMAN, R. A. ALBANESE (USAF, School of Aerospace Medicine, Brooks AFB, TX), and G. B. HUMPHRESS (Southwest Research Institute, San Antonio, TX) IN: Symposium on Aviation Psychology, 3rd, Columbus, OH, April 22-25, 1985, Proceedings . Columbus, OH, Ohio State University, 1985, p. 297-307. refs

The objectives of the USAF physiologic training program are threefold: (1) to identify the top 20 percent of the operational fighter pilot pool, (2) to develop special training techniques for making each member a 99th percentile pilot, and (3) to develop biologically based designs for the pilot/aircraft interface. The elements of the training objective (cognitive skills training, sensory/motor skills training, and operational skills training) and the principal techniques, training protocols, the software, and the mathematical models involved are discussed. Establishing local, artificially intelligent training work stations, the 'Challenge Work Stations' is proposed, to serve as a device to support locally the training and maintaining pilot attributes conditioning. The functions of each Challenge Work Station will be those of a coach: (1) to

present challenges, (2) to record, maintain, and trend scores on individual challenges, upon request, (3) to serve as a personal aid and tutor for individual pilot, (4) to tailor training prescriptions and advisories to every pilot's individual circumstances, and (5) to use feedback from actual cockpit performances by the pilot. I.S.

THE SOCIAL-PSYCHOLOGICAL ASPECTS OF PILOT-ERROR - MALE VS FEMALE
G.J. VAIL (St. Mary's Graduate Institute, Minneapolis, MN) IN: Symposium on Aviation Psychology, 3rd, Columbus, OH, April 22-25, 1985, Proceedings . Columbus, OH, Ohio State University, 1985, p. 309-319. Research supported by the Ninety Nines, Inc. refs

The National Transportation Safety Board data on pilot-error fatalities for general aviation, years 1977 through 1981, have been analyzed by gender differences. The analysis included following variables: (1) age of pilot, (2) certificate of pilot, (3) kind of flying, (4) type of aircraft, (5) type of power, (6) total time, by time in type of aircraft, (7) broad cause/factor, (8) specific cause/factor, (9) phase of operation, and (10) pilot's occupation. When compared to the total population of female and male pilots, the relative number of female pilot-error fatalities was significantly less than the number of male pilot-error fatalities. On the other hand, female pilots incur more of their fatalities when flying solo-instructional than male pilots (11.1 pct and 1.5 pct, respectively). Females also incurred relatively more of their fatalities during practice-noncommercial runs (9.3 pct compared to 2.4 pct for males). I.S.

A86-29886*# Ohio State Univ., Columbus.
A REVIEW OF CRITICAL IN-FLIGHT EVENTS RESEARCH METHODOLOGY
W. C. GIFFIN, T. H. ROCKWELL, and P. E. SMITH (Ohio State University, Columbus) IN: Symposium on Aviation Phychology, 3rd, Columbus, OH, April 22-25, 1985, Proceedings . Columbus, OH, Ohio State University, 1985, p. 321-328. refs
(Contract NAG2-112; NAG2-75; NAS2-10047)

Pilot's cognitive responses to critical in-flight events (CIFE's) were investigated, using pilots, who had on the average about 2540 flight hours each, in four experiments: (1) full-mission simulation in a general aviation trainer, (2) paper and pencil CIFE tests, (3) interactive computer-aided scenario testing, and (4) verbal protocols in fault diagnosis tasks. The results of both computer and paper and pencil tests showed only 50 percent efficiency in correct diagnosis of critical events. The efficiency in arriving at a diagnosis was also low: over 20 inquiries were made for 21 percent of the scenarios diagnosed. The information-seeking pattern was random, with frequent retracing over old inquiries. The measures for developing improved cognitive skills for CIFE's are discussed. I.S.

THE SCARE PILOT
J. L. PARNELL (Icarus, Inc., Houston, TX) IN: Symposium on Aviation Psychology. 3rd, Columbus, OH, April 22-25, 1985, Proceedings . Columbus, OH, Ohio State University, 1985, p. 329-336. refs

The roots of pilot's 'human errors', in reality caused by faulty or inconsistent designs in an aircraft, deficient pilot's operating handbook (POHB's), stress or outright fear are discussed with examples for each type of situation. It is concluded that fear-caused panic is often uncontrollable, but the emergency reflex-like actions taken in extreme emergencies are often the correct ones. However, some emergencies cannot be practiced in real flight situation (e.g., fire in the cockpit, a tire blowout on landing), and can be taught in classroom only by instructors who have actually experienced these emergency situations themselves. The importance of finding the true reasons in every 'pilot error' event is emphasized, for these must be used as guides for future airplane designs, pilot screening and upgrading of instructors. I.S.

JUDGMENT TRAINING EFFECTIVENESS AND PERMANENCY
G. P. BUCH (Transport Canada, Toronto) and I. J. DE BAGHEERA (Montreal, Universite, Montreal, Canada) IN: Symposium on Aviation Psychology, 3rd, Columbus, OH, April 22-25, 1985, Proceedings . Columbus, OH, Ohio State University, 1985, p. 337-343.

Partial results of a study evaluating the relative permanency of acquired skills and the effectiveness of a judgment training (JT) program for student pilots, conducted at a three-year college, are presented. Twenty flight and ground instructors underwent a 14-d intensive course on the study of the JT principles, followed by a 16-week control period. Aggressiveness and anxiety tests were administered to students in their first year. In the course of their second year, but prior to receiving the Student Judgment Manual, a written pretest dealing with flight judgmental instances was administered along with a personality trait test. Teaching styles and initial reaction of judgment training are discussed. One result of the study was a higher quality of judgment achieved by the second-year students, as compared with the more experienced third-year group. The cause for this is believed to lie in the close contact of the less experienced group with their instructors, who were carrying out their own training. I.S.

RECURRENT COCKPIT RESOURCE MANAGEMENT TRAINING AT UNITED AIRLINES
R. L. ARNOLD and D. L. JACKSON (United Airlines Denver Training Center, Loveland, CO) IN: Symposium on Aviation Psychology, 3rd, Columbus, OH, April 22-25, 1985, Proceedings . Columbus, OH, Ohio State University, 1985, p. 345-351.

Cockpit Resource Management (CRM) training is an integral part of United Airlines' recurrent training program. Each flight crewmember is trained and checked once per year. Crews participate in all training and checking activities as a crew unit. The training and checking is spread over three consecutive days. On day one, crews participate in a structured exercise designed to review and apply CRM techniques. On day two, the crews perform line oriented flight training (LOFT) in a flight simulator. The LOFT is guided by a scenario structured to promote crew application of CRM principles. A problem is introduced, and the outcome of the LOFT is dependent upon how the crew deals with the problem. The LOFT session is video taped for post session critique. Crews are given a flight check on day three. Efforts are under way to develop assessment scales for CRM application. Author

WHEN SHOULD PILOT DISCIPLINE END AND PILOT SAVVY BEGIN?
J. N. KOMICH (Flight Safety Institute, Sacramento, CA) IN: Symposium on Aviation Psychology, 3rd, Columbus, OH, April 22-25, 1985, Proceedings . Columbus, OH, Ohio State University, 1985, p. 367-371.

Case studies of several fatal accidents and of incidents where a seemingly imminent crash has been avoided by an unusual maneuver are presented. In some extenuating circumstances a crash was prevented by a procedure not covered by a pilot manual. In others, a prescribed procedure was misleading due to unusual situations, but the thoroughly conditioned pilot was unable to depart from the learned procedure. Changes in the airline captain evaluation and in recurrent training process are suggested, which include greater emphasis on the quality, rather than quantity, of

flight time and teaching the pilot to analyze each flight for unique or unusual occurences in the flight. Simulators should provide greater variety of situations, simulating actual cities and circumstances. Finally, every pilot should have access to other pilots' experiences of having avoided a near-crash situation. I.S.

THE ATTITUDE AND INFORMATION COMPONENTS OF THE RISK ASSESSMENT-JUDGEMENT PROCESS
J. KRAMER IN: Symposium on Aviation Psychology, 3rd, Columbus, OH, April 22-25, 1985, Proceedings . Columbus, OH, Ohio State University, 1985, p. 373-380. refs

The FAA regulations regarding the individual's rights to 'voluntary exposure to risk' and the 'rights to incur risk' to others are discussed in light of existing hazards and incompliances to prescribed safety procedures which exist in the area of personal and business aviation. The attitude of pilots towards safety is analyzed, and the examples of accidents caused by a macho attitude, alcohol and drug abuse, and negligence towards one's health problems are presented. The existing FAA flight test guides are found inadequate, especially with respect to 'other than standard' take-off conditions and to aircraft manufactured prior to March 1979. A realignment of the Biennial Flight Review, which is the only mechanism available for judgement training of the general aviation pilot, is suggested. I.S.

'CAPTAIN I WAS TRYING TO BRING UP THE FACT THAT YOU MADE A MISTAKE EARLIER' - DEFERENCE AND DEMEANOR AT 30,000 FEET
R. M. FRANKEL (Wayne State University, Detroit, MI) IN: Symposium on Aviation Psychology, 3rd, Columbus, OH, April 22-25, 1985, Proceedings . Columbus, OH, Ohio State University, 1985, p. 403-410. refs

Results of a NASA-sponsored study, which uses videotechnology and microinteractional analysis to identify the rules and structures of the mutual participation of the crew in the cockpit, are presented. The report focuses on the analysis of a conversational sequence between an air traffic control voice and the crew in the cockpit of a flight simulator, which involves the occurence of an uncorrected error on the part of the flight captain. While the original error was caused by an interactional complexity, with the 1st pilot being simultaneously engaged in three different conversation sequences, the reason for perpetuation of the error was found in the attitude of deference and demeanor on the part of a subordinate pilot who knew about the error. I.S.

THE ROLE OF FUNDAMENTAL EXPRESSION IN INSTRUMENT FLIGHT PERFORMANCE
C. E. MCCOY (Ohio State University, Columbus) IN: Symposium on Aviation Psychology, 3rd, Columbus, OH, April 22-25, 1985, Proceedings . Columbus, OH, Ohio State University, 1985, p. 419-426. refs

The application of the expressive or qualitative aspects of communication to instrument flight is discussed. How these expressive aspects affect pilot performance is examined. The role of phenomenology in the relationship between pilot and aircraft is addressed. C.D.

A86-29897#
AN ANALYSIS OF THE DEARTH OF ASSERTIVENESS BY SUBORDINATE CREWMEMBERS
J. N. KOMICH (Flight Safety Institute, Sacramento, CA) IN: Symposium on Aviation Psychology, 3rd, Columbus, OH, April 22-25, 1985, Proceedings . Columbus, OH, Ohio State University, 1985, p. 431-436.

The problem of an aberrant decision made by the flight captain and remaining unchallenged by the subordinate crewmembers is analyzed. The roots of the problem are seen in the occasional professional inadequacy and/or in the personality of a 'too strong' captain, in the desire of the crew to maintain harmony in the cockpit, and in the 'captain mystique' concept, supported at all levels of aviation bureaucracy. To alleviate this so called 'lack of assertiveness' in the supporting crew, it is suggested that a method be developed that quantitates all aspects of the flight regime. Such quantitative parameters would facilitate the 'out of limits' definition of the flight, which would reduce the subjectiveness of pilots' decisions and judgments, and, in addition, would provide the subordinate crewmembers with concrete basis from which to speak. The need to further stiffen the quality checks by the ATP and to support a crewman who speaks up is emphasized. I.S.

FORMULA FOR A BETTER UNDERSTANDING OF PILOT PERFORMANCE
L. V. CURRERI (Cigna Corp., Windsor Locks, CT) IN: Symposium on Aviation Psychology, 3rd, Columbus, OH, April 22-25, 1985, Proceedings . Columbus, OH, Ohio State University, 1985, p. 451-458. refs

The factors of motivation and ability in the Vroom's formula (which evaluates human performance as a multiplicative function of motivation and ability), as they apply to the training of pilots, are discussed. The most important issues in the ability factor include the need of effective communication among the crewmembers, especially in cases of negative experiences, and the need to correlate the individual behavioral traits with the requirements of the new technical skills. The aspects of the motivation factor include performance standards, responsibility, rewards, and team spirit, as well as 'hygienic factors' of job security, fair play, and working conditions. Although the hygienic factors cannot motivate by themselves, they are prerequisites for motivation. The need to integrate the motivation programs into pilots' technical training is emphasized. I.S.

THE INFLUENCE OF PREVIEW PERIOD AND GLOBAL OPTICAL FLOW RATE ON SENSITIVITY TO LOSS IN SPEED OF SELF MOTION
D. H. OWEN, I. E. PALLOS, L. J. HETTINGER, and J. C. FOGT (Ohio State University, Columbus) IN: Symposium on Aviation Psychology, 3rd, Columbus, OH, April 22-25, 1985, Proceedings . Columbus, OH, Ohio State University, 1985, p. 459-466. refs
(Contract F33615-83-K-0038)

The effects of the preview period and the global optical flow rate on the judgment of one's own speed were evaluated, using a special purpose scene generator. A test event consisted of seven preview segments, in the 0-40 s range, of constant speed followed by a 10-s segment of either constant speed or constant-rate deceleration. The subjects were to mark the initiation of their perception of deceleration by pressing a button. Six optical flow rates, ranging from 1.63 to 26.1 eyeheights/s crossed with the constant speed motion. The results indicate that the errors of reporting 'constant speed' on deceleration trials increase at first, then decrease as the preview period increases on duration, whereas the reaction times between initiation of deceleration and the button press show an opposite effect. Errors of reporting 'deceleration' on constant speed trials were relatively constant over preview durations of up to 20 s, then rose between 20 and 40 s. Implications for optimizing observation time before initiating a control adjustment and for video simulation of high-speed self motion are discussed. I.S.

A86-29902#
THE EFFECTS OF PREVIEW PERIOD ON DESCENT DETECTION
A. E. JOHNSON and D. H. OWEN (Ohio State University, Columbus) IN: Symposium on Aviation Psychology, 3rd, Columbus, OH, April 22-25, 1985, Proceedings . Columbus, OH, Ohio State University, 1985, p. 467-473. refs
(Contract F33615-83-K-0038)

Preview period (segments of level flight preceding a test segment), fractional loss in altitude, and event type (level or descent) were factorially crossed to investigate their influence on the ability of observers to detect descent. Observers made 'level' or 'descent' judgments and rated how confident they were in their decision while viewing computer-generated events which represented either descent or level flight. For level trials, the fastest reaction times resulted from preview periods between 1.25 and 5.0 s. Errors and reaction times decreased as the rate of fractional loss increased. Methodological and practical implications of the findings are discussed relevant to developing systems which optimize an individual's ability to control the altitude of an aircraft. Author

SOURCES OF OPTICAL INFORMATION AND THEIR METRICS FOR DETECTING LOSS IN ALTITUDE
L. WOLPERT and D. H. OWEN (Ohio State University, Columbus) IN: Symposium on Aviation Psychology, 3rd, Columbus, OH, April 22-25, 1985, Proceedings . Columbus, OH, Ohio State University, 1985, p. 475-481.
(Contract F33615-83-K-0038; AF TASK 2313T3)

This experiment was designed to test the usefulness of two metrics for optical information specifying loss in altitude. Eyeheight and ground-texture-unit metrics were contrasted at three levels of global optical flow rate under conditions of constant and accelerating flow. Observers were required to make 'descent' or 'level' judgments based on 15-s computer-generated events simulating level flight or loss in altitude. Analyses of errors and response latencies indicated that the eyeheight metric was more functionally relevant than the ground-texture-unit metric and that performance decrements occurred with increases in flow rate. Likewise, better performance resulted with constant optical flow than with optical flow acceleration. These results and their implications for theory of self-motion perception and for the control of high-speed, low-level flight are discussed. Author

INCREASING SENSITIVITY TO OPTICAL INFORMATION SPECIFYING LOSS IN ALTITUDE
L. J. HETTINGER and D. H. OWEN (Ohio State University, Columbus) IN: Symposium on Aviation Psychology, 3rd, Columbus, OH, April 22-25, 1985, Proceedings . Columbus, OH, Ohio State University, 1985, p. 483-490. refs

An experiment was conducted to assess the effect of training with advance information sensitivity to visual information specifying loss in altitude. Two groups of observers were assigned to two training conditions, designated as 'easy' and 'difficult', and were tested in four separate sessions, the last three being preceded by training sessions. Both groups showed significant improvement in discriminating descent from level flight. Although no significnat effect of training condition was observed, the overall trend was for difficult training to result in more sustained and, in the end, more effective learning. Previously observed negative effects of high values of global optical flow rate on descent detection diminished with training. Distinctions between fast and slow learners are drawn, and the results are discussed in terms of their relevance to perceptual learning theory and pilot training. Author

ALTITUDE ESTIMATION OF PILOT AND NON-PILOT OBSERVERS USING REAL-WORLD SCENES
E. J. RINALDUCCI, M. J. PATTERSON, M. FORREN, and R. ANDES, JR. (Georgia Institute of Technology, Atlanta) IN: Symposium on Aviation Psychology, 3rd, Columbus, OH, April 22-25, 1985, Proceedings . Columbus, OH, Ohio State University, 1985, p. 491-498. refs

The present investigation was primarily concerned with the perceptual factors associated with low altitude flight, and was directed towards the assessment of the ability of pilots to accurately estimate altitude using a psychophysical technique. Pilot and non-pilot observers in the study were required to estimate altitude from photographs taken at different altitudes over six terrain areas in the Southwestern United States. These terrain areas differed in various cue factors such as object density, objects of known size, vertical development, and shading. In general, the results indicated that pilots were more accurate in their estimates than non-pilots, but both groups showed a similar pattern of responding to the different terrains. The ability of pilots and non-pilots to estimate altitude appeared to depend upon the presence of certain cue factors. Recommendations are made relative to the assessment of pilot's ability to estimate altitude before and after low altitude flight training. Author

SIMULATED TERRAIN FOLLOWING FLIGHT - VISUAL AND RADAR TERRAIN CORRELATION REQUIREMENTS
D. MCCORMICK (Singer Co., Link Flight Simulation Div., Sunnyvale, CA) IN: Symposium on Aviation Psychology, 3rd, Columbus, OH, April 22-25, 1985, Proceedings . Columbus, OH, Ohio State University, 1985, p. 499-503.

The components of a Weapon System Trainer (WST), used in training military pilots for the hazardous low altitude terrain-following flight (TF) missions are described. A WST consists of an aircraft simulator within an interactive tactical environment, provided by a computer data base. Visual imagery, representing out-the-window scenes, infrared, or Low Light Level TV image scenes, is provided by a Computer Image Generator, whereas the corresponding, and more accurate, radar terrain information is supplied by a Digital Radar Land Mass System. The amount of correlation needed for the two systems in different types of flight is discussed. A correlation error where the visual terrain is at an altitude greater than 10 percent of the TF altitude above the radar terrain is a potential source of pilot detected, WST generated TF system failure. I.S.

PERCEPTION OF ALTITUDE IN THE LOW AND MEDIUM ALTITUDE RANGES
J. DE MAIO (Honeywell, Inc., Minneapolis, MN) and R. BROOKS (USAF, Human Resources Laboratory, Williams AFB, AZ) IN: Symposium on Aviation Psychology, 3rd, Columbus, OH, April 22-25, 1985, Proceedings . Columbus, OH, Ohio State University, 1985, p. 505-512. refs

The effectiveness of computer-generated imagery in providing visual cues needed for perception of altitude above ground level (AGL) was evaluated from the results of a magnitude estimation task presented to 33 pilots. Subjects estimated AGL altitude after viewing videotaped presentation of five two-dimensional square patterns, which ranged in area from 450-ft x 450-ft to 4000-ft x 4000-ft. The accuracy of perception was indexed by the slope of a regression line of log perceived altitude on log presented altitude. The results show that accuracy of perception is a function of log altitude. Among the three visual scene features examined: the squares, the sides of the squares, and the square corners, the corner density was by far the best predictor of estimation slope. The corner density required to support accurate altitude estimation decreased with altitude: e.g., six corners/sq mile were required at the altitude of 2233 ft, as opposed to nine corners/sq mile at 629 ft. I.S.

CANADIAN AUTOMATED PILOT SELECTION SYSTEM
J. A. JAMES (Department of National Defence, Canadian Forces Personnel Applied Research Unit, Willowdale, Canada) IN: Symposium on Aviation Psychology, 3rd, Columbus, OH, April 22-25, 1985, Proceedings . Columbus, OH, Ohio State University, 1985, p. 513-519.

The Canadian Automated Pilot Selection System (CAPSS) designed for psychomotor testing of airforce candidates is described, including such details as the simulator test facility, the analysis center, the syllabus, the instruction and testing audio-visual system, and the performance feedback. CAPSS is based on a 'job sample' approach, in which the candidates are required to perform a standard set of exercises involving flight tasks representative of those required in learning to fly a light aircraft. The test produces reliable measures of such behavioral characteristics and abilities as basic psychomotor abilities, learning rates, multiple-task integration, and performance under overload. Although variations of the job sample approach were found to be not cost-effective in the U.S., this is believed to be due to the decentralized character of the U.S. testing system and to the much greater numbers of the candidates to be tested. I.S.

TEST ANXIETY IN THE SIMULATOR ENVIRONMENT
J. F. HANSON (Republic Airlines, Inc., Ann Arbor, MI) IN: Symposium on Aviation Psychology, 3rd, Columbus, OH, April 22-25, 1985, Proceedings . Columbus, OH, Ohio State University, 1985, p. 529-532.

The aspects of test anxiety particular to the environment of a periodic simulator checkride for airline pilots are discussed. A succession of four stages of the test anxiety phenomenon: (1) recognition by the pilot of a test situation, (2) initial reaction, (3) mental state changes, referred to by psychologists as 'A-state' reaction, and (4) self-inspection and reaction are analyzed. Measures that can help to eliminate or alleviate stages (1) and (2), and to help the subject to develop a positive, rather than negative reaction in stages (3) and (4), or at least to alleviate the negative impact of these stages, are suggested. I.S.

MICROPAT - A PROGRESS REPORT ON THE VALIDATION OF AN AUTOMATED TEST BATTERY FOR PILOT SELECTION
H. C. A. DALE (Bartdale, Ltd., Beverley, England) and D. BARTRAM (Hull, University, England) IN: Symposium on Aviation Psychology, 3rd, Columbus, OH, April 22-25, 1985, Proceedings . Columbus, OH, Ohio State University, 1985, p. 533-539. Research supported by the Army Personnel Research Establishment. refs

The Micropat test system, developed to improve the selection of Army helicopter pilots, is described. The current Micropat library contains the following tests: (1) adaptive tracking, (2) compensatory tracking, (3) risk, (4) signal detection, (5) dual-task (two-dimensional step tracking and a mental arithmetic test), (6) landing, (7) schedule assessing, and (8) memory span. The results of a validation study have shown that intercorrelations between the pass/fail within the sample and P-score were in most cases low, indicating that most measures are independent both of each other and the P-score. The schedule, risk, and subject-controlled tracking tests, predict aspects of criterion variance unaccounted for by the traditional tests incorporated in the P-score. I.S.

STUDENT PILOT STRESS - AN EMOTIONAL BARRIER TO EFFICIENT FLIGHT TRAINING
I. HENLEY (Transport Canada, Winnipeg) IN: Symposium on Aviation Psychology, 3rd, Columbus, OH, April 22-25, 1985, Proceedings . Columbus, OH, Ohio State University, 1985, p. 541-549. refs

Research has shown that learning to fly is a stressful experience and that stress impedes learning, impairs performance and interferes with decision making processes. To obtain optimal training efficiency, one of the necessary functions of the flight instructor should be to assist to bring about a reduction in the stress level of the student should that stress level be detrimental to efficient learning. Unfortunately, a disturbing finding by researchers in the field of flight training reveals that frequently flight instructors, instead of alleviating stress, impose additional stress on the student pilot. Research addressing the issue of

providing special educational training to flight instructors is in progress. This paper considers the issue of flight instructor training emphasizing the recognition of emotional barriers experienced by students in flight training and the reduction of student pilot stress. Author

A CONTROL THEORY MODEL OF AVIATOR BEHAVIOR
B. A. SMITH (Singer Co., Link Flight Simulation Div., Binghamton, NY) IN: Symposium on Aviation Psychology, 3rd, Columbus, OH, April 22-25, 1985, Proceedings . Columbus, OH, Ohio State University, 1985, p. 551-558. refs

The Control Theory Model of Shipley and Smith (1980) is applied to describe student behavior during training in a General Aviation Trainer. Four groups of subjects received cognitive training at different times during the acquisition of motor skills associated with a basic flight maneuver. Subject performance was displayed in the form of learning curves and analyzed by use of Taylor's theorem. It was found that the individual subject's learning curves contained 'quantum jumps' from one level of performance to another, with an inflection point in the learning curve preceding the onset of these jumps. The inflection points occurred sooner in subjects receiving more cognitive training than in those with less cognitive training. The performance level at which the inflection point occurred was virtually the same for all groups. I.S.

THE EFFECTS OF PSYCHOPHYSICAL MATCHING ON THE TRANSFER OF TRAINING BETWEEN ALTERNATIVE MOTION SIMULATORS
J. M. FLACH (Illinois, University, Urbana), G. R. MCMILLAN, R. WARREN (USAF, Aerospace Medical Research Laboratory, Wright-Patterson AFB, OH), and M. K. SNELL (Systems Research Laboratories, Inc., Dayton, OH) IN: Symposium on Aviation Psychology, 3rd, Columbus, OH, April 22-25, 1985, Proceedings . Columbus, OH, Ohio State University, 1985, p. 601-608. refs

Psychophysical matching techniques were employed to equate the subjective experience of motion in two motion simulation devices - the RATS, a whole-body motion environment and the ALCOGS, which presented motion cues through a moving seat-pan. The psychophysical matching technique was designated SIGMA, for Subjective Interactive Gain Measurement Analysis. Use of the motion drive algorithm, derived using SIGMA, resulted in equivalent roll-axis tracking performance between the two simulators. However, training subjects in the ALCOGS using this motion drive algorithm did not result in better transfer between simulators than training with no motion cues. Author

COMPARISON OF THE EFFECTS OF ATROPINE SULFATE AND ETHANOL ON PERFORMANCE
J. A. DELLINGER, H. L. TAYLOR, and B. C. RICHARDSON (Illinois, University, Savoy) IN: Symposium on Aviation Psychology, 3rd, Columbus, OH, April 22-25, 1985, Proceedings . Columbus, OH, Ohio State University, 1985, p. 631-638. refs
(Contract F33615-83-K-0612; DAMD17-83-C-3150)

The flight simulator performance decrements resulting from atropine injections were compared to similar decrements resulting from ethanol toxicsis. Twenty volunteers received 0.0, 0.5, 1.0, 2.0 and 4.0 mg/75 kg of atropine sulfate under double-blind conditions. The performance decrements at each atropine sulfate treatment level for each subject were determined by computing RMS deviations for five flight performance variables. The data set from a previous study concerned with the effects of ethanol on pilot performance was reanalyzed, and the decrements for the five variables at the 0.082 percent blood alcohol level (BAL) were computed. Probit analysis was used to estimate the Effective Dose (ED50) at which 50 percent of the subjects in the atropine sulfate experiment were expected to display decrements in excess of those observed for the 0.082 percent BAL. The ED50 was 3.12 mg of atropine sulfate. Author

FITNESS-FOR-DUTY, A PILOT'S VIEWPOINT
H. L. SPROGIS (Aviation Research Associates, Ltd., Los Angeles, CA) IN: Symposium on Aviation Psychology, 3rd, Columbus, OH, April 22-25, 1985, Proceedings . Columbus, OH, Ohio State University, 1985, p. 645-652.

No more relevant examination of pilot reliability can perhaps be undertaken than that which overviews the pilot's fitness-for-duty both physically and mentally. Aviation is special to the needs and requirements of maintaining exacting standards of fitness. This paper attempts to define fitness-for-duty and additionally suggests a fitness-for-duty model that may be of assistance to pilots, management, and researchers. Finally, from the model, some principals have surfaced which may help in the further investigation of this critical problem of fitness-for-duty, and how pilots might react to certain solutions. 'THE CAUSES OF CAUSES' - DETERMINANTS AND BACKGROUND VARIABLES OF HUMAN FACTOR INCIDENTS AND ACCIDENTS
K. GERBERT and R. KEMMLER (DFVLR, Institut fuer Flugmedizin, Fuerstenfeldbruck, West Germany) IN: Symposium on Aviation Psychology, 3rd, Columbus, OH, April 22-25, 1985, Proceedings . Columbus, OH, Ohio State University, 1985, p. 683-690.

The kind of human errors most frequently responsible for in-flight accidents and the primary causes of the errors are discussed. The most frequent critical errors were found to be the delay or omission of necessary actions/reactions (57.5 pct), failure to maintain altitude (41.5 pct), misjudgment of weather conditions encountered enroute (30.2 pct), failure to maintain airspeed (23.2 pct), and misjudgment of distances (21.3 pct). The most important factors responsible for the performance capability of a pilot are his physical and psychological fitness as well as his abilities, skills, knowledge, and experience, which, however, can be reduced by external disturbances and by a greatly increased workload. It is believed that some of the most recent advances in the cockpit avionics have not been completely adapted to the needs of the human operator. I.S.

HUMAN PERFORMANCE ASPECTS OF ACCIDENT INVESTIGATION
J. A. MCINTYRE and R. B. STONE (Air Line Pilots Association, International, Washington, DC) IN: Symposium on Aviation Psychology, 3rd, Columbus, OH, April 22-25, 1985, Proceedings . Columbus, OH, Ohio State University, 1985, p. 691-695.

The two principal methods used to evaluate the 'human performance' factors responsible for safe in-flight operations and the specific areas of concern in the application of these methods are discussed. The one method is related to the factors directly tied to performance in the operating envelope, i.e., of training, air traffic control, cockpit resource management, fatigue, and illness. The other method relates to evaluating the phychological profile of the flight crew, i.e., the individual lifestyles, stresses, and personal relationships, which are difficult to link with the general accident proneness. Even in the postaccident investigations, the tendency to focus on easy-to-understand human aberrations may water down the technical and complex overall systems approach needed. As an illustration, investigation findings on two aircraft accidents are presented, together with a discussion of the coverage and its omissions. I.S.

PROGRESS IN HUMAN PERFORMANCE ACCIDENT INVESTIGATION
C. E. SANDLER (National Transportation Safety Board, Washington, DC) IN: Symposium on Aviation Psychology, 3rd, Columbus, OH, April 22-25, 1985, Proceedings . Columbus, OH, Ohio State University, 1985, p. 705-710. refs

The particulars of transportation accidents, most of them involving aircraft, for which a specific human performance factor was identified by a National Transportation Safety Board investigation, are presented. The examples include fatal accidents caused by marijuana use, the erratic behavior of a pilot previously known to possess autocratic personality, overreliance of a crew on an automated system that had a history of discrepancies, and an instance of improper maintenance, due to a change in procedures, by a conscientious and experienced maintenance crew. The Safety Board recommendations, based on the particular performance factors, are presented. I.S.

PERCEPTUAL 'TRAPS' OF THE VISUAL SYSTEM
R. CLAPP (Boeing Military Airplane Co., Wichita, KS) IN: 1985 Summer Computer Simulation Conference, Chicago, IL, July 22-24, 1985, Proceedings . San Diego, CA, Society for Computer Simulation, 1985, p. 732-737. refs

Peculiar operational loops in the human visual system are considered. These loops act as 'traps' in the attempted perception of surrounding real world (or displayed) scenes. These traps belong to three categories, including physical, physiological, and psychological. Attention is given to ambient mode and sensor interactions, visual cue sets, sensory interactions, decisional process flow, motion detection 'interrupts', physical processes, physiological processes, psychological processes, the resolution of eye, the resting point of accommodation, luminance/accommodation relation, the resolution/contrast relation, expectance effects, illusion (learned), and emotion and perception. It is found that many traps of the visual process exist, taking into account psychological, physiological, and physical traps. G.R.

SIMULATOR INSTRUCTOR TASK LOADING - THE TIDE IS TURNING
R. A. GAMACHE (Singer Co., Link Flight Simulation Div., Binghamton, NY) IN: 1985 Summer Computer Simulation Conference, Chicago, IL, July 22-24, 1985, Proceedings . San Diego, CA, Society for Computer Simulation, 1985, p. 744-749.

The designer of the simulator instructional system faces a new challenge each time when he is concerned with a new training requirement. Virtually all simulator instructional systems are composed of three major components, including the console or instructor station, CRT displays, and interactive devices such as keyboards and control panels. The instructor's environment is considered along with aspects of display control and interaction, questions of data display and interaction, task oriented systems, multifunction keyboards, and problems of orchestrating and improvising. It is found that instructional system design is a dynamic and evolutionary process, one that requires the designer to thoroughly analyze the problem, identify the potential solutions, make the selections, and create the design. BIGNESS IS IN THE EYE OF THE BEHOLDER
S. N. ROSCOE (New Mexico State University; ILLIANA Aviation Sciences, Las Cruces, NM) Human Factors (ISSN 0018-7208), vol. 27, Dec. 1985, p. 615-636. refs
(Contract NAS2-9094; F49620-77-C-0117; AF-AFOSR-80-00224)

This report reviews an investigation of judgments of size and distance as required of pilots in flight. The experiments covered a broad spectrum of basic psychophysiological issues involving the measurement of visual accommodation and its correlation with various other dependent variables. Psychophysiological issues investigated included the size-distance invariance hypothesis, the projection of afterimages, the moon illusion, night and empty-field myopia, the dark focus and its so-called Mandelbaum effect, the nature and locus of the accommodative stimulus, the relation between accommodation, retinal size, and perceived size, and possible relationships among accommodative responses, autonomic balance, and personality variables. VISUAL LOBE AREA FOR SINGLE TARGETS ON A COMPETING HOMOGENEOUS BACKGROUND
A. J. COURTNEY and H. S. CHAN (University of Hong Kong, Hong Kong) Human Factors (ISSN 0018-7208), vol. 27, Dec. 1985, p. 643-652. refs

The binocular visual lobe for a detection task, with a peripherally presented target embedded in a homogeneous competing background, was mapped on eight axes passing through the fixation point. The lobes were very irregular in shape and there were differences between the subjects. The eight-axis area correlated highly with area based on only the horizontal and vertical axes, but the latter area gave no indication of even gross irregularities in lobe shape. Lobe areas for two subjects were exhaustively mapped; resulting boundaries were very irregular and there were regions of insensitivity within the lobe area. It was suggested that lobe shape as well as area is important to visual search. The irregular boundary and areas of insensitivity may partly account for the difficulty experienced by some subjects in locating targets even after repeated scanning. Author

THE RELATION BETWEEN THE TYPE A BEHAVIOR PATTERN, PACING, AND SUBJECTIVE WORKLOAD UNDER SINGLE- AND DUAL-TASK CONDITIONS
D. DAMOS (Arizona State University, Tempe) Human Factors (ISSN 0018-7208), vol. 27, Dec. 1985, p. 675-680. refs
(Contract NCC2-202)

Twenty Type A and 20 Type B subjects performed two discrete tasks alone and together. Half of the subjects performed paced versions of both tasks; half, unpaced versions. Workload ratings were obtained for all subjects under single- and dual-task conditions using eight bipolar adjective scales. Under single-task conditions there was a significant interaction between behavior pattern and pacing on one of the tasks. This interaction indicated that Type A subjects responded more rapidly under unpaced conditions than did Type B subjects, although there was little difference between the groups under paced conditions. Under dual-task conditions, Type A subjects responded more rapidly than did Type B subjects regardless of pacing. There was one significant interaction between behavior pattern and task on one of the workload scales. Author

EFFECTS OF SPEECH RATE AND PITCH CONTOUR ON THE PERCEPTION OF SYNTHETIC SPEECH
L. M. SLOWIACZEK and H. C. NUSBAUM (Indiana University, Bloomington) Human Factors (ISSN 0018-7208), vol. 27, Dec. 1985, p. 701-712. refs
(Contract NIH-NS-12179; NIH-NS-07134; F33615-83-K-0501)

The effects of speaking rate, meaning, length of speech, and pitch contour on the perception of synthesized speech were examined with reference to the development of high-quality voice response systems. In the first of the two experiments conducted, the subjects transcribed sentences that were either syntactically correct and meaningful or syntactically correct but semantically anomalous. In the second experiment, the sentences varied in length and syntactic structure. In both experiments, presentation, delivered at the rate of either 150 or 250 words/min, varied from monotone to normally inflected clausal intonation. Accelerating the speaking rate, increasing the sentence length or the syntactic complexity of the sentence, and removing semantic information were all found to significantly worsen the performance of the identification of words in sentences. Removing normal pitch cues had only a minor negative effect. I.S.

THE METRIC OF VISUAL SPACE
M. WAGNER (Franklin and Marshall College, Lancaster, PA) Perception and Psychophysics (ISSN 0031-5117), vol. 38, no. 6, Dec. 1985, p. 483-495. refs

The geometric properties of visual space in the horizontal plane were measured by four different procedures. Five observers were asked to judge distances, angles, and areas defined by pairs and triplets of stakes, using magnitude estimation, category estimation, mapping, and perceptual matching. All judgements took place outdoors in a broad, open field under full-cue conditions. Stimuli oriented in depth were judged to be half as large as the same stimuli oriented in the frontal plane. Angles facing either directly toward or directly away from the observer were seen as approximately twice as large as those seen on their sides. Four mathematical models for visual space are examined. Both the hyperbolic model of Luneburg (1947) and the spherical model of Reid (1813) fail, each for different reasons. Two other models, however, produce a reasonably complete description of visual space. In the first model, visual space is an affine-transformed version of a Euclidean physical space. In the second model, distances are viewed as vectors that can be broken down into in-depth and frontal components relative to the observer. The in-depth component of this vector is contracted by a constant amount in visual space. Author

IMPROVEMENT IN DIRECTION DISCRIMINATION - NO ROLE FOR EYE MOVEMENTS
W. KOSNIK, J. FIKRE, and R. SEKULER (Northwest University, Evanston, IL) Perception and Psychophysics (ISSN 0031-5117), vol. 38, no. 6, Dec. 1985, p. 554-558. refs
(Contract AF-AFOSR-80-0246)

Practice improves observers' ability to discriminate between highly similar directions of motion. In an effort to clarify the basis for this improvement, an observer's eye movements were recorded while he made direction discriminations. It is found that the observer did not need to track the moving target in order to learn the discrimination. Both at the beginning and at the end of training the observer's eye movements more closely resembled movements made while fixating a stationary target, and did not at all resemble movements made while intentionally tracking the stimulus. These results suggest that the learned discrimination of the direction of moving targets is perceptual in nature and does not depend on the learning of a sensorimotor response. Author

MECHANISMS OF HUMAN MOTION PERCEPTION REVEALED BY A NEW CYCLOPEAN ILLUSION
M. SHADLEN and T. CARNEY (California, University, Berkeley) Science (ISSN 0036-8075), vol. 232, April 4, 1986, p. 95-97. refs
(Contract NIH-EY-01175; NIH-EY-05636)

A new cyclopean illusion of motion may bear on neural mechanisms of direction selectivity. Stationary flickering patterns were presented to each eye, and the resulting fused pattern was perceived to be moving. To determine direction of motion, the visual system seems to integrate image components differing by 90 degrees in spatial and temporal phase. On the other hand, image speed seems to be derived from displacement of features over time. A model of neural direction selectivity is discussed in light of these results. Author

ELECTRIC SLEEP METHOD OF PREVENTING FATIGUE BUILD-UP IN SAILORS ON EXTENDED CRUISES
Y. STENKO, I. I. VARENIKOV, and V. A. SKRUPSKIY *In its* USSR Report: Life Sciences. Biomedical and Behavioral Sciences (JPRS-UBB-86-002) p 60-65 8 Jan. 1986 refs Transl. into ENGLISH from Gigiyena Truda i Professionalnyye Zabolevaniya (Moscow, USSR), no. 5, May 1985 p 42-44
Avail: NTIS HC A06

The effectiveness of drugs and the electric sleep method in the correction of sleep disturbances were compared. It is suggested that the maintenance of normal sleep and the correction of sleep disturbances is kept by prevention of fatigue build up in special forms of work organization in extended sea cruises. It is concluded that electric sleep therapy is the most effective method in the prevention of adverse effects which are the results of the impact of a ship's environmental factors over a period of many months, also includes the cumulative effects of noise. Visual recognition, navigation, tracking and imagery are deposited to involve some of the same types of representations and processes. The first part of this paper develops a theory of some of the shared types of representations and processing modules. This theory is developed in light of computational, neuroanatomical, neurophysiological, and behavioral considerations. The second part of the paper develops a mechanism for the development of lateralization of visual function in the brain. Tnis theory leads to predictions about the lateralization of the putative processing modules. The third part of the paper examines critical tests of these predictions, and reviews relevant empirical findings in the literature. Author (GRA)

The design of human organizations in which members perform routine tasks under the pressure of time is considered, particularly the problem of where and how in the design process to take into account human behavior and limitations. A three-phase design approach is suggested. In the first phase, the impact of human characteristics is neglected and attention is focused on aspects of organization structure that are external to individual members. In the second phase, implementations for these decision rules are devised and models of actual human behavior and induced workload for the tasks established for each member are developed. The descriptions are determined as a function of parameters that relate to features of the task set-up and to the options provided to the member for accomplishing his task. A final design phase places these parameters for best organization performance and in view of the workload limitations of individual members. The result is an organization design. The three-phase approach has been formalized as a multi-step methodology. Discussion and illustration is given for each design step. In addition, the methodology is exercised on a specific problem and the resulting organization design has been built. Operation of the organization has been tested under several conditions and experimentally observed results match those predicted for the design, which in turn supports the validity of the design approach. Readiness of operational units, especially Fleet Air Reconnaissance Squadron TWO (VQ-2), is difficult to assess, particularly during operational cycles when the units are fulfilling their missions. This effort was conducted to develop a readiness training assessment system for VQ-2 to provide accurate, timely, and efficient assessments of the operational readiness of aircrew personnel while maintaining the highest possible state of readiness to perform the squadron's mission. The readiness training system for maintaining readiness and training data for VQ-2 aircrew personnel consists of: (1) a matrix for the EP-3E and the EA-3B aircraft of all the events that affect the readiness of the personnel assigned to the 10 crew positions in the EP-3E and the 5 crew positions in the EA-3B for each of the four VQ-2 mission area; (2) a computer-managed system to enter, process, store, and produce the readiness training manual that contains all VQ-2's references on training and readiness. LEVELS OF HELICOPTER CONTROL FORCE INPUTS DURING IN-FLIGHT EMERGENCY CONDITIONS AS A FUNCTION OF AVIATOR EXPERIENCE
A. W. SCHOPPER and J. H. WELLS (U.S. Army, Aeromedical Research Laboratory, Fort Rucker, AL) IN: Symposium on Aviation Psychology, 3rd, Columbus, OH, April 22-25, 1985, Proceedings . Columbus, OH, Ohio State University, 1985, p. 1-23. refs

Twelve helicopter pilots flew six normal and six simulated emergency (hydraulics off) condition approaches and landings in a U.S. Army utility helicopter to document the magnitude of force inputs required for emergency operations; the pilots differed widely in number of hours previously flown, in order to determine the effect of pilot experience. Cyclic, collective, and pedal controls were strain gage-instrumented, and attention was given to the outputs recorded during the last 60 sec of flight prior to each touchdown. Analyses of variance undertaken on the means of the forces recorded during successive 5-sec intervals revealed significant differences in the magnitude of the forces applied as a function of hydraulic system condition and time-to-touchdown. Significant interactions with pilot experience are noted. O.C.

PILOT USAGE OF DECOUPLED FLIGHT PATH AND PITCH CONTROLS
J. BERKHOUT, R. OSGOOD (South Dakota, University, Vermillion), and D. BERRY (NASA, Flight Research Center, Edwards, CA) IN: Symposium on Aviation Psychology, 3rd, Columbus, OH, April 22-25, 1985, Proceedings . Columbus, OH, Ohio State University, 1985, p. 39-46.

Data from decoupled flight maneuvers have been collected and analyzed for four AFTI-F-16 pilots operating this aircraft's highly augmented fly-by-wire control system, in order to obtain spectral density, cross spectra, and Bode amplitude data, as well as coherences and phase angles for the two longitudinal axis control functions of each of 50 20-sec epochs. The analysis of each epoch yielded five distinct plotted parameters for the left hand twist grip and right hand sidestick controller output time series. These two control devices allow the left hand to generate vertical translation, direct lift, or pitch-pointing commands that are decoupled from those of the right hand. Attention is given to the control patterns obtained for decoupled normal flight, air-to-air gun engagement decoupled maneuvering, and decoupled air-to-surface bombing run maneuvering. O.C.

COCKPIT INFORMATION REQUIREMENTS ANALYSIS - A MISSION ORIENTATION
D. D. RILEY (Essex Corp., Warminster, PA) and W. A. BREITMAIER (U.S. Navy, Naval Air Development Center, Warminster, PA) IN: Symposium on Aviation Psychology, 3rd, Columbus, OH, April 22-25, 1985, Proceedings . Columbus, OH, Ohio State University, 1985, p. 55-61. refs

A methodology has been developed to derive, on the basis of mission needs, the cockpit information requirements of A-6F and V-22 naval aircraft. After determining a representative mission scenario, the mission is broken down into segments and subjected to a function analysis. Functions are then allocated to either human operator or machine control, and cockpit task requirements for each mission segment are derived together with the cockpit information presentation capabilities necessary for operator performance of each task item. Operator task responsibilities are then assigned according to crew position or function for each mission segment. O.C.

COGNITIVE NETWORK ORGANIZATION AND COCKPIT AUTOMATION
R. J. ROSKE-HOFSTRAND (NASA, Ames Research Center, Moffett Field, CA; New Mexico State University, Las Cruces) and K. R. PAAP (IBM Santa Teresa Laboratories, San Jose, CA; New Mexico State University, Las Cruces) IN: Symposium on Aviation Psychology, 3rd, Columbus, OH, April 22-25, 1985, Proceedings . Columbus, OH, Ohio State University, 1985, p. 71-78.

Attention is given to a technique for the derivation of pilot cognitive networks from empirical data, which has been successfully used to guide the redesign of the Control Display Unit that serves as the primary interface of the complex flight management system being developed by NASA's Advanced Concepts Flight Simulator program. The 'pathfinder' algorithm of Schvaneveldt et al. (1985) is used to obtain the conceptual organization of four pilots by generating a family of link-weighted networks from a set of psychological distance data derived through similarity ratings. The degree of conceptual agreement between pilots is assessed, and the means of translating a cognitive network into a menu structure are noted. O.C.

A COMPARISON OF VOICE AND KEYBOARD DATA ENTRY FOR A HELICOPTER NAVIGATION SYSTEM
K. A. CHRIST and F. J. MALKIN (U.S. Army, Human Engineering Laboratory, Aberdeen Proving Ground, MD) IN: Symposium on Aviation Psychology, 3rd, Columbus, OH, April 22-25, 1985, Proceedings . Columbus, OH, Ohio State University, 1985, p. 79-86.

The entering of helicopter navigation data by voice command instead of keyboard punching promises to ease the visual and manual workloads currently experienced by US Army helicopter pilots when flying below treetop level to avoid detection. A comparative evaluation is made of voice and keyboard methods in the case of a Doppler navigation set furnishing worldwide navigation data in universal transverse Mercator coordinates, while the helicopter simulator is operating in level flight and in terrain-following flight. Speed of data entry is found to be greater overall with the keyboard than with the voice, although neither method disrupted flight performance. O.C.

SPEECH VARIABILITY EFFECTS ON RECOGNITION ACCURACY ASSOCIATED WITH CONCURRENT TASK PERFORMANCE BY PILOTS
C. A. SIMPSON (Psycho-Linguistic Research Associates, Menlo Park, CA) IN: Symposium on Aviation Psychology, 3rd, Columbus, OH, April 22-25, 1985, Proceedings . Columbus, OH, Ohio State University, 1985, p. 87-102. refs
(Contract NAS2-11431)

In the present study of the responses of pairs of pilots to aircraft warning classification tasks using an isolated word, speaker-dependent speech recognition system, the induced stress was manipulated by means of different scoring procedures for the classification task and by the inclusion of a competitive manual control task. Both speech patterns and recognition accuracy were analyzed, and recognition errors were recorded by type for an isolated word speaker-dependent system and by an offline technique for a connected word speaker-dependent system. While errors increased with task loading for the isolated word system, there was no such effect for task loading in the case of the connected word system. O.C.

DEVELOPMENT OF A COMPREHENSIVE VOICE MESSAGE VOCABULARY FOR TACTICAL AIRCRAFT
D. J. FOLDS (Georgia Institute of Technology, Atlanta) IN: Symposium on Aviation Psychology, 3rd, Columbus, OH, April 22-25, 1985, Proceedings . Columbus, OH, Ohio State University, 1985, p. 103-110. refs
(Contract F33615-83-D-0601)

Synthetic speech messages are currently implemented in some tactical aircraft and speech message systems have been proposed for others. The purpose of the present research was to obtain the judgments of tactical pilots and researchers in the field concerning the best uses of voice messages in near-term tactical aircraft, and to integrate those judgments into a comprehensive message ensemble for tactical aircraft. Results from the pilot survey are presented and unresolved issues are discussed. Author

SELECTING COLOR CODES FOR A COMPUTER-GENERATED TOPOGRAPHIC MAP BASED ON PERCEPTION EXPERIMENTS AND FUNCTIONAL REQUIREMENTS
A. SPIKER, S. P. ROGERS, and J. CICINELLI (Anacapa Sciences, Inc., Santa Barbara, CA) IN: Symposium on Aviation Psychology, 3rd, Columbus, OH, April 22-25, 1985, Proceedings . Columbus, OH, Ohio State University, 1985, p. 151-158. refs

The development of computer-generated topographic displays (CGTDs) for Army helicopter and other tactical vehicles provides a number of advantages related to terrain-correlation navigation, mission planning, and enroute navigation. A selection of suitable color code displays based on a study of human factors and functional requirements, can be a great help in an efficient implementation of functions to be provided by the CGTD. Attention is given to the digital map system, the primary functional requirements with respect to color and symbology, color naming studies involving the employment of 40 subjects in four experiments, map search studies with 20 subjects, and color set recommendations. It is concluded that depending on the distribution of chromaticities and luminances in the color set, color contrast, brightness contrast, and Gaussian spread may either hinder or help performance. G.R.

LUMINANCE CONTRAST REQUIREMENTS FOR LEGIBILITY OF SYMBOLS ON COMPUTER-GENERATED MAP DISPLAYS IN AIRCRAFT COCKPITS
S. P. ROGERS, A. SPIKER, and J. CICINELLI (Anacapa Sciences, Inc., Santa Barbara, CA) IN: Symposium on Aviation Psychology, 3rd, Columbus, OH, April 22-25, 1985, Proceedings . Columbus, OH, Ohio State University, 1985, p. 175-182. refs
(Contract DAAK80-81-C-0089)

Difficulties regarding the translation of research findings into design recommendations in the case of symbol luminance have been related to inconsistent results. The present paper is concerned with studies which have been conducted with the aim to avoid the shortcomings of earlier investigations. In the described experiments, luminance and luminance contrast effects in low, moderate, and high ambient illumination environments are examined. The obtained results confirm and extend previous findings in the visual adaptation area. Average response time decreased with increases in contrast ratio, decreases in adaptation luminance, and increases in display background luminance. The result of the current investigation underlines the importance of basing cockpit display design decisions on quantitative perceptual data. G.R.

POTENTIAL CONTROLLER ERROR MODES IN AUTOMATED EN ROUTE ATC (AERA)
J. B. MCKINLEY and R. J. JAGO (Systems Control Technology, Inc., Washington, DC) IN: Symposium on Aviation Psychology, 3rd, Columbus, OH, April 22-25, 1985, Proceedings . Columbus, OH, Ohio State University, 1985, p. 189-197. Research sponsored by the Martin Marietta Corp. refs

A snapshot of an ongoing human factors evaluation for the FAA's Advanced Automation System program is presented. In particular, the anticipated Automated En Route Air Traffic Control (AERA) controller's functions and tasks are described. Potential error modes that may be attributable to system error causes such as attention, judgment, and communication are identified. Finally, AERA controller training implications are discussed and primary skill requirements are described for each of the AERA control processes. C.D.

CAN PILOTS TIME-SHARE BETTER THAN NON-PILOTS?
P. S. TSANG (NASA, Ames Research Center, Moffett Field, CA) IN: Symposium on Aviation Psychology, 3rd, Columbus, OH, April 22-25, 1985, Proceedings . Columbus, OH, Ohio State University, 1985, p. 215-222. refs

The time-sharing ability of 12 male pilots and 12 male college students ranging in age from 18-36 are evaluated and compared. The subjects performed five pairs of dual tasks with varying degrees of structural similarity; the test procedures are described. The time-sharing efficiency and resource allocation optimality of the subjects are analyzed. The data reveal that the pilots and students display similar time-sharing performance; the degree of time-sharing efficiency decreases and resource allocation optimality increases with an increasing degree of structural similarity between the time-shared tasks. I.F.

CAUSES OF DISSOCIATION BETWEEN SUBJECTIVE WORKLOAD MEASURES AND PERFORMANCE - CAVEATS FOR THE USE OF SUBJECTIVE ASSESSMENTS
M. A. VIDULICH (NASA, Ames Research Center, Moffett Field, CA) and C. D. WICKENS (Illinois, University, Champaign) IN: Symposium on Aviation Psychology, 3rd, Columbus, OH, April 22-25, 1985, Proceedings . Columbus, OH, Ohio State University, 1985, p. 223-230. refs
(Contract N00014-79-C-0658)

Dissociations between subjective workload assessments and performance were investigated. The difficulty of a Sternberg memory search task was manipulated by varying stimulus presentation rate, stimulus discernibility, value of good performance, and automaticity of performance. All Sternberg task conditions were performed both alone and concurrently with a tracking task. Bipolar subjective workload assessments were collected. Dissociations between workload and performance were found related to automaticity, presentation rate, and motivation level. The results were interpreted as supporting the hypothesis that the specific cognitive processes responsible for subjective assessments can differ from those responsible for performance. The potential contamination these dissociations could inflict on operational workload assessments is discussed. Author

RELATIVE CONTRIBUTIONS OF SWAT DIMENSIONS TO OVERALL SUBJECTIVE WORKLOAD RATINGS
S. S. POTTER and W. H. ACTON (Systems Research Laboratories, Inc., Dayton, OH) IN: Symposium on Aviation Psychology, 3rd, Columbus, OH, April 22-25, 1985, Proceedings . Columbus, OH, Ohio State University, 1985, p. 231-238. refs

The present study investigated several aspects of the Subjective Workload Assessment Technique (SWAT) using a recall task designed to place demands upon short term memory processing. Reaction time data, SWAT ratings, and ratings on overall task difficulty proved sensitive to demand manipulations, and the correlation between the two subjective scales was significant. The results also indicated differential sensitivity between the three SWAT subscales, which supports the assumption that the three dimensions in SWAT represent separate dimensions of subjective load. This finding has significant implications for the application of SWAT in operational settings. System designers are not only concerned with the overall degree of workload imposed by a system, but also need information about the specific aspects which are responsible for producing the high levels of workload. TECHNIQUES OF SUBJECTIVE WORKLOAD ASSESSMENT - A COMPARISON OF TWO METHODOLOGIES
M. A. VIDULICH and P. S. TSANG (NASA, Ames Research Center, Moffett Field, CA) IN: Symposium on Aviation Psychology, 3rd, Columbus, OH, April 22-25, 1985, Proceedings . Columbus, OH, Ohio State University, 1985, p. 239-246. refs

With increasing complexity of systems, evaluation techniques based on close examination of an operator's performance become more and more difficult to perform, and it is much easier to base on evaluation of a workload on the opinion of the operator involved in performing the task. The present paper has the objective to compare two of the general subjective workload assessment techniques which have been developed. One of these techniques, the Subjective Workload Assessment Technique (SWAT), has been developed primarily at the USAF Aerospace Medical Research Laboratory for use in cockpit environments. The second technique, the NASA weighted-bipolar technique, is a development tool to examine the underlying relationships among many factors. One of the two goals of the study is concerned with the general validity of subjective workload assessments, while, according to the second goal, any particular strengths or weaknesses with respect to either of the two techniques are to be observed. It is concluded that both techniques appear to be worthwhile. G.R.

SUBJECTIVE ASSESSMENT OF PILOT WORKLOAD IN THE ADVANCED FIGHTER COCKPIT
S. D. DETRO (BDM Corp., Brookville, OH) IN: Symposium on Aviation Psychology, 3rd, Columbus, OH, April 22-25, 1985, Proceedings . Columbus, OH, Ohio State University, 1985, p. 247-254.

In connection with the development of advanced cockpit design concepts, it is vital that the workload for the pilot in the context of human-machine interactions does not exceed inherent human limitations. On the basis of cost considerations, a validation of cockpit concepts at an early design stage is crucial. Two procedural variants of the Subjective Workload Assessment Technique (SWAT) have been developed for the evaluation of tentative cockpit designs. In a combination of the SWAT technique and another subjective technique, called Ground Attack Tactics Survey (GATS), quantitative data can be effectively derived from structured interviews with 'expert operators' of similar systems. The considered techniques were used to explore the workload implications of advanced crew system control and display concepts for an advanced fighter cockpit when prototype aircrew protection

equipment (Chemical, Biological, and Radiological /CBR/) was also in use. G.R.

MEASURING PILOT WORKLOAD IN A MOTION BASE TRAINER - A COMPARISON OF FOUR TECHNIQUES
M. R. BORTOLUSSI, B. H. KANTOWITZ (BITS, Inc., West Lafayette, IN), and S. G. HART (NASA, Ames Research Center, Moffett Field, CA) IN: Symposium on Aviation Psychology, 3rd, Columbus, OH, April 22-25, 1985, Proceedings . Columbus, OH, Ohio State University, 1985, p. 263-270. refs
(Contract NCC2-228)

Various techniques have been developed to predict and measure pilot workload. This simulation was conducted in order to compare four widely used methods: A visual two- and four-choice reaction time task, time production, retrospective multi-dimensional subjective ratings and in-flight verbal workload estimates. Two scenarios with different levels of difficulty determined by preliminary research were designed to test these techniques. The insertion of the secondary tasks did not significantly affect flight performance. All four techniques were able to distinguish among levels of scenario complexity. In addition, the three secondary tasks and workload ratings obtained in-flight were generally able to distinguish among levels of difficulty for different segments within the scenarios. Author

TIME-SHARING REVISED - TEST OF A COMPONENTIAL MODEL FOR THE ASSESSMENT OF INDIVIDUAL DIFFERENCES
R. BRAUNE and C. D. WICKENS (Illinois, University, Savoy) IN: Symposium on Aviation Psychology, 3rd, Columbus, OH, April 22-25, 1985, Proceedings . Columbus, OH, Ohio State University, 1985, p. 271-278. refs
(Contract N00204-82-C-0113)

In many systems, taking into account also nuclear power plants and modern-day aircraft, the human operator is required to control and/or monitor several tsks in parallel. Any differences in 'time-sharing efficiency' during the operation of some systems, such as those in a current fighter aircraft, can be crucial for the success. For this reason, it appears important to have information about individual differences occurring in people with respect to their ability for time-sharing performance. A componential model of time-sharing performance was, therefore, tested. It was found that the notion of a general time-sharing ability could not be rejected due to the high intercorrelations between the extracted factors. Preliminary results of a second-order factor analysis suggest the existence of a general time-sharing factor. This factor appears to represent a bipolar continuum related to attention switching and parallel processing of heterogeneous dynamics. G.R.

AN INVESTIGATION REGARDING THE USE OF A DYNAMIC SEAT-PAN DISPLAY FOR TRAINING AND AS A DEVICE FOR COMMUNICATING ROLL-AXIS MOTION INFORMATION
E. A. MARTIN (USAF, Aeronautical Systems Div., Wright-Patterson AFB, OH) IN: Symposium on Aviation Psychology, 3rd, Columbus, OH, April 22-25, 1985, Proceedings . Columbus, OH, Ohio State University, 1985, p. 591-600. refs

This paper describes a research program conducted to determine the feasibility of providing useful angular onset-motion information via a broad-area tactual seat-pan display. The experiment was designed to permit the evaluation of the utility of the display as a training device as well as its efficacy for imparting motion information. The results indicate that - with proper attention given the drive law the tactual display can elicit both performance and control behavior indistinguishable from that observed in a whole-body motion environment. Unfortunately, the training transfer results were not so encouraging. These indicated that the seat-pan display as used in this study was not adequate for training naive subjects to properly interpret and use the motion information available in a whole-body motion environment. Author

TACTUAL CUING CAN PRODUCE BETTER PERFORMANCE THAN VISUAL CUING
M. K. SNELL (Systems Research Laboratories, Inc., Dayton, OH), J. M. FLACH (Illinois, University, Urbana), G. R. MCMILLAN, and R. WARREN (USAF, Aerospace Medical Research Laboratory, Wright-Patterson AFB, OH) IN: Symposium on Aviation Psychology, 3rd, Columbus, OH, April 22-25, 1985, Proceedings . Columbus, OH, Ohio State University, 1985, p. 609-616. refs

Three experiments were conducted to investigate the relative utility of g-seat tactual motion cuing (cuing imparted by a moving seat pan) and visual motion cuing (cuing imparted by a schematic attitude indicator) to subjects performing a compensatory roll-axis tracking task. The studies compared tracking performances with three motion cuing conditions: g-seat plus visual, g-seat alone, and visual alone. The lowest error scores occurred when the g-seat plus visual cuing conditions were used. When used separately, the g-seat produced significantly lower error scores than the visual condition. A whole-body motion plus visual condition was included for comparison. Author

ENVIRONMENTAL CONSIDERATIONS AND WASTE PLANNING ON THE LUNAR SURFACE
R. BRIGGS and A. SACCO, JR. (Worcester Polytechnic Institute, MA) IN: Lunar bases and space activities of the 21st century . Houston, TX, Lunar and Planetary Institute, 1985, p. 423-430. refs

Developments related to the establishment and maintenance of a lunar facility are examined, taking into account arising waste and environmental problems. Processes to obtain oxygen on the moon from lunar ilmenite for a transport to low earth orbit (LEO) are discussed along with questions of life support on the moon, the utilization of nuclear power for lunar needs, the transport of man and materials to low lunar orbit (LLO), and transportation between LLO and LEO. Waste and environmental problems are partly related to the desirability to preserve the present perfect environmental conditions for an astronomical observation post on the far side of the moon. In addition, it will be necessary to comply with an international treaty which stipulates, among other things, that harmful contamination of the moon is to be avoided. A summary of environmental considerations arising from lunar operations is presented. G.R.

THE EVOLUTION OF CELSS FOR LUNAR BASES
R. D. MACELROY, H. P. KLEIN (NASA, Ames Research Center, Moffett Field, CA), and M. M. AVERNER (New Hampshire, University, Durham) IN: Lunar bases and space activities of the 21st century . Houston, TX, Lunar and Planetary Institute, 1985, p. 623-633. refs

A bioregenerative life support system designed to address the fundamental requirements of a functioning independent lunar base is presented in full. Issues to be discussed are associated with CELSS weight, volume and cost of operation. The fundamental CELSS component is a small, highly automated module containing plants which photosynthesize and provide the crew with food, water and oxygen. Hydrogen, nitrogen and carbon dioxide will be initially brought in from earth, recycled and their waste products conserved. As the insufficiency of buffers necessitates stringent cybernetic control, a stable state will be maintained by computer control. Through genetic engineering and carbon dioxide, temperature, and nutrient manipulation, plant productivity can be increased, while the area necessary for growth and illumination energy decreased. In addition, photosynthetic efficiency can be enhanced through lamp design, fiber optics and the use of appropriate wavelengths. Crop maintenance will be performed by robotics, as a means of preventing plant ailments. K.K.

IMPLEMENTING SUPERCRITICAL WATER OXIDATION TECHNOLOGY IN A LUNAR BASE ENVIRONMENTAL CONTROL/LIFE SUPPORT SYSTEM
M. MEYER SEDEJ (NASA, Johnson Space Center, Houston, TX) IN: Lunar bases and space activities of the 21st century . Houston, TX, Lunar and Planetary Institute, 1985, p. 653-661. refs

A supercritical water oxidation system (SCWOS) offers several advantages for a lunar base environmental control/life support system (ECLSS) compared to an ECLSS based on Space Station technology. In supercritically heated water (630 K, 250 atm) organic materials mix freely with oxygen and undergo complete combustion. Inorganic salts lose solubility and precipitate out. Implementation of SCWOS can make an ECLSS more efficient and reliable by elimination of several subsystems and by reduction in potential losses of life support consumables. More complete closure of the total system reduces resupply requirements from the earth, a crucial cost item in maintaining a lunar base. Author

EFFECTS OF ADAPTATION AND DISPLAY LUMINANCE ON CRT SYMBOL RECOGNITION TIME
A. SPIKER, S. P. ROGERS, and J. CICINELLI (Anacapa Sciences, Inc., Santa Barbara, CA) IN: Advances in display technology V; Proceedings of the Meeting, Los Angeles, CA, January 24, 25, 1985 . Bellingham, WA, SPIE - The International Society for Optical Engineering, 1985, p. 13-20. refs
(Contract DAAK80-81-C-0089)

The inability of the human visual system to adapt quickly to a wide range of environmental luminances poses a stiff challenge to the design of airborne displays. Using a repeated measures factorial design, the present study investigated the independent and interactive effects of adaptation luminance, contrast ratio, and display background luminance on this 'eye adaptation mismatch' phenomenon. Adaptation luminances ranged from 1 fL to 10,000 fL, with legibility defined as the time required by observers to recognize CRT symbols. Overall, response time increased systematically with increases in adaptation luminance, and decreased with increases in contrast ratio and display background luminance. Additional analyses revealed that contrast ratio and display luminance influence response time multiplicatively, such that quests to maintain large contrast ratios under bright ambient light at the expense of lowered display luminance could exaggerate the mismatch between adaptation luminance and display luminance and thus degrade symbol legibility. Author

A86-32316
MINIMUM COLOUR DIFFERENCES REQUIRED TO RECOGNISE SMALL OBJECTS ON A COLOUR CRT
P. L. PHILLIPS (British Aerospace, PLC, Sowerby Research Centre, Bristol, England) IN: Advances in display technology V; Proceedings of the Meeting, Los Angeles, CA, January 24, 25, 1985 . Bellingham, WA, SPIE - The International Society for Optical Engineering, 1985, p. 21-34. Sponsorship: Ministry of Defence. refs
(Contract MOD RP42-3)

Data were obtained on the eye's sensitivity to irregular objects viewed at small subtense, to extend the current standards and methods available for both military and general use for evaluating the color and other displays. Computer-controlled CRT was employed on a variety of background and object colorings, to measure the threshold color difference that an observer requires between an object and background, so that he can discriminate a variety of similar objects. The results are presented in the CIE international colorimetric system. It was shown that larger color differences are required for object recognition than those assumed from conventional color discrimination data. A simple relationship to account for object size and background color is suggested to aid in visual performance assessments and mathematical modeling. I.S.

A86-32317
THE RASTERED EYE - VISION IN TELEVISION
R. E. CLAPP (Boeing Military Airplane Co., Wichita, KS) IN: Advances in display technology V; Proceedings of the Meeting, Los Angeles, CA, January 24, 25, 1985 . Bellingham, WA, SPIE - The International Society for Optical Engineering, 1985, p. 36-42.

Limiting resolution criteria for detection, orientation, recognition and identification of objects in the visual scene or display have been developed using static high contrast targets. Misconception or misapplication of these criteria to television systems has led to underspecification or underdesign of visual display systems by a factor of 3 to 4 times. Limiting resolution criteria for rastered visual display systems are presented, together with other visual parameter effects. These criteria are used to develop 'standard' sets of parameters for the specification of raster visual display systems. Author

INTERACTION BETWEEN CONTROLLING, PLANNING, AND FAULT MANAGING IN COMPLEX MAN-MACHINE SYSTEMS
G. JOHANNSEN (Kassel, Gesamthochschule, West Germany) IN: A bridge between control science and technology. Volume 5 . Oxford and New York, Pergamon Press, 1985, p. 2541-2545. refs

The three main task categories in man-machine systems are controlling, planning, and fault managing which are briefly explained in the paper. Their interaction is illustrated schematically with a block diagram and further outlined using Rasmussen's cognitive levels of behaviour. Two paradigms, namely car driving and aircraft piloting, exemplify the nature of the interaction in more detail, partially based on experimental results. The state-of-the-art in

modelling these task categories and their interaction is discussed with an emphasis on qualitative vs. quantitative models using control theory, artificial intelligence techniques, and fuzzy set theory. Model-based support and expert systems are mentioned as an important future application. Author

A86-33186
MULTI-COMPONENT CHARACTERIZATION OF THE HUMAN OPERATOR'S CONTROL OUTPUT
T. YOSHIDA (Matsue Technical College, Japan) and H. TAMURA (Osaka University, Toyonaka, Japan) IN: A bridge between control science and technology. Volume 5 . Oxford and New York, Pergamon Press, 1985, p. 2603-2608. refs

In this paper the human control output in the manual control system is studied under the assumption that it consists of three components. The first is a input component which assumed to be a continuous function of time generated by the input model in operator's brain. The second is a system component which takes place, depending on the current state of the error. The third is the psychophysical noise of the operator. The existence of each component is experimentally ascertained. Next, the control output is subdivided into two phases based on remnant, and the roles of the input and the system component are clarified. These results support that the control logic is reflected on remnant and that the proposed conceptional model is valid. Author

A UNIFYING APPROACH TO HUMAN PILOT MODELLING
R. A. HESS (California, University, Davis) IN: A bridge between control science and technology. Volume 5 . Oxford and New York, Pergamon Press, 1985, p. 2609-2613. refs

The data base supporting models of the human pilot participating in well defined single-axis tracking tasks can be considered essentially complete as regards the effects of aircraft dynamics and disturbance characteristics. Despite this fact, certain fundamental and interesting questions have only recently been addressed or remain unanswered. Among these are the following: (1) By what mechanism does the human pilot generate the dynamic equalization required in tracking tasks? (2) How might the human utilize an 'internal model' of the environment in these tasks? (3) What causes nonlinear pilot behavior when controlling higher-order dynamics? (4) How do manipulator characteristics effect human pilot dynamics and performance? (5) How does the human organize his perceptions in pursuit as opposed to compensatory tracking? (6) How does the human quantify his subjective impressions of task difficulty or handling qualities? With these and related issues in mind, a 'structural model' of the human pilot is discussed. The model is shown to be descriptive rather than predictive in nature and is shown to have its basis in an hypothesized feedback structure involving the human neuromuscular system. Selecting pertinent examples from experimental results reported in the literature, the questions just raised are discussed and the potential of the structural model to answer them in a unified manner is demonstrated. EXPERT COMPUTER AIDED DECISION IN SUPERVISORY CONTROL
A. BISSERET (Institut National de Recherche en Informatique et en Automatique, Le Chesnay, France) IN: A bridge between control science and technology. Volume 5 . Oxford and New York, Pergamon Press, 1985, p. 2621-2626. refs

Supervisory control is changing from surveillance on large classical control panels to a surveillance on computer displays with the use of man-computer dialogues. The displayed information of course can be sophisticated, and interesting efforts currently pursued in this direction are presented. But moreover it should become possible to have the computer participate directly to the decision activities. The concept of expert system might be promising but only for already expert activity. This paper insists on the non-expert but necessary problem solving activity of the supervisors facing unforeseen situations. The development of research towards computer aid specific to this activity is stressed. Examples of recent advances in cognitive psychology and artificial intelligence are suggested as directions for this development. Author

OXYGEN-LIBERATING MIXTURES FOR BREATHING APPARATUS Abstract Only
In its USSR Report: Life Sciences. Biomedical and Behavioral Sciences (JPRS-UBB-86-004) p 131 12 Mar. 1986 Transl. into ENGLISH from Sovetskaya Belorussiya (Minsk, USSR), 10 Dec. 1985 p 4
Avail: NTIS HC A07/MF A01

Mixtures which are capable at any time of releasing their stored oxygen were prepared. When heated, 100 grams of a substance ground into powder releases more than 40 liters of gas. This is enough to sustain human respiration for several hours in extreme conditions. Such a need may arises in medical practice, in mines, under water, and high in the mountains. The development of these alloys is the result of theoretical and experimental work. Their components are mixtures of salts and inorganic peroxides. E.A.K.

DESIGN GUIDELINES FOR THE USE OF AUDIO CUES IN COMPUTER INTERFACES
D. A. SUMIKAWA, M. M. BLATTNER, K. I. JOY, and R. M. GREENBERG Jul. 1985 25 p Presented at the 19th Annual Hawaii International Conference on System Sciences, Honolulu, Hawaii, 8 Jan. 1986 Prepared in cooperation with California Univ., Davis, Calif.
(Contract W-7405-ENG-48)
(DE85-015176; UCRL-92925; CONF-860107-1) Avail: NTIS HC A02/MF A01

A logical next step in the evolution of the computer-user interface is the incorporation of sound thereby using our senses of hearing in our communication with the computer. This allows our visual and auditory capacities to work in unison leading to a more effective and efficient interpretation of information received from the computer than by sight alone. In this paper we examine earcons, which are audio cues, used in the computer-user interface to provide information and feedback to the user about computer entities (these include messages and functions, as well as states and labels). The material in this paper is part of a larger study

that recommends guidelines for the design and use of audio cues in the computer-user interface. The complete work examines the disciplines of music, psychology, communication theory, advertising, and psychoacoustics to discover how sound is utilized and analyzed in those areas. The resulting information is organized according to the theory of semiotics, the theory of signs, into the syntax, semantics, and pragmatics of communication by sound. Here we present design guidelines for the syntax of earcons. DOE

STOCHASTIC MODELS OF MAN-MACHINE SYSTEM EFFECTIVENESS Ph.D. Thesis
K. W. LEE 1985 360 p
Avail: Univ. Microfilms Order No. DA8528018

A human performance reliability model was developed to introduce the human operator effect into the system effectiveness model. The model can predict quantitatively how much the human aspects of the man-machine system contribute to the system unreliability. Mission effectiveness models that provide a realistic measurement of system effectiveness are presented. It depicts interrelationships between the components of the mission system and shows a way to properly integrate the human operator into mission effectiveness. For situations in which there are too many computational difficulties in developing the models, the simulation approach is more practical than the analytical approach. To demonstrate the sensitivity of the probabilistic assumptions for the system variables to the mission effectiveness, a robustness test is performed. To identify system variables sensitive to mission effectiveness can be obtained by allocating more effort to estimating these variables. The models developed will lead to a more valid effectiveness analysis output and provide a useful tool for consistent system evaluation. Dissert. Abstr.

THE SYSTEM INTEGRATION AND VERIFICATION TESTING OF AN ORBITAL MANEUVERING VEHICLE FOR AN AIR BEARING FLOOR Final Report
N. L. SHIELDS, JR., M. F. MARTIN, K. R. PAULUKAITIS, J. W. HASLAM, JR., and D. E. HENDERSON 22 Feb. 1986 125 p refs
(Contract NAS8-35636)
(NASA-CR-178350; NAS 1.26:178350; H-86-02) Avail: NTIS HC A06/MF A01 CSCL 05H

The teleoperator and Robotics Evaluation Facility (TOREF) is composed of a 4,000 square foot precision air bearing floor, the Teleoperator Motion Base, the Target Motion and Support Simulator, the mock-ups of the Hubble Space Telescope, Multi-mission Modular Spacecraft, and the Orbital Maneuvering Vehicle (OMV). The TOREF and its general capabilities to support the OMV and other remote system simulations; the facility operating procedures and requirements; and the results of generic OMV investigations are summarized. EFFECT OF HEAT AND CHEMICAL PROTECTIVE CLOTHING ON COGNITIVE PERFORMANCE Final Report
B. J. FINE and J. L. KOBRICK Nov 1985 27 p
(AD-A162001; USARIEM-M-4/86) Avail: NTIS HC A03/MF A01 CSCL 06Q

This study examined the effects of heat on the sustained cognitive performance of sedentary soldiers clad in chemical protective clothing, Twenty males trained for 2 weeks on selected military tasks. Then, they performed the tasks for 7-hour periods on 4 successive days in hot (32.8C.,61%rh) and normal (21.1C35%rh) conditions, with and without protective clothing. After 4 to 5 hours in the heat wearing protective clothing, the cognitive performance of the group began to deteriorate markedly. By the end of 7 hrs. of heat, increases in % group error on investigator-paced tasks ranged from 17% to 235 over control conditions. Virtually all of the decrements were due to increases in errors of omission. The productivity of the group on a self-paced task (map plotting) diminished by approximately 40% from control conditions after 6 hrs. in the heat in protective clothing; accuracy of plotting was not markedly affected. EFFECTIVENESS OF AN AIR-COOLED VEST USING SELECTED AIR TEMPERATURE AND HUMIDITY COMBINATIONS
N. A. PRIMENTAL, H. M. COSIMINI, M. N. SAWKA, and C. B. WENGER Nov. 1985 25 p
(AD-A162026; USARIEM-M5/86) Avail: NTIS HC A02/MF A01 CSCL 06Q

We evaluated the effectiveness of an air-cooled vest in reducing thermal strain when supplied with five different dry bulb (db) and dew point (dp) temperature combinations. The combinations were selected to determine minimal air conditioning requirements for various military vehicles. Four male soldiers attempted twelve, 300-min heat exposures (49 C db, 20 C dp) at metabolic rates of 175 and 315 W. They wore chemical protective clothing over the combat vehicle crewman uniform; on ten of the test days, they also wore the air-cooled vest. Air supplied to the vest ranged from 20-27 C db, 7-18 C dp. Without the vest, endurance times were 118 min (175 W) and 73 min (315 W). Endurance times with the vest were 300 min (175 W) and 242-300 min (315 W). Rectal temperatures, heart rates and sweating rates were reduced dramatically with the air at the lower dry bulb temperature. We conclude that effective combinations of cooled and dehumidified air can be provided on military vehicles to reduce the crewmen's thermal strain, with minimized size and weight penalties. GRA

THE DESIGN OF NATURAL LANGUAGE INTERFACES M.S. Thesis
I. KOTROZOS Sep. 1985 110 p
(AD-A162181) Avail: NTIS HC A06/MF A01 CSCL 05H

One of the possible solutions to the problem of designing effective man-machine interfaces seems to be the use of natural languages. This thesis examines the principles of design of effective man-machine interfaces, the role of natural languages in achieving effective man-machine communication and the implementation issues and techniques for their use as interfaces. AN EXAMINATION OF THE LIFE SUPPORT EQUIPMENT DEVELOPMENT AND ACQUISITION PROCESS M.S. Thesis
J. J. MOYER Sep. 1985 66 p
(AD-A162241; AFIT/GSM/XPX/85S-24) Avail: NTIS HC A04/MF A01 CSCL 15E

The process of life support equipment development and acquisition is examined. This research identified the how the present process works, and the problems of the process. The research was limited to the development and acquisition of life support equipment for tactical aircraft. However, most of the problems and steps of the process are shared by life support equipment programs for other users. The process was determined by referring to applicable regulations and interviewing people involved in the process. Problems were identified during interviews, and by examining the process as a whole. Seven problems are identified, of which five are considered correctable in the current defense acquisition framework. Four of the five problems deal with the management of the acquisition and development process, and combined indicate the lack of an integrated approach. Solutions were developed from suggestions obtained during the interviews and through qualitative analysis of the problems. An integrated solution is proposed in the recommendations. GRA

HUMAN FACTORS ENGINEERING AND OPERABILITY IN THE DESIGN OF ELECTRONIC WARFARE SPACES ABOARD UNITED STATES NAVAL COMBATANTS M.S. Thesis
D. J. BLAUSER, JR. Sep. 1985 118 p
(AD-A162251) Avail: NTIS HC A06/MF A01 CSCL 17D

The purpose of this thesis is to present and discuss a a method of assessing the effectiveness of a work space layout. In addition, this method will provide the framework for pinpointing those areas of layout design where redesign will be most cost effective. The objective is to address inefficiencies in the layout of warfare modules on U.S. Navy combatants. In particular, the Electronic Warfare Module on aircraft carriers is assessed due to the highly time-critical nature of electronic warfare. The method chosen in this thesis is a modification of two techniques of assessment: Integration Analysis and Mission Operability Assessment Technique (MOAT). The portions of these techniques used are Link Analysis, Task Analysis, and Operability Analysis. The application herein concludes that the EW Module layout design on the latest NIMITZ-class aircraft carriers was less than 40% effective in promoting mission accomplishment. GRA

PERSON COMPUTER DIALOGUE: A HUMAN ENGINEERING DATA BASE SUPPLEMENT
B. E. SHAW and M. E. MCCAULEY Jan. 1985 148 p
(Contract F33615-82-C-0513)
(AD-A163074; AFAMRL-TR-85-013) Avail: NTIS HC A07/MF A01 CSCL 09B

This report was prepared as a Human Engineering Data Base Supplement to the Integrated Information for Designers (IPID) Engineering Data Compendium. It was specifically written to aid computer system designers. The body of literature on person-computer dialogue has been gathered and organized into an integrated format. Major topic areas include conceptual comparisons of person-computer dialogue, models for evaluation of dialogue systems, unique considerations of specific user groups, and specific user-system dialogue design considerations. These major areas are subdivided into succinct discussions of highly focused design considerations. Each discussion of design considerations includes a general description, statement of applications, constraints, and key references in addition to the graphic/tabular formatted design guidelines. An extensive bibliography of literature on person-computer dialogue is included. GRA

STANDARDIZATION OF CARBON-PHENOLIC COMPOSITE TEST METHODOLOGY
W. B. HALL *In* NASA. Marshall Space Flight Center Research Reports: 1985 NASA/ASEE Summer Faculty Fellowship Program 27 p Jan. 1986
Avail: NTIS HC A99/MF E04 CSCL 11D

The objective of this study was to evaluate the residual volatiles, filler content, and resin flow test procedures for carbon-phenolic prepreg materials. The residual volatile test procedure was rewritten with tighter procedure control which was then evaluated by round robin testing by four laboratories on the same rolls of prepreg. Results indicated that the residual volatiles test was too operator and equipment dependent to be reliable, and it was recommended that the test be discontinued. The resin flow test procedures were rewritten with tighter procedure control, and it is now considered to be an acceptable test. It was recommended that the filler content determination be made prior to prepregging. Author

EXOBIOLOGY EXPERIMENTS FOR SPACE STATION
D. L. DEVINCENZI (NASA, Washington, DC) and L. D. GRIFFITHS (GE Management and Technical Services Co., Washington DC) (International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, Oct. 13-18, 1985) Physiologist, Supplement (ISSN 0031-9376), vol. 28, Dec. 1985, p. S-185, S-186.

The benefits the Space Station could provide to the study of the origin, evolution, and distribution of life throughout the universe are described. Space Station experiments relevant to the cosmic evolution of biogenic elements and compounds, prebiotic chemical evolution, early evolution of life, and the evolution of advanced life forms are examined. The application of astronomical and astrometric observations to be obtained from the Space Station to the origin of life research is discussed. I.F.

PHOTOCHEMISTRY OF METHANE AND THE FORMATION OF HYDROCYANIC ACID (HCN) IN THE EARTH'S EARLY ATMOSPHERE
K. J. ZAHNLE (NASA, Ames Research Center, Moffett Field, CA; Michigan, University, Ann Arbor) Journal of Geophysical Research (ISSN 0148-0227), vol. 91, Feb. 20, 1986, p. 2819-2834. refs
(Contract NSF ATM-82-097960)

A one-dimensional photochemical model is used to analyze the photochemistries of CH4 and HCN in the primitive terrestrial atmosphere. CH4, N2, and HCN photolysis are examined. The background atmosphere and boundary conditions applied in the analysis are described. The formation of HCN as a by-product of N2 and CH4 photolysis is investigated; the effects of photodissociation and rainfall on HCN is discussed. The low and high CH4 mixing ratios and radical densities are studied. I.F.

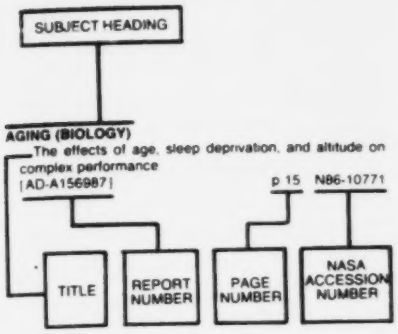
Typical Subject Index Listing



The subject heading is a key to the subject content of the document. The title is used to provide a description of the subject matter. When the title is insufficiently descriptive of the document content, the title extension is added, separated from the title by three hyphens. The (NASA or AIAA) accession number and the page number are included in each entry to assist the user in locating the abstract in the abstract section. If applicable, a report number is also included as an aid in identifying the document. Under any one subject heading, the accession numbers are arranged in sequence with the AIAA accession numbers appearing first.

Changes in fitness and shipboard task performance following circuit weight training programs featuring continuous or interval running [AD-A163110] p 225 N86-24206

ARTIFICIAL INTELLIGENCE
Interaction between controlling, planning, and fault managing in complex man-machine systems p 240 A86-33184
Expert computer aided decision in supervisory control p 241 A86-33186

ASPARTATES
Response of rat hindlimb muscles to 12 hours recovery from tail-cast suspension p 198 A86-30426

ASSESSMENTS
Professional flightcrew human resource development Developing a Needs Assessment Programme p 232 A86-29915

ASTRONAUT PERFORMANCE
Catching zzzs in zero-G p 217 A86-31150

ATMOSPHERIC CHEMISTRY
Photochemistry of methane and the formation of hydrocyanic acid (HCN) in the earth's early atmosphere p 243 A86-30697

ATMOSPHERIC SOUNDING
Meteorological adaptation research at biology institute p 211 N86-23257

ATMOSPHERIC TEMPERATURE
Effectiveness of an air-cooled vest using selected air temperature and humidity combinations [AD-A162026] p 242 N86-24219

ATROPHY
Responses of skeletal muscle to unloading - A review p 192 A86-30379
Are there conditions in which adrenalectomy impedes the atrophying effects of denervation? p 194 A86-30397
Changes in muscle protein composition induced by disuse atrophy - Analysis by two-dimensional electrophoresis p 200 A86-30440

ATROPINE
Comparison of the effects of atropine sulfate and ethanol on performance p 232 A86-29923
Environmental stress after atropine treatment [AD-A161923] p 223 N86-24197

ATTENTION
Can pilots time-share better than non-pilots? p 238 A86-29874

ATTENUATION
Experimental evaluation of pathogenicity of different variants of lassa virus p 211 N86-23254

AUDIO FREQUENCIES
Effects of speech rate and pitch contour on the perception of synthetic speech p 234 A86-31824

AUDIO SIGNALS
Design guidelines for the use of audio cues in computer interfaces [DE85-015176] p 241 N86-23281

AUDIOLOGY
A survey of speech audiometry in the National Health Service [NPL-AC-105] p 221 N86-23267

AUDIOMETRY
A survey of speech audiometry in the National Health Service [NPL-AC-105] p 221 N86-23267

AUDITORY TASKS
The effect of using speech generation and recognition systems on the performance of discrete tasks p 227 A86-29863

AUTOKINESIS
The influence of preview period and global optical flow rate on sensitivity to loss in speed of self motion p 230 A86-29901

AUTOMATED EN ROUTE ATC
Potential controller error modes in Automated En Route ATC (AERA) p 238 A86-29871

AUTOMATIC CONTROL
Information display complexes --- Russian book p 241 A86-33324

AUTOMATION
Cognitive network organization and cockpit automation p 237 A86-29858
Coping with automation - An airline view p 238 A86-29873

AVIATION PSYCHOLOGY
Symposium on Aviation Psychology, 3rd, Columbus, OH, April 22-25, 1985, Proceedings p 226 A86-29851
Cognitive network organization and cockpit automation p 237 A86-29858
Pitch change thresholds as influenced by angular rate and duration of the apparent horizon's displacement p 227 A86-29867
Coping with automation - An airline view p 238 A86-29873
Relative contributions of SWAT dimensions to overall subjective workload ratings --- Subjective Workload Assessment Technique p 238 A86-29876
Subjective assessment of pilot workload in the advanced fighter cockpit p 238 A86-29878
In search of a time-sharing ability in zero input tracking analyzer scores --- of pilot psychomotor performance p 227 A86-29882
Reliability of military pilots - Problems and prospects p 227 A86-29884
A review of critical in-flight events research methodology p 226 A86-29886
Judgment training effectiveness and permanency p 226 A86-29888
The attitude and information components of the risk assessment-judgement process --- of aircraft pilots p 229 A86-29892
'Captain I was trying to bring up the fact that you made a mistake earlier' - Deference and demeanor at 30,000 feet p 229 A86-29894
An analysis of the dearth of assertiveness by subordinate crewmembers p 229 A86-29897
Cockpit resource management - Exploring the attitude-performance linkage p 229 A86-29899
Formula for a better understanding of pilot performance p 230 A86-29900
The effects of preview period on descent detection p 230 A86-29902
Perception of altitude in the low and medium altitude ranges p 231 A86-29907
An exploratory study of computer-based aviator testing p 231 A86-29909
Test anxiety in the simulator environment p 231 A86-29910
Student pilot stress - An emotional barrier to efficient flight training p 231 A86-29912
A control theory model of aviator behavior p 232 A86-29913
A preliminary study - A multivariate analysis of attitudinal characteristics of flight instructors p 232 A86-29914

Psychological recovery after incidents and accidents within aviation p 232 A86-29924
The role of the flight psychologist in the RNLAF in A/C accident investigation and prevention p 233 A86-29926
'The causes of causes' - Determinants and background variables of human factor incidents and accidents p 233 A86-29930
Review of book on principles of aviation psychology p 235 N86-23261

B

BABOONS
Effects of 60 Hz electric fields on operant and social stress behaviors of nonhuman primates [DE86-002587] p 209 N86-23221
BACILLUS
Cloning and analysis of genes for anthrax toxin components [AD-A161901] p 212 N86-24186
Identification of vaccine resistant isolates of bacillus anthracis [AD-A162002] p 212 N86-24187
BACKGROUND NOISE
Visual lobe area for single targets on a competing homogeneous background p 234 A86-31821
BACTERIA
Antibiotic properties of bifidobacteria p 219 N86-23236
BACTERIOLOGY
Antibiotic properties of bifidobacteria p 219 N86-23236
Description of preparation of capsular antigen isolated from yersinia pestis strain EV p 219 N86-23242
BACTERIOPHAGES
Search for DNA host specificity systems in salmonella typhi p 210 N86-23247
BED REST
Mechanisms for negative water balance during weightlessness immersion or bed rest? p 214 A86-30386
BEHAVIOR
Effects of 60 Hz electric fields on operant and social stress behaviors of nonhuman primates [DE86-002587] p 209 N86-23221
Behavioral effects of microwave radiation absorption [PB86-113735] p 222 N86-23275
BENDING
Evidences for changes in sensitivity to auxin and in cell-wall properties during gravitropic bending of dicot stems p 196 A86-30409
BENZENE
Production and characterization of antibodies to benzo(a)pyrene [DE85-002204] p 222 N86-23271
BIBLIOGRAPHIES
Aerospace Medicine and Biology: A Cumulative Index to the 1985 Issues [NASA-SP-7011(280)] p 221 N86-23265
Behavioral effects of microwave radiation absorption [PB86-113735] p 222 N86-23275

USSR report: Life sciences. Biomedical and behavioral sciences [JPRS-UBB-86-004] p 212 N86-23258
BIOCOMPATIBILITY
Production of gamma- and alpha-interferon by human blood leukocytes under successive induction conditions p 217 N86-23229
BIOCONVERSION
Annual report and summaries of FY 1985 activities supported by the Division of Biological Energy Research [DE85-009132] p 209 N86-23220
BIODYNAMICS
The alleviating effect of arbitrary movements on the vestibulomotor p 216 A86-30898
The effects of ketamine on Rhesus monkey skeletal dynamics [AD-A162848] p 213 N86-24189
BIOELECTRIC POTENTIAL
Neuronal responses and the evoked potentials in subcortical structures of the human brain during visual recognition. II - The effect of stimuli relevance on the evoked neuronal responses p 216 A86-30894
A bidomain model for the extracellular potential and magnetic field of cardiac tissue p 206 A86-31224
BIOELECTRICITY
Gravistimulation-induced changes in current patterns around root caps p 196 A86-30411
Biochemical models for study of nerve cell processes p 209 N86-23223
BIOFEEDBACK
Electric sleep method of preventing fatigue build-up in sailors on extended cruises p 235 N86-23248
BIOGENY
Exobiology experiments for space station p 243 A86-30453
BIOINSTRUMENTATION
Study of biotechnology applied to research and development [AD-A161877] p 212 N86-24185
BIOLOGICAL EFFECTS
Gravistimulation-induced changes in current patterns around root caps p 196 A86-30411
Effects of mechanical stresses, abscisic acid, and outdoor exposure on growth and water relations of eggplant p 196 A86-30416
Effects of clinostat rotation on Aurelia statolith synthesis p 199 A86-30436
Use of membrane vesicles as a simplified system for studying transport of auxin [DE86-002264] p 209 N86-23219
Annual report and summaries of FY 1985 activities supported by the Division of Biological Energy Research [DE85-009132] p 209 N86-23220
Aerospace Medicine and Biology: A Cumulative Index to the 1985 Issues [NASA-SP-7011(280)] p 221 N86-23265
Behavioral effects of microwave radiation absorption [PB86-113735] p 222 N86-23275
System for measurement of small vibrations at material interfaces induced by electrostrictive forces [PB86-116530] p 222 N86-23276
Biological effects and physical safety aspects of NMR imaging and in vivo spectroscopy [DE86-002966] p 213 N86-24190
Aerospace medicine and biology: A continuing bibliography with indexes (supplement 283) [NASA-SP-7011(283)] p 223 N86-24192
The effect of high frequency electromagnetic fields on human beings (frequency range between 1 kHz and 1000 GHz) p 223 N86-24193
Effects of wearing NBC (Nuclear, Biological and Chemical) protective clothing in the heat on detection of visual signals [AD-A162321] p 224 N86-24202
ELF (Extremely Low Frequency) biological effects literature data base management system [AD-A162900] p 225 N86-24205
BIOLOGICAL EVOLUTION
Biological extinction in earth history p 207 A86-32057
Eukaryotic ribosomes that lack a 5.8S RNA p 207 A86-32237
The theoretical principles of adaptation --- physiological responses to environment p 208 A86-33072
Investigation on the chirality of electrons from Sr-90-Y-90 beta-decay and their asymmetrical interactions with D- and L-alanines p 243 A86-33390
BIOLOGICAL MODELS (MATHEMATICS)
Time-sharing revised - Test of a componential model for the assessment of individual differences p 239 A86-29881
A bidomain model for the extracellular potential and magnetic field of cardiac tissue p 206 A86-31224
The metric of visual space p 234 A86-32072
Biochemical models for study of nerve cell processes p 209 N86-23223
The BAe D target acquisition model ORACLE: An overview, 1984 [BAE-JS-10009] p 221 N86-23268
Using Ashford's general model to aid in the understanding of a pesticide's neurotoxic effect through pesticide-drug mixture experiments [PB86-130028] p 226 N86-24211
Stochastic models of man-machine system effectiveness p 242 N86-24216
BIOMAGNETISM
Neuromagnetism - Theory, techniques, and measurements --- Thesis p 217 A86-33459
BIOMEDICAL DATA
Biomedical research with cyclotron produced radionuclides [DE86-000327] p 221 N86-23269
Using Ashford's general model to aid in the understanding of a pesticide's neurotoxic effect through pesticide-drug mixture experiments [PB86-130028] p 226 N86-24211
BIOMETRICS
Effects of gravity on the fluid balance and distribution in man p 214 A86-30383
Thermoencephaloscopy p 206 A86-30892
Complex approach to the study of adaptive systemic reactions and functional states in man. I - The time factor in the formation of subcomplexes of systemic physiological indexes of functional state dynamics, and the instrumentation used in the study p 216 A86-30893
Correlation of constant flow rate with frequency spectrum of respiratory sounds when measured at the trachea p 217 A86-31223
Neuromagnetism - Theory, techniques, and measurements --- Thesis p 217 A86-33459
BIONICS
Model of experimental pixuna virus infection in white mice p 211 N86-23253
BIOPHYSICS
USSR report: Life sciences. Biomedical and behavioral sciences [JPRS-UBB-86-004] p 212 N86-23258
BIOSYNTHESIS
Control of arachidonic acid release in chick muscle cultures p 198 A86-30429
Hepatic enzymes of sphingolipid and glycerolipid biosynthesis in rats from Spacelab 3 p 205 A86-30471
Artificial antigens, vaccines reviewed p 219 N86-23235
Obtaining hybridomas that synthesize monoclonal antibodies to polysaccharide of group a streptococcus p 219 N86-23240

BIOTELEMETRY
Homeostasis and biological rhythms in the rat during spaceflight p 202 A86-30460

BLOOD
The effects of ketamine on Rhesus monkey skeletal dynamics
[AD-A162848] p 213 N86-24189

BLOOD CIRCULATION
Circadian variation of volume and concentration of orthostatically shifted fluid p 215 A86-30445
Day course of blood and plasma density in relation to other hematological parameters p 215 A86-30446
The regulatory mechanisms of blood supply in skeletal muscles — Russian book p 207 A86-32524
Blood transport of oxygen (The role of erythrocytes) p 206 A86-33073

BLOOD COAGULATION
Physiological changes in hemostasis associated with acute exercise p 215 A86-30680

BLOOD PLASMA
Day course of blood and plasma density in relation to other hematological parameters p 215 A86-30446
Atriopeptin (AP-3) in atria and plasma of rats orbited aboard NASA Spacelab (SL3) for seven days p 205 A86-30477
Plasma renin concentration (PRC) of rats orbited for 7 days aboard NASA Spacelab 3 p 205 A86-30478
Plasma lactate and ventilation thresholds in trained and untrained cyclists p 215 A86-30678
Effect of elevated FFA on carbohydrate and lipid oxidation during prolonged exercise in humans p 215 A86-30679

BLOOD PRESSURE
Microvascular flow adjustments with postural changes in humans p 215 A86-30448

BLOOD VESSELS
Localization of calcium stimulated adenosine triphosphatase activity in blood vessels of the skeleton p 197 A86-30424

BLOOD VOLUME
Volume regulating hormones p 214 A86-30384
Circadian variation of volume and concentration of orthostatically shifted fluid p 215 A86-30445

BODY FLUIDS
Effects of gravity on the fluid balance and distribution in man p 214 A86-30383
Volume regulating hormones p 214 A86-30384
Fluid and electrolyte control in simulated and actual spaceflight p 214 A86-30385
Changes in functional metabolism in the rat central nervous system following spaceflight p 199 A86-30433
Circadian variation of volume and concentration of orthostatically shifted fluid p 215 A86-30445

BODY TEMPERATURE
Influence of exposure to a prolonged hyperdynamic field on body temperature in the squirrel monkey p 200 A86-30439
Reduction of circadian disruption following surgery by ingestion of caffeine in the laboratory rat p 201 A86-30447
Homeostasis and biological rhythms in the rat during spaceflight p 202 A86-30460

BODY WEIGHT
Skeletal mass change as a function of gravitational loading p 192 A86-30380
Respiratory response and muscle function during isometric handgrip exercise at high altitude
[AD-A162003] p 223 N86-24198

BONE DEMINERALIZATION
Correlated light and electron microscopy of the vasculature of cortical bone in rat femora and tibiae p 193 A86-30395
Fertilization, development and spicule formation in sea urchins under conditions of constant reorientation relative to the gravitation axis p 195 A86-30406
Bone loss during simulated weightlessness - Is it glucocorticoid mediated? p 197 A86-30423
Effect of simulated weightlessness and chronic 1,25-dihydroxyvitamin D administration on bone metabolism p 198 A86-30425

BONE MINERAL CONTENT
Skeletal mass change as a function of gravitational loading p 192 A86-30380
Effects of gravitational and muscular loading on bone formation in growing rats p 194 A86-30396
Microprobe analysis of epiphyseal plates from Spacelab 3 rats p 204 A86-30469
Bone maturation in rats flown on the Spacelab-3 mission p 205 A86-30479

BONES
Effects of non weight bearing on callus formation p 193 A86-30394
Morphologic and histochemical studies of bone cells from SL-3 rats p 205 A86-30473
Osteocalcin as an indicator of bone metabolism during spaceflight p 205 A86-30474

BOTANY
USSR Space Life Sciences Digest, issue 4
[NASA-CR-3922(04)] p 209 N86-23218

BRAIN
Effects of weightlessness on neurotransmitter receptors in selected brain areas p 203 A86-30462
Ventilatory acclimatization to hypoxia is not dependent on cerebral hypocapnic alkalosis p 206 A86-30683
Biochemical models for study of nerve cell processes p 209 N86-23223
L-tryptophan administered to chronic sleep-onset insomniacs: Late-appearing reduction of sleep latency
[AD-A163115] p 225 N86-24207

BRAIN CIRCULATION
Thermoencephaloscopy p 206 A86-30892
The effect of intense mental work under stress on cardiac activity, hemodynamics, and brain circulation p 216 A86-30895

BRAIN STEM
Corticoreticular interactions in the mechanisms of reflexotherapy p 208 A86-33071

BREATHING APPARATUS
Oxygen-liberating mixtures for breathing apparatus p 241 N86-23264

C

CABIN ATMOSPHERES
Dynamics of the salivary electrolyte composition and renal excretory function during human adaptation to an altered gaseous environment p 216 A86-30899

CAFFEINE
Reduction of circadian disruption following surgery by ingestion of caffeine in the laboratory rat p 201 A86-30447

CALCIFEROL
Effect of simulated weightlessness and chronic 1,25-dihydroxyvitamin D administration on bone metabolism p 198 A86-30425
1,25-Dihydroxyvitamin D3 receptors in space-flown vs. grounded control rat kidneys p 204 A86-30472

CALCIFICATION
Morphogenesis and calcification of the statoconia in the chick (Gallus domesticus) embryo - implications for future studies p 195 A86-30405

CALCIUM
Cytochemical localization of calcium in cap cells of primary roots of Zea mays L. p 197 A86-30418
The effects of ketamine on Rhesus monkey skeletal dynamics
[AD-A162848] p 213 N86-24189

CALCIUM METABOLISM
Spaceflight and calcium metabolism p 192 A86-30378
Effect of calmodulin and auxin transport inhibitors on calcium net uptake along apical corn roots p 196 A86-30412
Immunocytochemical localization of calmodulin in pea root caps and plumules and its relevance to hypothesis on gravitropism p 197 A86-30419
The calcium dependence of auxin action in roots p 197 A86-30421
Correlated changes in calmodulin activity and gravitropic sensitivity in roots of maize p 197 A86-30422
Localization of calcium stimulated adenosine triphosphatase activity in blood vessels of the skeleton p 197 A86-30424
Effect of simulated weightlessness and chronic 1,25-dihydroxyvitamin D administration on bone metabolism p 198 A86-30425
Changes in skeletal muscle properties following hindlimb suspension p 198 A86-30428
Electron microprobe analyses of Ca, S, Mg and P distribution in incisors of Spacelab-3 rats p 202 A86-30455
1,25-Dihydroxyvitamin D3 receptors in space-flown vs. grounded control rat kidneys p 204 A86-30472
Osteocalcin as an indicator of bone metabolism during spaceflight p 205 A86-30474
Bone maturation in rats flown on the Spacelab-3 mission p 205 A86-30479
Status of calcium metabolism in coal miners with vibration sickness p 220 N86-23251

CANCER
Radiation induction of cancer of the skin
[DE86-002201] p 221 N86-23270
EFFECTS. Documentation and verification for a BEIR 3 cancer risk model based on age, sex and population dynamics for BIOTRAN
[DE86-003295] p 226 N86-24210

CAPILLARY FLOW
Microvascular flow adjustments with postural changes in humans p 215 A86-30448

CARBOHYDRATE METABOLISM
Are there conditions in which adrenalectomy impedes the atrophying effects of denervation? p 194 A86-30397
Possible mechanism for changes in glycogen metabolism in unloaded soleus muscle p 198 A86-30427
Altered carbohydrate metabolism in the whole body suspended rat p 199 A86-30431
Muscle protein and glycogen responses to recovery from hypogravity and unloading by tail-cast suspension p 202 A86-30457
Effect of elevated FFA on carbohydrate and lipid oxidation during prolonged exercise in humans p 215 A86-30679
Remarkable metabolic availability of oral glucose during long-duration exercise in humans p 216 A86-30684

CARBOHYDRATES
Obtaining hybridomas that synthesize monoclonal antibodies to polysaccharide of group a streptococcus p 219 N86-23240

CARBON ISOTOPES
Biomedical research with cyclotron produced radionuclides
[DE86-000327] p 221 N86-23269

CARBON 14
Use of membrane vesicles as a simplified system for studying transport of auxin
[DE86-002264] p 209 N86-23219

CARBON-CARBON COMPOSITES
Standardization of carbon-phenolic composite test methodology p 243 N86-24527

CARDIOLOGY
Cardiorespiratory responses to lower body negative pressure and tilt tests after exposure to simulated weightlessness p 215 A86-30387

CARDIOVASCULAR SYSTEM
Characteristics of medically disqualified airman applicants in calendar years 1982 and 1983
[AD-A162209] p 224 N86-24201

CAROTID SINUS BODY
Carotid bodies are required for ventilatory acclimatization to chronic hypoxia p 206 A86-30682

CASUALTIES
Drugs of abuse in aviation fatalities. 1: Marijuana
[AD-A161911] p 223 N86-24196

CATECHOLAMINE
Investigation of mechanisms of the radioprotective effect of agonists of catecholamine receptors - involvement of both subtypes of alpha-adrenoreceptors in the radioprotective effect p 208 A86-32698

CATHODE RAY TUBES
Effects of adaptation and display luminance on CRT symbol recognition time p 240 A86-32315
Minimum colour differences required to recognise small objects on a colour CRT p 240 A86-32316

CELLS (BIOLOGY)
Early mammalian development under conditions of reorientation relative to the gravity vector p 194 A86-30399
Simulated hypogravity and synaptogenesis in culture p 194 A86-30401
Evidences for changes in sensitivity to auxin and in cell-wall properties during gravitropic bending of dicot stems p 196 A86-30409
Cytochemical localization of calcium in cap cells of primary roots of Zea mays L. p 197 A86-30418
Tissue culture apparatus for flight experimentation p 201 A86-30444
Morphology of human embryonic kidney cells in culture after space flight p 201 A86-30452
Microgravity associated changes in pituitary growth hormone (GH) cells prepared from rats flown on Space Lab 3 p 202 A86-30459
Morphologic and histochemical studies of bone cells from SL-3 rats p 205 A86-30473
Use of membrane vesicles as a simplified system for studying transport of auxin
[DE86-002264] p 209 N86-23219
Interaction of asialoglycoprotein receptor of hepatocytes with chemically galactosylated acid alpha-glucosidase p 210 N86-23224
Discovery regarding electron redistribution among cell membranes p 217 N86-23227
Obtaining hybridomas that synthesize monoclonal antibodies to polysaccharide of group a streptococcus p 219 N86-23240

Study of cell-wall antigen determinants in ribosomal preparations of group a streptococcus
p 220 N86-23243
Standardization of conditions for measuring intensity of specific fluorescence in continuous cell cultures infected with variants of Japanese encephalitis virus
p 211 N86-23255

CENTRAL NERVOUS SYSTEM
Changes in functional metabolism in the rat central nervous system following spaceflight
p 199 A86-30433

CENTRIFUGING STRESS
Skeletal mass change as a function of gravitational loading p 192 A86-30380
Animal models of motion sickness - Are nonemetic species an appropriate choice? p 193 A86-30393
Growth and development of mice and rats conceived and reared at different G-intensities during chronic centrifugation p 195 A86-30403
Influence of exposure to a prolonged hyperdynamic field on body temperature in the squirrel monkey
p 200 A86-30439

CEREBRAL CORTEX
Thermoencephaloscopy p 206 A86-30892
Neuronal responses and the evoked potentials in subcortical structures of the human brain during visual recognition. II - The effect of stimuli relevance on the evoked neuronal responses p 216 A86-30894
Role of dopaminergic systems of neostriatum during the activity of the central nervous system in man and animals p 208 A86-33070
Corticoreticular interactions in the mechanisms of reflexotherapy p 208 A86-33071

CEREBRUM
Visual hemispheric specialization: A computational theory
[AD-A161296] p 235 N86-23279

CHEMICAL COMPOSITION
Standardization of carbon-phenolic composite test methodology p 243 N86-24527

CHEMICAL EFFECTS
Effects of mechanical stresses, abscisic acid, and outdoor exposure on growth and water relations of eggplant p 196 A86-30416

CHEMICAL PROPERTIES
Fiberoptics immunofluorescence spectroscopy for chemical and biological monitoring
[DE86-002239] p 225 N86-24209

CHEMICAL REACTIONS
Test of erythrocyte antigen diagnostic agent for detecting antibodies to coxiella burnetti p 218 N86-23231

CHEMORECEPTORS
Effects of weightlessness on neurotransmitter receptors in selected brain areas p 203 A86-30462
Investigation of mechanisms of the radioprotective effect of agonists of catecholamine receptors - Involvement of both subtypes of alpha-adrenoreceptors in the radioprotective effect p 208 A86-32698
Demonstration and role of chemoreception in the marine zooplankton
[DRIC-T-7456] p 209 N86-23217
Interaction of asialoglycoprotein receptor of hepatocytes with chemically galactosilated acid alpha-glucosidase
p 210 N86-23224

CHEMOTHERAPY
Interaction of asialoglycoprotein receptor of hepatocytes with chemically galactosilated acid alpha-glucosidase
p 210 N86-23224

CHICKENS
Morphogenesis and calcification of the statoconia in the chick (Gallus domesticus) embryo - Implications for future studies p 195 A86-30405

CHIRAL DYNAMICS
Investigation on the chirality of electrons from Sr-90-Y-90 beta-decay and their asymmetrical interactions with D- and L-alanines p 243 A86-33390

CHOLESTEROL
Activation of cholesterogenesis under the effect of ionizing radiation on a living body p 207 A86-32697

CHROMOSOMES
Cloning and expression of leptospira pomona hemolysin gene in escherichia coli p 211 N86-23249
Cloning and analysis of genes for anthrax toxin components
[AD-A161901] p 212 N86-24186

CHRONIC CONDITIONS
Skeletal mass change as a function of gravitational loading p 192 A86-30380
Chronic acceleration and egg production in domestic fowl p 193 A86-30392
Growth and development of mice and rats conceived and reared at different G-intensities during chronic centrifugation p 195 A86-30403
Carotid bodies are required for ventilatory acclimatization to chronic hypoxia p 206 A86-30682

CIRCADIAN RHYTHMS
Modification of the resting oxygen consumption level of biological body and its tissues, during prolonged hypodynamics exposure p 194 A86-30398
Circadian variation of volume and concentration of orthostatically shifted fluid p 215 A86-30445
Day course of blood and plasma density in relation to other hematological parameters p 215 A86-30446
Reduction of circadian disruption following surgery by ingestion of caffeine in the laboratory rat
p 201 A86-30447

CIRCULATION
Respiratory response and muscle function during isometric handgrip exercise at high altitude
[AD-A162003] p 223 N86-24198

CIVIL AVIATION
Professional flightcrew human resource development Developing a Needs Assessment Programme
p 232 A86-29915

CLADDING
Effect of heat and chemical protective clothing on cognitive performance
[AD-A162001] p 242 N86-24218

CLINICAL MEDICINE
Problems in medical biorhythmology --- Russian book
p 206 A86-31371
USSR report: Life sciences. Biomedical and behavioral sciences
[JPRS-UBB-86-002] p 209 N86-23222
AIDS-free USSR monitoring potential outbreak there
p 218 N86-23235
Hypoxia prophylaxis against radiation injury
p 220 N86-23244
Many medical uses foreseen for artificial skin
p 220 N86-23245
Electric sleep method of preventing fatigue build-up in sailors on extended cruises p 235 N86-23248
USSR report: Life sciences. Biomedical and behavioral sciences
[JPRS-UBB-86-004] p 212 N86-23258
Measurement techniques for use with technique/exposure guides
[PB86-123718] p 222 N86-23272
Evaluation of radiation exposure from diagnostic radiology examinations: General recommendations
[PB86-125903] p 222 N86-23273
Evaluation of radiation exposure from diagnostic radiology examinations: Technique/exposure guides for the craniocaudal projection in mammography
[PB86-126075] p 222 N86-23274

CLOSED ECOLOGICAL SYSTEMS
Metabolic support for a lunar base
p 191 A86-30166
Implementing supercritical water oxidation technology in a lunar base environmental control/life support system p 240 A86-30167
Vivaria requirements for animal life cycle studies on space station p 200 A86-30443

CLOTHING
Effectiveness of an air-cooled vest using selected air temperature and humidity combinations
[AD-A162026] p 242 N86-24219

COCKPITS
Cockpit information requirements analysis - A mission oriented p 236 A86-29856
Cockpit design and evaluation data bases
p 236 A86-29857
Cognitive network organization and cockpit automation
p 237 A86-29858
A comparison of voice and keyboard data entry for a helicopter navigation system p 237 A86-29859
The effect of using speech generation and recognition systems on the performance of discrete tasks
p 227 A86-29863
Luminance contrast requirements for legibility of symbols on computer-generated map displays in aircraft cockpits
p 237 A86-29869
Subjective assessment of pilot workload in the advanced fighter cockpit p 238 A86-29878
Recurrent cockpit resource management training at United Airlines p 228 A86-29889
Cockpit speech interference considerations
p 229 A86-29895
Cockpit resource management - Exploring the attitude-performance linkage p 229 A86-29899

COGNITION
Effect of heat and chemical protective clothing on cognitive performance
[AD-A162001] p 242 N86-24218

COGNITIVE PSYCHOLOGY
Cognitive network organization and cockpit automation
p 237 A86-29858
Causes of dissociation between subjective workload measures and performance - Caveats for the use of subjective assessments p 238 A86-29875

COLD ACCLIMATIZATION
Energy balance in exercise-trained rats acclimated at two environmental temperatures p 206 A86-30865
Hypobiosis and functional resistance to cold
p 206 A86-30897
Analysis of the functional structure of thermogeneses on the basis of pharmacological tests
p 208 A86-33074
Psychological selection of personnel for employment in the Antartic
[DRIC-T-7449] p 235 N86-23278

COLD TOLERANCE
Hypobiosis and functional resistance to cold
p 206 A86-30897

COLLAGENS
Many medical uses foreseen for artificial skin
p 220 N86-23245

COLONIES
Antibiotic properties of bifidobacteria
p 219 N86-23236
Cloning and analysis of genes for anthrax toxin components
[AD-A161901] p 212 N86-24186

COLOR CODING
Selecting color codes for a computer-generated topographic map based on perception experiments and functional requirements p 237 A86-29866

COLOR VISION
Minimum colour differences required to recognise small objects on a colour CRT p 240 A86-32316

COMMAND AND CONTROL
Predicted versus experienced workload and performance on a supervisory control task
p 227 A86-29879

COMMUNICATION
The role of fundamental expression in instrument flight performance p 229 A86-29896

COMMUNITIES
HBeAg and its antibodies in carriers of HSsAg in various regions of USSR p 218 N86-23233

COMPLEX SYSTEMS
Interaction between controlling, planning, and fault managing in complex man-machine systems
p 240 A86-33164

COMPRESSION TESTS
The effects of ketamine on Rhesus monkey skeletal dynamics
[AD-A162848] p 213 N86-24189

COMPUTER AIDED MAPPING
Selecting color codes for a computer-generated topographic map based on perception experiments and functional requirements p 237 A86-29866

COMPUTER ASSISTED INSTRUCTION
Development of a computer-managed readiness assessment system
[AD-A162931] p 236 N86-24215

COMPUTER DESIGN
Design guidelines for the use of audio cues in computer interfaces
[DE85-015176] p 241 N86-23281

COMPUTER GRAPHICS
Perception of altitude in the low and medium altitude ranges p 231 A86-29907

COMPUTER NETWORKS
Diseases in CEMA countries p 211 N86-23252

COMPUTER SYSTEMS DESIGN
Person computer dialogue: A human engineering data base supplement
[AD-A163074] p 243 N86-24223

COMPUTER TECHNIQUES
An exploratory study of computer-based aviator testing p 231 A86-29909
Micropat - A progress report on the validation of an automated test battery for pilot selection
p 231 A86-29911
Expert computer aided decision in supervisory control
p 241 A86-33186

COMPUTERIZED SIMULATION
EFFECTS: Documentation and verification for a BEIR 3 cancer risk model based on age, sex and population dynamics for BIOTRAN
[DE86-003265] p 226 N86-24210

CONDITIONED REFLEXES
Corticoreticular interactions in the mechanisms of reflexotherapy p 208 A86-33071

CONFERENCES
Symposium on Aviation Psychology, 3rd, Columbus, OH, April 22-25, 1985, Proceedings p 226 A86-29851
International Union of Physiological Sciences Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, October 13-18, 1985, Proceedings p 191 A86-30375
Study of biotechnology applied to research and development
[AD-A161877] p 212 N86-24185

CONTROL SIMULATION
Predicted versus experienced workload and performance on a supervisory control task p 227 A86-29879
A unifying approach to human pilot modelling p 241 A86-33187

CONTROL SYSTEMS DESIGN
Interaction between controlling, planning, and fault managing in complex man-machine systems p 240 A86-33184
Information display complexes --- Russian book p 241 A86-33324

CONTROL THEORY
A control theory model of aviator behavior p 232 A86-29913
Multi-component characterization of the human operator's control output p 241 A86-33186

COSMIC RAYS
Radiation transport of cosmic ray nuclei in lunar material and radiation doses p 191 A86-30168

COSMOS SATELLITES
Early postnatal development of rats gestated during flight of Cosmos 1514 p 195 A86-30402

COTTON
Production of gene bank from cotton plant chloroplast DNA foi HC/MF p 210 N86-23228

CRANIUM
Evaluation of radiation exposure from diagnostic radiology examinations: Technique/exposure guides for the craniocaudal projection in mammography [PB86-126075] p 222 N86-23274

CREATININE
The effects of ketamine on Rhesus monkey skeletal dynamics [AD-A162848] p 213 N86-24189

CREWS
Effectiveness of an air-cooled vest using selected air temperature and humidity combinations [AD-A162026] p 242 N86-24219

CRITERIA
The functional age profile - An objective decision criterion for the assessment of pilot performance capacities and capabilities p 234 A86-31823

CRITICAL LOADING
Critical impact and acceleration loading to the head p 214 A86-30381

CROP GROWTH
Wheat farming in a lunar base p 191 A86-30165
The calcium dependence of auxin action in roots p 197 A86-30421

CUES
Tactual cuing can produce better performance than visual cuing p 239 A86-29920
Design guidelines for the use of audio cues in computer interfaces [DE85-015176] p 241 N86-23281

CULTURE TECHNIQUES
Search for DNA host specificity systems in salmonella typhi p 210 N86-23247
Experimental evaluation of pathogenicity of different variants of lassa virus p 211 N86-23254
Standardization of conditions for measuring intensity of specific fluorescence in continuous cell cultures infected with variants of Japanese encephalitis virus p 211 N86-23255
Study of biosample preservation, handling, and observation facilities [ESA-CR(P)-2126] p 213 N86-24191

CYCLIC AMP
Microgravity changes in heart structure and cyclic-AMP metabolism p 203 A86-30465

CYCLOTRON RADIATION
Biomedical research with cyclotron produced radionuclides [DE86-000327] p 221 N86-23269

CYTOGENESIS
Simulated hypogravity and synaptogenesis in culture p 194 A86-30401
Effect of plasmids on virulence of pseudomonas aeruginosa strains in mouse experiments p 210 N86-23237

CYTOLOGY
Gravity sensing in animal cells p 192 A86-30389
Immunocytochemical localization of calmodulin in pea root caps and plumules and its relevance to hypothesis on gravitropism p 197 A86-30419
Biochemical and morphological evaluation of the effects of space flight on rat salivary glands p 204 A86-30468
Microprobe analysis of epiphyseal plates from Spacelab 3 rats p 204 A86-30469
Activation of cholesterogenesis under the effect of ionizing radiation on a living body p 207 A86-32697

CYTOPLASM
Response of amphibian egg non-yolk cytoplasm to gravity orientation p 195 A86-30407
Effect of plasmids on virulence of pseudomonas aeruginosa strains in mouse experiments p 210 N86-23237

D

DATA BASE MANAGEMENT SYSTEMS
ELF (Extremely Low Frequency) biological effects literature data base management system [AD-A162900] p 225 N86-24205

DATA BASES
Cockpit information requirements analysis - A mission orientation p 236 A86-29856
Cockpit design and evaluation data bases p 236 A86-29857

DATA CORRELATION
Simulated terrain following flight - Visual and radar terrain correlation requirements p 231 A86-29906

DATA PROCESSING
Canadian automated pilot selection system p 231 A86-29908
A methodology for the analysis and design of human information processing organizations [AD-A162083] p 235 N86-24214

DATA REDUCTION
Estimate of emotional stress during working activity based on systems analysis of skin-galvanic reaction p 220 N86-23259

DECISION MAKING
A review of critical in-flight events research methodology p 228 A86-29886
Judgment training effectiveness and permanency p 228 A86-29888
Private pilot judgment training in flight school settings - A demonstration project p 228 A86-29890
The functional age profile - An objective decision criterion for the assessment of pilot performance capacities and capabilities p 234 A86-31823
Expert computer aided decision in supervisory control p 241 A86-33188

DEHYDRATION
Transient dehydration of lungs in tail-suspended rats p 200 A86-30438

DEMOGRAPHY
AIDS-free USSR monitoring potential outbreak there p 218 N86-23235

DENTISTRY
Electron microprobe analyses of Ca, S, Mg and P distribution in incisors of Spacelab-3 rats p 202 A86-30455

DEOXYRIBONUCLEIC ACID
Effect of seven days of spaceflight on hindlimb muscle protein, RNA and DNA in adult rats p 204 A86-30471
Production of gene bank from cotton plant chloroplast DNA foi HC/MF p 210 N86-23228
Search for DNA host specificity systems in salmonella typhi p 210 N86-23247
Cloning and expression of leptospira pomona hemolysin gene in eschenchia coli p 211 N86-23249
Cloning and analysis of genes for anthrax toxin components [AD-A161901] p 212 N86-24186

DEPOSITION
Aerosol deposition along the respiratory tract at zero gravity - A theoretical study p 213 A86-30169

DESCENT
The effects of preview period on descent detection p 230 A86-29902
Increasing sensitivity to optical information specifying loss in altitude p 230 A86-29904
Optical and event-duration variables affecting self-motion perception [AD-A161836] p 223 N86-24194
Respiratory response and muscle function during isometric handgrip exercise at high altitude [AD-A162003] p 223 N86-24198

DESIGN ANALYSIS
Fiberoptics immunofluorescence spectroscopy for chemical and biological monitoring [DE86-002239] p 225 N86-24209

DETECTION
Optical and event-duration variables affecting self-motion perception [AD-A161836] p 223 N86-24194

DEW POINT
Effectiveness of an air-cooled vest using selected air temperature and humidity combinations [AD-A162026] p 242 N86-24219

DIAGNOSIS
Farm animals as source of yersiniosis p 217 N86-23230
Test of erythrocyte antigen diagnostic agent for detecting antibodies to coxiella burnetti p 218 N86-23231
Detection of HBsAg in families of children with viral hepatitis B p 218 N86-23232
Evaluation of radiation exposure from diagnostic radiology examinations: General recommendations [PB86-125903] p 222 N86-23273
Remote sensing of body signs and signatures [AD-A162106] p 224 N86-24199

DIGESTIVE SYSTEM
Hypokinezia and space flight reflected on rats stomach p 200 A86-30442

DIGITAL COMPUTERS
Simulator instructor task loading - The tide is turning p 233 A86-30362

DIGITAL DATA
Comparison of novice and experienced pilots using analog and digital flight displays p 227 A86-29865

DIRECTION
Improvement in direction discrimination - No role for eye movements p 234 A86-32073

DISCIPLINING
When should pilot discipline end and pilot savvy begin? p 228 A86-29891

DISEASES
Diseases in CEMA countries p 211 N86-23252

DISORIENTATION
Vision in spatial disorientation (SDO) and loss of situational awareness p 226 A86-29853

DISPLAY DEVICES
Comparison of novice and experienced pilots using analog and digital flight displays p 227 A86-29865
Selecting color codes for a computer-generated topographic map based on perception experiments and functional requirements p 237 A86-29866
Luminance contrast requirements for legibility of symbols on computer-generated map displays in aircraft cockpits p 237 A86-29869
An investigation regarding the use of a dynamic seat-pan display for training and as a device for communicating roll-axis motion information p 239 A86-29918
Effects of adaptation and display luminance on CRT symbol recognition time p 240 A86-32315
Minimum colour differences required to recognise small objects on a colour CRT p 240 A86-32316
The rastered eye - Vision in television p 240 A86-32317
Window of visibility - A psychophysical theory of fidelity in time-sampled visual motion displays p 240 A86-32451
Electronic displays --- Russian book p 241 A86-33322
Information display complexes --- Russian book p 241 A86-33324
A preliminary study of flat-panel displays p 236 N86-24546

DOPA
Role of dopaminergic systems of neostriatum during the activity of the central nervous system in man and animals p 208 A86-33070

DOSAGE
Antiemetic drugs and pilot performance [AD-A162109] p 224 N86-24200

DOSIMETERS
Measurement techniques for use with technique/exposure guides [PB86-123718] p 222 N86-23272

DRUGS
Electric sleep method of preventing fatigue build-up in sailors on extended cruises p 235 N86-23248
Model of experimental pixuna virus infection in white mice p 211 N86-23253
Drugs of abuse in aviation fatalities. 1: Marijuana [AD-A161911] p 223 N86-24196

DYNAMIC LOADS
Human head/neck/upper-torso model response to dynamic loading p 221 N86-23266

DYNAMIC MODELS
The effects of ketamine on Rhesus monkey skeletal dynamics [AD-A162848] p 213 N86-24189

DYNAMIC RESPONSE
Human head/neck/upper-torso model response to dynamic loading p 221 N86-23266

DYNAMICAL SYSTEMS
Vertebrate gravity sensors as dynamic systems p 193 A86-30391

E

EARTH (PLANET)
Biological extinction in earth history p 207 A86-32057

EDEMA
Cloning and analysis of genes for anthrax toxin components [AD-A161901] p 212 N86-24186

EDUCATION
Training aircraft accident investigators using simulations p 233 A86-29928
An evaluation of tests of anaerobic power [AD-A162826] p 224 N86-24203
Changes in fitness and shipboard task performance following circuit weight training programs featuring continuous or interval running [AD-A163110] p 225 N86-24206
EFFECTIVENESS
Effectiveness of an air-cooled vest using selected air temperature and humidity combinations [AD-A162026] p 242 N86-24219
EFFERENT NERVOUS SYSTEMS
Early postnatal development of rats gestated during flight of Cosmos 1514 p 195 A86-30402
EGGS
Chronic acceleration and egg production in domestic fowl p 193 A86-30392
Response of amphibian egg non-yolk cytoplasm to gravity orientation p 195 A86-30407
Amphibian fertilization and development in microgravity p 195 A86-30408
ELECTRIC CURRENT
Human reactions to transient electric currents [PB86-117280] p 222 N86-23277
ELECTRIC STIMULI
The alleviating effect of arbitrary movements on the vestibulomotor p 216 A86-30898
ELECTRICAL PROPERTIES
L-tryptophan administered to chronic sleep-onset insomiacs: Late-appearing reduction of sleep latency [AD-A163115] p 225 N86-24207
ELECTROCARDIOGRAPHY
A bidomain model for the extracellular potential and magnetic field of cardiac tissue p 206 A86-31224
ELECTROCHROMISM
A preliminary study of flat-panel displays p 236 N86-24546
ELECTROLUMINESCENCE
A preliminary study of flat-panel displays p 236 N86-24546
ELECTROLYTE METABOLISM
Fluid and electrolyte control in simulated and actual spaceflight p 214 A86-30385
Dynamics of the salivary electrolyte composition and renal excretory function during human adaptation to an altered gaseous environment p 216 A86-30899
ELECTROLYTES
Protein-protein interactions in systems with synthetic polyelectrolytes p 210 N86-23225
ELECTROMAGNETIC FIELDS
The effect of high frequency electromagnetic fields on human beings (frequency range between 1 kHz and 1000 GHz) p 223 N86-24193
Extremely Low Frequency (ELF) communications system bio-effects library development [AD-A162839] p 225 N86-24204
ELECTROMAGNETIC PROPERTIES
Extremely Low Frequency (ELF) communications system bio-effects library development [AD-A162839] p 225 N86-24204
ELECTROMAGNETIC RADIATION
Assessment of selected physiological indicators in antenna operators at short-wave transmitting and receiving centers p 220 N86-23250
Human reactions to transient electric currents [PB86-117280] p 222 N86-23277
ELECTRON DISTRIBUTION
Discovery regarding electron redistribution among cell membranes p 217 N86-23227
ELECTRON RECOMBINATION
Discovery regarding electron redistribution among cell membranes p 217 N86-23227
ELECTRON SCATTERING
Investigation on the chirality of electrons from Sr-90-Y-90 beta-decay and their asymmetrical interactions with D- and L-alanines p 243 A86-33390
ELECTRON TRANSFER
Discovery regarding electron redistribution among cell membranes p 217 N86-23227
ELECTRONIC EQUIPMENT
Electronic displays --- Russian book p 241 A86-33322
ELECTRONIC WARFARE
Human factors engineering and operability in the design of electronic warfare spaces aboard United States Naval combatants [AD-A162251] p 243 N86-24222
ELECTROPHORESIS
Changes in muscle protein composition induced by disuse atrophy - Analysis by two-dimensional electrophoresis p 200 A86-30440
Detection of HBsAg in families of children with viral hepatitis B p 218 N86-23232
A preliminary study of flat-panel displays p 236 N86-24546
ELECTROSTRICTION
System for measurement of small vibrations at material interfaces induced by electrostrictive forces [PB86-116530] p 222 N86-23276
EMBRYOLOGY
Comparative analysis of hypo - and hyper-gravity effects on prenatal development of mammals p 191 A86-30377
Morphology of human embryonic kidney cells in culture after space flight p 201 A86-30452
EMBRYOS
Growth and differentiation of mammalian embryonic tissues exposed to hypergravity in vivo and in vitro p 194 A86-30400
Growth and development of mice and rats conceived and reared at different G-intensities during chronic centrifugation p 195 A86-30403
Morphogenesis and calcification of the statoconia in the chick (Gallus domesticus) embryo - Implications for future studies p 195 A86-30405
Amphibian fertilization and development in microgravity p 195 A86-30408
EMERGENCIES
Levels of helicopter control force inputs during in-flight emergency conditions as a function of aviator experience p 236 A86-29852
EMERGENCY BREATHING TECHNIQUES
Oxygen-liberating mixtures for breathing apparatus p 241 N86-23264
EMOTIONAL FACTORS
Student pilot stress - An emotional barrier to efficient flight training p 231 A86-29912
ENDOCRINOLOGY
Hepatic enzyme adaptation in rats after space flight p 205 A86-30476
The role of hormonal changes in the development of motion sickness in man p 216 A86-30896
ENERGY CONSUMPTION
Energy balance in exercise-trained rats acclimated at two environmental temperatures p 206 A86-30685
The energy cost of combat engineer tasks [AD-A161861] p 223 N86-24195
ENERGY DISSIPATION
Energy balance in exercise-trained rats acclimated at two environmental temperatures p 206 A86-30685
ENERGY TRANSFER
An evaluation of tests of anaerobic power [AD-A162826] p 224 N86-24203
ENVIRONMENT EFFECTS
Meteorological adaptation research at biology institute p 211 N86-23257
Environmental stress after atropine treatment [AD-A161923] p 223 N86-24197
Analysis of health effects resulting from population exposures to ambient particulate matter. Health and environmental effects document, 1985 [DE86-002161] p 225 N86-24208
ENVIRONMENTAL CONTROL
Implementing supercritical water oxidation technology in a lunar base environmental control/life support system p 240 A86-30167
ENVIRONMENTAL LABORATORIES
Rat maintenance in the Research Animal Holding Facility during the Flight of Space Lab 3 p 201 A86-30454
ENVIRONMENTAL MONITORING
Executive summary: Ambient ozone and human health: An epidemiological analysis [PB86-114089] p 226 N86-24212
Ambient ozone and human health: An epidemiological analysis, volume 3 [PB86-114105] p 226 N86-24213
ENZYME ACTIVITY
Hepatic enzymes of sphingolipid and glycerolipid biosynthesis in rats from Spacelab 3 p 205 A86-30475
Hepatic enzyme adaptation in rats after space flight p 205 A86-30476
Plasma renin concentration (PRC) of rats orbited for 7 days aboard NASA Spacelab 3 p 205 A86-30478
Ecto-protein kinase activity on the external surface of neural cells p 207 A86-31650
Protein-protein interactions in systems with synthetic polyelectrolytes p 210 N86-23225
ENZYMES
Interaction of asialoglycoprotein receptor of hepatocytes with chemically galactosilated acid alpha-glucosidase p 210 N86-23224
Effect of intensive visible light on activity of glutathione peroxidase in pigmented epithelium of eye p 210 N86-23226
Search for DNA host specificity systems in salmonella typhi p 210 N86-23247
Cloning and analysis of genes for anthrax toxin components [AD-A161901] p 212 N86-24186
ENZYMOLOGY
Fab-fragment of heterologic immunoglobulin for flu prophylaxis and treatment p 219 N86-23241
Study of biotechnology applied to research and development [AD-A161877] p 212 N86-24185
EPIDEMIOLOGY
USSR report: Life sciences. Biomedical and behavioral sciences [JPRS-UBB-86-002] p 209 N86-23222
Detection of HBsAg in families of children with viral hepatitis B p 218 N86-23232
Analysis of health effects resulting from population exposures to ambient particulate matter. Health and environmental effects document, 1985 [DE86-002161] p 225 N86-24208
Executive summary: Ambient ozone and human health: An epidemiological analysis [PB86-114089] p 226 N86-24212
Ambient ozone and human health: An epidemiological analysis, volume 3 [PB86-114105] p 226 N86-24213
EPITHELIUM
Effect of intensive visible light on activity of glutathione peroxidase in pigmented epithelium of eye p 210 N86-23226
ERGOMETERS
An evaluation of tests of anaerobic power [AD-A162826] p 224 N86-24203
ERROR ANALYSIS
Potential controller error modes in Automated En Route ATC (AERA) p 238 A86-29871
ERYTHROCYTES
Blood transport of oxygen (The role of erythrocytes) p 208 A86-33073
Test of erythrocyte antigen diagnostic agent for detecting antibodies to coxiella burnetti p 218 N86-23231
ESTIMATING
Altitude estimation of pilot and non-pilot observers using real-world scenes p 230 A86-29905
ETHYL ALCOHOL
Comparison of the effects of atropine sulfate and ethanol on performance p 232 A86-29923
EVOKED RESPONSE (PSYCHOPHYSIOLOGY)
Neuronal responses and the evoked potentials in subcortical structures of the human brain during visual recognition. II - The effect of stimuli relevance on the evoked neuronal responses p 216 A86-30894
EXERCISE PHYSIOLOGY
Plasma lactate and ventilation thresholds in trained and untrained cyclists p 215 A86-30678
Physiological changes in hemostasis associated with acute exercise p 215 A86-30680
Remarkable metabolic availability of oral glucose during long-duration exercise in humans p 216 A86-30684
Energy balance in exercise-trained rats acclimated at two environmental temperatures p 206 A86-30685
The effect of intense mental work under stress on cardiac activity, hemodynamics, and brain circulation p 216 A86-30895
The regulatory mechanisms of blood supply in skeletal muscles --- Russian book p 207 A86-32524
An evaluation of tests of anaerobic power [AD-A162826] p 224 N86-24203
EXOBIOLOGY
Exobiology experiments for space station p 243 A86-30453
Rat maintenance in the Research Animal Holding Facility during the Flight of Space Lab 3 p 201 A86-30454
Reduction of the spermatogonial population in rat testes flown on Space Lab-3 p 203 A86-30466
Atriopetin (AP-3) in atria and plasma of rats orbited aboard NASA Spacelab (SL3) for seven days p 205 A86-30477
Plasma renin concentration (PRC) of rats orbited for 7 days aboard NASA Spacelab 3 p 205 A86-30478
USSR Space Life Sciences Digest, issue 4 [NASA-CR-3922(04)] p 209 N86-23218
Aerospace Medicine and Biology: A Cumulative Index to the 1985 Issues [NASA-SP-7011(280)] p 221 N86-23265
Aerospace medicine and biology: A continuing bibliography with indexes (supplement 283) [NASA-SP-7011(283)] p 223 N86-24192
EXPERIENCE
Comparison of novice and experienced pilots using analog and digital flight displays p 227 A86-29865
EXPERIMENT DESIGN
The influence of preview period and global optical flow rate on sensitivity to loss in speed of self motion p 230 A86-29901

EXPERT SYSTEMS

EXPERT SYSTEMS
Expert computer aided decision in supervisory control p 241 A86-33188

EXPOSURE
Assessment of selected physiological indicators in antenna operators at short-wave transmitting and receiving centers p 220 N86-23250
Evaluation of radiation exposure from diagnostic radiology examinations: General recommendations [PB86-125903] p 222 N86-23273
Analysis of health effects resulting from population exposures to ambient particulate matter. Health and environmental effects document, 1985 [DE86-002161] p 225 N86-24206

EXTINCTION
Biological extinction in earth history p 207 A86-32057

EXTREMELY LOW FREQUENCIES
System for measurement of small vibrations at material interfaces induced by electrostrictive forces [PB86-116530] p 222 N86-23276
Extremely Low Frequency (ELF) communications system bio-effects library development [AD-A162839] p 225 N86-24204
ELF (Extremely Low Frequency) biological effects literature data base management system [AD-A162900] p 225 N86-24205

EYE (ANATOMY)
Effect of intensive visible light on activity of glutathione peroxidase in pigmented epithelium of eye p 210 N86-23226

EYE MOVEMENTS
Improvement in direction discrimination - No role for eye movements p 234 A86-32073

F

FATIGUE (BIOLOGY)
Cage-size and gender effects on fatigue in rats p 198 A86-30430
Influence of complexity of control task on level of activation of operators physiological functions when working with waiting p 221 N86-23260
Respiratory response and muscle function during isometric handgrip exercise at high altitude [AD-A162003] p 223 N86-24198
Effectiveness of an air-cooled vest using selected air temperature and humidity combinations [AD-A162026] p 242 N86-24219

FATTY ACIDS
Effect of elevated FFA on carbohydrate and lipid oxidation during prolonged exercise in humans p 215 A86-30679

FAULT TOLERANCE
Interaction between controlling, planning, and fault managing in complex man-machine systems p 240 A86-33184

FEAR
The scare pilot p 228 A86-29887

FEMALES
Estimate of emotional stress during working activity based on systems analysis of skin-galvanic reaction p 220 N86-23259

FEMUR
Correlated light and electron microscopy of the vasculature of cortical bone in rat femora and tibiae p 193 A86-30395

FERTILIZATION
Early mammalian development under conditions of reorientation relative to the gravity vector p 194 A86-30399
Fertilization, development and spicule formation in sea urchins under conditions of constant reorientation relative to the gravitation axis p 195 A86-30406
Amphibian fertilization and development in microgravity p 195 A86-30408

FIBER OPTICS
Fiberoptics immunofluorescence spectroscopy for chemical and biological monitoring [DE86-002239] p 225 N86-24209

FIELD OF VIEW
Visual lobe area for single targets on a competing homogeneous background p 234 A86-31621

FIELD STRENGTH
Assessment of selected physiological indicators in antenna operators at short-wave transmitting and receiving centers p 220 N86-23250

FIGHTER AIRCRAFT
Vision in spatial disorientation (SDO) and loss of situational awareness p 226 A86-29853
Pilot usage of decoupled flight path and pitch controls p 236 A86-29854
Development of a comprehensive voice message vocabulary for tactical aircraft p 237 A86-29861
Subjective assessment of pilot workload in the advanced fighter cockpit p 238 A86-29878

FILLERS
Standardization of carbon-phenolic composite test methodology p 243 N86-24527

FITNESS
Changes in fitness and shipboard task performance following circuit weight training programs featuring continuous or interval running [AD-A163110] p 225 N86-24206

FLIGHT ALTITUDE
The effects of preview period on descent detection p 230 A86-29902
Sources of optical information and their metrics for detecting loss in altitude p 230 A86-29903
Increasing sensitivity to optical information specifying loss in altitude p 230 A86-29904
Altitude estimation of pilot and non-pilot observers using real-world scenes p 230 A86-29905

FLIGHT CHARACTERISTICS
The role of fundamental expression in instrument flight performance p 229 A86-29896

FLIGHT CONTROL
Pilot usage of decoupled flight path and pitch controls p 236 A86-29854

FLIGHT CREWS
'Captain I was trying to bring up the fact that you made a mistake earlier' - Deference and demeanor at 30,000 feet p 229 A86-29894
An analysis of the dearth of assertiveness by subordinate crewmembers p 229 A86-29897
Professional flightcrew human resource development Developing a Needs Assessment Programme p 232 A86-29915
Human performance aspects of accident investigation p 233 A86-29931
Development of a computer-managed readiness assessment system [AD-A162931] p 236 N86-24215

FLIGHT FITNESS
Reliability of military pilots - Problems and prospects p 227 A86-29884
Fitness-for-duty, a pilot's viewpoint p 232 A86-29925

FLIGHT INSTRUMENTS
Optical and event-duration variables affecting self-motion perception [AD-A161836] p 223 N86-24194

FLIGHT MANAGEMENT SYSTEMS
Cognitive network organization and cockpit automation p 237 A86-29858

FLIGHT PATHS
Pilot usage of decoupled flight path and pitch controls p 236 A86-29854

FLIGHT SAFETY
When should pilot discipline end and pilot savvy begin? p 228 A86-29891
The attitude and information components of the risk assessment-judgement process --- of aircraft pilots p 229 A86-29892
The role of the flight psychologist in the RNLAF in A/C accident investigation and prevention p 233 A86-29926

FLIGHT SIMULATION
Sources of optical information and their metrics for detecting loss in altitude p 230 A86-29903

FLIGHT SIMULATORS
Measuring pilot workload in a motion base trainer - A comparison of four techniques p 239 A86-29880
Simulated terrain following flight - Visual and radar terrain correlation requirements p 231 A86-29906
Canadian automated pilot selection system p 231 A86-29908
Test anxiety in the simulator environment p 231 A86-29910
A control theory model of aviator behavior p 232 A86-29913
Knowing what we get from training devices - Substituting a little arithmetic for a measure of emotion p 232 A86-29921
Comparison of the effects of atropine sulfate and ethanol on performance p 232 A86-29923

FLIGHT STRESS
The scare pilot p 228 A86-29887

FLIGHT TESTS
Test anxiety in the simulator environment p 231 A86-29910

FLIGHT TRAINING
Recurrent cockpit resource management training at United Airlines p 228 A86-29889
Private pilot judgment training in flight school settings - A demonstration project p 228 A86-29890
Altitude estimation of pilot and non-pilot observers using real-world scenes p 230 A86-29905
Student pilot stress - An emotional barrier to efficient flight training p 231 A86-29912
A preliminary study - A multivariate analysis of attitudinal characteristics of flight instructors p 232 A86-29914
Development of a computer-managed readiness assessment system [AD-A162931] p 236 N86-24215

FLUID FLOW
Standardization of carbon-phenolic composite test methodology p 243 N86-24527

FLUORESCENCE
Standardization of conditions for measuring intensity of specific fluorescence in continuous cell cultures infected with variants of Japanese encephalitis virus p 211 N86-23255
The effects of Bis (tri-n-butyltin) oxide on three species of marine phytoplankton [AD-A162115] p 212 N86-24188
Fiberoptics immunofluorescence spectroscopy for chemical and biological monitoring [DE86-002239] p 225 N86-24209
A preliminary study of flat-panel displays p 236 N86-24546

FLY BY WIRE CONTROL
Pilot usage of decoupled flight path and pitch controls p 236 A86-29854

FOOD INTAKE
Early adaptation to altered gravitational environments in the squirrel monkey p 203 A86-30461

FOOD PROCESSING
Antibiotic properties of bifidobacteria p 219 N86-23236

FOOD PRODUCTION (IN SPACE)
Wheat farming in a lunar base p 191 A86-30165
Plant growth responses to atmosphere and other environmental variables in the Space Shuttle Plant Growth Unit p 196 A86-30415

FRACTIONATION
Optical and event-duration variables affecting self-motion perception [AD-A161836] p 223 N86-24194

FRACTURING
Effects of non weight bearing on callus formation p 193 A86-30394

G

GALVANIC SKIN RESPONSE
Estimate of emotional stress during working activity based on systems analysis of skin-galvanic reaction p 220 N86-23259

GAS TRANSPORT
Blood transport of oxygen (The role of erythrocytes) p 208 A86-33073

GASES
A preliminary study of flat-panel displays p 236 N86-24546

GASTROINTESTINAL SYSTEM
Hypokinesia and space flight reflected on rats stomach p 200 A86-30442

GENETIC ENGINEERING
Production of gene bank from cotton plant chloroplast DNA foi HC/MF p 210 N86-23228
Effect of plasmids on virulence of pseudomonas aeruginosa strains in mouse experiments p 210 N86-23237
Cloning and expression of leptospira pomona hemolysin gene in escherichia coli p 211 N86-23249
Cloning and analysis of genes for anthrax toxin components [AD-A161901] p 212 N86-24186

GENETICS
Annual report and summaries of FY 1985 activities supported by the Division of Biological Energy Research [DE85-009132] p 209 N86-23220
USSR report: Life sciences. Biomedical and behavioral sciences [JPRS-UBB-86-002] p 209 N86-23222

GEOMETRIC ACCURACY
The metric of visual space p 234 A86-32072

GLOBULINS
Fab-fragment of heterologic immunoglobulin for flu prophylaxis and treatment p 219 N86-23241

GLUCOSE
Remarkable metabolic availability of oral glucose during long-duration exercise in humans p 216 A86-30684

GLUTAMATES
Response of rat hindlimb muscles to 12 hours recovery from tail-cast suspension p 198 A86-30426

GLUTAMINE
Response of rat hindlimb muscles to 12 hours recovery from tail-cast suspension p 198 A86-30426
Vaccine Proteins R and D on Salyut-7 p 220 N86-23256

GLUTATHIONE
Effect of intensive visible light on activity of glutathione peroxidase in pigmented epithelium of eye p 210 N86-23226

GLYCOGENS
Possible mechanism for changes in glycogen metabolism in unloaded soleus muscle p 196 A86-30427
Muscle protein and glycogen responses to recovery from hypogravity and unloading by tail-cast suspension p 202 A86-30457

GRAVIRECEPTORS
Gravity sensing in animal cells p 192 A86-30389
Vertebrate gravity sensors as dynamic systems p 193 A86-30391
The structure and development of the starch sheath in pea epicotyls p 196 A86-30414
Morphological evidence of mechanoreceptive gravity perception in a water flea - Daphnia magna p 199 A86-30435

GRAVITATIONAL EFFECTS
Comparative analysis of hypo - and hyper-gravity effects on prenatal development of mammals p 191 A86-30377
Effects of gravitational and muscular loading on bone formation in growing rats p 194 A86-30396
Response of amphibian egg non-yolk cytoplasm to gravity orientation p 195 A86-30407
Gravistimulation-induced changes in current patterns around root caps p 196 A86-30411

GRAVITATIONAL PHYSIOLOGY
Aerosol deposition along the respiratory tract at zero gravity - A theoretical study p 213 A86-30169
International Union of Physiological Sciences, Commission on Gravitational Physiology, Annual Meeting, 7th, Niagara Falls, NY, October 13-18, 1985, Proceedings p 191 A86-30376
Comparative analysis of hypo - and hyper-gravity effects on prenatal development of mammals p 191 A86-30377
Spaceflight and calcium metabolism p 192 A86-30378
Skeletal mass change as a function of gravitational loading p 192 A86-30380
Effects of gravity on the fluid balance and distribution in man p 214 A86-30383
Volume regulating hormones p 214 A86-30384
Fluid and electrolyte control in simulated and actual spaceflight p 214 A86-30385
Mechanisms for negative water balance during weightlessness Immersion or bed rest? p 214 A86-30386
Cardiorespiratory responses to lower body negative pressure and tilt tests after exposure to simulated weightlessness p 215 A86-30387
Investigations of higher plants under weightlessness p 192 A86-30388
Gravity sensing in animal cells p 192 A86-30389
The effects of real and simulated microgravity on vestibulo-oculomotor interaction p 193 A86-30390
Vertebrate gravity sensors as dynamic systems p 193 A86-30391
Chronic acceleration and egg production in domestic fowl p 193 A86-30392
Correlated light and electron microscopy of the vasculature of cortical bone in rat femora and tibiae p 193 A86-30395
Effects of gravitational and muscular loading on bone formation in growing rats p 194 A86-30396
Early mammalian development under conditions of reorientation relative to the gravity vector p 194 A86-30399
Growth and differentiation of mammalian embryonic tissues exposed to hypergravity in vivo and in vitro p 194 A86-30400
Growth and development of mice and rats conceived and reared at different G-intensities during chronic centrifugation p 195 A86-30403
A marsupial model for the investigation of gravitational effects on early development p 195 A86-30404
Fertilization, development and spicule formation in sea urchins under conditions of constant reorientation relative to the gravitation axis p 195 A86-30406
Gravistimulation-induced changes in current patterns around root caps p 196 A86-30411
Effect of calmodulin and auxin transport inhibitors on calcium net uptake along apical corn roots p 196 A86-30412
Red light shifts the locus and rate of gravitropic curvature in etiolate pea epicotyls p 196 A86-30413
The structure and development of the starch sheath in pea epicotyls p 196 A86-30414
Plant growth responses to atmosphere and other environmental variables in the Space Shuttle Plant Growth Unit p 196 A86-30415
Immunocytochemical localization of calmodulin in pea root caps and plumules and its relevance to hypothesis on gravitropism p 197 A86-30419
Effects of norflurazon on the levels of abscisic acid and xanthoxin in caps of gravistimulated roots of maize p 197 A86-30420
Correlated changes in calmodulin activity and gravitropic sensitivity in roots of maize p 197 A86-30422
Bone loss during simulated weightlessness - Is it glucocorticoid mediated? p 197 A86-30423
Altered carbohydrate metabolism in the whole body suspended rat p 199 A86-30431
Oxygen consumption during cold exposure at 2.1 G in rats adapted to hypergravic fields p 199 A86-30432
Effects of clinostat rotation on Aurelia statolith synthesis p 199 A86-30436
Protein concentration elevations in lungs of mice following sudden, transient cephalad (+Gz) acceleration p 199 A86-30437
Transient dehydration of lungs in tail-suspended rats p 200 A86-30438
Influence of exposure to a prolonged hyperdynamic field on body temperature in the squirrel monkey p 200 A86-30439
Considerations in the design of life sciences research facilities for the Space Station p 200 A86-30441
Day course of blood and plasma density in relation to other hematological parameters p 215 A86-30446
Microvascular flow adjustments with postural changes in humans p 215 A86-30448
Electron microprobe analyses of Ca, S, Mg and P distribution in incisors of Spacelab-3 rats p 202 A86-30455
Responses of amino acids in hindlimb muscles to recovery from hypogravity and unloading by tail-cast suspension p 202 A86-30456
Microgravity associated changes in pituitary growth hormone (GH) cells prepared from rats flown on Space Lab 3 p 202 A86-30459
Early adaptation to altered gravitational environments in the squirrel monkey p 203 A86-30461
Effects of weightlessness on neurotransmitter receptors in selected brain areas p 203 A86-30462
The effect of a hyperdynamic environment on the development of the rat retina p 203 A86-30463
Otoconial morphology in space-flown rats p 204 A86-30470
Morphologic and histochemical studies of bone cells from SL-3 rats p 205 A86-30473
Osteocalcin as an indicator of bone metabolism during spaceflight p 205 A86-30474
Bone maturation in rats flown on the Spacelab-3 mission p 205 A86-30479
The use of suspension models and comparison with true weightlessness --- Animal Model Workshop on Gravitational Physiology p 205 A86-30480

GRAVITROPISM
Evidences for changes in sensitivity to auxin and in cell-wall properties during gravitropic bending of dicot stems p 196 A86-30409
Effects of simulated gravity nullification on shoot-inversion release of apical dominance in Pharbitis nil p 196 A86-30410
Effect of calmodulin and auxin transport inhibitors on calcium net uptake along apical corn roots p 196 A86-30412
Red light shifts the locus and rate of gravitropic curvature in etiolate pea epicotyls p 196 A86-30413
An attempt to localize and identify the gravity sensing mechanism of plants p 197 A86-30417
Cytochemical localization of calcium in cap cells of primary roots of Zea mays L. p 197 A86-30418
Immunocytochemical localization of calmodulin in pea root caps and plumules and its relevance to hypothesis on gravitropism p 197 A86-30419
Effects of norflurazon on the levels of abscisic acid and xanthoxin in caps of gravistimulated roots of maize p 197 A86-30420
Correlated changes in calmodulin activity and gravitropic sensitivity in roots of maize p 197 A86-30422

GROUND SPEED
Optical and event-duration variables affecting self-motion perception [AD-A161836] p 223 N86-24194

GROWTH
Comparative analysis of hypo - and hyper-gravity effects on prenatal development of mammals p 191 A86-30377
Growth and differentiation of mammalian embryonic tissues exposed to hypergravity in vivo and in vitro p 194 A86-30400
Growth and development of mice and rats conceived and reared at different G-intensities during chronic centrifugation p 195 A86-30403
A marsupial model for the investigation of gravitational effects on early development p 195 A86-30404
The effect of a hyperdynamic environment on the development of the rat retina p 203 A86-30463
Bone maturation in rats flown on the Spacelab-3 mission p 205 A86-30479

GUINEA PIGS
Identification of vaccine resistant isolates of bacillus anthracis [AD-A162002] p 212 N86-24187

H

HAND (ANATOMY)
Respiratory response and muscle function during isometric handgrip exercise at high altitude [AD-A162003] p 223 N86-24198

HANDBOOKS
Review of book on principles of aviation psychology p 235 N86-23261

HANDLING EQUIPMENT
Study of biosample preservation, handling, and observation facilities [ESA-CR(P)-2126] p 213 N86-24191

HEAD (ANATOMY)
Critical impact and acceleration loading to the head p 214 A86-30381
Human head/neck/upper-torso model response to dynamic loading p 221 N86-23266

HEALING
Effects of non weight bearing on callus formation p 193 A86-30394

HEALTH
Executive summary: Ambient ozone and human health: An epidemiological analysis [PB86-114089] p 226 N86-24212
Ambient ozone and human health: An epidemological analysis, volume 3 [PB86-114105] p 226 N86-24213

HEALTH PHYSICS
Effect of intensive visible light on activity of glutathione peroxidase in pigmented epithelium of eye p 210 N86-23226
Discovery regarding electron redistribution among cell membranes p 217 N86-23227
Assessment of selected physiological indicators in antenna operators at short-wave transmitting and receiving centers p 220 N86-23250

HEART
Microgravity changes in heart structure and cyclic-AMP metabolism p 203 A86-30465
Remote sensing of body signs and signatures [AD-A162106] p 224 N86-24199

HEART DISEASES
Characteristics of medically disqualified airman applicants in calendar years 1982 and 1983 [AD-A162209] p 224 N86-24201

HEART FUNCTION
The effect of intense mental work under stress on cardiac activity, hemodynamics, and brain circulation p 216 A86-30895

HEART RATE
Homeostasis and biological rhythms in the rat during spaceflight p 202 A86-30460
Remote sensing of body signs and signatures [AD-A162106] p 224 N86-24199
Effectiveness of an air-cooled vest using selected air temperature and humidity combinations [AD-A162026] p 242 N86-24219

HELICOPTER CONTROL
Levels of helicopter control force inputs during in-flight emergency conditions as a function of aviator experience p 236 A86-29852
Helicopter-control-referenced strength capabilities of small individuals p 213 A86-29855

HELICOPTERS
A comparison of voice and keyboard data entry for a helicopter navigation system p 237 A86-29859

HEMATOLOGY
Hematologic parameters of astrorats flown on SL-3 p 202 A86-30458
Studies of radioprotective properties of adeturon and polyanion, applied separately and in combination p 208 A86-32699
Detection of HBsAg in families of children with viral hepatitis B p 218 N86-23232

HEMATOPOIESIS
Hematologic parameters of astrorats flown on SL-3 p 202 A86-30458

HEMODYNAMIC RESPONSES
The effect of intense mental work under stress on cardiac activity, hemodynamics, and brain circulation p 216 A86-30895

HEMOGLOBIN
Detection of HBsAg in families of children with viral hepatitis B p 218 N86-23232

HEMORRHAGES

HBsAg and its antibodies in carriers of HSsAg in various regions of USSR p 218 N86-23233

HEMORRHAGES

Some characteristics of epizootic process in hemorrhagic fever with renal syndrome p 218 N86-23234

HEMOSTATICS

Physiological changes in hemostasis associated with acute exercise p 215 A86-30680

HEPATITIS

Detection of HBsAg in families of children with viral hepatitis B p 218 N86-23232

HBeAg and its antibodies in carriers of HSsAg in various regions of USSR p 218 N86-23233

HERBICIDES

US Department of Agriculture/Corps of Engineers cooperative aquatic plant control research. Annual report for FY 1983; chemical control technology [AD-A161867] p 212 N86-24184

HEREDITY

Annual report and summaries of FY 1985 activities supported by the Division of Biological Energy Research [DE85-009132] p 209 N86-23220

HIGH ALTITUDE

Respiratory response and muscle function during isometric handgrip exercise at high altitude [AD-A162003] p 223 N86-24198

HIGH ALTITUDE BREATHING

Hypoxia prophylaxis against radiation injury p 220 N86-23244

HIGH FREQUENCIES

The effect of high frequency electromagnetic fields on human beings (frequency range between 1 kHz and 1000 GHz) p 223 N86-24193

HIGH GRAVITY ENVIRONMENTS

Growth and differentiation of mammalian embryonic tissues exposed to hypergravity in vivo and in vitro p 194 A86-30400

Influence of exposure to a prolonged hyperdynamic field on body temperature in the squirrel monkey p 200 A86-30439

The effect of a hyperdynamic environment on the development of the rat retina p 203 A86-30463

HISTOCHEMICAL ANALYSIS

Morphologic and histochemical studies of bone cells from SL-3 rats p 205 A86-30473

HISTOLOGY

Effect of calmodulin and auxin transport inhibitors on calcium net uptake along apical corn roots p 196 A86-30412

The structure and development of the starch sheath in pea epicotyls p 196 A86-30414

Corticoreticular interactions in the mechanisms of reflexotherapy p 208 A86-33071

HOMEOSTASIS

Homeostasis and biological rhythms in the rat during spaceflight p 202 A86-30460

Meteorological adaptation research at biology institute p 211 N86-23257

HORMONE METABOLISMS

Volume regulating hormones p 214 A86-30384

Somatostatin inhibits the ventilatory response to hypoxia in humans p 216 A86-30681

The role of hormonal changes in the development of motion sickness in man p 216 A86-30896

HORMONES

Use of membrane vesicles as a simplified system for studying transport of auxin [DE86-002264] p 209 N86-23219

HUMAN BEHAVIOR

The relation between the Type A behavior pattern, pacing, and subjective workload under single- and dual-task conditions p 234 A86-31822

Role of dopaminergic systems of neostriatum during the activity of the central nervous system in man and animals p 208 A86-33070

Meteorological adaptation research at biology institute p 211 N86-23257

USSR report: Life sciences. Biomedical and behavioral sciences [JPRS-UBB-86-004] p 212 N86-23258

Estimate of emotional stress during working activity based on systems analysis of skin-galvanic reaction p 220 N86-23259

Report from a behavioral science study grip to Australia, 23 Aug. - 10 Sep. 1985 [FOA-C-50027-H3] p 235 N86-23280

A methodology for the analysis and design of human information processing organizations [AD-A162083] p 235 N86-24214

HUMAN BEINGS

The effect of high frequency electromagnetic fields on human beings (frequency range between 1 kHz and 1000 GHz) p 223 N86-24193

HUMAN FACTORS ENGINEERING

Selecting color codes for a computer-generated topographic map based on perception experiments and functional requirements p 237 A86-29866

Luminance contrast requirements for legibility of symbols on computer-generated map displays in aircraft cockpits p 237 A86-29869

Cockpit resource management - Where do we stand? p 229 A86-29898

Professional flightcrew human resource development Developing a Needs Assessment Programme p 232 A86-29915

Simulator instructor task loading - The tide is turning p 233 A86-30362

The rastered eye - Vision in television p 240 A86-32317

The methodology and techniques used in analyses of operator activity --- Russian book p 234 A86-32523

A unifying approach to human pilot modelling p 241 A86-33187

USSR report: Life sciences. Biomedical and behavioral sciences [JPRS-UBB-86-002] p 209 N86-23222

Review of book on principles of aviation psychology p 235 N86-23261

Design guidelines for the use of audio cues in computer interfaces [DE85-015176] p 241 N86-23281

The energy cost of combat engineer tasks [AD-A161861] p 223 N86-24195

Human factors engineering and operability in the design of electronic warfare spaces aboard United States Naval combatants [AD-A162251] p 243 N86-24222

Person computer dialogue: A human engineering data base supplement [AD-A163074] p 243 N86-24223

HUMAN PERFORMANCE

Helicopter-control-referenced strength capabilities of small individuals p 213 A86-29855

Causes of dissociation between subjective workload measures and performance - Caveats for the use of subjective assessments p 238 A86-29875

Human performance aspects of accident investigation p 233 A86-29931

Progress in human performance accident investigation p 233 A86-29932

Critical impact and acceleration loading to the head p 214 A86-30381

Modification of the resting oxygen consumption level of biological body and its tissues, during prolonged hypodynamics exposure p 194 A86-30398

The relation between the Type A behavior pattern, pacing, and subjective workload under single- and dual-task conditions p 234 A86-31822

Effects of wearing NBC (Nuclear, Biological and Chemical) protective clothing in the heat on detection of visual signals [AD-A162321] p 224 N86-24202

Changes in fitness and shipboard task performance following circuit weight training programs featuring continuous or interval running [AD-A163110] p 225 N86-24206

Effect of heat and chemical protective clothing on cognitive performance [AD-A162001] p 242 N86-24218

HUMAN REACTIONS

Techniques of subjective workload assessment - A comparison of two methodologies p 238 A86-29877

Human reactions to transient electric currents [PB86-117280] p 222 N86-23277

HUMAN RELATIONS

'Captain I was trying to bring up the fact that you made a mistake earlier' - Deference and demeanor at 30,000 feet p 229 A86-29894

HUMAN RESOURCES

Professional flightcrew human resource development Developing a Needs Assessment Programme p 232 A86-29915

HUMAN TOLERANCES

Human reactions to transient electric currents [PB86-117280] p 222 N86-23277

HUMIDITY

Effectiveness of an air-cooled vest using selected air temperature and humidity combinations [AD-A162026] p 242 N86-24219

HYDROCYANIC ACID

Photochemistry of methane and the formation of hydrocyanic acid (HCN) in the earth's early atmosphere p 243 A86-30697

HYPERBARIC CHAMBERS

Disturbances in the night sleep structure and organization and their significance in the adaptive-recuperation processes p 217 A86-32875

HYPERCAPNIA

Dynamics of the salivary electrolyte composition and renal excretory function during human adaptation to an altered gaseous environment p 216 A86-30899

HYPERTENSION

Plasma renin concentration (PRC) of rats orbited for 7 days aboard NASA Spacelab 3 p 205 A86-30478

HYPERVENTILATION

Respiratory response and muscle function during isometric handgrip exercise at high altitude [AD-A162003] p 223 N86-24198

HYPOCAPNIA

Ventilatory acclimatization to hypoxia is not dependent on cerebral hypocapnic alkalosis p 206 A86-30683

HYPODYNAMIA

Modification of the resting oxygen consumption level of biological body and its tissues, during prolonged hypodynamics exposure p 194 A86-30398

Altered carbohydrate metabolism in the whole body suspended rat p 199 A86-30431

HYPOKINESIA

Possible mechanism for changes in glycogen metabolism in unloaded soleus muscle p 198 A86-30427

Altered carbohydrate metabolism in the whole body suspended rat p 199 A86-30431

Changes in muscle protein composition induced by disuse atrophy - Analysis by two-dimensional electrophoresis p 200 A86-30440

Hypokinezia and space flight reflected on rats stomach p 200 A86-30442

HYPOMETABOLISM

Hypobiosis and functional resistance to cold p 206 A86-30897

HYPOTHERMIA

Oxygen consumption during cold exposure at 2.1 G in rats adapted to hypergravic fields p 199 A86-30432

Hypobiosis and functional resistance to cold p 206 A86-30897

HYPOXIA

Somatostatin inhibits the ventilatory response to hypoxia in humans p 216 A86-30681

Carotid bodies are required for ventilatory acclimatization to chronic hypoxia p 206 A86-30682

Ventilatory acclimatization to hypoxia is not dependent on cerebral hypocapnic alkalosis p 206 A86-30683

Hypoxia prophylaxis against radiation injury p 220 N86-23244

Respiratory response and muscle function during isometric handgrip exercise at high altitude [AD-A162003] p 223 N86-24198

I

IDENTIFYING

Identification of vaccine resistant isolates of bacillus anthracis [AD-A162002] p 212 N86-24187

IMAGE RESOLUTION

The rastered eye - Vision in television p 240 A86-32317

IMMUNITY

Some characteristics of epizootic process in hemorrhagic fever with renal syndrome p 218 N86-23234

AIDS-free USSR monitoring potential outbreak there p 218 N86-23235

Artificial vaccines and stimulation of immunity p 219 N86-23236

Fab-fragment of heterologic immunoglobulin for flu prophylaxis and treatment p 219 N86-23241

Study of cell-wall antigen determinants in ribosomal preparations of group a streptococcus p 220 N86-23243

IMMUNOASSAY

Fiberoptics immunofluorescence spectroscopy for chemical and biological monitoring [DE86-002239] p 225 N86-24209

IMMUNOLOGY

Effect of flight in mission SL-3 on interferon-gamma production by rats p 204 A86-30467

USSR report: Life sciences. Biomedical and behavioral sciences [JPRS-UBB-86-002] p 209 N86-23222

Obtaining hybridomas that synthesize monoclonal antibodies to polysacchande of group a streptococcus p 219 N86-23240

Production and characterization of antibodies to benzo(a)pyrene [DE86-002204] p 222 N86-23271

Identification of vaccine resistant isolates of bacillus anthracis [AD-A162002] p 212 N86-24187

IMPACT LOADS
Critical impact and acceleration loading to the head
p 214 A86-30381

INDEPENDENT VARIABLES
The effects of ketamine on Rhesus monkey skeletal dynamics
[AD-A162848] p 213 N86-24189

INDEXES (RATIOS)
An evaluation of tests of anaerobic power
[AD-A162826] p 224 N86-24203

INDICATORS
Electronic displays --- Russian book
p 241 A86-33322

INDUSTRIAL PLANTS
Estimate of emotional stress during working activity based on systems analysis of skin-galvanic reaction
p 220 N86-23259

INDUSTRIAL SAFETY
Biological effects and physical safety aspects of NMR imaging and in vivo spectroscopy
[DE86-002966] p 213 N86-24190
The effect of high frequency electromagnetic fields on human beings (frequency range between 1 kHz and 1000 GHz) p 223 N86-24193

INFECTIOUS DISEASES
Farm animals as source of yersiniosis
p 217 N86-23230
HBeAg and its antibodies in carriers of HSsAg in various regions of USSR p 218 N86-23233
AIDS-free USSR monitoring potential outbreak there
p 218 N86-23235
Artificial vaccines and stimulation of immunity
p 219 N86-23238
Model of experimental pixuna virus infection in white mice p 211 N86-23253
Experimental evaluation of pathogenicity of different variants of lassa virus p 211 N86-23254
Cloning and analysis of genes for anthrax toxin components
[AD-A161901] p 212 N86-24186
Identification of vaccine resistant isolates of bacillus anthracis
[AD-A162002] p 212 N86-24187

INFLUENZA
Artificial vaccines and stimulation of immunity
p 219 N86-23238
Fab-fragment of heterologic immunoglobulin for flu prophylaxis and treatment p 219 N86-23241
Vaccine Proteins R and D on Salyut-7
p 220 N86-23256

INFORMATION RETRIEVAL
Diseases in CEMA countries p 211 N86-23252

INHIBITORS
Effects of norflurazon on the levels of abscisic acid and xanthoxin in caps of gravistimulated roots of maize
p 197 A86-30420

INORGANIC COMPOUNDS
Oxygen-liberating mixtures for breathing apparatus
p 241 N86-23264

INSECTS
Morphological evidence of mechanoreceptive gravity perception in a water flea - Daphnia magna
p 199 A86-30435

INSOMNIA
L-tryptophan administered to chronic sleep-onset insomiacs: Late-appearing reduction of sleep latency
[AD-A163115] p 225 N86-24207

INSTRUCTORS
A preliminary study - A multivariate analysis of attitudinal characteristics of flight instructors p 232 A86-29814
Simulator instructor task loading - The tide is turning
p 233 A86-30362

INSTRUMENT FLIGHT RULES
A review of critical in-flight events research methodology p 228 A86-29886
The role of fundamental expression in instrument flight performance p 229 A86-29896

INTERACTIVE CONTROL
The role of fundamental expression in instrument flight performance p 229 A86-29896

INTERFACES
System for measurement of small vibrations at material interfaces induced by electrostrictive forces
[PB86-116530] p 222 N86-23276
The design of natural language interfaces
[AD-A162181] p 242 N86-24220

INTERFERON
Effect of flight in mission SL-3 on interferon-gamma production by rats p 204 A86-30467
Production of gamma- and alpha-interferon by human blood leukocytes under successive induction conditions
p 217 N86-23229

INTERNATIONAL COOPERATION
AIDS-free USSR monitoring potential outbreak there
p 218 N86-23235

INTOXICATION
Comparison of the effects of atropine sulfate and ethanol on performance p 232 A86-29923

INVERTEBRATES
Effects of clinostat rotation on Aurelia statolith synthesis p 199 A86-30436

IONIZING RADIATION
Activation of cholesterogenesis under the effect of ionizing radiation on a living body p 207 A86-32697

ISOTOPIC LABELING
Biomedical research with cyclotron produced radionuclides
[DE86-000327] p 221 N86-23269

J

JUDGMENTS
A review of critical in-flight events research methodology p 228 A86-29886
Private pilot judgment training in flight school settings - A demonstration project p 228 A86-29890
The attitude and information components of the risk assessment-judgement process --- of aircraft pilots
p 229 A86-29892

K

KIDNEYS
Morphology of human embryonic kidney cells in culture after space flight p 201 A86-30452
1,25-Dihydroxyvitamin D3 receptors in space-flown vs. grounded control rat kidneys p 204 A86-30472

KINETICS
An evaluation of tests of anaerobic power
[AD-A162826] p 224 N86-24203

L

LACTATES
Plasma lactate and ventilation thresholds in trained and untrained cyclists p 215 A86-30678

LACTOSE
Antibiotic properties of bifidobacteria
p 219 N86-23236

LEARNING
Effects of 60 Hz electric fields on operant and social stress behaviors of nonhuman primates
[DE86-002587] p 209 N86-23221

LEG (ANATOMY)
The effects of ketamine on Rhesus monkey skeletal dynamics
[AD-A162848] p 213 N86-24189

LEGIBILITY
Luminance contrast requirements for legibility of symbols on computer-generated map displays in aircraft cockpits
p 237 A86-29869

LETHALITY
Cloning and analysis of genes for anthrax toxin components
[AD-A161901] p 212 N86-24186

LEUKOCYTES
Production of gamma- and alpha-interferon by human blood leukocytes under successive induction conditions
p 217 N86-23229

LIFE SCIENCES
Considerations in the design of life sciences research facilities for the Space Station p 200 A86-30441
Space Station life science research facility - The vivarium/laboratory p 201 A86-30449
Life science research on the Space Station
p 201 A86-30451
USSR Space Life Sciences Digest, issue 4
[NASA-CR-3922(04)] p 209 N86-23218
USSR report: Life sciences. Biomedical and behavioral sciences
[JPRS-UBB-86-004] p 212 N86-23258

LIFE SUPPORT SYSTEMS
The evolution of CELSS for lunar bases --- Controlled Ecological Life Support Systems p 239 A86-30164
Wheat farming in a lunar base p 191 A86-30165
Metabolic support for a lunar base
p 191 A86-30166
An examination of the life support equipment development and acquisition process
[AD-A162241] p 242 N86-24221

LIGHT (VISIBLE RADIATION)
Effect of intensive visible light on activity of glutathione peroxidase in pigmented epithelium of eye
p 210 N86-23226

LIGHT EMITTING DIODES
A preliminary study of flat-panel displays
p 236 N86-24546

LIMBS (ANATOMY)
Effect of seven days of spaceflight on hindlimb muscle protein, RNA and DNA in adult rats p 204 A86-30471

LINE SPECTRA
Method of changes in reversible pattern masking as factor in visual perception p 221 N86-23263

LIPID METABOLISM
Hepatic enzymes of sphingolipid and glycerolipid biosynthesis in rats from Spacelab 3
p 205 A86-30475
Effect of elevated FFA on carbohydrate and lipid oxidation during prolonged exercise in humans
p 215 A86-30679
Activation of cholesterogenesis under the effect of ionizing radiation on a living body p 207 A86-32697

LIPIDS
Test of erythrocyte antigen diagnostic agent for detecting antibodies to coxiella burnetti p 218 N86-23231

LIPOIC ACID
Study of cell-wall antigen determinants in ribosomal preparations of group a streptococcus
p 220 N86-23243

LIQUID CRYSTALS
A preliminary study of flat-panel displays
p 236 N86-24546

LIVER
Hepatic enzymes of sphingolipid and glycerolipid biosynthesis in rats from Spacelab 3
p 205 A86-30475
Hepatic enzyme adaptation in rats after space flight
p 205 A86-30476
Interaction of asialoglycoprotein receptor of hepatocytes with chemically galactosylated acid alpha-glucosidase
p 210 N86-23224

LIVESTOCK
Farm animals as source of yersiniosis
p 217 N86-23230

LOADS (FORCES)
Effects of gravitational and muscular loading on bone formation in growing rats p 194 A86-30396

LOWER BODY NEGATIVE PRESSURE
Cardiorespiratory responses to lower body negative pressure and tilt tests after exposure to simulated weightlessness p 215 A86-30387

LUMINANCE
Effects of adaptation and display luminance on CRT symbol recognition time p 240 A86-32315

LUMINOUS INTENSITY
Red light shifts the locus and rate of gravitropic curvature in etiolate pea epicotyls p 196 A86-30413
Effect of intensive visible light on activity of glutathione peroxidase in pigmented epithelium of eye
p 210 N86-23226
Standardization of conditions for measuring intensity of specific fluorescence in continuous cell cultures infected with variants of Japanese encephalitis virus
p 211 N86-23255

LUNAR BASES
Environmental considerations and waste planning on the lunar surface p 239 A86-30149
The evolution of CELSS for lunar bases --- Controlled Ecological Life Support Systems p 239 A86-30164
Wheat farming in a lunar base p 191 A86-30165
Metabolic support for a lunar base
p 191 A86-30166
Implementing supercritical water oxidation technology in a lunar base environmental control/life support system p 240 A86-30167

LUNAR COMPOSITION
Radiation transport of cosmic ray nuclei in lunar material and radiation doses p 191 A86-30168

LUNAR SURFACE
Radiation transport of cosmic ray nuclei in lunar material and radiation doses p 191 A86-30168

LUNGS
Protein concentration elevations in lungs of mice following sudden, transient cephalad (+Gz) acceleration
p 199 A86-30437
Transient dehydration of lungs in tail-suspended rats
p 200 A86-30438
Remote sensing of body signs and signatures
[AD-A162106] p 224 N86-24199

LYMPHOCYTES
Experimental evaluation of pathogenicity of different variants of lassa virus p 211 N86-23254

M

MAGNETOCARDIOGRAPHY
A bidomain model for the extracellular potential and magnetic field of cardiac tissue p 206 A86-31224

MALES
The effects of ketamine on Rhesus monkey skeletal dynamics
[AD-A162848] p 213 N86-24189

MAMMALS

Effect of heat and chemical protective clothing on cognitive performance
[AD-A162001] p 242 N86-24218
Effectiveness of an air-cooled vest using selected air temperature and humidity combinations
[AD-A162026] p 242 N86-24219

MAMMALS

Early mammalian development under conditions of reorientation relative to the gravity vector
p 194 A86-30399
Growth and differentiation of mammalian embryonic tissues exposed to hypergravity in vivo and in vitro
p 194 A86-30400
Early postnatal development of rats gestated during flight of Cosmos 1514 p 195 A86-30402
A marsupial model for the investigation of gravitational effects on early development p 195 A86-30404

MAMMARY GLANDS

Evaluation of radiation exposure from diagnostic radiology examinations: Technique/exposure guides for the craniocaudal projection in mammography
[PB86-126075] p 222 N86-23274

MAN ENVIRONMENT INTERACTIONS

Environmental considerations and waste planning on the lunar surface p 239 A86-30149
Complex approach to the study of adaptive systemic reactions and functional states in man. I - The time factor in the formation of subcomplexes of systemic physiological indexes of functional state dynamics, and the instrumentation used in the study p 216 A86-30693
The theoretical principles of adaptation --- physiological responses to environment p 208 A86-33072

MAN MACHINE SYSTEMS

Symposium on Aviation Psychology, 3rd, Columbus, OH, April 22-25, 1985, Proceedings p 226 A86-29851
Vision in spatial disorientation (SDO) and loss of situational awareness p 226 A86-29853
Cockpit information requirements analysis - A mission orientation p 236 A86-29856
Cockpit design and evaluation data bases p 236 A86-29857
Speech variability effects on recognition accuracy associated with concurrent task performance by pilots p 237 A86-29860

[NASA-CR-178350] p 242 N86-24217
The design of natural language interfaces
[AD-A162181] p 242 N86-24220
Person computer dialogue: A human engineering data base supplement
[AD-A163074] p 243 N86-24223

MANAGEMENT

An examination of the life support equipment development and acquisition process
[AD-A162241] p 242 N86-24221

MANAGEMENT ANALYSIS

Changes in fitness and shipboard task performance following circuit weight training programs featuring continuous or interval running
[AD-A163110] p 225 N86-24206

MANAGEMENT INFORMATION SYSTEMS

Development of a computer-managed readiness assessment system
[AD-A162931] p 236 N86-24215

MANUAL CONTROL

Multi-component characterization of the human operator's control output p 241 A86-33186
A unifying approach to human pilot modelling p 241 A86-33187

MARIJUANA

Drugs of abuse in aviation fatalities. 1: Marijuana
[AD-A161911] p 223 N86-24196

MARINE BIOLOGY

Microplankton species assemblages at the Scripps Pier from March to November 1983 during the 1982-1984 El Nino event p 207 A86-31833
Demonstration and role of chemoreception in the marine zooplankton
[DRIC-T-7456] p 209 N86-23217
USSR report: Life sciences. Biomedical and behavioral sciences
[JPRS-UBB-86-002] p 209 N86-23222
US Department of Agriculture/Corps of Engineers cooperative aquatic plant control research. Annual report for FY 1983; chemical control technology
[AD-A161867] p 212 N86-24184

MASKING

Method of changes in reversible pattern masking as factor in visual perception p 221 N86-23263

MECHANICAL PROPERTIES

The effects of ketamine on Rhesus monkey skeletal dynamics
[AD-A162848] p 213 N86-24189

MECHANICAL SHOCK

Effects of mechanical stresses, abscisic acid, and outdoor exposure on growth and water relations of eggplant p 196 A86-30416

MECHANORECEPTORS

Morphological evidence of mechanoreceptive gravity perception in a water flea - Daphnia magna p 199 A86-30435

MEDICAL ELECTRONICS

Electric sleep method of preventing fatigue build-up in sailors on extended cruises p 235 N86-23248

MEDICAL SCIENCE

Diseases in CEMA countries p 211 N86-23252
Model of experimental pixuna virus infection in white mice p 211 N86-23253
USSR report: Life sciences. Biomedical and behavioral sciences
[JPRS-UBB-86-004] p 212 N86-23258

MEDICAL SERVICES

A survey of speech audiometry in the National Health Service
[NPL-AC-105] p 221 N86-23267

MEMBRANES

Use of membrane vesicles as a simplified system for studying transport of auxin
[DE86-002264] p 209 N86-23219
Discovery regarding electron redistribution among cell membranes p 217 N86-23227

MEMORY

The Sternberg memory search task as an index of pilot workload p 227 A86-29883

MENINGITIS

Experimental evaluation of pathogenicity of different variants of lassa virus p 211 N86-23254

MENTAL HEALTH

Psychological recovery after incidents and accidents within aviation p 232 A86-29924

MENTAL PERFORMANCE

Relative contributions of SWAT dimensions to overall subjective workload ratings --- Subjective Workload Assessment Technique p 238 A86-29876
The Sternberg memory search task as an index of pilot workload p 227 A86-29883
The attitude and information components of the risk assessment-judgement process --- of aircraft pilots p 229 A86-29892
Cockpit resource management - Exploring the attitude-performance linkage p 229 A86-29899
Fitness-for-duty, a pilot's viewpoint p 232 A86-29925
The effect of intense mental work under stress on cardiac activity, hemodynamics, and brain circulation p 216 A86-30695
The functional age profile - An objective decision criterion for the assessment of pilot performance capacities and capabilities p 234 A86-31823
Report from a behavioral science study grp to Australia, 23 Aug. - 10 Sep. 1985
[FOA-C-50027-H3] p 235 N86-23280

MESSAGES

Development of a comprehensive voice message vocabulary for tactical aircraft p 237 A86-29861

METABOLISM

Changes in functional metabolism in the rat central nervous system following spaceflight p 199 A86-30433
Effectiveness of an air-cooled vest using selected air temperature and humidity combinations
[AD-A162026] p 242 N86-24219

METHANE

Photochemistry of methane and the formation of hydrocyanic acid (HCN) in the earth's early atmosphere p 243 A86-30697

MICE

A marsupial model for the investigation of gravitational effects on early development p 195 A86-30404
Interaction of asialoglycoprotein receptor of hepatocytes with chemically galactosylated acid alpha-glucosidase p 210 N86-23224
Effect of plasmids on virulence of pseudomonas aeruginosa strains in mouse experiments p 210 N86-23237
Model of experimental pixuna virus infection in white mice p 211 N86-23253
Radiation induction of cancer of the skin
[DE86-002201] p 221 N86-23270

MICROANALYSIS

Microprobe analysis of epiphyseal plates from Spacelab 3 rats p 204 A86-30469

MICROBIOLOGY

Production of gamma- and alpha-interferon by human blood leukocytes under successive induction conditions p 217 N86-23229

MICROORGANISMS

Annual report and summaries of FY 1985 activities supported by the Division of Biological Energy Research
[DE85-009132] p 209 N86-23220
Cloning and expression of leptospira pomona hemolysin gene in escherichia coli p 211 N86-23249

MICROSCOPY

Standardization of conditions for measuring intensity of specific fluorescence in continuous cell cultures infected with variants of Japanese encephalitis virus p 211 N86-23255

MICROSPORES

Eukaryotic ribosomes that lack a 5.8S RNA p 207 A86-32237

MICROWAVES

Behavioral effects of microwave radiation absorption
[PB86-113735] p 222 N86-23275

MILITARY AVIATION

Reliability of military pilots - Problems and prospects p 227 A86-29884

MILITARY HELICOPTERS

Micropat - A progress report on the validation of an automated test battery for pilot selection p 231 A86-29911

MINERAL METABOLISM

Electron microprobe analyses of Ca, S, Mg and P distribution in incisors of Spacelab-3 rats p 202 A86-30455

MINES (EXCAVATIONS)

Status of calcium metabolism in coal miners with vibration sickness p 220 N86-23251

MOLECULAR BIOLOGY

Investigation on the chirality of electrons from Sr-90-Y-90 beta-decay and their asymmetrical interactions with D- and L-alanines p 243 A86-33390
USSR report: Life sciences. Biomedical and behavioral sciences
[JPRS-UBB-86-002] p 209 N86-23222
Artificial vaccines and stimulation of immunity p 219 N86-23238

MOLECULAR STRUCTURE

Artificial antigens, vaccines reviewed p 219 N86-23239

MONKEYS

The effects of ketamine on Rhesus monkey skeletal dynamics
[AD-A162848] p 213 N86-24189

MONOSACCHARIDES

Study of cell-wall antigen determinants in ribosomal preparations of group a streptococcus p 220 N86-23243

MORPHOLOGY

Morphological evidence of mechanoreceptive gravity perception in a water flea - Daphnia magna p 199 A86-30435

MORTALITY

Analysis of health effects resulting from population exposures to ambient particulate matter. Health and environmental effects document, 1985
[DE86-002161] p 225 N86-24208
EFFECTS: Documentation and verification for a BEIR 3 cancer risk model based on age, sex and population dynamics for BIOTRAN
[DE86-003265] p 226 N86-24210

MOTION PERCEPTION
The influence of preview period and global optical flow rate on sensitivity to loss in speed of self motion p 230 A86-29901
Increasing sensitivity to optical information specifying loss in altitude p 230 A86-29904
An investigation regarding the use of a dynamic seat-pan display for training and as a device for communicating roll-axis motion information p 239 A86-29918
Window of visibility - A psychophysical theory of fidelity in time-sampled visual motion displays p 240 A86-32451
Mechanisms of human motion perception revealed by a new cyclopean illusion p 235 A86-33103
MOTION SICKNESS
Is space sickness a form of motion sickness? p 214 A86-30382
Animal models of motion sickness - Are nonemetic species an appropriate choice? p 193 A86-30393
The role of hormonal changes in the development of motion sickness in man p 216 A86-30896
MOTION SIMULATION
The effects of psychophysical matching on the transfer of training between alternative motion simulators p 232 A86-29919
MOTION SIMULATORS
The effects of psychophysical matching on the transfer of training between alternative motion simulators p 232 A86-29919
MOTIVATION
Formula for a better understanding of pilot performance p 230 A86-29900
MULTIVARIATE STATISTICAL ANALYSIS
Antiemetic drugs and pilot performance [AD-A162109] p 224 N86-24200
MUSCLES
Changes in skeletal muscle properties following hindlimb suspension p 198 A86-30428
Control of arachidonic acid release in chick muscle cultures p 198 A86-30429
Cage-size and gender effects on fatigue in rats p 198 A86-30430
Morphological and biochemical changes in soleus and extensor digitorum longus muscles of rats orbited in Spacelab 3 p 203 A86-30464
MUSCULAR FATIGUE
Responses of skeletal muscle to unloading - A review p 192 A86-30379
Cage-size and gender effects on fatigue in rats p 198 A86-30430
Respiratory response and muscle function during isometric handgrip exercise at high altitude [AD-A162003] p 223 N86-24198
MUSCULAR FUNCTION
Effects of gravitational and muscular loading on bone formation in growing rats p 194 A86-30396
Are there conditions in which adrenalectomy impedes the atrophying effects of denervation? p 194 A86-30397
Changes in muscle protein composition induced by disuse atrophy - Analysis by two-dimensional electrophoresis p 200 A86-30440
Responses of amino acids in hindlimb muscles to recovery from hypogravity and unloading by tail-cast suspension p 202 A86-30456
Muscle protein and glycogen responses to recovery from hypogravity and unloading by tail-cast suspension p 202 A86-30457
Effect of seven days of spaceflight on hindlimb muscle protein, RNA and DNA in adult rats p 204 A86-30471
The regulatory mechanisms of blood supply in skeletal muscles --- Russian book p 207 A86-32524
Respiratory response and muscle function during isometric handgrip exercise at high altitude [AD-A162003] p 223 N86-24198
MUSCULAR STRENGTH
Helicopter-control-referenced strength capabilities of small individuals p 213 A86-29855
Responses of skeletal muscle to unloading - A review p 192 A86-30379
Respiratory response and muscle function during isometric handgrip exercise at high altitude [AD-A162003] p 223 N86-24198
Changes in fitness and shipboard task performance following circuit weight training programs featuring continuous or interval running [AD-A163110] p 225 N86-24206
MUSCULOSKELETAL SYSTEM
Responses of skeletal muscle to unloading - A review p 192 A86-30379
Skeletal mass change as a function of gravitational loading p 192 A86-30380
A marsupial model for the investigation of gravitational effects on early development p 195 A86-30404
Localization of calcium stimulated adenosine triphosphatase activity in blood vessels of the skeleton p 197 A86-30424
Changes in skeletal muscle properties following hindlimb suspension p 198 A86-30428
The regulatory mechanisms of blood supply in skeletal muscles --- Russian book p 207 A86-32524
The effects of ketamine on Rhesus monkey skeletal dynamics [AD-A162848] p 213 N86-24189
MYOCARDIUM
A bidomain model for the extracellular potential and magnetic field of cardiac tissue p 206 A86-31224

N

NATURAL LANGUAGE (COMPUTERS)
The design of natural language interfaces [AD-A162181] p 242 N86-24220
NAVY
Study of biotechnology applied to research and development [AD-A161877] p 212 N86-24185
Changes in fitness and shipboard task performance following circuit weight training programs featuring continuous or interval running [AD-A163110] p 225 N86-24206
Human factors engineering and operability in the design of electronic warfare spaces aboard United States Naval combatants [AD-A162251] p 243 N86-24222
NECK (ANATOMY)
Human head/neck/upper-torso model response to dynamic loading p 221 N86-23266
NERVOUS SYSTEM
Biochemical models for study of nerve cell processes p 209 N86-23223
NEUROLOGY
Visual hemispheric specialization: A computational theory [AD-A161296] p 235 N86-23279
Using Ashford's general model to aid in the understanding of a pesticide's neurotoxic effect through pesticide-drug mixture experiments [PB86-130028] p 226 N86-24211
NEUROMUSCULAR TRANSMISSION
The alleviating effect of arbitrary movements on the vestibulomotor p 216 A86-30898
NEURONS
Neuronal responses and the evoked potentials in subcortical structures of the human brain during visual recognition. II - The effect of stimuli relevance on the evoked neuronal responses p 216 A86-30894
Ecto-protein kinase activity on the external surface of neural cells p 207 A86-31650
Biochemical models for study of nerve cell processes p 209 N86-23223
NEUROPHYSIOLOGY
Thermoencephaloscopy p 206 A86-30892
The role of hormonal changes in the development of motion sickness in man p 216 A86-30896
Role of dopaminergic systems of neostriatum during the activity of the central nervous system in man and animals p 208 A86-33070
Corticoreticular interactions in the mechanisms of reflexotherapy p 208 A86-33071
Neuromagnetism - Theory, techniques, and measurements --- Thesis p 217 A86-33459
NEUROTRANSMITTERS
Effects of weightlessness on neurotransmitter receptors in selected brain areas p 203 A86-30462
NIGHT
Disturbances in the night sleep structure and organization and their significance in the adaptive-recuperation processes p 217 A86-32875
NITROGEN ISOTOPES
Biomedical research with cyclotron produced radionuclides [DE86-000327] p 221 N86-23269
NOISE INTENSITY
Cockpit speech interference considerations p 229 A86-29895
NORADRENALINE
Analysis of the functional structure of thermogenesis on the basis of pharmacological tests p 208 A86-33074
NOZZLE DESIGN
Standardization of carbon-phenolic composite test methodology p 243 N86-24527
NUCLEAR MAGNETIC RESONANCE
Biological effects and physical safety aspects of NMR imaging and in vivo spectroscopy [DE86-002966] p 213 N86-24190
NUCLEAR MEDICINE
Mechanisms of the radiation protection effect and indication of the efficiency of radioprotectors --- Russian book p 207 A86-31375
NUTRITIONAL REQUIREMENTS
Are there conditions in which adrenalectomy impedes the atrophying effects of denervation? p 194 A86-30397

O

OCEAN CURRENTS
Microplankton species assemblages at the Scripps Pier from March to November 1983 during the 1982-1984 El Nino event p 207 A86-31833
OCULOMOTOR NERVES
The effects of real and simulated microgravity on vestibulo-oculomotor interaction p 193 A86-30390
ONTOGENY
Early postnatal development of rats gestated during flight of Cosmos 1514 p 195 A86-30402
OPERATOR PERFORMANCE
Potential controller error modes in Automated En Route ATC (AERA) p 238 A86-29871
Predicted versus experienced workload and performance on a supervisory control task p 227 A86-29879
The methodology and techniques used in analyses of operator activity --- Russian book p 234 A86-32523
Influence of complexity of control task on level of activation of operators physiological functions when working with waiting p 221 N86-23260
OPERATORS (MATHEMATICS)
Multi-component characterization of the human operator's control output p 241 A86-33186
OPERATORS (PERSONNEL)
Stochastic models of man-machine system effectiveness p 242 N86-24216
OPTICAL ACTIVITY
Investigation on the chirality of electrons from Sr-90-Y-90 beta-decay and their asymmetrical interactions with D- and L-alanines p 243 A86-33390
OPTICAL ILLUSION
Mechanisms of human motion perception revealed by a new cyclopean illusion p 235 A86-33103
OPTICAL PROPERTIES
Optical and event-duration variables affecting self-motion perception [AD-A161836] p 223 N86-24194
ORBIT TRANSFER VEHICLES
The system integration and verification testing of an orbital maneuvering vehicle for an air bearing floor [NASA-CR-178350] p 242 N86-24217
ORGANIC COMPOUNDS
The calcium dependence of auxin action in roots p 197 A86-30421
Protein-protein interactions in systems with synthetic polyelectrolytes p 210 N86-23225
Fiberoptics immunofluorescence spectroscopy for chemical and biological monitoring [DE86-002239] p 225 N86-24209
ORGANIC PEROXIDES
Effect of intensive visible light on activity of glutathione peroxidase in pigmented epithelium of eye p 210 N86-23226
ORGANIZATIONS
A methodology for the analysis and design of human information processing organizations [AD-A162083] p 235 N86-24214
ORGANS
Diseases in CEMA countries p 211 N86-23252
ORTHOSTATIC TOLERANCE
Circadian variation of volume and concentration of orthostatically shifted fluid p 215 A86-30445
OSTEOPOROSIS
Correlated light and electron microscopy of the vasculature of cortical bone in rat femora and tibiae p 193 A86-30395
Osteocalcin as an indicator of bone metabolism during spaceflight p 205 A86-30474
OTOLITH ORGANS
Morphogenesis and calcification of the statoconia in the chick (Gallus domesticus) embryo - Implications for future studies p 195 A86-30405
Otoconial morphology in space-flown rats p 204 A86-30470
OXIDATION
Implementing supercritical water oxidation technology in a lunar base environmental control/life support system p 240 A86-30167
Effect of elevated FFA on carbohydrate and lipid oxidation during prolonged exercise in humans p 215 A86-30679

OXYGEN BREATHING

OXYGEN BREATHING
Oxygen-liberating mixtures for breathing apparatus
p 241 N86-23264

OXYGEN CONSUMPTION
Modification of the resting oxygen consumption level of biological body and its tissues, during prolonged hypodynamics exposure
p 194 A86-30398
Oxygen consumption during cold exposure at 2.1 G in rats adapted to hypergravic fields
p 199 A86-30432
Plasma lactate and ventilation thresholds in trained and untrained cyclists
p 215 A86-30678
Blood transport of oxygen (The role of erythrocytes)
p 208 A86-33073

OXYGEN MASKS
Oxygen-liberating mixtures for breathing apparatus
p 241 N86-23264

OXYGEN METABOLISM
Modification of the resting oxygen consumption level of biological body and its tissues, during prolonged hypodynamics exposure
p 194 A86-30398

OXYGEN PRODUCTION
Oxygen-liberating mixtures for breathing apparatus
p 241 N86-23264

OZONE
Executive summary: Ambient ozone and human health: An epidemiological analysis
[PB86-114089]
p 226 N86-24212
Ambient ozone and human health: An epidemiological analysis, volume 3
[PB86-114105]
p 226 N86-24213

P

PACIFIC OCEAN
Microplankton species assemblages at the Scripps Pier from March to November 1983 during the 1982-1984 El Nino event
p 207 A86-31833

PANCREAS
Protein-protein interactions in systems with synthetic polyelectrolytes
p 210 N86-23225

PARASITES
Farm animals as source of yersiniosis
p 217 N86-23230

PARASITIC DISEASES
Farm animals as source of yersiniosis
p 217 N86-23230

PARTICULATES
Analysis of health effects resulting from population exposures to ambient particulate matter. Health and environmental effects document, 1985
[DE86-002161]
p 225 N86-24208

PATHOGENESIS
Experimental evaluation of pathogenicity of different variants of lassa virus
p 211 N86-23254
Standardization of conditions for measuring intensity of specific fluorescence in continuous cell cultures infected with variants of Japanese encephalitis virus
p 211 N86-23255

PATHOGENS
Cloning and expression of leptospira pomona hemolysin gene in escherichia coli
p 211 N86-23249

PATTERN RECOGNITION
Method of changes in reversible pattern masking as factor in visual perception
p 221 N86-23263

PERCEPTION
Optical and event-duration variables affecting self-motion perception
[AD-A161836]
p 223 N86-24194

PERCEPTUAL ERRORS
The influence of preview period and global optical flow rate on sensitivity to loss in speed of self motion
p 230 A86-29901

PERIPHERAL VISION
Effects of wearing NBC (Nuclear, Biological and Chemical) protective clothing in the heat on detection of visual signals
[AD-A162321]
p 224 N86-24202

PERSONALITY
The relation between the Type A behavior pattern, pacing, and subjective workload under single- and dual-task conditions
p 234 A86-31822

PERSONNEL
Status of calcium metabolism in coal miners with vibration sickness
p 220 N86-23251
Estimate of emotional stress during working activity based on systems analysis of skin-galvanic reaction
p 220 N86-23259
Changes in fitness and shipboard task performance following circuit weight training programs featuring continuous or interval running
[AD-A163110]
p 225 N86-24206
Development of a computer-managed readiness assessment system
[AD-A162931]
p 236 N86-24215
Effect of heat and chemical protective clothing on cognitive performance
[AD-A162001]
p 242 N86-24218
Effectiveness of an air-cooled vest using selected air temperature and humidity combinations
[AD-A162026]
p 242 N86-24219

PERSONNEL DEVELOPMENT
Professional flightcrew human resource development: Developing a Needs Assessment Programme
p 232 A86-29915

PERSONNEL SELECTION
Psychological selection of personnel for employment in the Antartic
[DRIC-T-7449]
p 235 N86-23278
Characteristics of medically disqualified airman applicants in calendar years 1982 and 1983
[AD-A162209]
p 224 N86-24201

PERSPIRATION
Environmental stress after atropine treatment
[AD-A161923]
p 223 N86-24197
Effectiveness of an air-cooled vest using selected air temperature and humidity combinations
[AD-A162026]
p 242 N86-24219

PESTICIDES
Using Ashford's general model to aid in the understanding of a pesticide's neurotoxic effect through pesticide-drug mixture experiments
[PB86-130028]
p 226 N86-24211

PHARMACOLOGY
Studies of radioprotective properties of adeturon and polyanion, applied separately and in combination
p 208 A86-32699
USSR report: Life sciences. Biomedical and behavioral sciences
[JPRS-UBB-86-002]
p 209 N86-23222
Using Ashford's general model to aid in the understanding of a pesticide's neurotoxic effect through pesticide-drug mixture experiments
[PB86-130028]
p 226 N86-24211

PHENOLIC RESINS
Standardization of carbon-phenolic composite test methodology
p 243 N86-24527

PHOSPHORYLATION
Ecto-protein kinase activity on the external surface of neural cells
p 207 A86-31650

PHOTOCHEMICAL REACTIONS
Photochemistry of methane and the formation of hydrocyanic acid (HCN) in the earth's early atmosphere
p 243 A86-30697

PHOTORECEPTORS
Effect of intensive visible light on activity of glutathione peroxidase in pigmented epithelium of eye
p 210 N86-23226

PHOTOSYNTHESIS
Annual report and summaries of FY 1985 activities supported by the Division of Biological Energy Research
[DE85-009132]
p 209 N86-23220

PHYSICAL EXERCISE
Respiratory response and muscle function during isometric handgrip exercise at high altitude
[AD-A162003]
p 223 N86-24198
An evaluation of tests of anaerobic power
[AD-A162826]
p 224 N86-24203

PHYSICAL FITNESS
Fitness-for-duty, a pilot's viewpoint
p 232 A86-29925
An evaluation of tests of anaerobic power
[AD-A162826]
p 224 N86-24203
Changes in fitness and shipboard task performance following circuit weight training programs featuring continuous or interval running
[AD-A163110]
p 225 N86-24206

PHYSIOCHEMISTRY
Somatostatin inhibits the ventilatory response to hypoxia in humans
p 216 A86-30681
Hypobiosis and functional resistance to cold
p 206 A86-30897
Role of dopaminergic systems of neostriatum during the activity of the central nervous system in man and animals
p 208 A86-33070

PHYSIOLOGICAL ACCELERATION
Comparative analysis of hypo - and hyper-gravity effects on prenatal development of mammals
p 191 A86-30377
Chronic acceleration and egg production in domestic fowl
p 193 A86-30392
Oxygen consumption during cold exposure at 2.1 G in rats adapted to hypergravic fields
p 199 A86-30432
The effect of a hyperdynamic environment on the development of the rat retina
p 203 A86-30463

PHYSIOLOGICAL DEFENSES
Investigation of mechanisms of the radioprotective effect of agonists of catecholamine receptors - involvement of both subtypes of alpha-adrenoreceptors in the radioprotective effect
p 208 A86-32698

PHYSIOLOGICAL EFFECTS
Comparison of the effects of atropine sulfate and ethanol on performance
p 232 A86-29923
Comparative analysis of hypo - and hyper-gravity effects on prenatal development of mammals
p 191 A86-30377
Critical impact and acceleration loading to the head
p 214 A86-30381
The effects of real and simulated microgravity on vestibulo-oculomotor interaction
p 193 A86-30390
Chronic acceleration and egg production in domestic fowl
p 193 A86-30392
The effect of a hyperdynamic environment on the development of the rat retina
p 203 A86-30463
Effect of flight in mission SL-3 on interferon-gamma production by rats
p 204 A86-30467
Biochemical and morphological evaluation of the effects of space flight on rat salivary glands
p 204 A86-30468
Effect of seven days of spaceflight on hindlimb muscle protein, RNA and DNA in adult rats
p 204 A86-30471
The use of suspension models and comparison with true weightlessness --- Animal Model Workshop on Gravitational Physiology
p 205 A86-30480
The alleviating effect of arbitrary movements on the vestibulomotor
p 216 A86-30898
Activation of cholesterogenesis under the effect of ionizing radiation on a living body
p 207 A86-32697
Assessment of selected physiological indicators in antenna operators at short-wave transmitting and receiving centers
p 220 N86-23250
Status of calcium metabolism in coal miners with vibration sickness
p 220 N86-23251
The energy cost of combat engineer tasks
[AD-A161861]
p 223 N86-24195
Respiratory response and muscle function during isometric handgrip exercise at high altitude
[AD-A162003]
p 223 N86-24198
Using Ashford's general model to aid in the understanding of a pesticide's neurotoxic effect through pesticide-drug mixture experiments
[PB86-130028]
p 226 N86-24211

PHYSIOLOGICAL RESPONSES
Mechanisms for negative water balance during weightlessness: Immersion or bed rest?
p 214 A86-30386
Cardiorespiratory responses to lower body negative pressure and tilt tests after exposure to simulated weightlessness
p 215 A86-30387
Changes in functional metabolism in the rat central nervous system following spaceflight
p 199 A86-30433
Responses of amino acids in hindlimb muscles to recovery from hypogravity and unloading by tail-cast suspension
p 202 A86-30456
Early adaptation to altered gravitational environments in the squirrel monkey
p 203 A86-30461
Otoconial morphology in space-flown rats
p 204 A86-30470
Hepatic enzyme adaptation in rats after space flight
p 205 A86-30476
Physiological changes in hemostasis associated with acute exercise
p 215 A86-30680
Somatostatin inhibits the ventilatory response to hypoxia in humans
p 216 A86-30681
Carotid bodies are required for ventilatory acclimatization to chronic hypoxia
p 206 A86-30682
Complex approach to the study of adaptive systemic reactions and functional states in man. I - The time factor in the formation of subcomplexes of systemic physiological indexes of functional state dynamics, and the instrumentation used in the study
p 216 A86-30893
Neuronal responses and the evoked potentials in subcortical structures of the human brain during visual recognition. II - The effect of stimuli relevance on the evoked neuronal responses
p 216 A86-30894
Hypobiosis and functional resistance to cold
p 206 A86-30897
The theoretical principles of adaptation --- physiological responses to environment
p 208 A86-33072
Influence of complexity of control task on level of activation of operators physiological functions when working with waiting
p 221 N86-23260
Effects of wearing NBC (Nuclear, Biological and Chemical) protective clothing in the heat on detection of visual signals
[AD-A162321]
p 224 N86-24202

PHYSIOLOGICAL TESTS
Analysis of the functional structure of thermogenesis on the basis of pharmacological tests
p 208 A86-33074

PHYSIOLOGY
Annual report and summaries of FY 1985 activities supported by the Division of Biological Energy Research
[DE85-009132]
p 209 N86-23220

Visual hemispheric specialization: A computational theory
[AD-A161296] p 235 N86-23279

PILOT ERROR
The social-psychological aspects of pilot-error - Male vs female p 226 A86-29885
The scare pilot p 228 A86-29887
'Captain I was trying to bring up the fact that you made a mistake earlier' - Deference and demeanor at 30,000 feet p 229 A86-29894
'The causes of causes' - Determinants and background variables of human factor incidents and accidents p 233 A86-29930

PILOT PERFORMANCE
Levels of helicopter control force inputs during in-flight emergency conditions as a function of aviator experience p 236 A86-29852
Vision in spatial disorientation (SDO) and loss of situational awareness p 226 A86-29853
Pilot usage of decoupled flight path and pitch controls p 236 A86-29854
Helicopter-control-referenced strength capabilities of small individuals p 213 A86-29855
Speech variability effects on recognition accuracy associated with concurrent task performance by pilots p 237 A86-29860
The effect of using speech generation and recognition systems on the performance of discrete tasks p 227 A86-29863
Comparison of novice and experienced pilots using analog and digital flight displays p 227 A86-29865
Pitch change thresholds as influenced by angular rate and duration of the apparent horizon's displacement p 227 A86-29867
Can pilots time-share better than non-pilots? p 238 A86-29874
Relative contributions of SWAT dimensions to overall subjective workload ratings --- Subjective Workload Assessment Technique p 238 A86-29876
Subjective assessment of pilot workload in the advanced fighter cockpit p 238 A86-29878
Measuring pilot workload in a motion base trainer - A comparison of four techniques p 239 A86-29880
Time-sharing revised - Test of a componential model for the assessment of individual differences p 239 A86-29881
In search of a time-sharing ability in zero input tracking analyzer scores --- of pilot psychomotor performance p 227 A86-29882
The Sternberg memory search task as an index of pilot workload p 227 A86-29883
Reliability of military pilots - Problems and prospects p 227 A86-29884
The social-psychological aspects of pilot-error - Male vs female p 226 A86-29885
A review of critical in-flight events research methodology p 226 A86-29886
Private pilot judgment training in flight school settings - A demonstration project p 228 A86-29890
When should pilot discipline end and pilot savvy begin? p 228 A86-29891
The attitude and information components of the risk assessment-judgement process --- of aircraft pilots p 229 A86-29892
Cockpit speech interference considerations p 229 A86-29895
The role of fundamental expression in instrument flight performance p 229 A86-29896
An analysis of the dearth of assertiveness by subordinate crewmembers p 229 A86-29897
Cockpit resource management - Where do we stand? p 229 A86-29898
Cockpit resource management - Exploring the attitude-performance linkage p 229 A86-29899
Formula for a better understanding of pilot performance p 230 A86-29900
The effects of preview period on descent detection p 230 A86-29902
Increasing sensitivity to optical information specifying loss in altitude p 230 A86-29904

Professional flightcrew human resource development - Developing a Needs Assessment Programme p 232 A86-29915
Comparison of the effects of atropine sulfate and ethanol on performance p 232 A86-29923
Psychological recovery after incidents and accidents within aviation p 232 A86-29924
Fitness-for-duty, a pilot's viewpoint p 232 A86-29925
Progress in human performance accident investigation p 233 A86-29932
Perceptual 'traps' of the visual system p 233 A86-30360
Bigness is in the eye of the beholder --- size and distance perception of pilots in flight p 233 A86-31820
The functional age profile - An objective decision criterion for the assessment of pilot performance capacities and capabilities p 234 A86-31823
A unifying approach to human pilot modelling p 241 A86-33187
Antiemetic drugs and pilot performance
[AD-A162109] p 224 N86-24200

PILOT SELECTION
Canadian automated pilot selection system p 231 A86-29908
Micropat - A progress report on the validation of an automated test battery for pilot selection p 231 A86-29911
Review of book on principles of aviation psychology p 235 N86-23261

PILOT TRAINING
Judgment training effectiveness and permanency p 228 A86-29886
Recurrent cockpit resource management training at United Airlines p 228 A86-29889
Private pilot judgment training in flight school settings - A demonstration project p 228 A86-29890
Student pilot stress - An emotional barrier to efficient flight training p 231 A86-29912

PILOTS (PERSONNEL)
Drugs of abuse in aviation fatalities. 1: Marijuana
[AD-A161911] p 223 N86-24196

PITUITARY HORMONES
Microgravity associated changes in pituitary growth hormone (GH) cells prepared from rats flown on Space Lab 3 p 202 A86-30459

PLANKTON
Microplankton species assemblages at the Scripps Pier from March to November 1983 during the 1982-1984 El Nino event p 207 A86-31833
Demonstration and role of chemoreception in the marine zooplankton
[DRIC-T-7456] p 209 N86-23217
The effects of Bis (tri-n-butyltin) oxide on three species of marine phytoplankton
[AD-A162115] p 212 N86-24188

PLANT ROOTS
Gravistimulation-induced changes in current patterns around root caps p 196 A86-30411
Cytochemical localization of calcium in cap cells of primary roots of Zea mays L. p 197 A86-30418
Immunocytochemical localization of calmodulin in pea root caps and plumules and its relevance to hypothesis on gravitropism p 197 A86-30419
Effects of norflurazon on the levels of abscisic acid and xanthoxin in caps of gravistimulated roots of maize p 197 A86-30420
The calcium dependence of auxin action in roots p 197 A86-30421
Correlated changes in calmodulin activity and gravitropic sensitivity in roots of maize p 197 A86-30422

PLANTS (BOTANY)
Investigations of higher plants under weightlessness p 192 A86-30388
Effects of simulated gravity nullification on shoot-inversion release of apical dominance in Pharbitis nil p 196 A86-30410
Plant growth responses to atmosphere and other environmental variables in the Space Shuttle Plant Growth Unit p 196 A86-30415
Effects of clinostat rotation on Aurelia statolith synthesis p 199 A86-30436
Use of membrane vesicles as a simplified system for studying transport of auxin
[DE86-002264] p 209 N86-23219
Annual report and summaries of FY 1985 activities supported by the Division of Biological Energy Research
[DE85-009132] p 209 N86-23220
Production of gene bank from cotton plant chloroplast DNA for HC/MF p 210 N86-23226

PLOTTING
Effect of heat and chemical protective clothing on cognitive performance
[AD-A162001] p 242 N86-24218

POLYMER CHEMISTRY
Artificial vaccines and stimulation of immunity p 219 N86-23238

POLYSACCHARIDES
Test of erythrocyte antigen diagnostic agent for detecting antibodies to coxiella burnetii p 218 N86-23231

POPULATIONS
EFFECTS: Documentation and verification for a BEIR 3 cancer risk model based on age, sex and population dynamics for BIOTRAN
[DE86-003285] p 226 N86-24210

POSTURE
Circadian variation of volume and concentration of orthostatically shifted fluid p 215 A86-30445
Microvascular flow adjustments with postural changes in humans p 215 A86-30448

PREDICTION ANALYSIS TECHNIQUES
Changes in fitness and shipboard task performance following circuit weight training programs featuring continuous or interval running
[AD-A163110] p 225 N86-24206
EFFECTS: Documentation and verification for a BEIR 3 cancer risk model based on age, sex and population dynamics for BIOTRAN
[DE86-003285] p 226 N86-24210

PRIMITIVE EARTH ATMOSPHERE
Photochemistry of methane and the formation of hydrocyanic acid (HCN) in the earth's early atmosphere p 243 A86-30697

PROBABILITY THEORY
EFFECTS: Documentation and verification for a BEIR 3 cancer risk model based on age, sex and population dynamics for BIOTRAN
[DE86-003285] p 226 N86-24210

PROCESS CONTROL (INDUSTRY)
Standardization of carbon-phenolic composite test methodology p 243 N86-24527

PROCUREMENT MANAGEMENT
An examination of the life support equipment development and acquisition process
[AD-A162241] p 242 N86-24221

PROCUREMENT POLICY
An examination of the life support equipment development and acquisition process
[AD-A162241] p 242 N86-24221

PRODUCTION MANAGEMENT
Influence of complexity of control task on level of activation of operators physiological functions when working with waiting p 221 N86-23260

PRODUCTIVITY
Effect of heat and chemical protective clothing on cognitive performance
[AD-A162001] p 242 N86-24218

PROSTAGLANDINS
Control of arachidonic acid release in chick muscle cultures p 198 A86-30429

PROTECTIVE CLOTHING
Effects of wearing NBC (Nuclear, Biological and Chemical) protective clothing in the heat on detection of visual signals
[AD-A162321] p 224 N86-24202
Effect of heat and chemical protective clothing on cognitive performance
[AD-A162001] p 242 N86-24218
Effectiveness of an air-cooled vest using selected air temperature and humidity combinations
[AD-A162026] p 242 N86-24219

PROTEIN METABOLISM
Changes in skeletal muscle properties following hindlimb suspension p 198 A86-30428
Protein concentration elevations in lungs of mice following sudden, transient cephalad (+Gz) acceleration p 199 A86-30437
Changes in muscle protein composition induced by disuse atrophy - Analysis by two-dimensional electrophoresis p 200 A86-30440
Effect of seven days of spaceflight on hindlimb muscle protein, RNA and DNA in adult rats p 204 A86-30471
Osteocalcin as an indicator of bone metabolism during spaceflight p 205 A86-30474

PROTEIN SYNTHESIS
Correlated changes in calmodulin activity and gravitropic sensitivity in roots of maize p 197 A86-30422
Control of arachidonic acid release in chick muscle cultures p 198 A86-30429
Production of gene bank from cotton plant chloroplast DNA for HC/MF p 210 N86-23226
Description of preparation of capsular antigen isolated from yersinia pestis strain EV p 219 N86-23242
Study of cell-wall antigen determinants in ribosomal preparations of group a streptococcus p 220 N86-23243

PROTEINS
Hypokinezia and space flight reflected on rats stomach p 200 A86-30442
Muscle protein and glycogen responses to recovery from hypogravity and unloading by tail-cast suspension p 202 A86-30457
Ecto-protein kinase activity on the external surface of neural cells p 207 A86-31650

PSYCHOLOGICAL EFFECTS

Interaction of asialoglycoprotein receptor of hepatocytes with chemically galactosylated acid alpha-glucosidase p 210 N86-23224

Protein-protein interactions in systems with synthetic polyelectrolytes p 210 N86-23225

Vaccine Proteins R and D on Salyut-7 p 220 N86-23256

PSYCHOLOGICAL EFFECTS

Complex approach to the study of adaptive systemic reactions and functional states in man. I - The time factor in the formation of subcomplexes of systemic physiological indexes of functional state dynamics, and the instrumentation used in the study p 216 A86-30693

PSYCHOLOGICAL FACTORS

Time-sharing revised - Test of a componential model for the assessment of individual differences p 239 A86-29881

The social-psychological aspects of pilot-error - Male vs female p 228 A86-29885

When should pilot discipline end and pilot savvy begin? p 229 A86-29891

The attitude and information components of the risk assessment-judgement process --- of aircraft pilots p 229 A86-29892

The influence of preview period and global optical flow rate on sensitivity to loss in speed of self motion p 230 A86-29901

Review of book on principles of aviation psychology p 235 N86-23261

PSYCHOLOGICAL TESTS

Judgment training effectiveness and permanency p 226 A86-29888

An exploratory study of computer-based aviator testing p 231 A86-29909

Psychological selection of personnel for employment in the Antartic [DRIC-T-7449] p 235 N86-23278

PSYCHOMETRICS

A preliminary study - A multivariate analysis of attitudinal characteristics of flight instructors p 232 A86-29914

PSYCHOMOTOR PERFORMANCE

In search of a time-sharing ability in zero input tracking analyzer scores --- of pilot psychomotor performance p 227 A86-29882

Canadian automated pilot selection system p 231 A86-29908

Influence of complexity of control task on level of activation of operators physiological functions when working with waiting p 221 N86-23260

PSYCHOPHARMACOLOGY

Electric sleep method of preventing fatigue build-up in sailors on extended cruises p 235 N86-23248

PSYCHOPHYSICS

Altitude estimation of pilot and non-pilot observers using real-world scenes p 230 A86-29905

The effects of psychophysical matching on the transfer of training between alternative motion simulators p 232 A86-29919

Improvement in direction discrimination - No role for eye movements p 234 A86-32073

Window of visibility - A psychophysical theory of fidelity in time-sampled visual motion displays p 240 A86-32451

PSYCHOPHYSIOLOGY

Perceptual 'traps' of the visual system p 233 A86-30360

Bigness is in the eye of the beholder --- size and distance perception of pilots in flight p 233 A86-31820

The methodology and techniques used in analyses of operator activity --- Russian book p 234 A86-32523

PUBLIC HEALTH

USSR report: Life sciences: Biomedical and behavioral sciences [JPRS-UBB-86-002] p 209 N86-23222

AIDS-free USSR monitoring potential outbreak there p 219 N86-23235

A survey of speech audiometry in the National Health Service [NPL-AC-105] p 221 N86-23267

Extremely Low Frequency (ELF) communications system bio-effects library development [AD-A162839] p 225 N86-24204

Analysis of health effects resulting from population exposures to ambient particulate matter. Health and environmental effects document, 1985 [DE86-002161] p 225 N86-24208

PYRENES

Production and characterization of antibodies to benzo(a)pyrene [DE86-002204] p 222 N86-23271

Q

QUALITATIVE ANALYSIS

An examination of the life support equipment development and acquisition process [AD-A162241] p 242 N86-24221

R

RABBITS

Production and characterization of antibodies to benzo(a)pyrene [DE86-002204] p 222 N86-23271

RADAR IMAGERY

Simulated terrain following flight - Visual and radar terrain correlation requirements p 231 A86-29906

RADIATION DOSAGE

Radiation transport of cosmic ray nuclei in lunar material and radiation doses p 191 A86-30168

Measurement techniques for use with technique/exposure guides [PB86-123718] p 222 N86-23272

Evaluation of radiation exposure from diagnostic radiology examinations: General recommendations [PB86-125903] p 222 N86-23273

Evaluation of radiation exposure from diagnostic radiology examinations: Technique/exposure guides for the craniocaudal projection in mammography [PB86-126075] p 222 N86-23274

Behavioral effects of microwave radiation absorption [PB86-113735] p 222 N86-23275

EFFECTS: Documentation and verification for a BEIR 3 cancer risk model based on age, sex and population dynamics for BIOTRAN [DE86-003285] p 226 N86-24210

RADIATION EFFECTS

Hypoxia prophylaxis against radiation injury p 220 N86-23244

Assessment of selected physiological indicators in antenna operators at short-wave transmitting and receiving centers p 220 N86-23250

Radiation induction of cancer of the skin [DE86-002201] p 221 N86-23270

Biological effects and physical safety aspects of NMR imaging and in vivo spectroscopy [DE86-002966] p 213 N86-24190

RADIATION HAZARDS

The effect of high frequency electromagnetic fields on human beings (frequency range between 1 kHz and 1000 GHz) p 223 N86-24193

RADIATION MEASUREMENT

Measurement techniques for use with technique/exposure guides [PB86-123718] p 222 N86-23272

RADIATION PROTECTION

Mechanisms of the radiation protection effect and indication of the efficiency of radioprotectors --- Russian book p 207 A86-31375

Activation of cholesterogenesis under the effect of ionizing radiation on a living body p 207 A86-32697

Investigation of mechanisms of the radioprotective effect of agonists of catecholamine receptors - Involvement of both subtypes of alpha-adrenoreceptors in the radioprotective effect p 208 A86-32698

Studies of radioprotective properties of adeturon and polyanion, applied separately and in combination p 208 A86-32699

Evaluation of radiation exposure from diagnostic radiology examinations: Technique/exposure guides for the craniocaudal projection in mammography [PB86-126075] p 222 N86-23274

RADIATION SHIELDING

Radiation transport of cosmic ray nuclei in lunar material and radiation doses p 191 A86-30168

RADIATION SICKNESS

Hypoxia prophylaxis against radiation injury p 220 N86-23244

RADIATION THERAPY

Mechanisms of the radiation protection effect and indication of the efficiency of radioprotectors --- Russian book p 207 A86-31375

Hypoxia prophylaxis against radiation injury p 220 N86-23244

RADIATION TRANSPORT

Radiation transport of cosmic ray nuclei in lunar material and radiation doses p 191 A86-30168

RADIOACTIVE DECAY

Investigation on the chirality of electrons from Sr-90-Y-90 beta-decay and their asymmetrical interactions with D- and L-alanines p 243 A86-33390

RADIOACTIVE ISOTOPES

Biomedical research with cyclotron produced radionuclides [DE86-000327] p 221 N86-23269

RADIOBIOLOGY

Mechanisms of the radiation protection effect and indication of the efficiency of radioprotectors --- Russian book p 207 A86-31375

Studies of radioprotective properties of adeturon and polyanion, applied separately and in combination p 208 A86-32699

RADIOCHEMISTRY

Biomedical research with cyclotron produced radionuclides [DE86-000327] p 221 N86-23269

RADIOGRAPHY

Measurement techniques for use with technique/exposure guides [PB86-123718] p 222 N86-23272

Evaluation of radiation exposure from diagnostic radiology examinations: General recommendations [PB86-125903] p 222 N86-23273

Evaluation of radiation exposure from diagnostic radiology examinations: Technique/exposure guides for the craniocaudal projection in mammography [PB86-126075] p 222 N86-23274

RATS

Response of rat hindlimb muscles to 12 hours recovery from tail-cast suspension p 198 A86-30426

REACTION KINETICS

Use of membrane vesicles as a simplified system for studying transport of auxin [DE86-002264] p 209 N86-23219

Annual report and summaries of FY 1985 activities supported by the Division of Biological Energy Research [DE85-009132] p 209 N86-23220

REACTION TIME

Effects of adaptation and display luminance on CRT symbol recognition time p 240 A86-32315

RECTUM

Effectiveness of an air-cooled vest using selected air temperature and humidity combinations [AD-A162026] p 242 N86-24219

REDUCED GRAVITY

A marsupial model for the investigation of gravitational effects on early development p 195 A86-30404

Amphibian fertilization and development in microgravity p 195 A86-30408

Plant growth responses to atmosphere and other environmental variables in the Space Shuttle Plant Growth Unit p 196 A86-30415

Localization of calcium stimulated adenosine triphosphatase activity in blood vessels of the skeleton p 197 A86-30424

Considerations in the design of life sciences research facilities for the Space Station p 200 A86-30441

Vivaria requirements for animal life cycle studies on space station p 200 A86-30443

Exobiology experiments for space station p 243 A86-30453

Microgravity associated changes in pituitary growth hormone (GH) cells prepared from rats flown on Space Lab 3 p 202 A86-30459

Microgravity changes in heart structure and cyclic-AMP metabolism p 203 A86-30465

REGRESSION ANALYSIS

Changes in fitness and shipboard task performance following circuit weight training programs featuring continuous or interval running [AD-A163110] p 225 N86-24206

REINFORCEMENT (PSYCHOLOGY)

Effects of 60 Hz electric fields on operant and social stress behaviors of nonhuman primates [DE86-002587] p 209 N86-23221

RELAXATION (PHYSIOLOGY)

Responses of skeletal muscle to unloading - A review p 192 A86-30379

RELEASING

Oxygen-liberating mixtures for breathing apparatus p 241 N86-23264

REMOTE SENSING

Remote sensing of body signs and signatures [AD-A162106] p 224 N86-24199

RENAL FUNCTION

Dynamics of the salivary electrolyte composition and renal excretory function during human adaptation to an altered gaseous environment p 216 A86-30899

Some characteristics of epizootic process in hemorrhagic fever with renal syndrome p 218 N86-23234

REQUIREMENTS

Effectiveness of an air-cooled vest using selected air temperature and humidity combinations [AD-A162026] p 242 N86-24219

RESEARCH AND DEVELOPMENT

Tissue culture apparatus for flight experimentation p 201 A86-30444

Life science research on the Space Station p 201 A86-30451

RESOURCES MANAGEMENT
Recurrent cockpit resource management training at United Airlines p 226 A86-29889
Cockpit resource management - Where do we stand? p 229 A86-29896
RESPIRATION
Oxygen-liberating mixtures for breathing apparatus p 241 N86-23264
Remote sensing of body signs and signatures [AD-A162106] p 224 N86-24199
RESPIRATORY DISEASES
Respiratory response and muscle function during isometric handgrip exercise at high altitude [AD-A162003] p 223 N86-24198
RESPIRATORY PHYSIOLOGY
Aerosol deposition along the respiratory tract at zero gravity - A theoretical study p 213 A86-30169
Cardiorespiratory responses to lower body negative pressure and tilt tests after exposure to simulated weightlessness p 215 A86-30387
Oxygen consumption during cold exposure at 2.1 G in rats adapted to hypergravic fields p 199 A86-30432
Plasma lactate and ventilation thresholds in trained and untrained cyclists p 215 A86-30678
Effect of elevated FFA on carbohydrate and lipid oxidation during prolonged exercise in humans p 215 A86-30679
Somatostatin inhibits the ventilatory response to hypoxia in humans p 216 A86-30681
Carotid bodies are required for ventilatory acclimatization to chronic hypoxia p 206 A86-30682
Ventilatory acclimatization to hypoxia is not dependent on cerebral hypocapnic alkalosis p 206 A86-30683
Correlation of constant flow rate with frequency spectrum of respiratory sounds when measured at the trachea p 217 A86-31223
RESPIRATORY SYSTEM
Aerosol deposition along the respiratory tract at zero gravity - A theoretical study p 213 A86-30169
RETINA
The effect of a hyperdynamic environment on the development of the rat retina p 203 A86-30463
Effect of intensive visible light on activity of glutathione peroxidase in pigmented epithelium of eye p 210 N86-23226
RHYTHM (BIOLOGY)
Influence of exposure to a prolonged hyperdynamic field on body temperature in the squirrel monkey p 200 A86-30439
Homeostasis and biological rhythms in the rat during spaceflight p 202 A86-30460
Problems in medical biorhythmology --- Russian book p 206 A86-31371
RIBONUCLEIC ACIDS
Effect of seven days of spaceflight on hindlimb muscle protein, RNA and DNA in adult rats p 204 A86-30471
Eukaryotic ribosomes that lack a 5.8S RNA p 207 A86-32237
ROBOTS
Robots as man-extension systems in space p 240 A86-33183
ROLL
An investigation regarding the use of a dynamic seat-pan display for training and as a device for communicating roll-axis motion information p 239 A86-29918
ROTATING ENVIRONMENTS
Effects of clinostat rotation on Aurelia statolith synthesis p 199 A86-30436
RUNNING
Changes in fitness and shipboard task performance following circuit weight training programs featuring continuous or interval running [AD-A163110] p 225 N86-24206

S

SALIVA
Dynamics of the salivary electrolyte composition and renal excretory function during human adaptation to an altered gaseous environment p 216 A86-30899
SALIVARY GLANDS
Biochemical and morphological evaluation of the effects of space flight on rat salivary glands p 204 A86-30468
SALMONELLA
Search for DNA host specificity systems in salmonella typhi p 210 N86-23247
SALYUT SPACE STATION
Vaccine Proteins R and D on Salyut-7 p 220 N86-23256
SEA LEVEL
Respiratory response and muscle function during isometric handgrip exercise at high altitude [AD-A162003] p 223 N86-24198
SEATS
An investigation regarding the use of a dynamic seat-pan display for training and as a device for communicating roll-axis motion information p 239 A86-29918
Tactual cuing can produce better performance than visual cuing p 239 A86-29920
SENSITIVITY
Human reactions to transient electric currents [PB86-117280] p 222 N86-23277
SENSORIMOTOR PERFORMANCE
The effects of real and simulated microgravity on vestibulo-oculomotor interaction p 193 A86-30390
Role of dopaminergic systems of neostriatum during the activity of the central nervous system in man and animals p 208 A86-33070
SENSORY FEEDBACK
Perceptual 'traps' of the visual system p 233 A86-30360
SENSORY PERCEPTION
Early postnatal development of rats gestated during flight of Cosmos 1514 p 195 A86-30402
The structure and development of the starch sheath in pea epicotyls p 196 A86-30414
SERUMS
Detection of HBsAg in families of children with viral hepatitis B p 218 N86-23232
HBeAg and its antibodies in carriers of HSaAg in various regions of USSR p 218 N86-23233
Effect of plasmids on virulence of pseudomonas aeruginosa strains in mouse experiments p 210 N86-23237
Vaccine Proteins R and D on Salyut-7 p 220 N86-23256
SEX
EFFECTS: Documentation and verification for a BEIR 3 cancer risk model based on age, sex and population dynamics for BIOTRAN [DE86-003285] p 226 N86-24210
SEX FACTOR
The social-psychological aspects of pilot-error - Male vs female p 228 A86-29885
SHIPS
Electric sleep method of preventing fatigue build-up in sailors on extended cruises p 235 N86-23248
SHIVERING
Analysis of the functional structure of thermogenesis on the basis of pharmacological tests p 208 A86-33074
SIGNAL DETECTION
Minimum colour differences required to recognise small objects on a colour CRT p 240 A86-32316
SIGNS AND SYMPTOMS
Is space sickness a form of motion sickness? p 214 A86-30382
SILICATES
US Department of Agriculture/Corps of Engineers cooperative aquatic plant control research: Annual report for FY 1983, chemical control technology [AD-A161867] p 212 N86-24184
SIMULATION
Training aircraft accident investigators using simulations p 233 A86-29928
The system integration and verification testing of an orbital maneuvering vehicle for an air bearing floor [NASA-CR-178350] p 242 N86-24217
SIZE DETERMINATION
Bigness is in the eye of the beholder --- size and distance perception of pilots in flight p 233 A86-31820
SKIN (ANATOMY)
Radiation induction of cancer of the skin [DE86-002201] p 221 N86-23270
SKIN GRAFTS
Many medical uses foreseen for artificial skin p 220 N86-23245
SLEEP
Catching zzzs in zero-G p 217 A86-31150
SLEEP DEPRIVATION
Disturbances in the night sleep structure and organization and their significance in the adaptive-recuperation processes p 217 A86-32875
Electric sleep method of preventing fatigue build-up in sailors on extended cruises p 235 N86-23248
The energy cost of combat engineer tasks [AD-A161861] p 223 N86-24195
SOCIAL FACTORS
The social-psychological aspects of pilot-error - Male vs female p 228 A86-29885
'Captain I was trying to bring up the fact that you made a mistake earlier' - Deference and demeanor at 30,000 feet p 229 A86-29894
SOLID PROPELLANT ROCKET ENGINES
Standardization of carbon-phenolic composite test methodology p 243 N86-24527
SOYBEANS
Evidences for changes in sensitivity to auxin and in cell-wall properties during gravitropic bending of dicot stems p 196 A86-30409
SPACE ADAPTATION SYNDROME
Is space sickness a form of motion sickness? p 214 A86-30382
Early adaptation to altered gravitational environments in the squirrel monkey p 203 A86-30461
SPACE FLIGHT
Early postnatal development of rats gestated during flight of Cosmos 1514 p 195 A86-30402
Morphology of human embryonic kidney cells in culture after space flight p 201 A86-30452
SPACE FLIGHT STRESS
Spaceflight and calcium metabolism p 192 A86-30378
Fluid and electrolyte control in simulated and actual spaceflight p 214 A86-30385
Effects of gravitational and muscular loading on bone formation in growing rats p 194 A86-30396
Changes in functional metabolism in the rat central nervous system following spaceflight p 199 A86-30433
Hypokinezia and space flight reflected on rats stomach p 200 A86-30442
Electron microprobe analyses of Ca, S, Mg and P distribution in incisors of Spacelab-3 rats p 202 A86-30455
Homeostasis and biological rhythms in the rat during spaceflight p 202 A86-30460
Morphological and biochemical changes in soleus and extensor digitorum longus muscles of rats orbited in Spacelab 3 p 203 A86-30464
Reduction of the spermatogonial population in rat testes flown on Space Lab-3 p 203 A86-30466
Effect of flight in mission SL-3 on interferon-gamma production by rats p 204 A86-30467
Biochemical and morphological evaluation of the effects of space flight on rat salivary glands p 204 A86-30468
Microprobe analysis of epiphyseal plates from Spacelab 3 rats p 204 A86-30469
Otoconial morphology in space-flown rats p 204 A86-30470
Effect of seven days of spaceflight on hindlimb muscle protein, RNA and DNA in adult rats p 204 A86-30471
1,25-Dihydroxyvitamin D3 receptors in space-flown vs. grounded control rat kidneys p 204 A86-30472
Hepatic enzymes of sphingolipid and glycerolipid biosynthesis in rats from Spacelab 3 p 205 A86-30475
Hepatic enzyme adaptation in rats after space flight p 205 A86-30476
Atriopeptin (AP-3) in atria and plasma of rats orbited aboard NASA Spacelab (SL3) for seven days p 205 A86-30477
Plasma renin concentration (PRC) of rats orbited for 7 days aboard NASA Spacelab 3 p 205 A86-30478
Bone maturation in rats flown on the Spacelab-3 mission p 205 A86-30479
SPACE LABORATORIES
Space Station life science research facility - The vivarium/laboratory p 201 A86-30449
Study of biosample preservation, handling, and observation facilities [ESA-CR(P)-2126] p 213 N86-24191
SPACE PERCEPTION
Vision in spatial disorientation (SDO) and loss of situational awareness p 225 A86-29853
Bigness is in the eye of the beholder --- size and distance perception of pilots in flight p 233 A86-31820
The metric of visual space p 234 A86-32072
Method of changes in reversible pattern masking as factor in visual perception p 221 N86-23263
SPACE SHUTTLES
Plant growth responses to atmosphere and other environmental variables in the Space Shuttle Plant Growth Unit p 196 A86-30415
SPACE STATIONS
Considerations in the design of life sciences research facilities for the Space Station p 200 A86-30441
Vivaria requirements for animal life cycle studies on space station p 200 A86-30443
Space Station life science research facility - The vivarium/laboratory p 201 A86-30449
Life science research on the Space Station p 201 A86-30451
Exobiology experiments for space station p 243 A86-31453
SPACEBORNE EXPERIMENTS
Investigations of higher plants under weightlessness p 192 A86-30388
Gravity sensing in animal cells p 192 A86-30389

SPACECRAFT ENVIRONMENTS

Protein concentration elevations in lungs of mice following sudden, transient cephalad (+Gz) acceleration
p 199 A86-30437
Vivária requirements for animal life cycle studies on space station p 200 A86-30443
Tissue culture apparatus for flight experimentation
p 201 A86-30444
Exobiology experiments for space station
p 243 A86-30453
Morphological and biochemical changes in soleus and extensor digitorum longus muscles of rats orbited in Spacelab 3 p 203 A86-30464
Microgravity changes in heart structure and cyclic-AMP metabolism p 203 A86-30465
Effect of flight in mission SL-3 on interferon-gamma production by rats p 204 A86-30467
Microprobe analysis of epiphyseal plates from Spacelab 3 rats p 204 A86-30469
Hepatic enzymes of sphingolipid and glycerolipid biosynthesis in rats from Spacelab 3
p 205 A86-30475
Atriopeptin (AP-3) in atria and plasma of rats orbited aboard NASA Spacelab (SL3) for seven days
p 205 A86-30477
Plasma renin concentration (PRC) of rats orbited for 7 days aboard NASA Spacelab 3 p 205 A86-30478
Bone maturation in rats flown on the Spacelab-3 mission p 205 A86-30479
Vaccine Proteins R and D on Salyut-7
p 220 N86-23256

SPACECRAFT ENVIRONMENTS

Plant growth responses to atmosphere and other environmental variables in the Space Shuttle Plant Growth Unit p 196 A86-30415
Catching zzzs in zero-G p 217 A86-31150

SPACELAB

A preliminary study of flat-panel displays
p 236 N86-24546

SPACELAB PAYLOADS

Rat maintenance in the Research Animal Holding Facility during the Flight of Space Lab 3 p 201 A86-30454
Hematologic parameters of astrorats flown on SL-3
p 202 A86-30458
Microgravity associated changes in pituitary growth hormone (GH) cells prepared from rats flown on Space Lab 3 p 202 A86-30459

SPECTRAL METHODS

Correlation of constant flow rate with frequency spectrum of respiratory sounds when measured at the trachea p 217 A86-31223

SPECTROSCOPY

Fiberoptics immunofluorescence spectroscopy for chemical and biological monitoring
[DE86-002239] p 225 N86-24209

SPEECH

Design guidelines for the use of audio cues in computer interfaces
[DE85-015176] p 241 N86-23281

SPEECH RECOGNITION

A comparison of voice and keyboard data entry for a helicopter navigation system p 237 A86-29859
Speech variability effects on recognition accuracy associated with concurrent task performance by pilots
p 237 A86-29860
The effect of using speech generation and recognition systems on the performance of discrete tasks
p 227 A86-29863
Cockpit speech interference considerations
p 229 A86-29895
Effects of speech rate and pitch contour on the perception of synthetic speech p 234 A86-31824

SPERMATOGENESIS

Reduction of the spermatogonial population in rat testes flown on Space Lab-3 p 203 A86-30466

SPICULES

Fertilization, development and spicule formation in sea urchins under conditions of constant reorientation relative to the gravitation axis p 195 A86-30406

SPORES

Identification of vaccine resistant isolates of bacillus anthracis
[AD-A162002] p 212 N86-24187

STANDARDIZATION

Standardization of conditions for measuring intensity of specific fluorescence in continuous cell cultures infected with variants of Japanese encephalitis virus
p 211 N86-23255
Measurement techniques for use with technique/exposure guides
[PB86-123718] p 222 N86-23272
Evaluation of radiation exposure from diagnostic radiology examinations. General recommendations
[PB86-125803] p 222 N86-23273
Evaluation of radiation exposure from diagnostic radiology examinations. Technique/exposure guides for the craniocaudal projection in mammography
[PB86-125075] p 222 N86-23274

STEMS

Evidences for changes in sensitivity to auxin and in cell-wall properties during gravitropic bending of dicot stems p 196 A86-30409

STEREOSCOPIC VISION

Mechanisms of human motion perception revealed by a new cyclopean illusion p 235 A86-33103

STIFFNESS

The effects of ketamine on Rhesus monkey skeletal dynamics
[AD-A162848] p 213 N86-24189

STOCHASTIC PROCESSES

Stochastic models of man-machine system effectiveness p 242 N86-24216

STREPTOCOCCUS

Obtaining hybridomas that synthesize monoclonal antibodies to polysaccharide of group a streptococcus
p 219 N86-23240
Study of cell-wall antigen determinants in ribosomal preparations of group a streptococcus
p 220 N86-23243

STRESS (PHYSIOLOGY)

Physiological changes in hemostasis associated with acute exercise p 215 A86-30680
The methodology and techniques used in analyses of operator activity --- Russian book p 234 A86-32523
Environmental stress after atropine treatment
[AD-A161923] p 223 N86-24197
Effectiveness of an air-cooled vest using selected air temperature and humidity combinations
[AD-A162026] p 242 N86-24219

STRESS (PSYCHOLOGY)

Student pilot stress - An emotional barrier to efficient flight training p 231 A86-29812
The effect of intense mental work under stress on cardiac activity, hemodynamics, and brain circulation
p 216 A86-30895
Effects of 60 Hz electric fields on operant and social stress behaviors of nonhuman primates
[DE86-002587] p 209 N86-23221
Estimate of emotional stress during working activity based on systems analyses of skin-galvanic reaction
p 220 N86-23259
Report from a behavioral science study grp to Australia, 23 Aug. - 10 Sep. 1985
[FOA-C-50027-H3] p 235 N86-23280

STROBOSCOPES

Window of visibility - A psychophysical theory of fidelity in time-sampled visual motion displays
p 240 A86-32451

SUPERCRITICAL FLUIDS

Implementing supercritical water oxidation technology in a lunar base environmental control/life support system p 240 A86-30167

SURGERY

Reduction of circadian disruption following surgery by ingestion of caffeine in the laboratory rat
p 201 A86-30447

SURGES

Human reactions to transient electric currents
[PB86-117280] p 222 N86-23277

SURVEYS

A survey of speech audiometry in the National Health Service
[NPL-AC-105] p 221 N86-23267

SUSPENDING (HANGING)

Effects of non-weight bearing on callus formation
p 193 A86-30394
Changes in skeletal muscle properties following hindlimb suspension p 198 A86-30428
Altered carbohydrate metabolism in the whole body suspended rat p 199 A86-30431
Transient dehydration of lungs in tail-suspended rats
p 200 A86-30438
Responses of amino acids in hindlimb muscles to recovery from hypogravity and unloading by tail-cast suspension p 202 A86-30456
The use of suspension models and comparison with true weightlessness --- Animal Model Workshop on Gravitational Physiology p 205 A86-30480

SWEAT COOLING

Environmental stress after atropine treatment
[AD-A161923] p 223 N86-24197

SYNAPSES

Simulated hypogravity and synaptogenesis in culture
p 194 A86-30401

SYNTHESIS (CHEMISTRY)

Artificial antigens, vaccines reviewed
p 219 N86-23239

SYNTHESIZERS

Design guidelines for the use of audio cues in computer interfaces
[DE85-015176] p 241 N86-23281

SYSTEM EFFECTIVENESS

Human factors engineering and operability in the design of electronic warfare spaces aboard United States Naval combatants
[AD-A162251] p 243 N86-24222

SYSTEMS ENGINEERING

Study of biosample preservation, handling, and observation facilities
[ESA-CR(P)-2126] p 213 N86-24191
Extremely Low Frequency (ELF) communications system bio-effects library development
[AD-A162839] p 225 N86-24204

SYSTEMS INTEGRATION

The system integration and verification testing of an orbital maneuvering vehicle for an air bearing floor
[NASA-CR-177350] p 242 N86-24217
Person computer dialogue: A human engineering data base supplement
[AD-A163074] p 243 N86-24223

T

TANKS (COMBAT VEHICLES)

Effectiveness of an air-cooled vest using selected air temperature and humidity combinations
[AD-A162026] p 242 N86-24219

TARGET ACQUISITION

The BAe D target acquisition model ORACLE: An overview, 1984
[BAE-JS-10009] p 221 N86-23268

TARGET RECOGNITION

Visual lobe area for single targets on a competing homogeneous background p 234 A86-31821
Improvement in direction discrimination - No role for eye movements p 234 A86-32073

TASK COMPLEXITY

Can pilots time-share better than non-pilots?
p 238 A86-29874
Relative contributions of SWAT dimensions to overall subjective workload ratings --- Subjective Workload Assessment Technique p 238 A86-29876
Techniques of subjective workload assessment - A comparison of two methodologies p 238 A86-29877
Predicted versus experienced workload and performance on a supervisory control task
p 227 A86-29879
Measuring pilot workload in a motion base trainer - A comparison of four techniques p 239 A86-29880
Time-sharing revised - Test of a componential model for the assessment of individual differences
p 239 A86-29881
The relation between the Type A behavior pattern, pacing, and subjective workload under single- and dual-task conditions p 234 A86-31822
The functional age profile - An objective decision criterion for the assessment of pilot performance capacities and capabilities p 234 A86-31823

TAXONOMY

Microplankton species assemblages at the Scripps Pier from March to November 1983 during the 1982-1984 El Nino event p 207 A86-31833

TEETH

Electron microprobe analyses of Ca, S, Mg and P distribution in incisors of Spacelab-3 rats
p 202 A86-30455

TELEOPERATORS

Robots as man-extension systems in space
p 240 A86-33183

TELEVISION SYSTEMS

The rastered eye - Vision in television
p 240 A86-32317

TEMPERATURE EFFECTS

Effects of wearing NBC (Nuclear, Biological and Chemical) protective clothing in the heat on detection of visual signals
[AD-A162321] p 224 N86-24202
Effect of heat and chemical protective clothing on cognitive performance
[AD-A162001] p 242 N86-24218

TEMPERATURE MEASUREMENT

Reduction of circadian disruption following surgery by ingestion of caffeine in the laboratory rat
p 201 A86-30447

TERRAIN ANALYSIS

Altitude estimation of pilot and non-pilot observers using real-world scenes p 230 A86-29905

TERRAIN FOLLOWING AIRCRAFT

Simulated terrain following flight - Visual and radar terrain correlation requirements p 231 A86-29906

TEST FACILITIES
Canadian automated pilot selection system
p 231 A86-29908
TESTES
Reduction of the spermatogonial population in rat testes flown on Space Lab-3
p 203 A86-30466
THERAPY
Corticoreticular interactions in the mechanisms of reflexotherapy
p 208 A86-33071
THERMAL STRESSES
Effectiveness of an air-cooled vest using selected air temperature and humidity combinations
[AD-A162026] p 242 N86-24219
THERMOGRAPHY
Thermoencephaloscopy
p 206 A86-30892
THERMOREGULATION
Oxygen consumption during cold exposure at 2.1 G in rats adapted to hypergravic fields
p 199 A86-30432
Influence of exposure to a prolonged hyperdynamic field on body temperature in the squirrel monkey
p 200 A86-30439
Analysis of the functional structure of thermogenesis on the basis of pharmacological tests
p 208 A86-33074
Environmental stress after atropine treatment
[AD-A161923] p 223 N86-24197
THORAX
The effects of ketamine on Rhesus monkey skeletal dynamics
[AD-A162848] p 213 N86-24189
THRESHOLDS (PERCEPTION)
Pitch change thresholds as influenced by angular rate and duration of the apparent horizon's displacement
p 227 A86-29867
Meteorological adaptation research at biology institute
p 211 N86-23257
Method of changes in reversible pattern masking as factor in visual perception
p 221 N86-23263
TIBIA
Correlated light and electron microscopy of the vasculature of cortical bone in rat femora and tibiae
p 193 A86-30395
TIME SHARING
Can pilots time-share better than non-pilots?
p 238 A86-29874
Time-sharing revised - Test of a componential model for the assessment of individual differences
p 239 A86-29881
In search of a time-sharing ability in zero input tracking analyzer scores --- of pilot psychomotor performance
p 227 A86-29882
TISSUES (BIOLOGY)
Effects of non weight bearing on callus formation
p 193 A86-30394
Modification of the resting oxygen consumption level of biological body and its tissues, during prolonged hypodynamics exposure
p 194 A86-30398
Growth and differentiation of mammalian embryonic tissues exposed to hypergravity in vivo and in vitro
p 194 A86-30400
Tissue culture apparatus for flight experimentation
p 201 A86-30444
A bidomain model for the extracellular potential and magnetic field of cardiac tissue
p 206 A86-31224
Many medical uses foreseen for artificial skin
p 220 N86-23245
TOLERANCES (PHYSIOLOGY)
The energy cost of combat engineer tasks
[AD-A161861] p 223 N86-24195
TOPOGRAPHY
Selecting color codes for a computer-generated topographic map based on perception experiments and functional requirements
p 237 A86-29866
TORSO
Human head/neck/upper-torso model response to dynamic loading
p 221 N86-23266
TOUCH
An investigation regarding the use of a dynamic seat-pan display for training and as a device for communicating roll-axis motion information
p 239 A86-29918
Tactual cuing can produce better performance than visual cuing
p 239 A86-29920
TOXIC DISEASES
Using Ashford's general model to aid in the understanding of a pesticide's neurotoxic effect through pesticide-drug mixture experiments
[PB86-130028] p 226 N86-24211
TOXINS AND ANTITOXINS
Cloning and analysis of genes for anthrax toxin components
[AD-A161901] p 212 N86-24186
Identification of vaccine resistant isolates of bacillus anthracis
[AD-A162002] p 212 N86-24187
TRACHEA
Correlation of constant flow rate with frequency spectrum of respiratory sounds when measured at the trachea
p 217 A86-31223
TRACKING (POSITION)
Pitch change thresholds as influenced by angular rate and duration of the apparent horizon's displacement
p 227 A86-29867
In search of a time-sharing ability in zero input tracking analyzer scores --- of pilot psychomotor performance
p 227 A86-29882
Tactual cuing can produce better performance than visual cuing
p 239 A86-29920
TRAINING AIRCRAFT
Knowing what we get from training devices - Substituting a little arithmetic for a measure of emotion
p 232 A86-29921
TRAINING ANALYSIS
Judgment training effectiveness and permanency
p 228 A86-29888
Training aircraft accident investigators using simulations
p 233 A86-29928
TRAINING DEVICES
Knowing what we get from training devices - Substituting a little arithmetic for a measure of emotion
p 232 A86-29921
Development of a computer-managed readiness assessment system
[AD-A162931] p 236 N86-24215
TRAINING EVALUATION
Knowing what we get from training devices - Substituting a little arithmetic for a measure of emotion
p 232 A86-29921
Development of a computer-managed readiness assessment system
[AD-A162931] p 236 N86-24215
TRAINING SIMULATORS
Simulator instructor task loading - The bde is turning
p 233 A86-30362
TRANSFER OF TRAINING
The effects of psychophysical matching on the transfer of training between alternative motion simulators
p 232 A86-29919
TRANSMITTER RECEIVERS
Remote sensing of body signs and signatures
[AD-A162106] p 224 N86-24199
TRANSPLANTATION
Diseases in CEMA countries
p 211 N86-23252

U

U.S.S.R.
USSR report: Life sciences. Biomedical and behavioral sciences
[JPRS-UBB-86-002] p 209 N86-23222
USSR report: Life sciences. Biomedical and behavioral sciences
[JPRS-UBB-86-004] p 212 N86-23258
ULTRAVIOLET RADIATION
Radiation induction of cancer of the skin
[DE86-002201] p 221 N86-23270
UNITED KINGDOM
A survey of speech audiometry in the National Health Service
[NPL-AC-105] p 221 N86-23267
UNITED STATES
Human factors engineering and operability in the design of electronic warfare spaces aboard United States Naval combatants
[AD-A162251] p 243 N86-24222
UNLOADING
Responses of skeletal muscle to unloading - A review
p 192 A86-30379
USER REQUIREMENTS
Person computer dialogue: A human engineering data base supplement
[AD-A163074] p 243 N86-24223
UTILITY AIRCRAFT
Development of a computer-managed readiness assessment system
[AD-A162931] p 236 N86-24215

V

VACCINES
Artificial vaccines and stimulation of immunity
p 219 N86-23238
Artificial antigens, vaccines reviewed
p 219 N86-23239
Fab-fragment of heterologic immunoglobulin for flu prophylaxis and treatment
p 219 N86-23241
Description of preparation of capsular antigen isolated from yersinia pestis strain EV
p 219 N86-23242
Study of cell-wall antigen determinants in ribosomal preparations of group a streptococcus
p 220 N86-23243
Vaccine Proteins R and D on Salyut-7
p 220 N86-23256
Identification of vaccine resistant isolates of bacillus anthracis
[AD-A162002] p 212 N86-24187
VASCULAR SYSTEM
Microvascular flow adjustments with postural changes in humans
p 215 A86-30448
VEGETATION GROWTH
Evidences for changes in sensitivity to auxin and in cell-wall properties during gravitropic bending of dicot stems
p 196 A86-30409
Effects of simulated gravity nullification on shoot-inversion release of apical dominance in Pharbitis nil
p 196 A86-30410
Effect of calmodulin and auxin transport inhibitors on calcium net uptake along apical corn roots
p 196 A86-30412
Red light shifts the locus and rate of gravitropic curvature in etiolate pea epicotyls
p 196 A86-30413
The structure and development of the starch sheath in pea epicotyls
p 196 A86-30414
Effects of mechanical stresses, abscisic acid, and outdoor exposure on growth and water relations of eggplant
p 196 A86-30416
An attempt to localize and identify the gravity sensing mechanism of plants
p 197 A86-30417
Effects of norflurazon on the levels of abscisic acid and xanthoxin in caps of gravistimulated roots of maize
p 197 A86-30420
Use of membrane vesicles as a simplified system for studying transport of auxin
[DE86-002264] p 209 N86-23219
VENTILATION
Respiratory response and muscle function during isometric handgrip exercise at high altitude
[AD-A162003] p 223 N86-24198
VERBAL COMMUNICATION
'Captain I was trying to bring up the fact that you made a mistake earlier' - Deference and demeanor at 30,000 feet
p 229 A86-29894
VERTEBRAE
The effects of ketamine on Rhesus monkey skeletal dynamics
[AD-A162848] p 213 N86-24189
VERTEBRATES
Vertebrate gravity sensors as dynamic systems
p 193 A86-30391
VERTICAL PERCEPTION
Method of changes in reversible pattern masking as factor in visual perception
p 221 N86-23263
VESTIBULAR TESTS
The effects of real and simulated microgravity on vestibulo-oculomotor interaction
p 193 A86-30390
The alleviating effect of arbitrary movements on the vestibulomotor
p 216 A86-30898
VESTS
Effectiveness of an air-cooled vest using selected air temperature and humidity combinations
[AD-A162026] p 242 N86-24219
VIBRATION EFFECTS
Status of calcium metabolism in coal miners with vibration sickness
p 220 N86-23251
VIBRATION MEASUREMENT
System for measurement of small vibrations at material interfaces induced by electrostrictive forces
[PB86-116530] p 222 N86-23276
VIRULENCE
Effect of plasmids on virulence of pseudomonas aeruginosa strains in mouse experiments
p 210 N86-23237
VIRUSES
Some characteristics of epizootic process in hemorrhagic fever with renal syndrome
p 218 N86-23234
Artificial vaccines and stimulation of immunity
p 219 N86-23238
Fab-fragment of heterologic immunoglobulin for flu prophylaxis and treatment
p 219 N86-23241
Model of experimental pixuna virus infection in white mice
p 211 N86-23253
Experimental evaluation of pathogenicity of different variants of lassa virus
p 211 N86-23254
Standardization of conditions for measuring intensity of specific fluorescence in continuous cell cultures infected with variants of Japanese encephalitis virus
p 211 N86-23255
VISUAL ACCOMMODATION
Effects of adaptation and display luminance on CRT symbol recognition time
p 240 A86-32315
VISUAL CONTROL
Tactual cuing can produce better performance than visual cuing
p 239 A86-29920

VISUAL DISCRIMINATION
Improvement in direction discrimination - No role for eye movements p 234 A86-32073
Minimum colour differences required to recognise small objects on a colour CRT p 240 A86-32316
The rastered eye - Vision in television p 240 A86-32317
Window of visibility - A psychophysical theory of fidelity in time-sampled visual motion displays p 240 A86-32451
The BAe D target acquisition model ORACLE: An overview, 1984 [BAE-JS-10009] p 221 N86-23268

VISUAL FIELDS
The metric of visual space p 234 A86-32072

VISUAL FLIGHT
Bigness is in the eye of the beholder --- size and distance perception of pilots in flight p 233 A86-31820

VISUAL PERCEPTION
Vision in spatial disorientation (SDO) and loss of situational awareness p 226 A86-29853
Sources of optical information and their metrics for detecting loss in altitude p 230 A86-29903
Increasing sensitivity to optical information specifying loss in altitude p 230 A86-29904
Perception of altitude in the low and medium altitude ranges p 231 A86-29907
Perceptual 'traps' of the visual system p 233 A86-30360
Neuronal responses and the evoked potentials in subcortical structures of the human brain during visual recognition. II - The effect of stimuli relevance on the evoked neuronal responses p 216 A86-30894
Bigness is in the eye of the beholder --- size and distance perception of pilots in flight p 233 A86-31820
Effects of adaptation and display luminance on CRT symbol recognition time p 240 A86-32315
Method of changes in reversible pattern masking as factor in visual perception p 221 N86-23263
Visual hemispheric specialization: A computational theory [AD-A161296] p 235 N86-23279
Optical and event-duration variables affecting self-motion perception [AD-A161836] p 223 N86-24194

VISUAL PIGMENTS
Effect of intensive visible light on activity of glutathione peroxidase in pigmented epithelium of eye p 210 N86-23226

VISUAL TASKS
The effect of using speech generation and recognition systems on the performance of discrete tasks p 227 A86-29863
Pitch change thresholds as influenced by angular rate and duration of the apparent horizon's displacement p 227 A86-29867
Visual lobe area for single targets on a competing homogeneous background p 234 A86-31821

VOICE COMMUNICATION
A comparison of voice and keyboard data entry for a helicopter navigation system p 237 A86-29859
Development of a comprehensive voice message vocabulary for tactical aircraft p 237 A86-29861

VOICE DATA PROCESSING
Effects of speech rate and pitch contour on the perception of synthetic speech p 234 A86-31824

VOMITING
Animal models of motion sickness - Are nonemetic species an appropriate choice? p 193 A86-30393

W

WARNING SYSTEMS
Development of a comprehensive voice message vocabulary for tactical aircraft p 237 A86-29861

WASTE UTILIZATION
Environmental considerations and waste planning on the lunar surface p 239 A86-30149

WATER
Implementing supercritical water oxidation technology in a lunar base environmental control/life support system p 240 A86-30167

WATER BALANCE
Effects of gravity on the fluid balance and distribution in man p 214 A86-30383
Volume regulating hormones p 214 A86-30384
Fluid and electrolyte control in simulated and actual spaceflight p 214 A86-30385
Mechanisms for negative water balance during weightlessness Immersion or bed rest? p 214 A86-30386
Effects of mechanical stresses, abscisic acid, and outdoor exposure on growth and water relations of eggplant p 196 A86-30416
Transient dehydration of lungs in tail-suspended rats p 200 A86-30438

WATER IMMERSION
Mechanisms for negative water balance during weightlessness Immersion or bed rest? p 214 A86-30386

WEAK INTERACTIONS (FIELD THEORY)
Investigation on the chirality of electrons from Sr-90-Y-90 beta-decay and their asymmetrical interactions with D- and L-alanines p 243 A86-33390

WEATHER
Meteorological adaptation research at biology institute p 211 N86-23257

WEIGHT (MASS)
Effectiveness of an air-cooled vest using selected air temperature and humidity combinations [AD-A162026] p 242 N86-24219

WEIGHTLESSNESS
Aerosol deposition along the respiratory tract at zero gravity - A theoretical study p 213 A86-30169
Comparative analysis of hypo - and hyper-gravity effects on prenatal development of mammals p 191 A86-30377
Effects of gravity on the fluid balance and distribution in man p 214 A86-30383
Investigations of higher plants under weightlessness p 192 A86-30388
Correlated light and electron microscopy of the vasculature of cortical bone in rat femora and tibiae p 193 A86-30395
Fertilization, development and spicule formation in sea urchins under conditions of constant reorientation relative to the gravitation axis p 195 A86-30406
Possible mechanism for changes in glycogen metabolism in unloaded soleus muscle p 198 A86-30427
Changes in functional metabolism in the rat central nervous system following spaceflight p 199 A86-30433
Microvascular flow adjustments with postural changes in humans p 215 A86-30448
Responses of amino acids in hindlimb muscles to recovery from hypogravity and unloading by tail-cast suspension p 202 A86-30456
Muscle protein and glycogen responses to recovery from hypogravity and unloading by tail-cast suspension p 202 A86-30457
Effects of weightlessness on neurotransmitter receptors in selected brain areas p 203 A86-30462
Morphological and biochemical changes in soleus and extensor digitorum longus muscles of rats orbited in Spacelab 3 p 203 A86-30464
Otoconial morphology in space-flown rats p 204 A86-30470
Morphologic and histochemical studies of bone cells from SL-3 rats p 205 A86-30473
Atriopetin (AP-3) in atria and plasma of rats orbited aboard NASA Spacelab (SL3) for seven days p 205 A86-30477
Catching zzzs in zero-G p 217 A86-31150

WEIGHTLESSNESS SIMULATION
Volume regulating hormones p 214 A86-30384
Fluid and electrolyte control in simulated and actual spaceflight p 214 A86-30385
Mechanisms for negative water balance during weightlessness Immersion or bed rest? p 214 A86-30386
Cardiorespiratory responses to lower body negative pressure and tilt tests after exposure to simulated weightlessness p 215 A86-30387
The effects of real and simulated microgravity on vestibulo-oculomotor interaction p 193 A86-30390
Simulated hypogravity and synaptogenesis in culture p 194 A86-30401
Bone loss during simulated weightlessness - Is it glucocorticoid mediated? p 197 A86-30423
Effect of simulated weightlessness and chronic 1,25-dihydroxyvitamin D administration on bone metabolism p 198 A86-30425
Altered carbohydrate metabolism in the whole body suspended rat p 199 A86-30431
Transient dehydration of lungs in tail-suspended rats p 200 A86-30438
The use of suspension models and comparison with true weightlessness --- Animal Model Workshop on Gravitational Physiology p 205 A86-30480

WHEAT
Wheat farming in a lunar base p 191 A86-30165

WORDS (LANGUAGE)
Development of a comprehensive voice message vocabulary for tactical aircraft p 237 A86-29861

WORK CAPACITY
Responses of skeletal muscle to unloading - A review p 192 A86-30379

WORK FUNCTIONS
A methodology for the analysis and design of human information processing organizations [AD-A162083] p 235 N86-24214

WORKLOADS (PSYCHOPHYSIOLOGY)
Can pilots time-share better than non-pilots? p 238 A86-29874
Causes of dissociation between subjective workload measures and performance - Caveats for the use of subjective assessments p 238 A86-29875
Relative contributions of SWAT dimensions to overall subjective workload ratings --- Subjective Workload Assessment Technique p 238 A86-29876
Techniques of subjective workload assessment - A comparison of two methodologies p 238 A86-29877
Subjective assessment of pilot workload in the advanced fighter cockpit p 238 A86-29878
Predicted versus experienced workload and performance on a supervisory control task p 227 A86-29879
Measuring pilot workload in a motion base trainer - A comparison of four techniques p 239 A86-29880
The Sternberg memory search task as an index of pilot workload p 227 A86-29883
Simulator instructor task loading - The tide is turning p 233 A86-30362
The relation between the Type A behavior pattern, pacing, and subjective workload under single- and dual-task conditions p 234 A86-31822
Influence of complexity of control task on level of activation of operators physiological functions when working with waiting p 221 N86-23260
A methodology for the analysis and design of human information processing organizations [AD-A162083] p 235 N86-24214

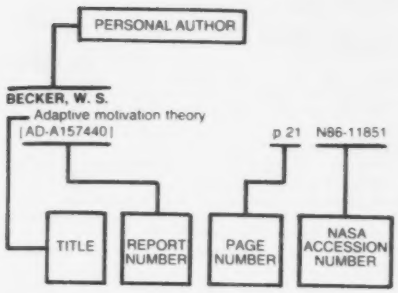
WORKSTATIONS
A preliminary study of flat-panel displays p 236 N86-24546

WOUND HEALING
Many medical uses foreseen for artificial skin p 220 N86-23245

Z

ZOOLOGY
Gravity sensing in animal cells p 192 A86-30389

Typical Personal Author Index Listing



Listings in this index are arranged alphabetically by personal author. The title of the document provides the user with a brief description of the subject matter. The report number helps to indicate the type of document listed (e.g., NASA report, translation, NASA contractor report). The page and accession numbers are located beneath and to the right of the title. Under any one author's name the accession numbers are arranged in sequence with the AIAA accession numbers appearing first.

A

ABROMAVAGE, M. M.
Extremely Low Frequency (ELF) communications system bio-effects library development
[AD-A162839] p 225 N86-24204

ACTON, W. H.
Relative contributions of SWAT dimensions to overall subjective workload ratings p 238 A86-29876

ADAMS, J. H., JR.
Radiation transport of cosmic ray nuclei in lunar material and radiation doses p 191 A86-30168

ADRION, J.
Symposium on Aviation Psychology, 3rd, Columbus, OH, April 22-25, 1985, Proceedings p 226 A86-29851

AFANASYEVA, G. V.
Production of gene bank from cotton plant chloroplast DNA for HC/MF p 210 N86-23228

AGADZHANIAN, N. A.
Dynamics of the salivary electrolyte composition and renal excretory function during human adaptation to an altered gaseous environment p 216 A86-30899

AHUMADA, A. J., JR.
Window of visibility - A psychophysical theory of fidelity in time-sampled visual motion displays p 240 A86-32451

AKESON, W. H.
Microvascular flow adjustments with postural changes in humans p 215 A86-30448

ALBANESE, R. A.
Reliability of military pilots - Problems and prospects p 227 A86-29884

ALBERTS, J. R.
Early postnatal development of rats gestated during flight of Cosmos 1514 p 195 A86-30402
Vivaria requirements for animal life cycle studies on space station p 200 A86-30443

ALI, J. S.
System for measurement of small vibrations at material interfaces induced by electrostrictive forces
[PB86-116530] p 222 N86-23276

ALMON, R. R.
Are there conditions in which adrenalectomy impedes the atrophying effects of denervation? p 194 A86-30397

ALPATOVA, T. V.
Investigation of mechanisms of the radioprotective effect of agonists of catecholamine receptors - Involvement of both subtypes of alpha-adrenoreceptors in the radioprotective effect p 208 A86-32698

AMBROSE, K. R.
Production and characterization of antibodies to benzo(a)pyrene
[DE86-002204] p 222 N86-23271
Fiberoptics immunofluorescence spectroscopy for chemical and biological monitoring
[DE86-002239] p 225 N86-24209

ANANYEV, V. A.
HBeAg and its antibodies in carriers of HSsAg in various regions of USSR p 218 N86-23233

ANDES, R., JR.
Altitude estimation of pilot and non-pilot observers using real-world scenes p 230 A86-29905

ANDREWS, R. B.
Hematologic parameters of astrorats flown on SL-3 p 202 A86-30458

APANASENKO, Z.
Early postnatal development of rats gestated during flight of Cosmos 1514 p 195 A86-30402

ARAKELOV, S. A.
HBeAg and its antibodies in carriers of HSsAg in various regions of USSR p 218 N86-23233

ARNAUD, S. B.
Spaceflight and calcium metabolism p 192 A86-30378
Osteocalcin as an indicator of bone metabolism during spaceflight p 205 A86-30474

ARNO, R. D.
Space Station life science research facility - The vivarium/laboratory p 201 A86-30449

ARNOLD, J.
Energy balance in exercise-trained rats acclimated at two environmental temperatures p 206 A86-30685

ARNOLD, R. L.
Recurrent cockpit resource management training at United Airlines p 228 A86-29889

ARZAMAZOV, G. S.
The role of hormonal changes in the development of motion sickness in man p 216 A86-30896

ASRATYAN, A. A.
Detection of HBsAg in families of children with viral hepatitis B p 218 N86-23274

AVERNER, M. M.
The evolution of CELSS for lunar bases p 239 A86-30164

B

BAIN, J. L. W.
Morphological and biochemical changes in soleus and extensor digitorum longus muscles of rats orbited in Spacelab 3 p 203 A86-30464

BANDURSKI, R. S.
An attempt to localize and identify the gravity sensing mechanism of plants p 197 A86-30417

BARANOV, V. M.
Cardiorespiratory responses to lower body negative pressure and tilt tests after exposure to simulated weightlessness p 215 A86-30387

BARLOW, G. H.
Morphology of human embryonic kidney cells in culture after space flight p 201 A86-30452

BARMIN, V. A.
The effects of real and simulated microgravity on vestibulo-oculomotor interaction p 193 A86-30390

BARTRAM, D.
Micropat - A progress report on the validation of an automated test battery for pilot selection p 231 A86-29911

BASHKIRTSEV, V. N.
Some characteristics of epizootic process in hemorrhagic fever with renal syndrome p 218 N86-23234

BATTISTE, V.
Predicted versus experienced workload and performance on a supervisory control task p 227 A86-29879

BAYAR, G. A.
Test of erythrocyte antigen diagnostic agent for detecting antibodies to coxiella burnetti p 218 N86-23231

BEJCZY, A. K.
Robots as man-extension systems in space p 240 A86-33183

BENSON, R.
Cockpit resource management - Exploring the attitude-performance linkage p 229 A86-29899

BERKHOUT, J.
Pilot usage of decoupled flight path and pitch controls p 236 A86-29854

BERN, M. M.
Physiological changes in hemostasis associated with acute exercise p 215 A86-30680

BERRY, D.
Pilot usage of decoupled flight path and pitch controls p 236 A86-29854

BESCH, E. L.
Chronic acceleration and egg production in domestic fowl p 193 A86-30392

BIKLE, D. ...
Bone loss during simulated weightlessness - Is it glucocorticoid mediated? p 197 A86-30423
Effect of simulated weightlessness and chronic 1,25-dihydroxyvitamin D administration on bone metabolism p 198 A86-30425

BISGARD, G. E.
Carotid bodies are required for ventilatory acclimatization to chronic hypoxia p 206 A86-30682
Ventilatory acclimatization to hypoxia is not dependent on cerebral hypocapnic alkalosis p 206 A86-30683

BISSERET, A.
Expert computer aided decision in supervisory control p 241 A86-33188

BJORKMAN, T.
Gravistimulation-induced changes in current patterns around root caps p 196 A86-30411

BLACK, S. D.
Amphibian fertilization and development in microgravity p 195 A86-30408

BLATTNER, M. M.
Design guidelines for the use of audio cues in computer interfaces
[DE85-015176] p 241 N86-23281

BLAUSER, D. J., JR.
Human factors engineering and operability in the design of electronic warfare spaces aboard United States Naval combatants
[AD-A162251] p 243 N86-24222

BLINNIKOVA, Y. I.
Study of cell-wall antigen determinants in ribosomal preparations of group a streptococcus p 220 N86-23243

BLIUGER, A. F.
The regulatory mechanisms of blood supply in skeletal muscles p 207 A86-32524

BLOOD, D. K.
Plasma lactate and ventilation thresholds in trained and untrained cyclists p 215 A86-30678

BOCK, E.
Ecto-protein kinase activity on the external surface of neural cells p 207 A86-31650

BOETTCHER, K. L.
A methodology for the analysis and design of human information processing organizations
[AD-A162083] p 235 N86-24214

BOGARDUS, C.
Effect of elevated FFA on carbohydrate and lipid oxidation during prolonged exercise in humans p 215 A86-30679

BONDAR, Y. I.
Method of changes in reversible pattern masking as factor in visual perception p 221 N86-23263

BORISON, H. L.
Is space sickness a form of motion sickness? p 214 A86-30382

BORTOLUSSI, M. R.
Measuring pilot workload in a motion base trainer - A comparison of four techniques p 239 A86-29880
BRAUNE, R.
Time-sharing revised - Test of a componential model for the assessment of individual differences p 239 A86-29881
An exploratory study of computer-based aviator testing p 231 A86-29909
The functional age profile - An objective decision criterion for the assessment of pilot performance capacities and capabilities p 234 A86-31823
BREITMAIER, W. A.
Cockpit information requirements analysis - A mission orientation p 236 A86-29856

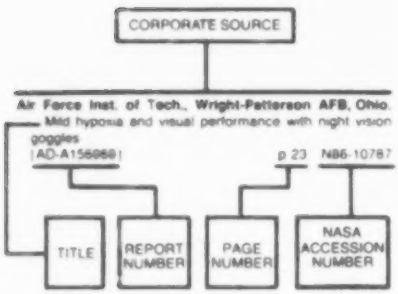
ZUBOV, S. V.
HBeAg and its antibodies in carriers of HSsAg in various regions of USSR p 218 N86-23233

Typical Corporate Source Index Listing



Listings in this index are arranged alphabetically by corporate source. The title of the document is used to provide a brief description of the subject matter. The page number and the accession number are included in each entry to assist the user in locating the abstract in the abstract section. If applicable, a report number is also included as an aid in identifying the document.

A

Aerospace Medical Research Labs., Wright-Patterson AFB, Ohio.
The effects of ketamine on Rhesus monkey skeletal dynamics
[AD-A162848] p 213 N86-24189

Air Force Inst. of Tech., Wright-Patterson AFB, Ohio.
An examination of the life support equipment development and acquisition process
[AD-A162241] p 242 N86-24221

Argonne National Lab., Ill.
Changes in muscle protein composition induced by disuse atrophy - Analysis by two-dimensional electrophoresis p 200 A86-30440

Arizona State Univ., Tempe.
The relation between the Type A behavior pattern, pacing, and subjective workload under single- and dual-task conditions p 234 A86-31822

Arizona Univ., Tucson.
Responses of skeletal muscle to unloading - A review p 192 A86-30379
Simulated hypogravity and synaptogenesis in culture p 194 A86-30401
Response of rat hindlimb muscles to 12 hours recovery from tail-cast suspension p 198 A86-30426
Possible mechanism for changes in glycogen metabolism in unloaded soleus muscle p 198 A86-30427
Responses of amino acids in hindlimb muscles to recovery from hypogravity and unloading by tail-cast suspension p 202 A86-30456
Muscle protein and glycogen responses to recovery from hypogravity and unloading by tail-cast suspension p 202 A86-30457

Army Engineer Waterways Experiment Station, Vicksburg, Miss.
US Department of Agriculture/Corps of Engineers cooperative aquatic plant control research. Annual report for FY 1983; chemical control technology
[AD-A161867] p 212 N86-24184

Army Medical Research Inst. of Infectious Diseases, Fort Detrick, Md.
Cloning and analysis of genes for anthrax toxin components
[AD-A161901] p 212 N86-24186
Identification of vaccine resistant isolates of bacillus anthracis
[AD-A162002] p 212 N86-24187

Army Research Inst. of Environmental Medicine, Natick, Mass.
Environmental stress after atropine treatment
[AD-A161923] p 223 N86-24197
Respiratory response and muscle function during isometric handgrip exercise at high altitude
[AD-A162003] p 223 N86-24198
Effects of wearing NBC (Nuclear, Biological and Chemical) protective clothing in the heat on detection of visual signals
[AD-A162321] p 224 N86-24202
An evaluation of tests of anaerobic power
[AD-A162826] p 224 N86-24203
Effect of heat and chemical protective clothing on cognitive performance
[AD-A162001] p 242 N86-24218
Effectiveness of an air-cooled vest using selected air temperature and humidity combinations
[AD-A162026] p 242 N86-24219

B

Baylor Coll. of Medicine, Houston, Tex.
Morphogenesis and calcification of the statoconia in the chick (Gallus domesticus) embryo - Implications for future studies p 195 A86-30405

Baylor Univ., Waco, Tex.
Cytochemical localization of calcium in cap cells of primary roots of Zea mays L. p 197 A86-30418

BITS, Inc., West Layfayette, Ind.
Measuring pilot workload in a motion base trainer - A comparison of four techniques p 239 A86-29880

British Aerospace Aircraft Group, Bristol (England).
The BAe D target acquisition model ORACLE: An overview, 1984
[BAE-JS-10009] p 221 N86-23268

Brunel Univ., Uxbridge (England).
Study of biosample preservation, handling, and observation facilities
[ESA-CR(P)-2126] p 213 N86-24191

C

California Univ., Berkeley.
Skeletal mass change as a function of gravitational loading p 192 A86-30380
Amphibian fertilization and development in microgravity p 195 A86-30408
Effects of norflurazon on the levels of abscisic acid and xanthoxin in caps of gravistimulated roots of maize p 197 A86-30420
Human head/neck/upper-torso model response to dynamic loading p 221 N86-23266

California Univ., Berkeley. Lawrence Berkeley Lab.
Biological effects and physical safety aspects of NMR imaging and in vivo spectroscopy
[DE86-002966] p 213 N86-24190

California Univ., Davis.
Chronic acceleration and egg production in domestic fowl p 193 A86-30392
Oxygen consumption during cold exposure at 2.1 G in rats adapted to hypergravic fields p 199 A86-30432
Changes in functional metabolism in the rat central nervous system following spaceflight p 199 A86-30433
Influence of exposure to a prolonged hyperdynamic field on body temperature in the squirrel monkey p 200 A86-30439
Life science research on the Space Station p 201 A86-30451
Homeostasis and biological rhythms in the rat during spaceflight p 202 A86-30460
Early adaptation to altered gravitational environments in the squirrel monkey p 203 A86-30461
Effects of weightlessness on neurotransmitter receptors in selected brain areas p 203 A86-30462
The effect of a hyperdynamic environment on the development of the rat retina p 203 A86-30463
Osteocalcin as an indicator of bone metabolism during spaceflight p 205 A86-30474
Design guidelines for the use of audio cues in computer interfaces
[DE85-015176] p 241 N86-23281

California Univ., San Diego.
Transient dehydration of lungs in tail-suspended rats p 200 A86-30438

California Univ., San Francisco.
Effect of simulated weightlessness and chronic 1,25-dihydroxyvitamin D administration on bone metabolism p 198 A86-30425
Osteocalcin as an indicator of bone metabolism during spaceflight p 205 A86-30474

Chicago Univ., Ill.
Biological extinction in earth history p 207 A86-32057

Columbia Univ., New York.
Early mammalian development under conditions of reorientation relative to the gravity vector p 194 A86-30399
Localization of calcium stimulated adenosine triphosphatase activity in blood vessels of the skeleton p 197 A86-30424
Morphologic and histochemical studies of bone cells from SL-3 rats p 205 A86-30473

Cornell Univ., Ithaca, N.Y.
Gravistimulation-induced changes in current patterns around root caps p 196 A86-30411

D

Defence and Civil Inst. of Environmental Medicine, Downsview (Ontario).
The energy cost of combat engineer tasks
[AD-A161861] p 223 N86-24195

Defence Research Information Centre, Orpington (England).
Demonstration and role of chemoreception in the marine zooplankton
[DRIC-T-7456] p 209 N86-23217
Psychological selection of personnel for employment in the Antartic
[DRIC-T-7449] p 235 N86-23278

Department of Energy, Washington, D. C.
Annual report and summaries of FY 1985 activities supported by the Division of Biological Energy Research
[DE85-009132] p 209 N86-23220

Dornier-Werke G.m.b.H., Friedrichshafen (West Germany).
Study of biosample preservation, handling, and observation facilities
[ESA-CR(P)-2126] p 213 N86-24191

E

East Carolina Univ., Greenville, N.C.
Effects of weightlessness on neurotransmitter receptors in selected brain areas p 203 A86-30462

Eastern Virginia Medical School, Norfolk.
Effects of clinostat rotation on Aurelia statolith synthesis p 199 A86-30436

Essex Corp., Huntsville, Ala.
The system integration and verification testing of an orbital maneuvering vehicle for an air bearing floor
[NASA-CR-178350] p 242 N86-24217

Essex Corp., Westlake Village, Calif.
Person computer dialogue: A human engineering data base supplement
[AD-A163074] p 243 N86-24223

F

Federal Aviation Administration, Washington, D.C.
Drugs of abuse in aviation fatalities. 1: Marijuana
[AD-A161911] p 223 N86-24196
Characteristics of medically disqualified airman applicants in calendar years 1982 and 1983
[AD-A162209] p 224 N86-24201
Florida State Univ., Tallahassee.
Fertilization, development and spicule formation in sea urchins under conditions of constant reorientation relative to the gravitation axis p 195 A86-30406
Florida Univ., Gainesville.
Effect of simulated weightlessness and chronic 1,25-dihydroxyvitamin D administration on bone metabolism p 198 A86-30425
Food and Drug Administration, Rockville, Md.
Measurement techniques for use with technique/exposure guides
[PB86-123716] p 222 N86-23272
Evaluation of radiation exposure from diagnostic radiology examinations: General recommendations
[PB86-125903] p 222 N86-23273
Evaluation of radiation exposure from diagnostic radiology examinations: Technique/exposure guides for the craniocaudal projection in mammography
[PB86-126075] p 222 N86-23274
Behavioral effects of microwave radiation absorption
[PB86-113735] p 222 N86-23275

H

Harvard Univ., Cambridge, Mass.
Visual hemispheric specialization: A computational theory
[AD-A161296] p 235 N86-23279
Analysis of health effects resulting from population exposures to ambient particulate matter. Health and environmental effects document, 1985
[DE86-002161] p 225 N86-24208
Health Effects Research Lab., Research Triangle Park, N. C.
System for measurement of small vibrations at material interfaces induced by electrostrictive forces
[PB86-116530] p 222 N86-23276

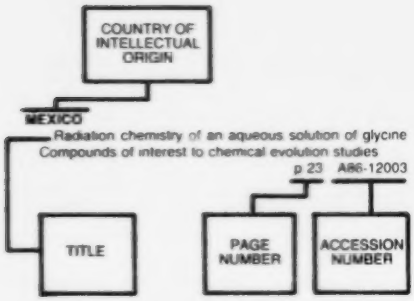
Typical Foreign Technology Index Listing



Listings in this index are arranged alphabetically by country of intellectual origin. The title of the document is used to provide a brief description of the subject matter. The page number and the accession number are included in each entry to assist the user in locating the citation in the abstract section.

A

AUSTRIA
Circadian variation of volume and concentration of orthostatically shifted fluid p 215 A86-30445
Day course of blood and plasma density in relation to other hematological parameters p 215 A86-30446

B

BELGIUM
Remarkable metabolic availability of oral glucose during long-duration exercise in humans p 216 A86-30684
BULGARIA
Disturbances in the night sleep structure and organization and their significance in the adaptive-recuperation processes p 217 A86-32875

C

CANADA
Judgment training effectiveness and permanency p 228 A86-29888
Canadian automated pilot selection system p 231 A86-29908
Student pilot stress - An emotional barrier to efficient flight training p 231 A86-29912
Animal models of motion sickness - Are nonemetic species an appropriate choice? p 193 A86-30393
Energy balance in exercise-trained rats acclimated at two environmental temperatures p 206 A86-30685

D

DENMARK
Psychological recovery after incidents and accidents within aviation p 232 A86-29924

F

FINLAND
Neuromagnetism - Theory, techniques, and measurements p 217 A86-33459
FRANCE
Volume regulating hormones p 214 A86-30384
Expert computer aided decision in supervisory control p 241 A86-33188
Demonstration and role of chemoreception in the marine zooplankton
[DRIC-T-7456] p 209 N86-23217
Psychological selection of personnel for employment in the Antartic
[DRIC-T-7449] p 235 N86-23278

G

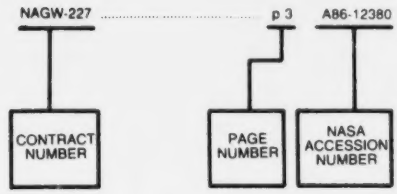
Protein-protein interactions in systems with synthetic polyelectrolytes p 210 N86-23225
Effect of intensive visible light on activity of glutathione peroxidase in pigmented epithelium of eye p 210 N86-23226
Discovery regarding electron redistribution among cell membranes p 217 N86-23227
Production of gene bank from cotton plant chloroplast DNA foi HC/MF p 210 N86-23228
Production of gamma- and alpha-interferon by human blood leukocytes under successive induction conditions p 217 N86-23229
Farm animals as source of yersiniosis p 217 N86-23230
Test of erythrocyte antigen diagnostic agent for detecting antibodies to coxiella burnetti p 218 N86-23231
Detection of HBsAg in families of children with viral hepatitis B p 218 N86-23232
HBeAg and its antibodies in carriers of HSsAg in various regions of USSR p 218 N86-23233
Some characteristics of epizootic process in hemorrhagic fever with renal syndrome p 218 N86-23234
AIDS-free USSR monitoring potential outbreak there p 218 N86-23235
Antibiotic properties of bifidobacteria p 219 N86-23236
Effect of plasmids on virulence of pseudomonas aeruginosa strains in mouse experiments p 210 N86-23237
Artificial vaccines and stimulation of immunity p 219 N86-23238
Artificial antigens, vaccines reviewed p 219 N86-23239
Obtaining hybridomas that synthesize monoclonal antibodies to polysaccharide of group a streptococcus p 219 N86-23240
Fab-fragment of heterologic immunoglobulin for flu prophylaxis and treatment p 219 N86-23241
Description of preparation of capsular antigen isolated from yersinia pestis strain EV p 219 N86-23242
Study of cell-wall antigen determinants in ribosomal preparations of group a streptococcus p 220 N86-23243
Hypoxia prophylaxis against radiation injury p 220 N86-23244
Many medical uses foreseen for artificial skin p 220 N86-23245
Search for DNA host specificity systems in salmonella typhi p 210 N86-23247
Electric sleep method of preventing fatigue build-up in sailors on extended cruises p 235 N86-23248
Cloning and expression of leptospira pomona hemolysin gene in escherichia coli p 211 N86-23249
Assessment of selected physiological indicators in antenna operators at short-wave transmitting and receiving centers p 220 N86-23250
Status of calcium metabolism in coal miners with vibration sickness p 220 N86-23251
Diseases in CEMA countries p 211 N86-23252
Model of experimental pixuna virus infection in white mice p 211 N86-23253
Experimental evaluation of pathogenicity of different variants of lassa virus p 211 N86-23254
Standardization of conditions for measuring intensity of specific fluorescence in continuous cell cultures infected with variants of Japanese encephalitis virus p 211 N86-23255
Vaccine Proteins R and D on Salyut-7 p 220 N86-23256
Meteorological adaptation research at biology institute p 211 N86-23257
USSR report: Life sciences. Biomedical and behavioral sciences
[JPRS-UBB-86-004] p 212 N86-23258
Estimate of emotional stress during working activity based on systems analysis of skin-galvanic reaction p 220 N86-23259
Influence of complexity of control task on level of activation of operators physiological functions when working with waiting p 221 N86-23260
Review of book on principles of aviation psychology p 235 N86-23261
Method of changes in reversible pattern masking as factor in visual perception p 221 N86-23263
Oxygen-liberating mixtures for breathing apparatus p 241 N86-23264

UNITED KINGDOM

Micropat - A progress report on the validation of an automated test battery for pilot selection p 231 A86-29911
Knowing what we get from training devices - Substituting a little arithmetic for a measure of emotion p 232 A86-29921
Somatostatin inhibits the ventilatory response to hypoxia in humans p 216 A86-30681
Minimum colour differences required to recognise small objects on a colour CRT p 240 A86-32316
A survey of speech audiometry in the National Health Service
[NPL-AC-105] p 221 N86-23267
The BAe D target acquisition model ORACLE: An overview, 1984
[BAE-JS-10009] p 221 N86-23268

Typical Contract Number Index Listing



Listings in this index are arranged alpha-numerically by contract number. Under each contract number, the accession numbers denoting documents that have been produced as a result of research done under that contract are arranged in ascending order with the AIAA accession numbers appearing first. The accession number denotes the number by which the citation is identified in the abstract section. Preceding the accession number is the page number on which the citation may be found.

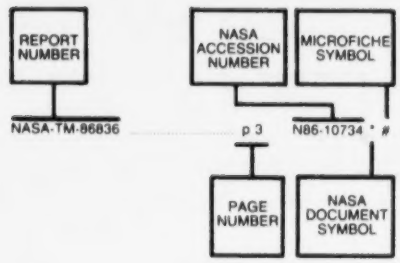
Typical Report Number Index Listing



Listings in this index are arranged alphanumerically by report number. The page number indicates the page on which the citation is located. The accession number denotes the number by which the citation is identified. An asterisk (*) indicates that the item is a NASA report. A pound sign (#) indicates that the item is available on microfiche.

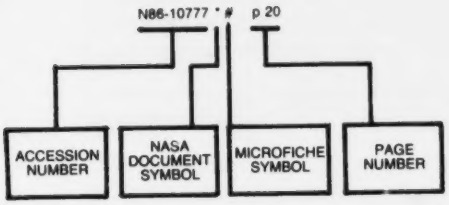
Typical Accession Number Index Listing



Listings in this index are arranged alphanumerically by accession number. The page number listed to the right indicates the page on which the citation is located. An asterisk (*) indicates that the item is a NASA report. A pound sign (#) indicates that the item is available on microfiche.

AVAILABILITY OF CITED PUBLICATIONS

IAA ENTRIES (A86-10000 Series)

Publications announced in *IAA* are available from the AIAA Technical Information Service as follows: Paper copies of accessions are available at $10.00 per document (up to 50 pages), additional pages $0.25 each. Microfiche[1] of documents announced in *IAA* are available at the rate of $4.00 per microfiche on demand. Standing order microfiche are available at the rate of $1.45 per microfiche for *IAA* source documents and $1.75 per microfiche for AIAA meeting papers.

Minimum air-mail postage to foreign countries is $2.50. All foreign orders are shipped on payment of pro-forma invoices.

All inquiries and requests should be addressed to: Technical Information Service, American Institute of Aeronautics and Astronautics, 555 West 57th Street, New York, NY 10019. Please refer to the accession number when requesting publications.

STAR ENTRIES (N86-10000 Series)

One or more sources from which a document announced in *STAR* is available to the public is ordinarily given on the last line of the citation. The most commonly indicated sources and their acronyms or abbreviations are listed below. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

Avail: NTIS. Sold by the National Technical Information Service. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code preceded by the letters HC or MF in the *STAR* citation. Current values for the price codes are given in the tables on NTIS PRICE SCHEDULES.

Documents on microfiche are designated by a pound sign (#) following the accession number. The pound sign is used without regard to the source or quality of the microfiche.

Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) is available at greatly reduced unit prices. For this service and for information concerning subscription to NASA printed reports, consult the NTIS Subscription Section, Springfield, Va. 22161.

NOTE ON ORDERING DOCUMENTS: When ordering NASA publications (those followed by the * symbol), use the N accession number. NASA patent applications (only the specifications are offered) should be ordered by the US-Patent-Appl-SN number. Non-NASA publications (no asterisk) should be ordered by the AD, PB, or other *report* number shown on the last line of the citation, not by the N accession number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy. The current price and order number are given following the availability line. (NTIS will fill microfiche requests, as indicated above, for those documents identified by a # symbol.)

Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Administration, Public Document Room (Room 126), 600 Independence Ave., S.W., Washington, D.C. 20546, or public document rooms located at each of the NASA research centers, the NASA Space Technology Laboratories, and the NASA Pasadena Office at the Jet Propulsion Laboratory.

(1) A microfiche is a transparent sheet of film, 105 by 148 mm in size containing as many as 60 to 98 pages of information reduced to micro images (not to exceed 26.1 reduction).

Avail: DOE Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts*. Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center - Its Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center.

Avail: Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation.

Avail: USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed in this introduction. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.

Avail: HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, California. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.

Avail: BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, inquiry should be addressed to the BLL.)

Avail: Fachinformationszentrum, Karlsruhe. Sold by the Fachinformationszentrum Energie, Physik, Mathematik GMBH, Eggenstein Leopoldshafen, Federal Republic of Germany, at the price shown in deutschmarks (DM).

Avail: Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.

Avail: U.S. Patent and Trademark Office. Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of $1.50 each, postage free.

Avail: ESDU. Pricing information on specific data, computer programs, and details on ESDU topic categories can be obtained from ESDU International Ltd. Requesters in North America should use the Virginia address while all other requesters should use the London address.

Other availabilities: If the publication is available from a source other than the above, the publisher and his address will be displayed entirely on the availability line or in combination with the corporate author line.

PUBLIC COLLECTIONS OF NASA DOCUMENTS

DOMESTIC: NASA and NASA-sponsored documents and a large number of aerospace publications are available to the public for reference purposes at the library maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

EUROPEAN: An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England for public access. The British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy or microfiche of NASA and NASA-sponsored documents, those identified by both the symbols # and * from ESA — Information Retrieval Service European Space Agency, 8-10 rue Mario-Nikis, 75738 CEDEX 15, France.

FEDERAL DEPOSITORY LIBRARY PROGRAM

In order to provide the general public with greater access to U.S. Government publications, Congress established the Federal Depository Library Program under the Government Printing Office (GPO), with 50 regional depositories responsible for permanent retention of material, inter-library loan, and reference services. At least one copy of nearly every NASA and NASA-sponsored publication, either in printed or microfiche format, is received and retained by the 50 regional depositories. A list of the regional GPO libraries, arranged alphabetically by state, appears on the inside back cover. These libraries are *not* sales outlets. A local library can contact a Regional Depository to help locate specific reports, or direct contact may be made by an individual.

STANDING ORDER SUBSCRIPTIONS

NASA SP-7011 and its supplements are available from the National Technical Information Service (NTIS) on standing order subscription as PB 86-912300 at the price of $8.00 domestic and $16.00 foreign, and at $14.00 domestic and $28.00 foreign for the annual index. Standing order subscriptions do not terminate at the end of a year, as do regular subscriptions, but continue indefinitely unless specifically terminated by the subscriber. Questions on the availability of the predecessor publications, *Aerospace Medicine and Biology* (Volumes I-XI), should be directed to NTIS.

NAS 1.21:

ACCESSION NUMBER RANGES

Accession numbers cited in this Supplement fall within the following ranges.

STAR (N-10000 Series)	N86-24852 – N86-26276
IAA (A-10000 Series)	A86-33481 – A86-37139

This bibliography was prepared by the NASA Scientific and Technical Information Facility operated for the National Aeronautics and Space Administration by RMS Associates.

NASA SP-7011(288)

AEROSPACE MEDICINE AND BIOLOGY

A CONTINUING BIBLIOGRAPHY WITH INDEXES

(Supplement 288)

A selection of annotated references to unclassified reports and journal articles that were introduced into the NASA scientific and technical information system and announced in August 1986 in

- *Scientific and Technical Aerospace Reports (STAR)*
- *International Aerospace Abstracts (IAA).*

NASA Scientific and Technical Information Branch 1986

This supplement is available from the National Technical Information Service (NTIS), Springfield, Virginia 22161, price code A05.

INTRODUCTION

This Supplement to *Aerospace Medicine and Biology* lists 190 reports, articles and other documents announced during August 1986 in *Scientific and Technical Aerospace Reports (STAR)* or in *International Aerospace Abstracts (IAA)*. The first issue of the bibliography was published in July 1964.

In its subject coverage, *Aerospace Medicine and Biology* concentrates on the biological, physiological, psychological, and environmental effects to which man is subjected during and following simulated or actual flight in the Earth's atmosphere or in interplanetary space. References describing similar effects of biological organisms of lower order are also included. Such related topics as sanitary problems, pharmacology, toxicology, safety and survival, life support systems, exobiology, and personnel factors receive appropriate attention. In general, emphasis is placed on applied research, but references to fundamental studies and theoretical principles related to experimental development also qualify for inclusion.

Each entry in the bibliography consists of a bibliographic citation accompanied in most cases by an abstract. The listing of the entries is arranged by *STAR* categories 51 through 55, the Life Sciences division. The citations, and abstracts when available, are reproduced exactly as they appeared originally in *IAA* or *STAR*, including the original accession numbers from the respective announcement journals. The *IAA* items will precede the *STAR* items within each category.

Seven indexes -- subject, personal author, corporate source, foreign technology, contract, report number, and accession number -- are included.

An annual index will be prepared at the end of the calendar year covering all documents listed in the 1986 Supplements.

TABLE OF CONTENTS

Page

Category 51 Life Sciences (General) 245
Includes genetics.

Category 52 Aerospace Medicine 249
Includes physiological factors; biological effects of radiation; and weightlessness.

Category 53 Behavioral Sciences 259
Includes psychological factors; individual and group behavior; crew training and evaluation; and psychiatric research.

Category 54 Man/System Technology and Life Support 266
Includes human engineering; biotechnology; and space suits and protective clothing.

Category 55 Planetary Biology 274
Includes exobiology; and extraterrestrial life.

The major nutritional components of the green algae (Scenedesmus obliquus) grown in a Constant Cell density Apparatus were determined. Suitable methodology to prepare proteins from which three major undesirable components of these cells (i.e., cell walls, nucleic acids, and pigments) were either removed or substantially reduced was developed. Results showed that processing of green algae to protein isolate enhances its potential nutritional and organoleptic acceptability as a diet component in a Controlled Ecological Life Support System.

Ferredoxins are low-molecular-weight, nonheme, iron proteins which function as electron carriers in a wide variety of electron transport chains. Howard et al. (1983) have suggested that the amino end of Azotobacter vinelandii ferredoxin shows a greater similarity to the carboxyl end of ferredoxin from Chromatium vinosum and that their half-chain sequences are homologous when the half-chains of either species are considered in inverse order. Examination of this proposition has made it necessary to reevaluate previous conclusions concerning the evolution of bacterial ferredoxin. Attention is given to the properties of the bacterial ferredoxin sequences, and the evolution of the bacterial ferredoxins.

A86-33781
TOPICAL EFFECTS OF MOLTEN SALT ON RAT INTEGUMENT - A HISTOLOGICAL AND PHOTOMETRIC ASSESSMENT
W. J. MEHM, J. B. NOLD, and R. C. ZERNZACH (U.S. Air Force Academy, Colorado Springs, CO) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, April 1986, p. 362-366. USAF-supported research. refs

The topical effects of the molten salt 1-methyl-3-ethyl-imidazolium tetrachloroaluminate (melt) and its organic component, the organic salt 1-methyl-3 ethylimidazolium chloride were tested on rat integument. Evaluation was accomplished using standard histological techniques supplemented with digital analysis using the microscope photometer. Two groups of animals were treated with 1.5 ml of either the melt or the organic salt for 10 consecutive days. A third group treated with the melt had the treated area flushed with running water 5 min after each application (wash). Significant treatment effects were observed in rats treated with the melt and wash preparations while the effects of the organic salt were unremarkable. The melt induced an ulcerative dermatitis with acanthosis while the wash produced only mild acanthosis and dermatitis. This damage appears to result from the penetration of aluminum chloride in the melt through the skin and its toxic effects on the cells of the dermis and epidermis. Author

A86-34490
SYNCHRONIZATION OF HEART CONTRACTIONS AND RESPIRATION DURING THERMOREGULATORY POLYPNEA IN DOGS [SINKHRONIZATSIIA SERDECHNYKH SOKRASHCHENII I DYKHANIIA PRI TERMOREGULIATSIONNOM POLIPNOE U SOBAK]
V. M. POKROVSKII, V. G. ABUSHKEVICH, A. I. DASHKOVSKII, E. A. MALIGONOV, S. V. SHAPIRO (Kubanskii Meditsinskii Institut, Krasnodar, USSR) et al. Akademiia Nauk SSSR, Doklady (ISSN 0002-3264), vol. 287, no. 2, 1986, p. 479-481. In Russian. refs

The heart contraction and respiratory rates were recorded in dogs placed into a thermoregulated chamber with controlled ventilation. In unanesthesized dogs, an increase in respiratory rate, occurring 60 to 90 minutes after the temperature was raised to 38 C, was followed by an increase in the heart rate. After about 135 min at 38 C, both cardiac and respiratory rates increased to 162/min, with one breath corresponding to one heart contraction. When the respiratory rate increased or decreased, the rate of heart contractions changed synchronously. The results suggest that, when the respiratory rate surpasses the heart rate, a common rhythm, dominated by the respiratory rhythm, develops in the cardiac and respiratory regulatory brain centers. The onset of heart and respiration rate synchronism was delayed in dogs under superficial anesthesia, while in dogs under deep anesthesia the phenomenon did not occur at all. I.S.

A86-34573
CONCEPTS FOR THE LIFE SUPPORT SUBSYSTEM IN THE EURECA BOTANY FACILITY
H. LOESER (ERNO Raumfahrttechnik GmbH, Bremen, West Germany) (DGLR, Jahrestagung, Bonn, West Germany, Sept. 30-Oct. 2, 1985) Zeitschrift fuer Flugwissenschaften und Weltraumforschung (ISSN 0342-068X), vol. 10, Jan.-Feb. 1986, p. 13-21.
(DGLR PAPER 85-126)

The Botany Facility (BF) represents one of the core experiments considered for the second Eureca launch, which is planned for 1990. A study is to be conducted regarding the ability of plants and fungi to germinate, grow, flourish, and produce seeds and spores under conditions of weightlessness. The life support subsystem requirements are discussed along with life support subsystem concepts, and the concept of water reclamation. Attention is given to BF performance data, physiological processes in plants, upper limits of physiological rates used for the design of BF life support subsystem, the basic concepts studied for the ventilation/humidification loop, an option using water reclamation with Peltier cooling, and the concept of a cuvette with internal water management. G.R.

PLANARIA REGENERATION IN ZERO GRAVITY
D. K. RASHKOVER IN: Space and society - Progress and promise; Proceedings of the Twenty-second Space Congress, Cocoa Beach, FL, April 23-26, 1985 . Cape Canaveral, FL, Canaveral Council of Technical Societies, 1985, p. 10-1 to 10-4. refs

The experimental requirements for the study of planaria regeneration in space are described. The temperature control system, oxygenated containers, fixative injecting device, and data collection systems are examined. The need to establish a power supply and preload time is discussed. I.F.

A86-34985* Miami Univ., Fla.
HYDROGEN PRODUCTION FROM SALT WATER BY MARINE BLUE GREEN ALGAE AND SOLAR RADIATION
A. MITSUI, D. ROSNER, S. KUMAZAWA, S. BARCIELA, E. PHLIPS (Miami, University, FL) et al. IN: Space and society - Progress and promise; Proceedings of the Twenty-second Space Congress, Cocoa Beach, FL, April 23-26, 1985 . Cape Canaveral, FL, Canaveral Council of Technical Societies, 1985, p. 11-7 to 11-14. refs
(Contract NSF CPE-80-15142; NSF CPE-83-12092; NAS10-10531)

Two marine bluegreen algae, Oscillatoria sp. Miami BG 7 and Synechococcus sp Miami 041511 have been selected as the result of over 10 years continuous and intensive effort of isolation, growth examination, and the screening of hydrogen photoproduction capability in this laboratory. Both strains photoproduced hydrogen for several days at high rates and a quantity of hydrogen was accumulated in a closed vessel. Overall hydrogen donor substance of the hydrogen photoproduction was found to be salt water. Using strain Miami BG 7, a two step method of hydrogen photoproduction from salt water was successfully developed and this was recycled several times over a one month period using both free cells and immobilized cells in both indoor and outdoor under natural sunlight. According to these experiments, a prototype floating hydrogen

production system was designed for further development of the biosolar hydrogen production system. Author

A86-35088
PROSPECTS FOR USING MILLIMETER-BAND ELECTROMAGNETIC RADIATION AS AN EFFICIENT WAY OF OBTAINING INFORMATION ON SPECIFIC PROCESSES IN LIVING ORGANISMS [O PERSPEKTIVAKH ISPOL'ZOVANIIA ELEKTROMAGNITNYKH IZLUCHENII MILLIMETROVOGO DIAPAZONA V KACHESTVE VYSOKOINFORMATIVNOGO SREDSTVA POLUCHENIIA DANNYKH O SPETSIFICHESKIKH PROTSESSAKH V ZHIVYKH ORGANIZMAKH]
N. D. DEVIATKOV and M. B. GOLANT Pis'ma v Zhurnal Tekhnicheskoi Fiziki (ISSN 0320-0016), vol. 12, March 12, 1986, p. 288-291. In Russian. refs

Various types of electromagnetic radiation are examined from the standpoint of their information content in diagnosing living organisms. It is shown that the information value of millimeter waves is particularly high due to both a low wave propagation velocity and low energy requirements for vibration excitation at resonance frequencies characterizing the state of an organism. It is noted that millimeter waves may be particularly useful for diagnosing diseases on the basis of a radiation spectrum analysis. V.L.

COMPARATIVE STUDY OF ACETAZOLAMIDE AND SPIRONOLACTONE ON REGIONAL BLOOD DISTRIBUTION ON EXPOSURE TO ACUTE HYPOBARIC HYPOXIA
S. C. JAIN, M. V. SINGH, S. B. RAWAL, H. M. DIVEKAR, and R. PARSHAD (Defence Institute of Physiology and Applied Sciences, Delhi, India) Defence Science Journal (ISSN 0011-748X), vol. 35, Oct. 1985, p. 425-429. refs

Regional blood distribution was studied in rats, which were divided into four groups viz., (1) control, (2) exposed to acute hypobaric hypoxia, (3) exposed to acute hypobaric hypoxia after oral treatment with 25 mg acetazolamide, and (4) exposed to acute hypobaric hypoxia after oral treatment with 6 mg spironolactone. The regional blood distribution was measured using radio-iodinated serum albumin (R-131 ISA). The acute hypoxic exposure results in major readjustment in the blood flow to the various organs mainly from the renal and splanchic vascular beds to the heart and brain. Treatment with acetazolamide and spironolactone results only in a slight decrease in blood contents of the heart, brain and lung as compared to the hypoxia alone exposed group. Author

ANTIOXIDANTS AS ANTIARRHYTHMIC REMEDIES [ANTIOKSIDANTY KAK ANTIARITMICHESKIE SREDSTVA]
V. V. FROLKIS, R. A. FROLKIS, G. IA. DUBUR, IU. V. KHMELEVSKII, V. G. SHEVCHUK (Institut Gerontologii; Institut Kardiologii, Kiev, Ukrainian SSR) et al. Fiziologicheskii Zhurnal (Kiev) (ISSN 0201-8489), vol. 32, Jan.-Feb. 1986, p. 24-32. In Russian. refs

The effect of antioxidants (alpha-tocopherol, butylated hydroxytoluene, and two derivatives of 1,4-dihydropyridine) on induced arrhythmias was studied in rats and rabbits injected with vasopressin, strophanthin, adrenalin, or calcium chloride. The results of physiological and biochemical tests have shown that preinjection with antioxidants decreases the incidence of drug-induced extrasystole, disturbances of atrioventricular conductivity, and heart fibrillation. The antioxidants prevent changes in the membrane phospholipids and activation of peroxidation, and slow down the activation of phospholipase. In addition, the antioxidants prevent decreases in Ca-ATPase and in binding and uptake of Ca(2+) by sarcoplasmic reticulum, and promote increases of sarcolemmal K,Na-ATPase and of creatine phosphokinase of sarcoplasmic reticulum. EFFECTS OF EXERCISE IN NORMOXIA AND ACUTE HYPOXIA ON RESPIRATORY MUSCLE METABOLITES
R. F. FREGOSI and J. A. DEMPSEY (Wisconsin, University, Madison) Journal of Applied Physiology (ISSN 0161-7567), vol. 60, April 1986, p. 1274-1283. Research supported by the University of Wisconsin, and Army. refs
(Contract NIH-HL-15469)

Changes in rat plantaris, diaphragm, and intercostal muscle metabolites following exercise of various intensities and durations, in normoxia and hypoxia were determined. A lack of significant glycogen utilization was found in rat respiratory muscles during all normoxic conditions, and only under conditions of extreme metabolic demand, coupled with reduced O2 transport (hypoxia) did glycogen utilization increase. The initial utilization lack was

associated with elevated G6P levels. ATP concentration was maintained in all muscles, in all conditions studied, but at the expense of creatine phosphate in the diaphragm and plantaris at maximum oxygen intake (VO2max). With all types of exercise greater than 84 pct VO2max, respiratory and locomotor muscle lactate concentrations increased, though these concentrations were either equal to or lower than arterial lactate concentration, and the increase in diaphragm lactate occurred without glycogen utilization. This lactate elevation in the absence of glycogen utilization suggests that increased lactate uptake, rather than lactate production, occurred in the respiratory muscles during exhaustive exercise. EFFECTS OF PRESSURE ON UPTAKE AND RELEASE OF CALCIUM BY BRAIN SYNAPTOSOMES
S. C. GILMAN, K. K. KUMAROO, and J. M. HALLENBECK (U.S. Navy, Hyperbaric Medicine Program Center, Bethesda, MD; George Washington University, Washington, DC) Journal of Applied Physiology (ISSN 0161-7567), vol. 60, April 1986, p. 1446-1450. refs
(Contract NAVY TASK MR041,01,01,1124)

Uptake of radioactive calcium from guinea pig brain fractions enriched in synaptosomes could be significantly and reproducibly decreased by exposure to high pressure. Calcium efflux from preloaded synaptosomes was unaffected by pressure exposure. It was hypothesized that the development of pressure-induced encaphalopathy may be related to an effect of pressure on the central nervous system calcium transport system. Author

IRON-SILICA CRYSTALLITE NUCLEATION BY BACTERIA IN A GEOTHERMAL SEDIMENT
F. G. FERRIS, W. S. FYFE (Western Ontario, University, London, Canada), and T. J. BEVERIDGE (Guelph, University, Canada) Nature (ISSN 0028-0836), vol. 320, April 17, 1986, p. 609-611. Research supported by the Ontario Geoscience Research Program. refs

The recognition of microfossils in ancient sedimentary rocks has confirmed that microrganisms which strongly resemble present-day prokaryotes existed at least 3 billion years ago. Identification of these structures is a difficult task, complicated not only by the simple morphology of microorganisms, but also by our limited understanding of the processes leading to the mineralization of individual cells and their component parts. These processes have been investigated in a natural setting, by examining sediment samples from an acidic hot spring in Yellowstone National Park. Electron microscopy and energy-dispersive X-ray spectroscopy of thin-sectioned specimens revealed remains of bacteria inside accumulations of iron and silica. Bacterial-like forms in successive stages of mineral preservation by silica were also found. Author

A MODEL OF THE SYSTEM CONTROLLING INVOLUNTARY EYE MOVEMENTS [MODEL' SISTEMY UPRAVLENIIA NEPROIZVOL'NYMI DVIZHENIIAMI GLAZ]
V. M. GUSEV and N. F. PODVIGIN (AN SSSR, Institut Fiziologii, Leningrad, USSR) Biofizika (ISSN 0006-3029), vol. 31, Mar.-Apr. 1986, p. 309-312. In Russian. refs

A mathematical model for the system controlling involuntary eye movements is developed in the framework of existing concepts of vision control, i.e., a correlated control of head and eye movements. The optimal control model is constructed using the quadratic criterion as a qualitative biochemical standard. Computed results are compared with experimental data on involuntary eye movements of a cat. An expression is presented for estimating the relationship between the parameters of the biochemical criterion and the retinotropic connections of a discrete locus in the external geniculate body. THE RHYTHMS OF PARAMAGNETIC-CENTER CONCENTRATION IN MOUSE LIVER AND A MATHEMATICAL MODEL OF SYNCHRONIZED AUTOOSCILLATIONS [RITMY KONTSENTRATSII PARAMAGNITNYKH TSENTROV V PECHENI MYSHEI I MATEMATICHESKAIA MODEL' SINKHRONIZIROVANNYKH AVTOKOLEBANII]
V. M. CHIBRIKIN (AN SSSR, Institut Khimicheskoi Fiziki, Moscow, USSR), A. G. IVANNIKOVA, and V. S. SOKOLOV Biofizika (ISSN 0006-3029), vol. 31, Mar.-Apr. 1986, p. 324-329. In Russian. refs

Circadian rhythms of changes in concentration of paramagnetic particles (PMP) in mammalian liver were studied in intact mice by the method of paramagnetic electron resonance. The results were compared with the parameters obtained for a mathematical model in which the PMP biorhythms are assumed to be harmonic autooscillations subject to weak synchronization by an external electromagnetic source. Intercorrelation studies show the amplitude of the modeled external synchronizer to be one order of magnitude lower than the amplitude of the PMP biorhythms. It is suggested that the daily variations in the geomagnetic field intensity can serve as an external synchronizer for the biological PMPs. I.S.

THE EFFECT OF EXTERNAL FACTORS ON THE REACTIONS MODELING BIOLOGICAL PROCESSES (PICCARDI TEST) [VLIIANIE VNESHNIKH FAKTOROV NA REAKTSII, MODELIRUIUSHCHIE BIOLOGICHESKIE PROTSESSY /TEST PIKKARDI/]
A. M. OPALINSKAIA (Tomskii Gosudarstvennyi Universitet, Tomsk, USSR) Biofizika (ISSN 0006-3029), vol. 31, Mar.-Apr. 1986, p. 330-335. In Russian. refs

Data are presented on long-term studies concerning the effects of cosmoheliogeophysical factors on the hydrolysis of BiCl3 (Piccardi test) used as a model for studying cosmoregulation of biological processes. Changes, observed in the course of a year, in the time needed to sediment certain amounts of BiOCl from a standard reaction mixture were shown to correlate with such factors as the thunderstorm activity, the polarity of the interplanetary magnetic field, geomagnetic storms, anad the rotation of the sun. In experiments conducted behind steel and Permalloy, shields fluctuations in the sedimentation time were minimized, demonstrating that the external electromagnetic fields play a prominent role in the observed correlation phenomena. USSR SPACE LIFE SCIENCES DIGEST, ISSUE 5 Final Report
L. R. HOOKE, ed., M. RADTKE, ed., V. GARSHNEK, ed., R. TEETER, ed., and J. E. ROWE, ed. (Library of Congress, Washington, D.C.) Washington NASA Apr. 1986 119 p (Contract NASW-3676)
(NASA-CR-3922(05); NAS 1.26:3922(05)) Avail: NTIS HC A06/MF A01 CSCL 06C

This is the fifth issue of NASA's USSR Space Life Sciences Digest. It contains abstracts of 37 papers recently published in Russian language periodicals and bound collections and of 11 new Soviet monographs. Selected abstracts are illustrated with figures and tables from the original. Additional features include a translated interview, a book review and a conference description and abstracts or titles of relevant Soviet papers presented in English at international conferences. The materials covered in this issue have been identified as relevant to 26 areas of aerospace medicine and space biology. These areas are biological rhythms, biospherics, body fluids, botany, cardiovascular and respiratory systems, endocrinology, exobiology, genetics, group dynamics, habitability and environment effects, health and medical treatment, hematology, human performance, immunology, mathematical modeling, metabolism, microbiology, morphology and cytology, musculoskeletal system, neurophysiological, nutrition, perception, personnel selection, psychology, and radiobiology. PHOTOENERGY TRANSDUCTION IN HALOBACTERIUM HALOBIUM Final Report, 1 Jul. 1975 - 31 Oct. 1985
W. STOECKENIUS and R. A. BOGOMOLNI 1985 9 p refs (Contract NSG-7151)
(NASA-CR-176673; NAS 1.26:176673) Avail: NTIS HC A02/MF A01 CSCL 06C

The structure and function of a rhodopsin-like pigment bacteriorhodopsin, discovered and isolated from the membranes of the halophile Halobacterium halobium, were studied. Intermediatesm appearing in the cyclic photoreaction that drives the proton translocation, were spectroscopically characterized. The charge translocation in membrane monolayers and mulitlayers placed between electrodes were kinetically resolved. A model was developed for the proton translocation process, in which the isomerization of the retinal Schiff base decreases its pK to drive the proton off and simultaneaouly changes the connectivity from the cytoplasmic surface to the external surface. The stoichiometry of proton pumping in intact cells and the effect of the light generated electrochemical potential on the kinetics of the photoreaction cycle and the synthesis of ATP were investigated. USSR SPACE LIFE SCIENCES DIGES: INDEX TO ISSUES 1-4
R. TEETER and L. R. HOOKE Jun. 1986 78 p refs (Contract NASW-3676)
(NASA-CR-3922(06); NAS 1.26:3922(06)) Avail: NTIS HC A05/MF A01 CSCL 06C

This document is an index to issues 1 to 4 of the USSR Space Life Sciences Digest and is arranged in three sections. In section 1, abstracts from the first four issues are grouped according to subject; please note the four letter codes in the upper right hand corner of the pages. Section 2 lists the categories according to which digest entries are grouped and cites additional entries relevant to that category by four letter code and entry number in section 1. Refer to section 1 for titles and other pertinent information. Key words are indexed in section 3. Author

THE FIRST CORTICAL IMPLANT OF A SEMICONDUCTOR MULTIELECTRODE ARRAY. VER (VISUAL EVOKED RESPONSES) AND PROPAGATION ANALYSIS M.S. Thesis
P. B. FITZJARRELL and R. L. SMALL Dec. 1985 185 p refs (AD-A164015; AFIT/GE/ENG/85D-15) Avail: NTIS HC A09/MF A01 CSCL 05J

This thesis reports results of the analysis of data collected from the first cortical implant of an electrode array on the primary visual cortex of a laboratory beagle. No evidence of visual evoked responses (VERs) was found in the data by summation and averaging techniques. Spatial correlation results indicate support of the hyper-column theory. Spatio-temporal correlation results indicate EEG signal propagation among the cortical columns under the array. Lack of any classic VER findings may be due to data digitization errors. Major recommendations include redigitization of the beagle data, as well as procedures for future chip implants and analyses using the Masscomp MC-500 computer. Author (GRA)

PHOSPHOROBACTERIN AND ITS EFFECTIVENESS
Y. N. MISHUSTIN 30 Jan. 1986 60 p refs Transl. into ENGLISH from Izvestiya Timiryazevskoy Sleskokhozyaystvennoy Akademii (USSR), no. 4, 1967 p 65-83
(AD-A164508; FTD-ID(RS)T-1432-84) Avail: NTIS HC A04/MF A01 CSCL 02A

As a result of works, carried out in institute of agricultural microbiology All-Union Academy of Agricultural Sciences proposed as bacterial fertilizing preparation, phosphorobacterin, which contains culture of spore-forming bacterium Bac. megaterium. This microorganism is capable to destroy organophosphorus compounds and to covert them into the form accessible to plants. Under field conditions phosphorobacterin, i.e., the preparation containing Bac. megaterium, slightly increases the yield of farm crops. According to the data of experimental institutions, the average increase in yield is about 10%. The available data show that phosphorobacterin is more effective on the soils where phosphotoacid fertilizers were applied. This gives rise to doubt as to the thesis that phosphorobacterin mainly improves phosphorus nutrition of plants. One may also consider it proved that Bac. megaterium has not any active propagation on the root surface and in the rhisosphere of plants. This fact makes one give up the theory of R.A. Menkina, the author of phosphorobacterin, about the nature of the relationship between higher plants and Bac megaterium. The available data makes one believe that the effect of phosphorobacterin is due to the presence in Bac. megaterium culture of a number of biologically active substances stimulating the first stages of the development of bacterial plants. BIOSENSORS FROM MEMBRANE PROTEINS RECONSTITUTED IN POLYMERIZED LIPID BILAYERS Patent Application
P. YAGER, inventor (to Navy) 23 Aug. 1985 18 p
(AD-D012160; US-PATENT-APPL-SN-768650) Avail: NTIS HC A02/MF A01 CSCL 06A

It is an object of the present invention to provide a polymerized lipid membrane which extends the longevity and durability of lipid bilayers used in bioensors. It is another object of this invention to provide a device which is portable and can be used in the field. Another object of the present invention is to provide a quick and easy method for producing rugged biochemical sensors. These and other objects are achieved by extracting membrane proteins

from biological cells, reincorporating the proteins into a lipid bilayer contacting the bilayer, containing the membrane proteins with the environment containing the stimulus, and measuring the change in voltage or conductivity across the bilayer. The voltage or conductivity change indicates the presence of the stimulus and the magnitude of the voltage or conductivity change indicates the amount of the stimulus present. The polymerized lipid membrane provides a rugged support for the proteins that function to sense molecules in the external environment. The acetylcholine receptor protein is purified by affinity chromatography reincorporated into lipid vesicles of polymerized lipids, and mounted on a glass microelectrode to produce a lipid bilayer containing the reincorporated proteins. One electrode from the silver-silver chloride pair is mounted on each side of the bilayer. The electrodes can measure the change in current across the bilayer when the acetylcholine receptor protein is effected by cholinergic agonists. GRA

MAGNETIC SEPARATION DEVICE Patent Application
G. M. STARKEN, J. CAVIN, R. A. QUINNELL, C. A. TWIGG, and D. P. CRAWFORD, inventors (to Navy) 25 Sep. 1985 28 p refs
(AD-D012163; US-PATENT-APPL-SN-780123) Avail: NTIS HC A03/MF A01 CSCL 06L

This invention pertains to magnetic separation devices and more particularly to; magnetic separation devices used to selectively remove magnetic bead-coated cells from tissues such as bone marrow or blood. Depletion of cell populations from boner marrow has been mainly approached using antibodies conjugated to toxins such as ricin or with antibodies complement to effect lysis of the target cells. These techniques have several disadvantages including difficulty in measuring the selective cell kill in the marrow, non-specific toxicity of either toxins or complement, and the necessity to prepare large amounts of complement. In addition, many antibodies are neither cytotoxic with complement nor toxin conjugates. Polymeric microspheres conjugated to antibodies have been used to probe the cell surface for receptor sites using scanning electron microscopy. Iron-containing polymeric microspheres tagged with fluroescent dyes conjugated to antibodies were used to separate red blood cells and lymphoid cells by binding the antibody-microsphere to selected cells and exposing the cell population to a magnetic field. Over 99% of the bound cells were attracted by the magnet. GRA

STUDIES OF THE ELECTRIC FIELD DISTRIBUTION IN BIOLOGICAL BODIES. EXPERIMENTAL DOSIMETRY AT RADIOFREQUENCIES Final Report, Dec. 1981 - Sep. 1985
S. S. STUCHLY and M. A. STUCHLY 5 Dec. 1985 70 p refs
(Contract N00014-82-G-0011)
(AD-A163156) Avail: NTIS HC A04/MF A01 CSCL 06R

The objective of the project was to develop and evaluate a computer-controlled system for measurements of the spatial distribution of the specific absorption rate (SAR) in biological bodies and to perform measurements on a model of the human body, with particular emphasis on exposures in the near-field of antennas. Far-field exposures at frequencies above 160 MHz, in spite of large gradients, local values of the SAR are only about 20 times higher than the whole-body average SAR for homogeneous models of human body. However, an additional increase by a factor of 4 to 5 can be anticipated at interfaces of high water content tissues with air (gas) pockets and low water content tissues. The existence of large gradients and high local SARs, as confirmed by our results, further supports an accepted view that biological effects at relatively low average SARs are due to thermal interactions. For humans, high SARs occur in the neck, and the ratio of the SAR in the neck to the whole-body average increases with frequency. Near-field exposures, based on the experimental findings we believe that because of the spatial pattern of energy deposition, the whole-body average SAR is not an adequate dosimetric measure for near-field exposures. DNA ANALYSIS OF EPITHELIAL CELL SUSPENSIONS
J. S. WILSON, N. F. JOHNSON, and L. M. HOLLAND 1985 22 p refs Presented at the Hanford Life Sciences Symposium, Richland, Wash., 21 Oct. 1985
(Contract W-7405-ENG-36)
(DE86-002403; LA-UR-85-3588; CONF-8510225-1) Avail: NTIS HC A02/MF A01

Cell suspensions of skin were obtained by animals exposed by skin painting of several crude oils. DNA analysis of these cell suspensions labeled with mithramycin provide determination of percentages of cells in the G1, S and G2M phases of the cell cycle. Data acquired showed differences from control animals occurring as early as 7 days after treatment and persisting through 21 days afterwards. There was histological evidence of erythema and hyperplasia in shale oil-exposed skins. Flow cytometric analysis of DNA content in shale-oil-exposed skin cells showed an increased percentage of cycling cells plus evidence of aneuploidy. Similar data from simply abraded skin showed increased percentages of cycling cells, but no aneuploidy. The shale-oil-exposed group, when compared to a standard petroleum-exposed group, had significantly increased percentages of cycling cells. This early indication of differing response to different complex mixtures was also seen in long-term skin exposures to these compounds. Similar analytical techniques were applied to tracheal cell suspensions from ozone-exposed rats. DOE

COMPARISON OF HUMAN IMPACT RESPONSE IN RESTRAINT SYSTEMS WITH AND WITHOUT A NEGATIVE G STRAP
B. F. HEARON and J. W. BRINKLEY (USAF, Aerospace Medical Research Laboratories, Wright-Patterson AFB, OH) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, April 1986, p. 301-312. refs
(Contract F33615-79-C-0523)

The effect of a negative G strap on restraint dynamics and human impact response was evaluated in forward-facing (-Gx) and vertical (+Gz) impact tests performed under different test conditions. In both axes, the experimental exposure was an approximate half-sine waveform, with peak acceleration up to 10 G and velocity change up to 9.2 m/s. Subjects were restrained to the test vehicle using either the PCU-15/P torso harness and lap belt (used operationally in such aircraft as the A-20 and F-15), or a conventional double shoulder strap and lap belt configuration, with fixed-length negative G straps incorporated into half of the experiments. Adding the negative G strap to either restraint system had clearly beneficial effects, including a decreased tendency toward submarining in forward-facing impacts, providing better occupant-seat coupling during free falls, and improving vertical impact protection. Conventional double shoulder strap and lap belt restraint provided better forward-facing and vertical impact protection than the PCU-15/P-including configuration. I.S.

MILD HYPOXIA AND VISUAL PERFORMANCE WITH NIGHT VISION GOGGLES
L. L. LEBER, S. N. ROSCOE, and G. M. SOUTHWARD (New Mexico State University, Las Cruces) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, April 1986, p. 318-324. refs

Military night vision goggles (NVGs) are image intensifiers normally used when the human operator's visual capabilities are unimpaired by oxygen deprivation. However, mountain search team

members and aviators sometimes operate with NVG augmentation of altitudes where hypoxic visual decrement is documented. The objective of this research was to investigate the effects of mild hypoxia on monocular visual performance with NVGs. It was found that mild oxygen deprivation significantly affects unaided square-wave grating visual acuity but does not significantly affect NVG-augmented performance. Large differences between visual sensitivities at different spatial frequencies were not differentially affected by mild hypoxia. Supplemental oxygen did significantly improve naked-eye but not NVG-augmented night resolution acuity up to a simulated altitude of 13,000 ft (3,962 m) above sea level (ASL). Author

EFFECT OF SIMULATED WEIGHTLESSNESS ON EXERCISE-INDUCED ANAEROBIC THRESHOLD
V. A. CONVERTINO, G. M. KARST, C. R. KIRBY, and D. J. GOLDWATER (NASA, Kennedy Space Center; Bionetics Corp., Cocoa Beach, FL; NASA, Ames Research Center, Moffett Field, CA) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, April 1986, p. 325-331. refs

The effect of simulated weightlessness, induced by ten days of continuous bedrest (BR) in the -6 deg head-down position, on the exercise-induced anaerobic threshold (AT) was determined by comparing specific ventilatory and gas-exchange measurements during an incremental ergometer test performed before and after BR. The primary index for determining the exercise-induced AT values of each subject was visual identification of the workrate or oxygen uptake (VO2) at which the ratio of the expired minute ventilation volume (VE) to VO2 exhibited a systematic increase without a concomitant increase in the VE/VCO2 value. Following BR, the mean VO2max of the subjects decreased by 7.0 percent, and the AT decreased from a mean of 1.26 L/min VO2 before BR to 0.95 L/min VO2 after BR. The decrease in AT was manifested by a decrease in both absolute and relative workrates. The change in AT correlated significantly with the change in plasma volume but not with the change in VO2max. The results suggest that the reduction in AT cannot be completely explained by the reduction in VO2, and that the AT decrease is associated with the reduction in intravascular fluid volume. I.S.

SYSTOLIC TIME INTERVALS IN PILOTS AND NON-PILOTS DURING 70 DEG HEAD-UP TILT
M. B. DIKSHIT, P. K. BANERJEE, P. L. N. RAO, and E. M. IYER (Indian Air Force, Institute of Aviation Medicine, Bangalore, India) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, April 1986, p. 332-335. Research supported by Armed Forces Medical Services of India. refs

Nine highly experienced Indian fighter pilots in current flying practice and 11 healthy nonpilots underwent head-up tilt (HUT) to 70 deg for 20 min. Heart rate and blood pressure response to tilt stress was similar in the two groups, as was the contractile function of the left ventricle measured by systolic time intervals. The highest prejection period/left ventricular ejection time ratio of 0.402 seen at the end of HUT was considerably lower than the values seen in studies of Grayboys et al. (1974) and Stafford et al. (1970). This suggests that myocardial contractility of Indians adjusts better to tilt stress than that of western subjects not adapted to heat. Author

ADAPTED HEAD- AND EYE-MOVEMENT RESPONSES TO ADDED-HEAD INERTIA
G. M. GAUTHIER, B. J. MARTIN, and L. W. STARK (California, University, Berkeley) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, April 1986, p. 336-342. refs
(Contract NCC2-86; CNRS-ERA-272)

Adaptation to inertia added to the head was studied in men by mounting masses on a rigidly attached helmet until two- to ten-fold increases of inertia were produced, while an overhead suspension compensated for the weights. The observed changes in the eye and head movement coordination included increased head movement latencies, as well as changes in the eye movement amplitude, and later stabilizing alternate contractions of the neck muscles. Oscillopsia, or continual displacement or instability of the visual world, which is a symptom of a breakdown of space constancy, was prominent and consistent in the perceptual reports of the subjects. Although adaptation resulting from adding inertia to the head occurred much faster than that induced by adding prisms or lenses, it has similar perceptual and motor components that may be objectively studied in detail. SUDDEN EMESIS FOLLOWING PARABOLIC FLIGHT MANEUVERS IMPLICATIONS FOR SPACE MOTION SICKNESS
J. R. LACKNER (Brandeis University, Waltham, MA) and A. GRAYBIEL (U.S. Navy, Naval Aerospace Medical Research Laboratory, Pensacola Naval Air Station, FL) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, April 1986, p. 343-347. refs
(Contract NAS9-15147)

Episodes of emesis unaccompanied by the usual prodomal signs of motion sickness have been reported by astronauts in the Space Shuttle program. Such reports have raised the issue whether space motion sickness has different characteristics from terrestrial motion sickness. Evidence is presented here from parabolic flight experiments that sudden vomiting can occur in response to a provocative vestibular stimulus even when no premonitory symptoms are being experienced. Accordingly, in chronic exposure conditions, the absence of prominent signs or symptoms of motion sickness does not necessarily mean an absence of sensitization. Author

ANALYSIS OF THE POTENTIAL ASSOCIATION BETWEEN NOISE-INDUCED HEARING LOSS AND CARDIOVASCULAR DISEASE IN USAF AIRCREW MEMBERS
S. J. KENT, H. E. VON GIERKE, and G. D. TOLAN (USAF, Aerospace Medical Research Laboratories, Wright-Patterson AFB, OH; USAF, School of Aerospace Medicine, Brooks AFB, TX) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, April 1986, p. 348-361. refs

The purpose of this investigation was to explore the relationship between noise-induced hearing loss and cardiovascular disease by examining the medical records of 2250 Air Force aircrew members. In this correlative analysis, high-tone hearing loss diagnosed with a high probability of being noise-induced was interpreted as an indirect indicator of noise exposure. Cardiovascular function was measured in terms of recorded systolic and diastolic blood pressure and clinical diagnoses of cardiovascular diseases. Analyses consisted of comparing cardiovascular parameters in maximum and minimum hearing loss groups, including polynomial regression curves for blood pressure data, and determining relative risk and attributable risk associated with noise-induced hearing loss for development of cardiovascular disease. The analyses consistently failed to indicate any association between the degree of noise-induced hearing loss and cardiovascular function in the aircrew population. Author

SYSTOLIC BLOOD PRESSURE IN FIGHTER PILOTS AFTER 12-15 YEARS SERVICE
P. FROOM, M. GROSS, J. BARZILAY, D. F. FORECAST, S. MARGALIOT (Israel Air Force, Aeromedical Centre, Tel Hashomer; Hadassah University Hospital, Jerusalem, Israel) et al. Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, April 1986, p. 367-369. refs

Systolic blood pressure (SBP) was measured at entry and after 12-15 years in 112 fighter pilots and compared to 112 transport and helicopter pilots. the pilots were 20-24 years old on entry into the study. Mean SBP + or - 1 S.D on entry was 122 + or - 12 mm Hg in fighter pilots and 124 + or - 12 mm Hg in transport and helicopter pilots. After 12-15 years follow-up, the mean SBP was 118 + or - 12 mm Hg in both groups. It is concluded that

the stress of flying fighter aircraft for 12-15 years is not associated with an increased risk of hypertension. Author

RETROSPECTIVE ANALYSIS OF NAVAL SPECIAL BOARDS OF FLIGHT SURGEONS, 1974-83
W. D. LOVAN, R. A. WEAVER, R. J. LENTZ, J. K. GOODRUM, and B. F. WITHERS, III (U.S. Navy, Naval Aerospace Medical Institute, Pensacola, FL) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, April 1986, p. 370-375. refs

The Naval Special Board of Flight Surgeons (SBFS) was established in 1956 for the evaluation of Navy, Marine Corps, and Coast Guard problem aeromedical cases. This paper examines a sample consisting of 248 of these cases for the period of 1974-83 with respect to the characteristics of those referred, their referral diagnostic category, and the recommendation of the Special Board regarding return to a flying status. Those cases with a referral diagnostic category of ENT and Ophthalmology were less likely to be returned to flight status. Older, more senior pilots, and pilots with more total flight time were less likely to be returned to unrestricted flying than were their younger, more junior, and less experienced counterparts. Otherwise, no significant difference in outcome based on age, rank, marital status, branch of service, specialty, or flight hours was detected. Overall, 61 percent of those evaluated by the SBFS were returned to flight status. Author

ZONAL DIFFERENTIATION OF PERFORMANCE UNDER HEAT STRESS
P. A. HANCOCK and A. A. BEHNKE (Southern California, University, Los Angeles, CA) IN: Human Factors Society, Annual Meeting, 29th, Baltimore, MD, September 29-October 3, 1985, Proceedings. Volume 1 . Santa Monica, CA, Human Factors Society, 1985, p. 585-589. refs

This paper details four discrete zones which describe the limit of human physiological and performance capabilities in conditions of elevated environmental temperature. Boundaries to these zones are expressed in both environmental and physiological parameters. The practical application of these zones may be realized where individuals are exposed to continuous or intermittent heat stress. Author

NONIONIZING RADIATION DAMAGE IN THE EYE
R. L. MCCALLY, R. A. FARRELL, C. B. BARGERON, H. A. KUES, and B. F. HOCHHEIMER (Johns Hopkins University, Laurel, MD) Johns Hopkins APL Technical Digest (ISSN 0270-5214), vol. 7, Jan.-Mar. 1986, p. 73-91. Research supported by the Independent Research and Development Funds, Wilmer Institute, Army, and Navy. refs

Damage mechanisms in corneas exposed to infrared and microwave radiation and retinas exposed to visible light are discussed. A new thermal-damage model for describing threshold damage to the cornea's front cellular layer caused by the absorption of CO2 laser infrared radiation is discussed, in addition to the healing and repair processes that follow exposure. In the model, damage is associated with the occurrence of a phase transition, and a physical explanation is provided for the small variation in temperature rise observed at the damage threshold condition for different exposure durations. Morphological changes in the cornea's posterior cellular layer induced by exposure to low-level microwave radiation are described, and a new low safe-exposure level for microwaves is suggested. Blue or violet light low-level exposure diagnostic techniques such as retinal photography are found to be inadequate, and new techniques based on the measurement of several fluorescent properties of probe dyes are presented. MEDICAL PROBLEMS OF SPACE FLIGHTS
P. C. CHATTERJEE (Indian Air Force, New Delhi, India) Aviation Medicine, vol. 29, June 1985, p. 9-12.

A general introduction to the various environmental stresses on man during space flight has been presented. These can broadly be divided into dynamic, physical and internal elements. Most of the body systems are adversely affected due to weightlessness. Some of the important aspects have been highlighted with requirement of possible prophylactic methods and methods of adaptation. MEDICAL EVALUATION OF COSMONAUTS DURING SPACE FLIGHT AND IMMEDIATE PRE AND POST FLIGHT PERIODS
P. M. SUNDARAM (Indian Air Force, Institute of Aviation Medicine, Bangalore, India) Aviation Medicine, vol. 29, June 1985, p. 18-22.

Procedures and tests performed in the preflight medical evaluation and maintenance, in-flight monitoring, and postflight evaluation of a spacecraft personnel crew that included an Indian cosmonaut are described. The preflight tests included a cardiovascular evaluation (tilt table tests, echocardiogram and electrocardiograms taken at rest and on an ergometer); (2) ophthalmological evaluation (perimeter studies, the adaptometer and the ocular muscle balance tests, and visual acuity studies); (3) vestibular evaluation; (4) dental evaluation; and (5) biochemical tests to serve as the baseline data. In addition to physical exercises, the Indian cosmonauts have carried out daily yoga exercises. The postflight medical evaluation indicated that the preflight medical program was adequate for the purposes of selection and training for flight missions. I.S.

VECTORCARDIOGRAPHIC STUDIES DURING INDO-SOVIET JOINT SPACE PROJECT
B. R. S. REDDY, G. S. NAYAR (Indian Air Force, Institute of Aviation Medicine, Bangalore, India), and P. C. CHATTERJEE (Indian Air Force, New Delhi, India) Aviation Medicine, vol. 29, June 1985, p. 23-30. refs

This paper presents the results of one of the first in-flight vectorcardiographic (VCG) studies along with preflight and postflight records. VCG data from two cosmonauts were recorded before, during, and after flight, while at rest and also during and after exercise on a bicycle ergometer. There was an increase in size of in-flight VCG loops and a decrease during the postflight period with recovery within four days. Short duration weightlessness did not have any negative effect on the functional state of the heart, as evidenced from cardiac vector studies. Author

EVALUATION OF PRECORDIAL MAPPING BEFORE AND AFTER SUBMAXIMAL EXERCISE AMONGST NORMAL AND ASYMPTOMATIC SUBJECTS WITH NON SPECIFIC ST-T ABNORMALITIES
M. M. SINGH (Air Force Central Medical Establishment, New Delhi, India), B. R. S. REDDY (Indian Air Force Institute of Aviation Medicine, Bangalore, India), J. S. KULKARNI (Air India, Bombay), and S. K. ADAVAL (Command Hospital, Bangalore, India) Aviation Medicine, vol. 29, June 1985, p. 38-42. refs

Using the automatic lead selector device of Reddy et al. (1981) and a conventional ECG machine, 16-point precordial ST-T mapping was conducted, before and after submaximal exercise, on 20 normal subjects, 61 subjects with nonspecific ECG abnormalities, three subjects with chest pain symptoms, and seven subjects with stabilized ischemic heart disease (IHD). The 16-point mapping helped to correctly diagnose ST-T changes in 71.4 percent of the IHD group. In contrast, this procedure ruled out IHD in 95.1 percent of the group with nonspecific ECG abnormalities. The observed ST-T changes were frequently seen in the No. 11 to No. 16 points of the maps. RESPIRATORY DISEASES - AEROMEDICAL ASPECTS INCLUDING DISPOSAL
J. S. KULKARNI (Air India, Bombay) Aviation Medicine, vol. 29, June 1985, p. 51-55.

Physiological determinants used in evaluating pilots for flying fitness are discussed. Special consideration is given to testing tolerance to respiratory stress due to environmental hypoxia and to Gz and Gx accelerations, as well as to diagnosing functional defects of the respiratory system. The respiratory indices used in differentiating between various types of ventilation defects (obstructive and nonobstructive) and of diffusion defects (due to pneumonia, asthma, pleural effusion, chronic bronchitis, emphysema, and pulmonary fibrosis) are described. Sixteen subjects with respiratory diseases, diagnosed in the course of an evaluation performed on 1445 subjects at the Institute of Aviation Medicine, were subjected to hypoxia stress and acceleration profile tests. Out of these, only two pilots have been permanently grounded, while four others were put back to full flying duties. It is noted that, in spite of the widespread habit of smoking in the Air Force, no cases of chronic bronchitis with emphysema have been detected. I.S.

CUTANEOUS VASCULAR RESPONSES TO HEAT SIMULATED AT A HIGH ALTITUDE OF 5,600 M
S. SAGAWA, K. SHIRAKI, and N. KONDA (University of Occupational and Environmental Health, Kitakyushu, Japan) Journal of Applied Physiology (ISSN 0161-7567), vol. 60, April 1986, p. 1150-1154. refs

Changes in cutaneous circulation due to hypoxia during simulated high altitude heat exposure are investigated. Six men were placed in an altitude chamber at 5600 m and were subjected to a 60-min heat exposure. After a 60-min equilibrium period at thermoneutrality (28 C), a heat load was provided by an increase in chamber temperature to 38 C at a rate of 1 deg min. Skin blood flow in the forearm (FBF) and finger (FiBF), skin and esophagus temperatures, and cardiac output (CO) were measured during heat exposure at 5,600 m and at sea level, and during the high altitude thermoneutral period. During thermoneutrality, hypoxia increased the mean skin temperature and mean heat transfer coefficient, as well as FBF and forearm vascular conductance, though no alteration in CO or in total peripheral resistance was found. During heat exposure, esophagus temperature rose faster at high altitude than at sea level. However, post-exposure data indicate that with the exception of FiBF, all thermal as well as circulatory parameters were unaffected by altitude. This attenuated vasodilation in the fingers suggests differential vascular controls and possible impairment of thermoregulation when additional stress, such as heat, is imposed. It can be concluded that cutaneous vasodilation caused by heat exposure is not induced uniformly over the whole body in a hypoxic environment. K.K.

TIME COURSE OF MUSCULAR BLOOD METABOLITES DURING FOREARM RHYTHMIC EXERCISE IN HYPOXIA
J. RAYNAUD, D. DOUGUET, P. LEGROS, A. CAPDEROU, B. RAFFESTIN (Paris XI, Univesite; Centre Chirurgical Marie-Lannelongue, Le Plessis-Robinson, France) et al. Journal of Applied Physiology (ISSN 0161-7567), vol. 60, April 1986, p. 1203-1208. Research supported by the Universite de Paris XI; Ministere de la Recherche et de la Technologie of France. refs
(Contract MRTF-82,J,0159)

The time course of local muscular metabolism, when arterial afferent blood remains unaltered, was studied. O2, concentration, PO2, PCO2, pH, osmolarity, and lactate, and Hb concentrations in forearm venous blood were measured during the submaximal exercise of forearm muscles. Blood composition was determined at times of rest and exercise; in normoxic and hypoxic environments. In hypoxia the venous muscular blood PO2 and O2 concentration was lower at rest and during exercise. The muscular arteriovenous O2 difference during exercise in hypoxia was increased by 10 pct compared with normoxia, which implies a similar increase in muscular blood flow, assuming exercise O2 consumption was not affected by hypoxia. Changes in PCO2 and pH magnitude were smaller in hypoxia during exercise and recovery, suggesting an increase in reduced Hb. An increase in muscular venous Hb coupled with unaltered arterial blood, poses the possibility of a continuous transcapillary water leakage during the first five minutes of exercise. It is concluded that muscular blood composition is less affected by hypoxia than expected. K.K.

LOW ACUTE HYPOXIA VENTILATORY RESPONSE AND HYPOXIC DEPRESSION IN ACUTE ALTITUDE SICKNESS
L. G. MOORE, G. L. HARRISON, R. E. MCCULLOUGH, R. G. MCCULLOUGH, A. J. MICCO (Colorado, University, Denver; Colorado State University, Fort Collins) et al. Journal of Applied Physiology (ISSN 0161-7567), vol. 60, April 1986, p. 1407-1412. refs
(Contract NIH-HL-14985)

It is hypothesized that low initial hypoxic ventilatory response and/or subsequent greater blunting by hypocapia or prolonged hypoxia would lower ventilation at high altitude in symptomatic compared to asymptomatic individuals. Eight subjects with histories of acute altitude sickness were compared with four subjects who had been asymptomatic during prior altitude exposure. At a simulated altitude of 4800 m, the susceptible group developed symptoms of altitude sickness and had lower minute ventilations and higher end-tidal PCO2 than the asymptomatic subjects. In measurements made prior to altitude exposure, ventilatory responsiveness to hypoxia was reduced in symptomatic compared to asymptomatic subjects, under both isocapnic and and poikolocapnic conditions. Diminution of the poikolocapnic relative to the isocapnic hypoxic response was similar in both groups, characterized by a ventilation decrease and an end-tidal PCO2 increase. It is concluded that hypoventilation in symptomatic compared to asymptomatic subjects is greater as a result of both a lower acute hypoxic response and a subsequent greater blunting of ventilation at high altitude. K.K.

HEMODYNAMIC RESPONSE TO LBNP FOLLOWING 2 HOURS HDT (-6 DEG)
H. LOELLGEN, K. E. KLEIN, U. GEBHARDT, J. BEIER, J. HORDINSKY (DFVLR, Institut fuer Flugmedizin, Cologne; Freiburg, Universitaet, Freiburg im Breisgau; Bonn, Universitaet, West Germany) et al. Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, May 1986, p. 406-412. refs

Central hemodynamics have been determined during stepwise decreasing lower body pressure in head-down tilt of -6 deg. Measurements were performed on eight healthy volunteers using right heart catheterization. During lower body negative pressure (LBNP), pressures in the right atrium, pulmonary artery, and pulmonary capillary (preload) decreased in parallel with the increase of negative pressure applied to the lower part of the body. Similarly, stroke volume and cardiac output decreased with increasing negative pressure. Heart rate moderately increased (30 percent) as well as total peripheral resistance. The left ventricular function curve was shifted downward and to the left during LBNP indicating hypovolemia with no evidence of decreased contractility. Cardiac dimensions determined by echocardiography changed in a similar way as those obtained by invasive measurements. There was a very close correlation between stroke volume determined by thermodilution and by echocardiography. Plasma norepinephrine and dopamine tended to increase at the end of LBNP. Echocardiography proved a useful and reliable approach to hemodynamic measurement during LBNP and is recommended for analysis of hemodynamic parameters during zero G and Gz simulation. Author

CARDIOVASCULAR DYNAMICS ASSOCIATED WITH TOLERANCE TO LOWER BODY NEGATIVE PRESSURE
T. M. SATHER, D. J. GOLDWATER, L. D. MONTGOMERY (NASA, Ames Research Center, Moffett Field, CA; Arizona, University, Tucson), and V. A. CONVERTINO (Bionetics Corp., Cocoa Beach, FL) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, May 1986, p. 413-419. refs

The purpose of this investigation was to identify cardiovascular responses associated with tolerance to lower body negative pressure (LBNP). Eighteen men, ages 29-51 years, were categorized as high (HT) or low (LT) LBNP-tolerant based on a graded presyncopal-limited LBNP exposure criterion of -60 mm Hg relative to ambient pressure. Groups were matched for physical characteristics and pre-LBNP cardiovascular measurements, with the exceptions of greater (p less than 0.05) end-diastolic volume and cardiac output in the HT group. During peak LBNP, cardiac output was similar in both groups, although the HT group displayed a greater heart rate (p less than 0.05). In both groups, venous return appeared to limit cardiac output resulting in decreased arterial pressure. Tolerance to LBNP did not appear solely dependent on the absolute amount of blood pooled in the legs since the HT group demonstrated a greater (p less than 0.05) peak LBNP-induced increase in midthigh-leg volume. Greater tolerance to LBNP was associated with a larger pre-LBNP cardiac output reserve and higher compensatory increases in heart rate and peripheral resistance. Author

EFFECT OF HYDRATION ON PLASMA VASOPRESSIN, RENIN, AND ALDOSTERONE RESPONSES TO HEAD-UP TILT
M. H. HARRISON, G. GEELEN, L. C. KEIL, C. A. WADE, L. C. HILL (NASA, Ames Research Center, Moffett Field; Letterman Army Institute of Research, San Francisco, CA) et al. Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, May 1986, p. 420-425. refs

If plasma vasopressin (PVP), plasma renin (PRA), and plasma aldosterone (PA) responses to change in posture are mediated only by alterations in intrathoracic baroreceptor activity hydration status should have minimal influence on these responses. To test this hypothesis, six male subjects underwent 45 min of 70 deg head-up tilt (HUT) following 26 h dehydration, and again, 105 min later, following rehydration. Compared with preceding supine hydrated control values, PVP, PRA, and PA increased (p less than 0.001) during dehydrated HUT, but only PVP and PRA increased during rehydrated HUT (p less than 0.001). The dissociation during rehydrated HUT of PRA and PA may have been related more to the reduction (p less than 0.001) in plasma potassium concentration than to the accompanying decrease (p less than 0.001) in plasma osmolality and sodium concentration. Although increases in PVP and PRA during HUT were attenuated (p less than 0.01) following rehydration, this attenuation was associated with the absence of symptoms of overt hypotension following rehydration. However, since rehydration did not abolish the increases in PVP and PRA induced by HUT, it is concluded that the present observations support the concept of intrathoracic baroreceptor involvement in the regulation of vasopressin secretion and renin release. PLASMA VISCOSITY ELEVATIONS WITH SIMULATED WEIGHTLESSNESS
D. G. MARTIN, V. A. CONVERTINO, D. GOLDWATER, E. W. FERGUSON, and E. B. SCHOOMAKER (NASA, Ames Research Center, Moffett Field, CA; Uniformed Services University of the Health Sciences, Bethesda, MD; Arizona, University, Tucson) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, May 1986, p. 426-431. refs

A hypothesis correlating an increase in blood viscosity during bed rest to a decrease in aerobic capacity during simulated weightlessness is tested. Eight human subjects were studied on the sixth day of bed rest during two consecutive 10-d bed rest periods separated by a 14-d recovery interval designed to simulate the flight-layover schedule of Shuttle astronauts. Plasma viscosity and volume were measured, together with maximal aerobic capacity (VO2max). An increase in hematocrit, plasma protein, and fibrinogen concentrations was found, contributing to an elevation in plasma viscosity. VO2max decreased significantly in the first, but not the second bed rest cycle, and though many individuals exhibited a decrease in plasma volume and aerobic capacity coupled with elevated plasma viscosity, correlations between these variables were lacking. It is concluded that the decrease in VO2max observed following simulated weightlessness cannot be attributed to alterations in muscle blood flow resulting from increased blood viscosity. K.K.

INFLUENCE OF INSPIRED OXYGEN CONCENTRATION ON ACCELERATION ATELECTASIS
M. S. HASWELL, W. A. TACKER, JR., U. I. BALLDIN, and R. R. BURTON (USAF, School of Aerospace Medicine, Brooks AFB, TX) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, May 1986, p. 432-437. refs

The USAF is developing an On Board Oxygen Generation System (OBOGS) for use in fighter aircraft. This study was conducted to determine the inert gas dilution requirements of the OBOGS necessary to prevent acceleration atelectasis. Human subjects were exposed to either 21, 50, 70, 82.5, 95 or 100 percent inspired oxygen, along with an increased +Gz Simulated Aerial Combat Maneuver (SACM) profile using a human centrifuge. The SACM profile utilized four +4.5z peaks (136 s at this +Gz) superimposed on a +3 Gz baseline, representing a total ride time of 276 s. A significant reduction in vital capacity (VC) occurred at inspired oxygen concentrations of 70 percent and greater. The addition of 5 percent argon (a natural product of OBOGS) to pure oxygen did not reduce the magnitude of acceleration atelectasis observed, nor the severity of breathing symptoms. A 30-s exposure to positive pressure breathing at 30 mm Hg during the end of the SACM reduced the level of VC reduction caused by subjects breathing 100 percent oxygen during +Gz. Author

LONGITUDINAL STUDY OF CARDIOVASCULAR DISEASE IN U.S. NAVY PILOTS
A. HOIBERG (U.S. Navy, Naval Health Research Center, San Diego, CA) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, May 1986, p. 438-442. refs

This longitudinal study examined the consequences of cardiovascular disease (CVD) in 145 U.S. Navy pilots who suffered a CVD incident during the 1972-79 time period. Results showed that one pilot died, one suffered a second acute myocardial infarction, and 32 pilots were hospitalized and/or retired with a physical disability because of CVD. The majority of subsequent CVD incidents occurred during a 12-month period after the initial CVD event; 35 percent had discontinued flying prior to the initial CVD incident. Percentages of pilots who either remained on active duty or were separated for nonmedical reasons ranged from 64.3 percent for pilots in the chronic ischemic heart disease sample to 97.6 percent for the symptomatic heart disease group. Thus, the majority of pilots were returned to duty either after the initial CVD incident or subsequent to the rehospitalization or physical evaluation board. Author

HEAD MOVEMENTS IN NON-TERRESTRIAL FORCE ENVIRONMENTS ELICIT MOTION SICKNESS - IMPLICATIONS FOR THE ETIOLOGY OF SPACE MOTION SICKNESS
J. R. LACKNER and A. GRAYBIEL (Brandeis University, Waltham, MA) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, May 1986, p. 443-448. refs
(Contract NAS9-15147)

Space motion sickness has become an operational concern in manned space flight. Considerable evidence exists that head

movements in free fall, especially pitch movements, are provocative until adaptation occurs. The question arises whether space motion sickness is an unique nosological entity or is due to body movements in a nonterrestrial force environment, a force environment for which the body's dynamic sensory-motor adaptions to 1 G are no longer appropriate. To evaluate this issue, subjects were asked to make controlled head movements during exposure to high gravitoinertial force levels, 1.8-2.0 G, in parabolic flight maneuvers. Head movements in pitch with eyes open were most evocative of motion sickness, yaw movements with eyes covered were least provocative. This pattern is identical to that which occurs when the same types of head movements are made in the free fall phase of parabolic maneuvers. It appears that space motion sickness is the consequence of prolonged exposure to a nonterrestrial force background rather than of exposure to free fall per se. Author

CENTRAL SEROUS RETINOPATHY (CHOROIDOPATHY) IN PILOTS
M. GROSS, P. FROOM, Y. TENDLER, M. MISHORI, and J. RIBAK (Israel Air Force, Aeromedical Center, Ramat Gan) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, May 1986, p. 457, 458. refs

The clinical charts of pilots in the Israeli Airforce were reviewed retrospectively for evidence of central serous retinopathy (CSR). There were 14 pilots with documented CSR identified, with an incidence of 1.3 per 1000 per year. Of six pilots who had recurrent attacks, five had a decrease of visual acuity during the initial attack to at least 20/30 in the affected eye. On the other hand, in those with visual acuity no worse than 20/25, only one of seven had recurrent attacks (p less than 0.05). It is concluded that CSR is a common condition in pilots, and that visual acuity during the initial attack can predict those who will have recurrent disease. Author

HEART AND RESPIRATION RATES DURING A MENTAL TASK PERFORMED WITH VARYING DEGREES OF SUCCESS [CHASTOTA SERDECHNYKH SOKRASHCHENII I DYKHANIIA PRI RAZLICHNOI USPESHNOSTI VYPOLNENIIA UMSTVENNOI RABOTY]
T. M. SINITSINA (Leningradskii Nauchno-Issledovatel'skii Institut Neirokhirurgii, Leningrad, USSR) and R. P. CHEKURDA Fiziologiia Cheloveka (ISSN 0131-1646), vol. 12, Mar.-Apr. 1986, p. 199-203. In Russian. refs

The effect of the degree of achievement in performing a mental assignment on the rates of respiration (RR) and heart contraction (HCR) was studied in 49 men and women by continually measuring the rates before, during, and after a mental test that required strict attention. The increases in RR and HCR were seen to parallel the degree of nervous tension and were highest among the poorest achievers. Correlation between the changes in the RR and HCR varied with the level of achievement: among the best achievers, the correlation ratio was in the range of 0.62-0.65, while in the lowest achievers there was no correlation. The results support the report of Zagriadskii and Sulimo-Samuillo (1982) that the optimal regulation of physiological functions facilitates ability to adapt to stressful situations. I.S.

THE MECHANISMS OF MUSCLE ACTIVITY REGULATION IN HUMANS DEPENDING ON BIORHYTHM TYPE [MEKHANIZMY REGULIATSII MYSHECHNOI DEIATEL'NOSTI V ZAVISIMOSTI OT BIORITMOLOGICHESKOGO TIPA CHELOVEKA]
S. G. KRIVOSHCHEKOV, G. M. DIVERT, and G. M. DOMAKHINA (Institut Fiziologii, Novosibirsk, USSR) Fiziologiia Cheloveka (ISSN 0131-1646), vol. 12, Mar.-Apr. 1986, p. 258-262. In Russian. refs

The functional states of the central nervous system (CNS) and of the muscles were assessed in the morning and evening hours in subjects of three biorhythm types: the evening and the morning types, and the arrhythmics. The subjective work capacity (SWC) levels were determined from questionnaires. In all subjects, the SWC levels correlated well with the functional muscle activity determined from electromyographic indices, being maximal in the morning for the morning types, and in the evening for the evening types. In subjects of the morning type, the maximal and minimal values of the SWC also coincided with the highs and lows of the sensorimotor reaction speeds (i.e., with the functional state of the CNS), whereas in the evening types and in the arrhythmics such synchrony was absent. It is suggested that, in the morning types, the psychophysiologic synchrony is psychogenically determined by the CNS regulatory mechanism, which is disturbed in subjects of the evening type due to socially acquired changes in the activity rhythms. I.S.

THE DYNAMICS OF SYSTEMIC FUNCTIONAL ORGANIZATION DURING ADAPTATION TO WORK IN EXTREME ENVIRONMENTS [DINAMIKA SISTEMNOI ORGANIZATSII FUNKTSII PRI ADAPTATSII K TRUDY V EKSTREMAL'NYKH USLOVIIAKH]
V. P. GREBNIAK and E. I. CHUPRINA (Donetskii Nauchno-Issledovatel'skii Institut Gigieny Truda i Profzabolevanii, Donetsk, Ukrainian SSR) Fiziologiia Cheloveka (ISSN 0131-1646), vol. 12, Mar.-Apr. 1986, p. 269-276. In Russian. refs

Dynamics of systemic organization were studied in miners working under stressful environmental conditions, using the maximal correlation method of Terentiev (1959). The correlation matrix included parameters of age, length of professional service, and the professionally significant stress indices of the cardiovascular, respiratory, and circulatory systems. It was found that the correlation coefficients between the systemic physiological indices were most informative in subjects with 2-5 yrs of stressful work experience. Whereas the number of intersystemic shifts was maximal in subjects with 2-5 years experience, the intrasystemic shifts continued to increase with the years of service. I.S.

EVALUATING THE FUNCTIONAL STATUS OF OPERATORS USING INDICES OF MENTAL WORK CAPACITY [OTSENKA FUNKTSIONAL'NOGO SOSTOIANIIA OPERATOROV PO POKAZATELIAM UMSTVENNOI RABOTOSPOSOBNOSTI]
A. IU. BUROV (Kievskii Nauchno-Issledovatel'skii Institut Gigieny Truda i Profzabolevanii, Kiev, Ukrainian SSR) Fiziologiia Cheloveka (ISSN 0131-1646), vol. 12, Mar.-Apr. 1986, p. 281-288. In Russian. refs

Results of psychophysiological tests were used to establish correlators between mental work capacity and vegetative indices. The latent time in answering questions and the number of correct answers in the test were correlated with the ECG R-R

cardiointervals, the propagating time of the pulse waves (RPs), and the cutaneogalvanic reaction recorded during the test. The character of vegetative activity was found to correlate with the capacity to do mental work, especially with the work productivity. The period between 1 and 15 min in the recorded spectra was found to be most useful for the psychophysiological assessment. I.S.

SUBSTANTIATION OF PHYSIOLOGICAL CRITERIA FOR ASSESSING THE FUNCTIONAL STATUS OF THE HUMAN BODY IN HIGH-TEMPERATURE ENVIRONMENTS [OBOSNOVANIE FIZIOLOGICHESKIKH KRITERIEV DLIA OTSENKI FUNKTSIONAL'NOGO SOSTOIANIIA ORGANIZMA CHELOVEKA V USLOVIIAKH VYSOKIKH TEMPERATUR OKRUZHAIUSHCHEI SREDY]
A. N. AZHAEV Fiziologiia Cheloveka (ISSN 0131-1646), vol. 12, Mar.-Apr. 1986, p. 289-295. In Russian. refs

The value of the parameters of water and ion exchange and thermal exchange processes and of cardiovascular and respiratory systems for assessing the ability of the human body for thermal adaptation was studied. Male subjects were exposed to temperatures in the 20-80 C range for various times. While the informational value of all the parameters studied depended on the degree of overheating, the parameters derived from the measurements of skin and rectal body temperatures were found to be useful in the assessment of the human functional state under all degrees of overheating. Under the conditions causing the first degree of overheating, the heat exchange rate, the loss of body weight, heat loss through perspiration, and the mean of skin temperature were found to be the most significant correlants. In the second and third overheating degrees, rectal temperature changes, and the parameters of the cardiovascular and respiratory functions were most informative. I.S.

DYNAMICS OF THE ULTRASLOW BIOELECTRIC BRAIN ACTIVITY DURING THE PERFORMANCE OF CERTAIN PARTS OF OPERATIONAL ACTIVITY [DINAMIKA SVERKHMEDLENNOI BIOELEKTRICHESKOI AKTIVNOSTI MOZGA PRI REALIZATSII NEKOTORYKH ELEMENTOV OPERATORSKOI DEIATEL'NOSTI]
V. I. PRIMAKOV (Voenno-Meditsinskaia Akademiia, Leningrad, USSR) Fiziologiia Cheloveka (ISSN 0131-1646), vol. 12, Mar.-Apr. 1986, p. 328, 329. In Russian. refs

The degree of correlation between the ultraslow electrical brain activity with the functional state of an operator was investigated in subjects before and during the performance of various psychomotor and psychophysiologic tests. Changes in the amplitude and period characteristics of the zeta and tau waves were recorded during videomotor acuity tests and during tests evaluating subjects' attention. The characteristics of both zeta and tau activities changed differently during various phases of the operators' activity, demonstrating that the ultraslow brain activity can serve as an objective index for evaluating the degree of strain imposed on the regulatory brain structures that control and rearrange the activity levels in other systems of the body. I.S.

HUMAN ADAPTATION TO ANTAGONISTIC ENVIRONMENTAL FACTORS [ADAPTATSIIA CHELOVEKA K VOZDEISTVIIU ANTAGONISTICHESKIKH FAKTOROV SREDY]
V. A. ASTASHIN (Voenno-Meditsinskaia Akademiia, Leningrad, USSR) Fiziologiia Cheloveka (ISSN 0131-1646), vol. 12, Mar.-Apr. 1986, p. 330, 331. In Russian.

The effect of alternate exposures to low and high temperatures on human physiological reactions was studied in subjects exposed for five days to a regimen of 2 hrs at 16 C and 40 percent humidity, followed by 2 hrs at 49 C and 25 percent humidity. The rate of heart contractions, minute respiratory volume, rectal temperature changes in the sensorimotor reactions, cardiovascular response to physical load, and leukocyte counts were monitored at all stages of the experiment. In addition, the effect of adaptation on the thermoregulatory reactions was studied by subjecting some subjects to an additional test consisting of an exposure to 10 C at rest, followed by exercise at 49 C, conducted before and after the 5-day adaptation experiment. The complex patterns of changes in the physiological reactions of thermoregulation suggest the existence of two simultaneous processes of adaptation. I.S.

CHEMICALLY INDUCED DAMAGE TO THE HIPPOCAMPAL FORMATION
L. U. NAALSUND May 1986 91 p refs Sponsored in cooperation with the Royal Norwegian Council for Scientific and Industrial Research
(NDRE/PUBL-86/1002; ISSN-0800-4412) Avail: NTIS HC A05/MF A01

Degeneration of the hippocampal formation after trimethyltin (TMT) administration can be detected at an early phase by electric recordings from intrahippocampal electrodes. The anatomical distribution of the damage can be studied by histochemistry, and was shown to include the CA3 and CA4 subfields in the initial period and spreading to the CA1 after a complete destruction of the pyramidal cells in CA3 and CA4. The degeneration was shown to be specific for glutamergic neurons in the hippocampus, high affinity uptake of 3H glutamate being the only biochemical parameter which was changed. In vitro TMT increased the efflux of 3H glutamate from synaptosomes in the resting state, but had no effect on the efflux of 3H GABA. The synaptosomal reuptake of transmitter and receptor binding were both inhibited in the presence of TMT. In relation to reports on TMT as an anion conductor, the effect of changes in extracellular Cl(-) concentration on transmitter release was investigated. A reduction in the external

Cl(-) concentration was shown to have a much larger effect on the efflux of transmitter from glutamergic than from GABAergic synaptosomes. The sensitivity of the hippocampal electric activity to changes after exposure to toxic compounds was utilized for the investigation of a put active neurotoxic effect of long term exposure to low levels of toluene. An increased synchronization together with an increased frequency in the theta waves was observed during the first period of toluene exposure. The later phase was characterized by a gradually increasing disruption in regular waves and a reduction in the theta frequency. No improvements regarding regularity or frequency was seen during one month after termination of exposure, indicating that irreversible changes in neuronal functions have occurred. Author

A REVIEW OF THE PILOT BACKACHE PROBLEM IN THE CH113 LABRADOR HELICOPTER
A. BEACH Dec. 1985 26 p refs
(AD-A164011; DCIEM-85-R-49) Avail: NTIS HC A03/MF A01 CSCL 06S

In response to an Unsatisfactory Condition Report, complaints of back pain and discomfort induced by the pilots' seat of the CH113 Labrador helicopter were investigated. Several published reports dealing with the problem are reviewed and summarized in terms of incidence and prevalence rates, frequency, intensity, duration, location and time to pain onset. A questionnaire was developed and distributed to CH113 Labrador helicopter pilots in order to determine how closely the backache characteristics of the pilots match the characteristics reported by the general population. In addition, an evaluation of the size and shape of the Labrador seat was conducted and results were compared to published seat design guidelines and recommendations. Questionnaire results indicate that the typical backache reported by Labrador pilots is similar to the backache reported by other helicopter pilots. It is usually a dull pain in the lumbar area, most often experienced during flight and usually lasting after the mission ends. Subjective results also indicate that backache may be negatively correlated with regular exercise. Based on the symptoms identified in the questionnaire and the causes identified by other investigators, design principles for an improved seat incorporating an inflatable lumbar support and a more effective load bearing seat cushion were established. REVIEW OF MODIFIED HEMOGLOBIN SOLUTIONS FOR USE AS TEMPORARY BLOOD SUBSTITUTES
L. J. J. HRONOWSKI Dec. 1985 31 p refs
(AD-A164210; DCIEM-85-R-51) Avail: NTIS HC A03/MF A01 CSCL 06O

The present review will focus on blood substitutes using hemoglobin solutions as oxygen carriers. It will review the more recent developments and discuss the limitations and problems associated with the present hemoglobin preparations. This will be covered under the headings of purification of hemoglobin, modification and polymerization of the hemoglobin molecule and the biological activities of the hemoglobin solutions. Polymerization of hemoglobin is currently the only means of obtaining a physiological concentration of hemoglobin which is iso-oncotic with plasma. Polymerized pyridoxylated hemoglobin is currently the most widely used example of such an iso-oncotic hemoglobin solution having normal oxygen carrying capacity. Such solutions, however, are heterogeneous polydispersed mixtures of widely different molecular weight. In addition, these solutions still contain about 20% of the unpolymerized tetramer which is rapidly eliminated in the urine. These solutions also have oxygen affinities which are considerably higher than those found in the red blood cells. In addition to their effectiveness, the hemoglobin solutions must be shown to be safe. Safety studies on the polymerized and modified hemoglobin solutions must address issues such as hematological responses, vasoactive ef fects, effect on the reticuloendothelial system, effect on immunocompetence, antigenicity, nephrotoxicity, and iron toxicity. MULTIDISCIPLINARY STUDIES ON EXCITATORY AMINO ACIDS AS TRANSMITTERS IN THE BRAIN Final Report, 27 Sep. 1982 - 26 Sep. 1985
C. W. COTMAN 7 Nov. 1985 9 p refs
(Contract DAAG29-82-K-0194)
(AD-A164258; ARO-19016.14-LS) Avail: NTIS HC A02/MF A01 CSCL 06A

The major goal has been to analyze the excitatory amino acid receptors in the brain, particularly those mediating responses by glutamate and aspartate. Acidic amino acids, principally L-glutamate and L-aspartate, appear to be the major excitatory transmitters in the CNS. As such, these molecules may be the most abundant CNS neurotransmitter class. L-Glutamate shows many of the characteristics of other neurotransmitters. Glutamate is present in high levels in the brain and is relatively enriched in select neurons. Transmitter glutamate is supplied to nerve terminals by synthesis, primarily via the enzyme glutaminase, and by high affinity uptake. The mechanism for transmitter inactivation in the synapse appears to be the rapid removal by a high affinity uptake system. Both endogenous L-glutamate and L-glutamate derived from exogenously supplied radiolabelled precursors exhibit Ca(++)-dependent release upon depolarization. A transport system responsible for the loading of L-glutamate into synaptic vesicles has also been identified. Excitatory amino acids act on a variety of distinct receptor types, and there are now available many compounds which can mimic or block synaptic activity at excitatory amino acid using synapses. Our approach has involved the analysis of these receptors in isolated synaptic membranes and their further definition and anatomical localization via light microscopic autoradiography. GRA

ISOTOPIC STUDY OF THE INHALATION TOXICOLOGY OF OXIDANTS
J. M. HAYES and J. SANTROCK Jun. 1985 200 p Sponsored in part by Health Effects Research Lab.
(PB86-109485; EPA-600/1-85-013) Avail: NTIS HC A09/MF A01 CSCL 06T

The purpose was to develop novel methods to investigate the biological fate of inhaled ozone and other oxygen-containing pollutants in animal and human tissues using the heavy isotope of oxygen, oxygen-18 (18O). Methods were developed which facilitated the conversion of tissue oxygen to CO2 and the subsequent trapping of the CO2 so that it could be subjected to isotope-ratio mass spectrometry. The ratios of the various masses of evolved CO2 were used to calculate the 18O content of the original tissues, thus enabling the detection of isotopic enrichments as small as 0.4%. The above procedures were performed by modification of a commercially available elemental analyzer to include effluent columns and trapping devices, development of oxygen isotopic standards, and derivation of mathematical models for correction of blank and memory effects originating during sample pyrolysis. These techniques were applied with success to the determination of the biological fate of inhaled ozone, and to the measurement of tissue oxidation induced by a model peroxidation initiator, carbon tetrachloride. EVALUATING COMPLIANCE WITH FCC (FEDERAL COMMUNICATIONS COMMISSION) SPECIFIED GUIDELINES FOR HUMAN EXPOSURE TO RADIOFREQUENCY RADIATION
R. F. CLEVELAND Oct. 1985 58 p
(PB86-127081; OST/BULL-65) Avail: NTIS HC A04/MF A01 CSCL 06R

The technical bulletin provides information and guidelines for use in evaluating compliance with FCC-specified environmental rules dealing with human exposure to radiofrequency (RF) radiation. It provides assistance in determining whether an FCC-regulated

facility might create a significant environmental effect due to human exposure to levels of RF radiation in excess of specified radiation protection guides. Emphasis is placed on exposure from broadcast facilities. However, the bulletin also contains information relevant to certain other RF-emitting sources. GRA

NORMAL AND ABNORMAL HUMAN VESTIBULAR OCULAR FUNCTION Final Technical Report
R. J. PETERKA and F. O. BLACK May 1986 66 p refs
(Contract NCC9-8)
(NASA-CR-176820; NAS 1.26:176820) Avail: NTIS HC A04/MF A01 CSCL 06P

The major motivation of this research is to understand the role the vestibular system plays in sensorimotor interactions which result in spatial disorientation and motion sickness. A second goal was to explore the range of abnormality as it is reflected in quantitative measures of vestibular reflex responses. The results of a study of vestibular reflex measurements in normal subjects and preliminary results in abnormal subjects are presented in this report. Statistical methods were used to define the range of normal responses, and determine age related changes in function.

AEROBIC CAPACITY AND CORONARY RISK FACTORS IN A MIDDLE-AGED ARMY POPULATION AD-A163998 HC A02/MF A01
J. F. PATTON, J. A. VOGEL, J. L. BEDNEK, JR., D. ALEXANDER, and R. ALBRIGHT Jan. 1986 23 p refs
(Contract USRIEM-M-10/86)
(AD-A163998) Avail: NTIS HC A02/MF A01 CSCL 06N

The purpose of this study was to assess the relationship between coronary risk factors (CRF) and aerobic capacity measured by the direct determination of oxygen uptake during maximal exercise testing. Subjects comprised 295 male Army personnel (40 to 53 years of age) who underwent multiple serial screening procedures to include a medical and physical evaluation, calculation of a Framingham risk factor index (RI) and a graded treadmill exercise test (GXT) with the determination of peak oxygen uptake (pVO sub 2). CRF included resting systolic (SBP) and diastolic (DBP) blood pressures, total cholesterol (TC), HDL-C, triglycerides (TRIG), fasting blood sugar (FBS), smoking history, resting ECG, and percent body fat (% BF). The results, although cross sectional, imply that a high level of aerobic capacity is associated with lower coronary risk factors. GRA

FITNESS AND ACTIVITY ASSESSMENTS AMONG US ARMY POPULATIONS: IMPLICATIONS FOR NCHS GENERAL POPULATION SURVEYS
J. A. VOGEL Jan. 1986 66 p refs
(AD-A164060; USARIEM-M-11/86) Avail: NTIS HC A04/MF A01 CSCL 06N

The military forces of this country represent the largest population for which physical fitness is routinely assessed. Field measures of aerobic power, muscle strength and muscular endurance, along with body weight, are measured twice yearly in the U.S. Army through age 60. Field measures are defined as those conducted by army units without the aid of equipment or indoor facilities. The purpose of these periodic fitness evaluations is both as an indicator of the adequacy of training to meet performance goals as well as a motivator to the individual to train and improve their fitness level. In addition to these periodic field measures, extensive population surveys of laboratory-measured fitness and activity assessment have been made in a wide variety of Army units over the past ten years by the Exercise Physiology Division, US Army Research Institute of Environmental Medicine. These assessments have been part of an ongoing research program to study factors influencing fitness in the Army. This chapter presents a description of the survey methods and sample data from both approaches. GRA

AN ANALYSIS OF POTENTIAL PREDICTIVE PARAMETERS OF MOTION SICKNESS USING A COMPUTERIZED BIOPHYSICAL DATA ACQUISITION SYSTEM M.S. Thesis
N. R. JARVIS and C. T. UYEDA, JR. Dec. 1985 254 p refs
(AD-A164099; AFIT/GSO/ENG/85D-1) Avail: NTIS HC A12/MF A01 CSCL 06E

A computerized biophysical data acquisition system was refined and used to collect biophysical data on human volunteer subjects to examine effects of coriolis induced motion sickness. Redesigned sensors to measure electrical cardiac activity, cardiac chest rebound, abdominal/thoracic respiration, peripheral pulse blood volume, facial pulse blood volume, skin temperature, gastric/intestinal activity, nystagmus, and brain wave activity were incorporated with commercially available sensors for galvanic skin response, heart rate, and blood pressure to thoroughly measure the subject's vital signs. Subjects were rotated in a multiaxis motion chair and data collected for later analysis. Data were collected on paper strip chart recorders in parallel with a MASSCOMP MC500 minicomputer. The MASSCOMP data acquisition system software was refined with better documentation to allow data replay.

(Contract N00014-85-K-0325)
(AD-A164379) Avail: NTIS HC A05/MF A01 CSCL 06S

In the operation of high performance aircraft, operational crews are often subject to high sustained + or - GZ acceleration. The response of the human cardiovascular system to these acceleration forces has been the object of considerable research. Numerous techniques have been used to measure important parameters of cardiovascular function; however, plethysmographic measurements of blood volume shifts have not been possible during exposure to hypergravity because of unavoidable tissue deformation. Such measurements have added significantly to understanding of the cardiovascular response to postural shifts and to zero-g. A multi-channel instrument has been developed which employs multiple ultrasonic depth measurements to determine the volume of blood contained in the various compartments of the circulation during exposure to hypergravity on a centrifuge. These volume measurements can be used to study the time course and quantity of blood shifts produced by exposure to selected acceleration profiles and physiological manipulations, including anti-G suit inflation. The data obtained should provide improved understanding of basic cardiovascular physiology and of the relative effectiveness of various anti-G devices. GRA

COMPARATIVE BIOCHEMISTRY AND METABOLISM. PART 2: NAPHTHALENE LUNG TOXICITY Annual Report, Jun. - Dec. 1984
P. R. RICHIERI and A. R. BUCKPITT Nov. 1985 38 p
(Contract F33615-80-C-0512)
(AD-A163144; AAMRL-TR-85-069) Avail: NTIS HC A03/MF A01 CSCL 06T

The studies reported in this document were to quantitatively examine the diffusion of naphthalene oxide and reactive metabolites form naphthalene in suspensions of isolated mouse hepatocytes and to determine whether the efflux of these metabolites was dependent upon the depletion of intracellular glutathione. The efflux of naphthalene oxide from intact hepatocytes was monitored in incubations containing 3H-glutathione (this tripeptide will not cross the intact hepatocellular membrane) and was based on the measurement of 3H-labelled glutathione adducts. Between 17 and

35% of the total naphthalene oxide formed during the metabolism of naphthalene in the cell was trapped on the exterior of the cell with 3H-glutathione. The fraction of epoxide exiting the hepatocytes as a percentage of the total amount formed did not vary with increasing naphthalene concentrations between 0.005 and 1.5 mM. These data in conjunction with the studies showing that incubation of hepatocytes with naphthalene at concentrations of 0.05 mM or greater caused a significant depletion of intracellular glutathione, suggested that the quantity of naphthalene oxide diffusing as a percentage of the total formed was not dependent upon the intracellular glutathione status. In contrast, the ration of extracellular vs *i* ntracellular covalent binding was dependent on the concentration of naphthalene in the incubation. GRA

ACUTE TOXICITY STUDIES ON 2 AIR FORCE HYDRAULIC FLUIDS (MLO 82-233 AND MLO 82-585) Technical Report, Apr. 1983 - Mar. 1984
E. R. KINKEAD, J. R. HOTRON, C. L. GAWORSKI, and R. A. SALOMON Nov. 1985 22 p
(Contract F33615-80-C-0512)
(AD-A163174; AAMRL-TR-85-070) Avail: NTIS HC A02/MF A01 CSCL 06T

This report describes results of investigations into the acute toxic properties of two operational Air Force hydraulic fluids, MLO 82-233 and MLO 82-585. Various routes of administration were investigated including inhalation, dermal, and oral in rats, guinea pigs, rabbits, and chickens. No acute toxicity occurred in rats with either hydraulic fluid as a results of oral or inhalation exposure at the maximum concentration tested. Dermal exposure of rabbits resulted in no mortalities with either hydraulic fluid. One hydraulic fluid, MLO 82-585, was found to be a moderate skin irritant but neither fluid caused ocular irritation nor did they produce a sensitization response in guinea pigs. Neither fluid would be considered to be a delayed neurotoxin. Author (GRA)

THE EXPERIMENTAL DETERMINATION OF SAFE ATMOSPHERIC EXPOSURE CONCENTRATIONS OF JP-10 JET FUEL Final Technical Report, Jun. 1978 - Jun. 1984
C. C. HAUN, E. R. KINKEAD, E. H. VERNOT, J. D. MACEWEN, and R. H. BRUNER Nov. 1985 25 p
(Contract F33615-76-C-5005; F33615-80-C-0512)
(AD-A163179; AAMRL-TR-85-072) Avail: NTIS HC A02/MF A01 CSCL 06T

Four animal species were exposed for 1 year to 100 ppm (556 cu mg/m) JP-10 to determine its long-term toxic and oncogenic effects. Rats, mice, and hamsters were maintained for 1 year postexposure, while dogs were held for 5 years postexposure. Mean body weights of exposed hamsters and male rats were lower than controls during exposure. Weight recovery occurred in hamsters, but not in male rats during postexposure phase of the study. Significant JP-10 exposure related effects were renal tubular nephrosis together with an increase in benign and malignant renal cell tumors in male rats. Author (GRA)

TOXICOLOGICAL STUDY OF NTO
J. E. LONDON and D. M. SMITH Sep. 1985 8 p refs
(Contract W-7405-ENG-36)
(DE86-003296; LA-10533=MS) Avail: NTIS HC A02/MF A01

The acute oral LD50 values for NTO for mice and rats are greater than 5 g/kg. According to classical guidelines, the test material would be considered only slightly toxic or practically nontoxic in both species. Skin application studies with NTO in rabbits demonstrated that it was mildly irritating cutaneously. With the scoring scheme, the rabbit eye test was considered negative; however, transient conjunctival and corneal irritation did result from the NTO application in several animals and one developed a chronic anterior uveitis. The material did not induce sensitization in the intradermal guinea pig assay. DOE

CARDIOKYMOGRAPHY
E. FEIGENBAUM 1985 9 p refs
(PB86-133790; NCHSR-85-127; REPT-10) Avail: NTIS HC A02/MF A01 CSCL 06L

Cardiokymography (CKG) is a non-invasive test to detect stress induced motion abnormalities of the anterior left ventricular wall of the heart for coronary artery disease (CAD). CKG involves translation of heart wall motion into a variable electrical signal that is recorded in graphic form. It may be affected by chest wall motion, systolic rotation of the ventricle, or patient movement. The tracing is a summation of cardio-thoracic movement in the area under the trancuducer. The utility of CKG in detecting CAD remains equivocal. Reassessment of CKG has disclosed that adequate scientific data are lacking with respect to the diagnostic effectiveness of this technology. At the present time cardiokymorgraphy continues to be considered investigational, when used as a method of diagnosing ischemic heart disease. GRA

Psychophysical research has revealed in recent years that traditional measures of visual acuity and visual field only partially characterize the information processes of the human observer. A survey of recent psychophysical research that has the potential for broadening conventional assessment of visual function is provided. Areas of practice to which such psychophyaical research techniques might be applied, are identified. GRA

HEALTH EFFECTS OF AMBIENT OZONE EXPOSURE IN VIGOROUSLY EXERCISING ADULTS
B. J. SELWYN, T. H. STOCK, D. E. JENKINS, D. J. KOTCHMAR, and R. S. CHAPMAN Jan. 1986 21 p refs Sponsored by Health Effects Research Lab. Prepared in cooperation with Baylor College of Medicine, Houston, Tex.
(Contract EPA-CR-807108)
(PB86-156940; EPA-600/D-86-033) Avail: NTIS HC A02/MF A01 CSCL 06E

The purpose of the analysis was to examine the association of changes in ambient ozone concentrations with changes in the pulmonary function (PFT) of healty adults after exercising vigorously outdoors. During May-October, 1981, 24 community residents (men and women) ran three miles twice a week some time between 4:30 and 6:30 P.M. at a high school track near Houston, Texas. An air monitoring trailer stood beside the track and monitored environmental variables continuously. The continuously measured environmental variables in this analysis (ozone, temperature, and relative humidity) were averaged over 15 minute intervals. Standard forced expiratory maneuvers were performed before and after each run. Exercise exertion was standardized. GRA

HUMAN FACTORS SOCIETY, ANNUAL MEETING, 29TH, BALTIMORE, MD, SEPTEMBER 29-OCTOBER 3, 1985, PROCEEDINGS. VOLUMES 1 & 2
R. W. SWEZEY, ED. Meeting supported by Carlow Associates, Inc., Army, U.S. Nuclear Regulatory Commission, et al. Santa Monica, CA, Human Factors Society, 1985. Vol. 1, 655 p.; vol. 2, 550 p. For individual items see A86-33777 to A86-33830.

Papers are presented on vigilance mechanisms; information-processing approaches to the study of human-computer interaction; human factors in telecommunications; assessing the effects of individual differences on mental and physical workload; computers for training, instruction, and information retrieval; display simplification, visual search, and decluttering; and expert/knowledge-based systems. Topics discussed include vision, information scanning, and retrieval; human factors in accident analysis; managing organizational and product design changes; visual displays and VDT usage; industrial ergonomics; industrial safety; the objectives for human performance and research in military command and control; space and teleoperation; and habitability in constrained/constraining environments. Consideration is given to automation; the use of event-related brain potentials in measurement of attention, performance, and workload; maintenance and simulation training; visual performance and color displays; attention and decision making, human factors in space; and future training technologies. I.F.

A86-33777
AUTOMATIC AND CONTROLLED PROCESSING APPROACH TO INTERPRETING VIGILANCE PERFORMANCE
A. D. FISK (South Carolina, University, Columbia) IN: Human Factors Society, Annual Meeting, 29th, Baltimore, MD, September 29-October 3, 1985, Proceedings. Volume 1 . Santa Monica, CA, Human Factors Society, 1985, p. 14-18. refs

The Fisk and Schneider (1981) data on predicting vigilance performance based on automatic and controlled processing are examined. Controlled processing is defined as serial, limited by short-term memory, under direct control of the individual, modifies long-term memory, and requires little practice; automatic processing is the opposite of controlled. The data reveal that vigilance decrement is reduced if the observer is properly trained and uses automatic processing to detect the target stimuli, and controlled processing is the locus of vigilance effect. The reliability of automatic processing is evaluated by studying the effects of various stressors on automatic and controlled processes. It is observed that automatic processing is unaffected by heat, alcohol, and high mental workloads; however, controlled processing is limited. It is noted that performance is controlled by the processing mode not by factors such as task complexity or stage of processing. I.F.

A86-33778
INFORMATION PROCESSING IN VIGILANCE PERFORMANCE - COMPLEXITY REVISITED
J. S. WARM, W. N. DEMBER (Cincinnati, University, OH), T. M. LANZETTA (IBM Corp., Armonk, NY), J. C. BOWERS, and R. J. LYSAGHT IN: Human Factors Society, Annual Meeting, 29th, Baltimore, MD, September 29-October 3, 1985, Proceedings. Volume 1 . Santa Monica, CA, Human Factors Society, 1985, p. 19-23. refs

Several experiments are described showing that the vigilance decrement can be reversed or retarded by a suitable level of complexity in symbolic functions needed for critical signal detection. This effect is most likely based upon motivational rather than learning factors and is dependent upon the selection of a complex task that is no more capacity demanding than a simple one. Author

A86-33782
THE INTERFERING EFFECTS OF PROCESSING CODE ON VISUAL MEMORY
B. P. GOETTL (Illinois, University, Champaign) IN: Human Factors Society, Annual Meeting, 29th, Baltimore, MD, September 29-October 3, 1985, Proceedings. Volume 1 . Santa Monica, CA, Human Factors Society, 1985, p. 66-70. refs
(Contract N00014-79-C-0658)

The possibility of reducing task interference in complex aviation environments by taking advantage of the verbal-spatial short term memory dichotomy is explored in a dual-task paradigm. Eighteen subjects performed verbal and spatial retention memory tasks concurrently with intervening verbal and spatial cognitive tasks. Both number and processing code of the intervening tasks were manipulated. Support was found for code-specific interference such that concurrently performed tasks of the same code disrupted performance more than concurrent tasks of different codes. In addition spatial memory was found to be more fragile than verbal memory. Implications of the findings to mental workload reduction include task scheduling, presentation format, and assignment. Author

ASSESSING SUBJECTIVE WORKLOAD ASSESSMENT - A COMPARISON OF SWAT AND THE NASA-BIPOLAR METHODS
M. A. VIDULICH and P. S. TSANG (NASA, Ames Research Center, Moffett Field, CA) IN: Human Factors Society, Annual Meeting, 29th, Baltimore, MD, September 29-October 3, 1985, Proceedings. Volume 1 . Santa Monica, CA, Human Factors Society, 1985, p. 71-75. refs

The Subjective Workload Assessment Technique (SWAT) and the NASA weighted-bipolar method used for evaluating subjective workload assessment are compared. The application of these methods to the rating of single- and dual-task trials of tracking and spatial transformation is described. The methods used to collect the ratings for the SWAT and bipolar technique are examined. Analysis of the transformation-tracking data reveal that the two assessment techniques produce similar results and both measure the differences in task difficulty. The positive and negative characteristics of each technique are analyzed. I.F.

TO SPEAK OR NOT TO SPEAK - A MULTIPLE RESOURCE PERSPECTIVE
P. S. TSANG, E. J. HARTZELL (NASA, Ames Research Center, Moffett Field, CA), and R. A. ROTHSCHILD (San Jose State University, CA) IN: Human Factors Society, Annual Meeting, 29th, Baltimore, MD, September 29-October 3, 1985, Proceedings. Volume 1 . Santa Monica, CA, Human Factors Society, 1985, p. 76-80. refs

The desirability of employing speech response in a dynamic dual task situation was discussed from a multiple resource perspective. A secondary task technique was employed to examine the time-sharing performance of five dual tasks with various degrees of resource overlap according to the structure-specific resource model of Wickens (1980). The primary task was a visual/manual tracking task which required spatial processing. The secondary task was either another tracking task or a spatial transformation task with one of four input (visual or auditory) and output (manual or speech) configurations. The results show that the dual task performance was best when the primary tracking task was paired with the visual/speech transformation task. This finding was explained by an interaction of the stimulus-central processing-response compatibility of the transformation task and the degree of resource competition between the time-shared tasks. Implications on the utility of speech response were discussed. Author

A86-33788
AGE-DEPENDENT CHANGES IN INFORMATION PROCESSING ABILITIES BETWEEN 20 AND 60 YEARS
R. BRAUNE, C. D. WICKENS, D. STRAYER, and A. F. STOKES (Illinois, University, Savoy) IN: Human Factors Society, Annual Meeting, 29th, Baltimore, MD, September 29-October 3, 1985, Proceedings. Volume 1 . Santa Monica, CA, Human Factors Society, 1985, p. 226-230. refs
(Contract N00014-83-K-0747)

Information processing performance in single- and dual-task configurations was examined across 60 subjects between the ages of 20 and 60. The objective was to investigate the general slowing trend observed with increasing chronological age more closely. The results supported this general slowing trend which appears to be more pronounced for complex stimulus materials. However, age did not interact with dual-task loading. Examination of the evoked brain potential data under speed and accuracy instructions suggested that most of the slowing was attributed to response processes rather than those of perception and memory. Furthermore, older subjects were more conservative in placing their response criterion, and suffered a smaller loss when placed under speed stress. Author

AN EXPERIMENTAL APPROACH TO VALIDATING A THEORY OF HUMAN ERROR IN COMPLEX SYSTEMS
N. M. MORRIS and W. B. ROUSE (Search Technology, Inc., Norcross, GA) IN: Human Factors Society, Annual Meeting, 29th, Baltimore, MD, September 29-October 3, 1985, Proceedings. Volume 1 . Santa Monica, CA, Human Factors Society, 1985, p. 333-337. refs
(Contract NAS2-12048)

The problem of 'human error' is pervasive in engineering systems in which the human is involved. In contrast to the common engineering approach of dealing with error probabilistically, the present research seeks to alleviate problems associated with error by gaining a greater understanding of causes and contributing factors from a human information processing perspective. The general approach involves identifying conditions which are hypothesized to contribute to errors, and experimentally creating the conditions in order to verify the hypotheses. The conceptual framework which serves as the basis for this research is discussed briefly, followed by a description of upcoming research. Finally, the potential relevance of this research to design, training, and aiding issues is discussed. Author

EYE-SCAN BEHAVIOR IN A FLIGHT SIMULATION TASK AS A FUNCTION OF LEVEL OF TRAINING
J. R. COMSTOCK, JR., G. D. COATES, and R. H. KIRBY (Old Dominion University, Norfolk, VA) IN: Human Factors Society, Annual Meeting, 29th, Baltimore, MD, September 29-October 3, 1985, Proceedings. Volume 1 . Santa Monica, CA, Human Factors Society, 1985, p. 391-395.
(Contract NAG1-451)

The present study explored eye-scan behavior as a function of level of subject training. Oculometric (eye-scan) measures were recorded from each of ten subjects during training trials on a CRT-based flight simulation task. The task developed for the study incorporated subtasks representative of specific activities performed by pilots, but which could be performed at asymptotic levels within relatively short periods of training. Changes in eye-scan behavior were examined as initially untrained subjects developed skill in the task. Eye-scan predictors of performance on the task were found. Examination of eye-scan in proximity to selected task events revealed differences in the distribution of looks at the instruments as a function of level of training. Author

HELICOPTER CREW EVALUATIONS ON THE EFFECTS OF VIBRATION ON PERFORMANCE
R. P. BATEMAN and R. P. WHITE, JR. (Systems Research Laboratories, Inc., Dayton, OH) IN: Human Factors Society, Annual Meeting, 29th, Baltimore, MD, September 29-October 3, 1985, Proceedings. Volume 1 . Santa Monica, CA, Human Factors Society, 1985, p. 550-553. Navy-supported research. refs

The relationship between aircraft vibration levels, fatigue, and performance is analyzed. Twelve experienced helicopter crew members ranked nine helicopters based on vibration levels and their fatigue levels were evaluated; no correlation between vibration characteristics and the onset of fatigue is observed. The effects of vibration on helicopter operations are examined. It is noted that high workloads and boredom cause fatigue and inhibit performance. I.F.

THE PSYCHOPHYSICS OF WORKLOAD - A SECOND LOOK AT THE RELATIONSHIP BETWEEN SUBJECTIVE MEASURES AND PERFORMANCE
D. GOPHER, N. CHILLAG, and N. ARZI (Technion - Israel Institute of Technology, Haifa) IN: Human Factors Society, Annual Meeting, 29th, Baltimore, MD, September 29-October 3, 1985, Proceedings. Volume 2 . Santa Monica, CA, Human Factors Society, 1985, p. 640-644.
(Contract NAGW-494)

Load estimates based upon subjective and performance indices were compared for subjects performing size matching and letter typing tasks under 6 levels of priorities, in single and dual task conditions. Each half of the group used a different task as reference in their subjective judgement. The results are interpreted to indicate that subjective measures are especially sensitive to voluntary allocation of attention and to the load on working memory. Association with performance is expected whenever these two factors are main determinants of performance efficiency, otherwise the two are likely to dissociate. Author

A86-33806
ASSESSMENT OF TASK PROFICIENCY IN AIR FORCE OJT
R. E. WARM (Applied Science Associates, Inc., Valencia, PA) IN: Human Factors Society, Annual Meeting, 29th, Baltimore, MD, September 29-October 3, 1985, Proceedings. Volume 2 . Santa Monica, CA, Human Factors Society, 1985, p. 740-744.

An On-the-Job Training (OJT) task proficiency assessment system was developed and tried out in the Air Force OJT environment. The task evaluation form system includes development procedures which when applied to a specific task allow subject matter experts to generate evaluation instruments. The resulting instruments, called task evaluation forms, accurately and completely depict the critical aspects of task performance. The task evaluation forms can be used by OJT supervisors to detect errors in task performance and derive and scores and pass/fail decisions which reflect observed performance. Author

AN INVESTIGATION OF THE 'VON RESTORFF' PHENOMENON IN POST-TEST WORKLOAD RATINGS
D. C. THORNTON (Toronto, University, Canada) IN: Human Factors Society, Annual Meeting, 29th, Baltimore, MD, September 29-October 3, 1985, Proceedings. Volume 2 . Santa Monica, CA, Human Factors Society, 1985, p. 760-764. refs
(Contract NAGW-429)

The von Restorff effect in post-task ratings of task difficulty is examined. Nine subjects performed a hovercraft simulation task which combined elements of skill-based tracking and rule- and knowledge-based process control for five days of one hour sessions. The effects of isolated increases in workload on rating of task performance, and on the number of command errors and river band hits are analyzed. It is observed that the position of the workload increase affects the number of bank hits and command errors. The data reveal that factors not directly related to the task performance influence subjective rating, and post-task ratings of workload are biased. I.F.

A86-33808* Illinois Univ., Savoy.
THE EFFECT OF VARYING TASK DIFFICULTY ON SUBJECTIVE WORKLOAD
Y.-Y. YEH, C. D. WICKENS (Illinois, University, Savoy), and S. G. HART (NASA, Ames Research Center, Moffett Field, CA) IN: Human Factors Society, Annual Meeting, 29th, Baltimore, MD, September 29-October 3, 1985, Proceedings. Volume 2 . Santa Monica, CA, Human Factors Society, 1985, p. 765-769.

The effect of different difficulty distribution patterns on subjective workload, and the presence of a primacy/recency effect in subjective ratings are examined. Eight subjects performed the perceptual central processing required for response selection and manual target acquisition for response execution. The reaction time, movement time, and the percent of correct pattern matching and arithmetic equations are analyzed. The data reveal that subjective rating is unaffected by different task difficulty and no primacy/recency effects are observed in subjective ratings. It is concluded that subjective workload reflects the experience of an ongoing integration process. I.F.

A86-33809
TRAINING CHARACTERISTICS OF THE CRITERION TASK SET WORKLOAD ASSESSMENT BATTERY
R. E. SCHLEGEL (Oklahoma, University, Norman) and C. A. SHINGLEDECKER (Ergometrics Technology, Inc., Dayton, OH) IN: Human Factors Society, Annual Meeting, 29th, Baltimore, MD, September 29-October 3, 1985, Proceedings. Volume 2 . Santa Monica, CA, Human Factors Society, 1985, p. 770-773. refs
(Contract F49620-82-C-0035)

An evaluation of the Criterion Task Set was performed to determine the training requirements for the various tasks. Twenty subjects were divided into four groups. One group trained on all nine tasks in the battery. The other three groups trained on different three-task subsets. All subjects trained for two hours per day on five consecutive days. Response time, accuracy and subjective workload measures were obtained for each trial. The required number of trials for stable performance ranged from two to six with a mode of five. Slight improvements were observed on some tasks after eight to ten trials. Performance by the group trained on all nine tasks was equivalent on half of the tasks and worse on the other half. Subjective workload ratings were highly correlated with the actual performance scores. Author

A86-33816* Georgia Inst. of Tech., Atlanta.
RULE-BASED ANALYSIS OF PILOT DECISIONS
C. M. LEWIS (Georgia Institute of Technology, Atlanta) IN: Human Factors Society, Annual Meeting, 29th, Baltimore, MD, September 29-October 3, 1985, Proceedings. Volume 2 . Santa Monica, CA, Human Factors Society, 1985, p. 907-911. refs
(Contract NAG2-123)

The application of the rule identification technique to the analysis of human performance data is proposed. The relation between the language and identifiable consistencies is discussed. The advantages of production system models for the description of complex human behavior are studied. The use of a Monte Carlo significance testing procedure to assure the validity of the rule identification is examined. An example of the rule-based analysis of Palmer's (1983) data is presented. I.F.

A86-33818
ANTICIPATORY ADJUSTMENTS DURING A WARNING INTERVAL - CORTICAL NEGATIVITY AND PERCEPTUAL SENSITIVITY
T. F. SANQUIST (Ford Aerospace and Communications Corp., Sunnyvale, CA) IN: Human Factors Society, Annual Meeting, 29th, Baltimore, MD, September 29-October 3, 1985, Proceedings. Volume 2 . Santa Monica, CA, Human Factors Society, 1985, p. 958-961. Navy-supported research. refs

Cortical negative afterwaves were recorded while subjects performed a warned signal detection task. Warning intervals of 500, 1200 and 1900 msec, and immediate and delayed responses were employed as experimental conditions. Detection sensitivity was best at the 1200 msec warning interval, which coincided with maximum cortical negativity. The response requirement manipulation had no effect on detection performance or brain wave amplitude. The results are interpreted as indicating an arousal based allocation of processing resources, indexed by cortical negativity. Author

A86-33819
THE USE OF BRAIN EVOKED RESPONSE IN A CRITICAL EVENT DETECTION TASK
G. F. WILSON, S. L. WARD, and R. L. HANN (USAF, Aerospace Medical Research Laboratories, Wright-Patterson AFB, OH) IN: Human Factors Society, Annual Meeting, 29th, Baltimore, MD, September 29-October 3, 1985, Proceedings. Volume 2 . Santa Monica, CA, Human Factors Society, 1985, p. 962-965. refs

Brain evoked potentials (EP) were used to study subject responses to 'critical events' (CEs) which were part of a series of stimuli. Both reaction times (RT) and EPs were influenced by the appearance of the CE. Longer RTs and a large late positive component of the EP were associated with the trials containing the CE stimuli. Intermediate RTs and late positve components of the EPs were found in a condition in which the stimulus preceding the CE gave information about the following CE and was also similar in appearance. While this is a laboratory test, it is similar in many ways to actual situations confronted by human factors specialists. EPs appear, then, to be useful tools in the system design and evaluation process. Author

A86-33820
EVENT-RELATED BRAIN POTENTIALS AND RESOURCE ALLOCATION - FROM DUAL-TASK DECREMENTS TO DUAL-TASK INTEGRALITY
A. F. KRAMER and C. D. WICKENS (Illinois, University, Champaign) IN: Human Factors Society, Annual Meeting, 29th, Baltimore, MD, September 29-October 3, 1985, Proceedings. Volume 2 . Santa Monica, CA, Human Factors Society, 1985, p. 966-970. refs

The use of event-related brain potentials (ERP) in the study of mental workload and resource allocation is discussed. A series of studies are reviewed which, taken together, suggest that the P300 component of the ERP provides a reliable measure of the perceptual/central processing demands of a task. Furthermore, the use of P300 in the assessment of mental workload offers the advantage of not requiring an overt response, thereby eliminating the possibility of secondary task intrusion into primary task performance. The concept of dual-task integrality is introduced and the resource demands of integral task pairs are inferred from measures of P300 amplitude. The finding are discussed in terms of resource models of mental workload. Author

A86-33821
EVENT-RELATED BRAIN POTENTIALS AND INTERMODAL DIVIDED ATTENTION
R. PARASURAMAN (Catholic University of America, Washington, DC) IN: Human Factors Society, Annual Meeting, 29th, Baltimore, MD, September 29-October 3, 1985, Proceedings. Volume 2 . Santa Monica, CA, Human Factors Society, 1985, p. 971-975. refs

Recorded event-related brain potentials (ERPs) are analyzed in order to study attention allocation to visual and auditory channels under high-information load. Ten subjects between 19-25 years monitored an audiovisual display of intermittent 2-degree circles presented centrally and 1000-Hz tones presented binaurally. The relationship between efficiency of target detection in the visual and auditory channel is examined with the performance operating characteristic analysis; a tradeoff in processing between the two channels is detected. The data reveal that intermodality divided attention affects both modality-specific and modality-nonspecific ERP components in practiced subjects under high-information load conditions. The application of the data to models of processing resources and the evaluation of mental workload is described.

PROCESSING INFERENCES DERIVED FROM EVENT-RELATED POTENTIAL MEASURES IN A MONITORING TASK
R. L. HORST, R. C. MUNSON (ARD Corp., Columbia, MD), and D. S. RUCHKIN (Maryland, University, Baltimore) IN: Human Factors Society, Annual Meeting, 29th, Baltimore, MD, September 29-October 3, 1985, Proceedings. Volume 2 . Santa Monica, CA, Human Factors Society, 1985, p. 976-980. refs
(Contract NAS1-17576)

Event-related potentials (ERPs) were recorded from the scalp of subjects as they monitored changing digital readouts for values that went 'out-of-bounds'. Workload was manipulated by varying the number of readouts that were monitored concurrently. The ERPs elicited by changes in the readouts showed long latency positivities that increased in amplitude, not only with the number of readouts monitored, but also with the number of monitored readouts that were 'in danger' of going out-of-bounds. No effects were found due to the number of nonmonitored readouts 'in danger'. This evidence indicates that subjects (1) selectively attended to the monitored readouts and (2) processed the monitored readouts differently as the readouts approached the out-of-bounds levels to which an overt response was required.

A COMPARISON OF OPERATOR PERFORMANCE IN MANUAL AND AUTOMATED VERSIONS OF A DYNAMIC DECISION-MAKING TASK
C. D. WICKENS, Y.-Y. YEH, R. B. FULD, and S. HODEL (Illinois, University, Savoy) IN: Human Factors Society, Annual Meeting, 29th, Baltimore, MD, September 29-October 3, 1985, Proceedings. Volume 2 . Santa Monica, CA, Human Factors Society, 1985, p. 1089-1091. refs
(Contract NAG2-308)

The study of operator performance in manual and automated versions of dynamic decision tasks is proposed. The two microcomputer paradigms of simple and complex, dynamic scheduling tasks are described. Error detection accuracy and latency of assignment, and fault detection and correction for the two tasks are to be analyzed.
I.F.

A86-33826
VOICE AND MANUAL CONTROL IN DUAL TASK SITUATIONS
C. D. WICKENS (Illinois, University, Savoy), J. ZENYUH (USAF, Wright Aeronautical Laboratories, Wright-Patterson AFB, OH), V. CULP (USAF, Mather AFB, CA), and W. MARSHAK (U.S. Air Force Academy, Colorado Springs, CO) IN: Human Factors Society, Annual Meeting, 29th, Baltimore, MD, September 29-October 3, 1985, Proceedings. Volume 2 . Santa Monica, CA, Human Factors Society, 1985, p. 1093-1097. refs

This paper describes various influences of compatibility and task-resource competition that affect time-sharing a verbal and a manual control task, with either manual or voice control. In the reported experiment subjects performed a two-dimensional discrete tracking task concurrently with a Sternberg memory search task. Each task was controlled either by voice, the left hand, or the right hand. The major influence on performance was the advantage for conditions in which the Sternberg task was voice-controlled and tracking was manually controlled. Voice-controlled tracking produced incompatibility, while bimanual control produced resource competition. Smaller, but still reliable effects were observed for hemispherically-compatible assignments (left-handed tracking).

EYE AND HEAD RESPONSE TO AN ATTENTION CUE IN A DUAL TASK PARADIGM
G. L. CALHOUN (USAF, Aerospace Medical Research Laboratories, Wright-Patterson AFB, OH), C. J. ARBAK (Systems Research Laboratories, Inc., Dayton, OH), and W. P. JANSON (Synergy, Inc., Dayton, OH) IN: Human Factors Society, Annual Meeting, 29th, Baltimore, MD, September 29-October 3, 1985, Proceedings. Volume 2 . Santa Monica, CA, Human Factors Society, 1985, p. 1125-1129. refs
(Contract F33615-82-C-0511)

Eight subjects were used to characterize eye and head movements in response to a cue to refixate. The subjects' tasks were to complete a centrally located task and identify vertically peripheral targets. Eye and head reaction time as well as conventional performance measures were recorded. The results showed that the eye and head movement pattern obtained with vertically displaced targets was not identical with those previously obtained with horizontally displaced targets. The results also indicated that eye reaction time, with hard tracking, increases the farther a target is vertically displaced from the centrally located task and head reaction time decreases with the presence of a verbal cue prior to target presentation. Manual reaction time did not, however, decrease with a cue. These results suggest that such unobtrusive measures may be valuable in the design of attention cueing systems.

A HIERARCHICAL MODEL OF PILOT'S PROCEDURAL BEHAVIOR FOR COCKPIT WORKLOAD ANALYSIS
K. TANAKA and K. MATSUMOTO (National Aerospace Laboratory, Chofu, Japan) (Japan Society for Aeronautical and Space Sciences, Aircraft Symposium, 22nd, Tokyo, Japan, Nov. 27-29, 1984) Japan Society for Aeronautical and Space Sciences, Transactions (ISSN 0549-3811), vol. 28, Feb. 1986, p. 230-239. refs

A dynamic model of human pilot behavior during aircraft operation is presented for the purpose of estimating pilot workload in an automated cockpit environment. On the basis of Rasmussen's hierarchical structure of human behavior (1983), the model is composed of three levels: knowledge-based behavior, rule-based behavior, and skill-based behavior. The model is constructed by taking advantages of LISP, and has the following specific features: goal-oriented and scenario-driven hierarchical structure; sequencer-type procedural behavior; and a group of functions of skill-based behavior. Simulation results of an aircraft operation driven by a sample scenario demonstrate that the model can reproduce estimations of crew's business corresponding to their subjective business, and show the possibility that the model should provide us with a tool for dynamic analysis of pilot behavior. TRAINING OF COSMONAUTS AND EXPERIENCE DURING SPACE FLIGHT
R. SHARMA (Indian Air Force, New Delhi, India) Aviation Medicine, vol. 29, June 1985, p. 13-17.

This paper presents the experiences of the Indian cosmonaut from the selection stage to the extensive training programs and his observations during the launch, space orbit and successful return to earth. Special refrence is made to the effectiveness of yogic exercise in cosmonaut training. Author

A86-35289#
SOME ASPECTS OF YOGIC EXERCISES DURING SPACE FLIGHT
J. M. WADHAWAN (Air Force Hospital, Jorhat, India), M. B. DIKSHIT (Indian Air Force, Institute of Aviation Medicine, Bangalore, India), and P. C. CHATTERJEE (Indian Air Force, New Delhi, India) Aviation Medicine, vol. 29, June 1985, p. 31-37.

The paper discusses some aspects of yogic exercises conducted during the joint Indo-Soviet manned space program. The ground and inflight yogic exercises conducted during the experiment have been discussed with some of their psycho-physiological principles and basis for the selection of these exercises. The experiment was aimed to determine the role of yogic exercises in minimizing the adverse effects of weightlessness during the space flight from April 3, 1984 to April 11, 1984. Preliminary results suggest that yogic exercises had definite beneficial effects on the Indian cosmonaut who was the subject of this study. The positive effects on the motor system were shown by appreciable recovery of EMG potentials following infligh yogic exercises which was found declining initially due to reflex muscular hypotonia. The Indian cosmonaut also maintained a state of psycho-physiological well being during the space flight. Author

AUTOMATED PORTABLE TEST SYSTEM (APTS) - A PERFORMANCE ENVELOPE ASSESSMENT TOOL
R. S. KENNEDY (Essex Corp., Orlando, FL), W. P. DUNLAP (Tulane University, New Orleans, LA), M. B. JONES (Pennsylvania State University, Hershey), R. L. WILKES (Casper College, NY), and A. C. BITTNER, JR. (U.S. Navy, Naval Biodynamics Laboratory, New Orleans, LA) IN: Aerospace Behavioral Engineering Technology Conference, 4th, Long Beach, CA, October 14-17, 1985, Proceedings . Warrendale, PA, Society of Automotive Engineers, Inc., 1985, p. 3-13. refs
(Contract NSF BSN-84-60765; NAS9-16982)
(SAE PAPER 851775)

The reliability and stability of microcomputer-based psychological tests are evaluated. The hardware, test programs, and system control of the Automated Portable Test System, which assesses human performance and subjective status, are described. Subjects were administered 11 pen-and-pencil and microcomputer-based tests for 10 sessions. The data reveal that nine of the 10 tests stabilized by the third administration; inertial correlations were high and consistent. It is noted that the microcomputer-based tests display good psychometric properties in terms of differential stability and reliability. I.F.

MENTAL FITNESS FOR DUTY AND CONTROL OF AROUSAL STATE
H. NAGANO (Japan Air Lines Co., Ltd., Tokyo) IN: Aerospace Behavioral Engineering Technology Conference, 4th, Long Beach, CA, October 14-17, 1985, Proceedings . Warrendale, PA, Society of Automotive Engineers, Inc., 1985, p. 27-29.
(SAE PAPER 851778)

Human factors in flight operations are studied. The two aspects essential for flight management, 'think ahead' and 'fly the aircraft', are described. The need for the pilot to control arousal level in order to maintain the reliability of the brain and perform required procedures is examined. The relationship between human factors and automation is analyzed. The development of improved training procedures for airline pilots in Japan is discussed. I.F.

ASTRONAUT CREW PERFORMANCE - RECENT SPACE EXPERIENCE
P. A. SANTY and J. L. LEWIS (NASA, Johnson Space Center, Houston, TX) IN: Aerospace Behavioral Engineering Technology Conference, 4th, Long Beach, CA, October 14-17, 1985, Proceedings . Warrendale, PA, Society of Automotive Engineers, Inc., 1985, p. 71-74. refs
(SAE PAPER 851802)

The performance and productivity of astronauts in space are studied. The effects of the space and spacecraft environments, man/machine interaction, work-rest cycles, and psychological factors on man's performance in space are examined. The objectives of the Gemini, Apollo, and Skylab programs and the performance data collected on these missions are analyzed. I.F.

A86-35441
PILOT SPEECH PERFORMANCE WHILE TALKING TO A SPEECH RECOGNIZER AND FLYING A COMPETITIVE HELICOPTER PURSUIT TASK
C. A. SIMPSON (Psycho-Linguistic Research Associates, Menlo Park, CA) IN: Aerospace Behavioral Engineering Technology Conference, 4th, Long Beach, CA, October 14-17, 1985, Proceedings . Warrendale, PA, Society of Automotive Engineers, Inc., 1985, p. 133-141. Army-supported research. refs
(SAE PAPER 851779)

The performance of pilots and connected-word speaker dependent speech recognizers under task loading conditions are evaluated. Ten male pilots performed recognizer template enrollment, pilot message categorization training, and warning message classification and gunner/scout pursuit tasks; the experimental conditions and procedures are described. Pilot response accuracy, pilot-machine system response accuracy, recognizer-computer performance, and recognition algorithm performance are examined. Individual performance differences among pilots and the effects of task loading on recognition accuracy are analyzed. The isolated-word recognition algorithm data of Simpson (1985) and the connected-word recognition algorithm data are compared. The data reveal that the isolated-word algorithm is inadequate for aircraft cockpit use; however, the connected-word algorithm is applicable for noncritical flight functions. I.F.

A CASE FOR REALISTIC TRAINING
J. S. CLAUZEL (Douglas Aircraft Co., Long Beach, CA) IN: Aerospace Behavioral Engineering Technology Conference, 4th, Long Beach, CA, October 14-17, 1985, Proceedings . Warrendale, PA, Society of Automotive Engineers, Inc., 1985, p. 175, 176.
(SAE PAPER 851915)

The development of a realistic program for training flight crews is discussed. The use of instructional techniques, equipment, and simulation in crew training is examined. It is noted that the application of the training information to emergency situations could reduce the number of aircraft accidents. I.F.

A86-35446* National Aeronautics and Space Administration. Ames Research Center, Moffett Field, Calif.
REALISTIC TRAINING FOR EFFECTIVE CREW PERFORMANCE
H. C. FOUSHEE (NASA, Ames Research Center, Moffett Field, CA) IN: Aerospace Behavioral Engineering Technology Conference, 4th, Long Beach, CA, October 14-17, 1985, Proceedings . Warrendale, PA, Society of Automotive Engineers, Inc., 1985, p. 177-181.
(SAE PAPER 851916)

Evaluation of incident and accident statistics reveals that most problems occur not because of a lack of proficiency in pilot training, but because of the inability to coordinate skills into effective courses of action. Line-Oriented Flight Training (LOFT) and Cockpit Resource Management (CRM) programs provide training which will develop both individual crew member skills, as well as those associated with effective group function. A study conducted by NASA at the request of the U.S. Congress supports the argument for training that enhances crew performance in addition to providing individual technical skills, and is described in detail. ASSESSMENT OF SIMULATION FIDELITY USING MEASUREMENTS OF PILOTING TECHNIQUE IN FLIGHT. II
S. W. FERGUSON, W. F. CLEMENT (Systems Technology, Inc., Mountain View, CA), R. H. HOH (Systems Technology, Inc., Hawthorne, CA), and W. B. CLEVELAND (NASA, Ames Research Center, Moffett Field, CA) AHS, Annual Forum and Technology Display, 41st, Fort Worth, TX, May 15-17, 1985, Paper. 24 p. Army-sponsored research. refs
(Contract NAS2-11098; NAS2-11731)

Two components of the Vertical Motion Simulator (presently being used to assess the fidelity of UH-60A simulation) are evaluated: (1) the dash/quickstop Nap-of-the-earth (NOE) piloting task, and (2) the bop-up task. Data from these two flight test experiments are presented which provide information on the effect of reduced visual field of view, variation in scene content and texture, and the affect of pure time delay in the closed-loop pilot response. In comparison with task performance results obtained in flight tests, the results from the simulation indicate that the pilot's NOE task performance in the simulator is significantly degraded. K.K.

AN INTEGRATED DISPLAY FOR VERTICAL AND TRANSLATIONAL FLIGHT EIGHT FACTORS AFFECTING PILOT PERFORMANCE
J. S. TATRO (Bell Helicopter Textron, Fort Worth, TX) and S. N. ROSCOE (New Mexico State University, Las Cruces) Human Factors (ISSN 0018-7208), vol. 28, Feb. 1986, p. 101-120. refs
(Contract N00014-81-K-0439)

As part of an overall research program to optimize both forward-looking and downward-looking tactical situation displays for all-weather instrument flight in vertical takeoff and landing (VTOL) aircraft, an integrated horizontal situation display was developed for both vertical and translational flight. This paper covers the developed and initial experimentation of the downward-looking portion of the overall display and control system. The effects of eight factors on pilot performance were tested, and a multiple regression model of VTOL pilot performance as a function of those eight factors was derived for each of three dependent performance measures. Factors having important effects were position error magnification, control order, prediction time, control gain, tracking mode, and several of their interactions. Author

CONTROLLING OF PILOT WORK CAPACITY BY PSYCHOSOMATIC SELF-REGULATION TECHNIQUES [UPRAVLENIE RABOTOSPOSOBNOST'IU LETCHIKA METODOM PSIKHOSOMATICHESKOI SAMOREGULIATSII]
S. G. MELNIK and A. V. SHAKULA Voenno-Meditsinskii Zhurnal (ISSN 0026-9050), Feb. 1986, p. 37-39. In Russian. refs

The effect of psychosomatic self-regulation training on the work capacity and the psychophysiological state of pilots was investigated. The training method consisted of eight 20-min-long recorded group instructions, followed by two weeks of relaxation training sessions. The results of the training efficiency were evaluated by measuring the postflight heat contraction rates and blood pressures and by comparing the in-flight work efficiency and piloting techniques in trained and untrained pilots assigned to long-time flights or to frequently repeated destroyer-flight missions. The pilots trained in self-regulation exhibited smaller increases in rates of heart contractions and in blood pressures and higher levels of work capacity and piloting technique. Moreover, in the second year after the training in self-regulation, the time losses due to illness were lower by a factor of 3 in comparison with the control group. I.S.

VISUAL CUE DOMINANCE HIERARCHIES - IMPLICATIONS FOR SIMULATOR DESIGN
R. WARREN (USAF, Aerospace Medical Research Laboratory, Wright-Patterson AFB, OH) and G. E. RICCIO (Systems Research Laboratories, Inc., Dayton, OH) IN: Flight simulation/simulators; Proceedings of the Aerospace Technology Conference and Exposition, Long Beach, CA, October 14-17, 1985 . Warrendale, PA, Society of Automotive Engineers, Inc., 1985, p. 61-75. refs (SAE PAPER 851946)

Fidelity requirements of flight simulators are addressed by proposing a classification based on informational, perceptual, experiential, and action implications. Fidelity assessment is argued to begin with cue inventory definition and empirical research. Cue evaluation is complex due to the presence of multiple cues for a single referent. A dominance hierarchy may emerge allowing little incidental learning to weak cues. An altitude holding experiment is reported to illustrate cue dominance effects. Other studies are discussed which also indicate possible non-optimum effects of using scenes with multiply redundant cues. Since certain flight situations may delete dominant cues, pilots need to be experienced using the weaker cues and this implies using simulators in reduced cue modes. Hence, maximum fidelity is not always desirable.

BEHAVIORAL CONSIDERATIONS FOR SPACE STATION DESIGN Final Report, Oct. 1984 - Dec. 1985
F. R. WOOD and K. O. DUNIVIN Jan. 1986 69 p refs
(AD-A163478; USAFA-TR-86-3) Avail: NTIS HC A04/MF A01 CSCL 05J

Flight crews are more than just the sum of the members' individual technical skills. They are dynamic and constantly changing systems of interacting units. The critical factor in this system is the interaction process. Factors which affect this interaction process are design considerations critical to the successful operation of the human system in space. Future space missions will be longer and will involve more routine tasks. Crews will be larger and more heterogeneous. These conditions make proper consideration of group dynamics principles imperative. Formal design of future space missions should consider critical design factors which promote the group process. The real change to current NASA mission design suggested by this report is that greater consideration be given to the informal processes characteristic of the human system. Consideration of these factors will pay large dividends in terms of human system performance and neglect of these factors will incur costs. GRA

STATISTICAL INFERENCES IN CROSS-LAGGED PANEL STUDIES
L. S. MAYER Nov. 1985 51 p refs
(Contract DAAG29-82-K-0156)
(AD-A163892; TR-15; ARO-19065.16-MA) Avail: NTIS HC A04/MF A01 CSCL 12A

Cross-lagged panel studies are statistical studies in which two or more variables are measured for a large number of subjects at each of several waves or points in time. The variables divide naturally into two sets and the primary purpose of the analysis is to estimate and test the cross-effects between the two sets. Such studies are found in the mainstreams of social behavioral and business research. One approach to this analysis is to express the cross-effects as parameters in regression equations and then use regression methods to estimate and test the parameters. We contribute to this approach by extending the regression model to a multivariate model that captures the correlation between the dependent variables. We develop estimators for the parameters of this model and hypothesis tests for assessing the presence of effects and cross-effects. We demonstrate our results with the analysis of a cross-lagged panel study of the perceptions and attitudes of patients toward a health maintenance organization.

THEORY-BASED COGNITIVE ASSESSMENT Interim Paper, Oct. 1984 - Sep. 1985
P. C. KYLLONEN Jan. 1986 35 p refs
(AD-A164083; AFHRL-TP-85-30) Avail: NTIS HC A03/MF A01 CSCL 05J

This paper reviews the theoretical foundations, current issues, and a number of recent studies in the area of cognitive ability assessment, with particular focus on personnel selection and classification applications. A brief review of the history of aptitude testing is provided, with particular emphasis on the cognitive psychology, along with the availability of modestly priced microcomputer systems, hold promise for improvements in ability assessment technology. Recent studies conducted at the Air Force Human Resources Laboratory as part of the Learning Abilities Measurement Program and similar projects are reported. The focus of these studies has been on determining (1) the utility of various cognitive tasks for providing meaningful information on individual cognitive skill levels, (2) whether such tasks tap abilities not measured by currently operational paper-and-pencil tests, and (3) how changes in processing efficiency can be analyzed. Cognitive diagnostic as well as selection-and-classification applications are discussed. GRA

SCHEMA-BASED THEORY OF INFORMATION PRESENTATION FOR DISTRIBUTED DECISION MAKING Interim Report
D. F. NOBLE and J. A. TRUELOVE Aug. 1985 120 p refs
(Contract N00014-84-C-0484)
(AD-A163150; R-028-85) Avail: NTIS HC A06/MF A01 CSCL 05J

The Schema-Based Theory of Information Presentation for Distributed Decision Making describes a schema structure appropriate for understanding connections between the way that information is presented and its impact on distributed decision making. The theory suggests a process for determining how information should be presented so that consensus and coordination will be improved and decision conflicts will be reduced. The theory proposes that experienced decision makers select alternatives by mental processes that match the features of the current situation to features of reference situations for which possible alternatives are known to be appropriate. These reference situations may specify particular threat activities and dispositions, own Battle Group objectives, prescribed contingency plan action, and decision behavior of other decision makers to the group. Information presented according to the principles derived from the theory will encourage each decision maker to more fully consider the impact of each action on the objectives of other decision makers. Applying the principles requires that the general schema used by decision makers be determined prior to the time when particular situation-specific information is presented. Given this prior determination, the principles sugg est what emphasis needs to be given to specific features and feature relationships in the presentation of the current situation. GRA

THE USE OF SIGNAL DETECTION THEORY IN RESEARCH ON HUMAN-COMPUTER INTERACTION
R. PARASURAMAN and G. WISDOM (Catholic University of America, Washington, DC) IN: Human Factors Society, Annual Meeting, 29th, Baltimore, MD, September 29-October 3, 1985, Proceedings. Volume 1 . Santa Monica, CA, Human Factors Society, 1985, p. 33-37. refs

The use of signal detection theory (SDT) in evaluating attentional and decision-making performance in the context of human-computer interaction is reviewed. SDT provides a means for distinguishing between accuracy and criterion setting in decision-making environments. This is useful in evaluating the effectiveness of the decision-making performance of an intelligent machine, a human user, or a human-machine system. SDT is also useful in deciding how best to allocate subtasks and functions in human-computer monitoring systems. Applications of SDT to the evaluation of rule bases in expert systems and the design of computer assistance in human-computer monitoring are discussed. Author

THERE'S A VOICE IN THE SKY - BUT CAN A PICTURE TELL YOU MORE?
C. P. ROBINSON (USAF, Aeronautical Systems Div., Wright-Patterson AFB, OH) and R. E. EBERTS (Purdue University, West Lafayette, IN) IN: Human Factors Society, Annual Meeting, 29th, Baltimore, MD, September 29-October 3, 1985, Proceedings. Volume 1 . Santa Monica, CA, Human Factors Society, 1985, p. 61-65. refs

A current trend in cockpit design is to incorporate synthesized speech to present secondary information. Multiple resource theories of information processing support this, but theories of stimulus-central processing-response compatibility suggest that spatial information presented visually may have some advantages over speech. An experiment was run comparing tracking and response performance when information was presented pictorially and by speech. Pictorial subjects responded quicker and improved more with learning than did speech subjects. More research on the spatial advantages of pictorial displays is needed before too many speech displays are incorporated into the cockpit. Author

ASSESSMENT OF SWAT ACCURACY
M. E. REVESMAN (BDM Corp., Albuquerque, NM) and S. M. ROKICKI (USAF, Operational Test and Evaluation Center, Kirtland AFB, NM) IN: Human Factors Society, Annual Meeting, 29th, Baltimore, MD, September 29-October 3, 1985, Proceedings. Volume 1 . Santa Monica, CA, Human Factors Society, 1985, p. 183-187.

Recently, the Subjective Workload Assessment Technique (SWAT) has become a popular tool for assessing mental workload. SWAT attempts to estimate an individual's internal representation of mental workload from a rank ordering of combinations of mental workload factors. This paper presents an experiment in which these internal values were simulated on a computer. Conjoint analysis was performed on rank orders produced from the internal values with and without noise added. Results indicated that conjoint analysis was able to accurately estimate the 'true' rankings and values, even when noise was present. In addition, linear regression was found to be a poor estimator of the 'true' values, while a simpler technique, rank summing, was found to be as accurate an estimator as conjoint analysis. Author

WORKLOAD MEASUREMENT IN SYSTEM DESIGN AND EVALUATION
F. T. EGGEMEIER (Wright State University, Dayton, OH), C. A. SHINGLEDECKER, and M. S. CRABTREE (Ergometrics Technology, Inc., Dayton, OH) IN: Human Factors Society, Annual Meeting, 29th, Baltimore, MD, September 29-October 3, 1985, Proceedings. Volume 1 . Santa Monica, CA, Human Factors Society, 1985, p. 215-219. refs
(Contract F33615-82-K-0522)

Because of its central role in system development, workload measurement has been extensively researched. These efforts have produced a variety of workload assessment techniques, many of which can be classified as either subjective, physiological, or behavioral measures. These categories of measures can vary along several dimensions that can be used as criteria in selection of a technique for a particular application. The proposed selection criteria include the sensitivity, diagnosticity, and intrusiveness associated with a technique. Different stages of system design can require techniques that differ on the noted dimensions. Since no technique is capable of meeting all of the applicable criteria, a comprehensive approach to workload assessment will require a battery of subjective, physiological, and behavioral measures. Further research dealing with comparative evaluation of the various assessment techniques along the noted dimensions will be required in order to refine workload metric selection criteria. Author

FEATURE POSITIVE CODING EFFECTS ON OBJECT LOCALIZATION
D. L. WILSON (Science Applications International Corp., Dayton, OH), R. K. BURNS (USAF, Aeronautical Systems Div., Wright-Patterson AFB, OH), and G. G. KUPERMAN (USAF, Aerospace Medical Research Laboratory, Wright-Patterson AFB, OH) IN: Human Factors Society, Annual Meeting, 29th, Baltimore, MD, September 29-October 3, 1985, Proceedings. Volume 1 . Santa Monica, CA, Human Factors Society, 1985, p. 292-296. refs

An investigation of feature positive information coding which included clutter level and display polarity as independent variables was conducted. Three dependent measures were considered: search time, designation time, and designation accuracy. Twelve subjects performed a target location/designation task under 72 combinations of the experimental variables. For search time, the main effects of feature coding and clutter level together with their interaction were found to be significant (p less than 0.01). For designation time, only the main effect of clutter was significant (p less than 0.05). No significant findings were identified for designation accuracy. Author

DECLUTTERING METHODS FOR HIGH DENSITY COMPUTER-GENERATED GRAPHIC DISPLAYS
E. E. SCHULTZ, JR., D. A. NICHOLS, and P. S. CURRAN (California Institute of Technology, Jet Propulsion Laboratory, Pasadena) IN: Human Factors Society, Annual Meeting, 29th, Baltimore, MD, September 29-October 3, 1985, Proceedings. Volume 1 . Santa Monica, CA, Human Factors Society, 1985, p. 300-303.

Several decluttering methods were compared with respect to the speed and accuracy of user performance which resulted. The presence of a map background was also manipulated. Partial removal of nonessential graphic features through symbol simplification was as effective a decluttering technique as was total removal of nonessential graphic features. The presence of a map background interacted with decluttering conditions when response time was the dependent measure. Results indicate that the effectiveness of decluttering methods depends upon the degree to which each method makes essential graphic information distinctive from nonessential information. Practical implications are discussed. Author

A86-33791
A PERIPHERAL INTEGRATED STATUS DISPLAY - IS IT REALLY GIVING THE 'BIG PICTURE' OR IS IT A MINISERIES?
D. B. BERINGER (Wisconsin, University, Madison) IN: Human Factors Society, Annual Meeting, 29th, Baltimore, MD, September 29-October 3, 1985, Proceedings. Volume 1 . Santa Monica, CA, Human Factors Society, 1985, p. 304-307. refs

Much effort has been directed towards the creation of effective integrated displays for vehicle or system control. These efforts have generally been aimed at 'primary' instruments or indices of system performance and only comparatively recently have secondary indices received similar attention. Each group of indices, however, has generally been kept separate, resulting in systems having multiple nonintegrated integrated displays. A method is proposed whereby these may be combined within a single instrument or 'integrated' integrated display. This method is based upon the use of spatial cues created by regular versus irregular polygons. A major question at issue is whether such a display created by regular versus irregular polygons. A major question at issue is whether such a display constitutes a single integrated shape or merely an assembly of subshapes that are serially scanned. Author

A86-33795
PRO-SWAT APPLIED TO ADVANCED HELICOPTER CREW STATION CONCEPTS
G. G. KUPERMAN (USAF, Aerospace Medical Research Laboratory, Wright-Patterson AFB, OH) IN: Human Factors Society, Annual Meeting, 29th, Baltimore, MD, September 29-October 3, 1985, Proceedings. Volume 1 . Santa Monica, CA, Human Factors Society, 1985, p. 398-402. refs

The Subjective Workload Assessment Technique was applied projectively (Pro-SWAT) to the prediction of workload to be expected in a single-pilot, advanced scout/attack helicopter weapon system. A composite mission scenario was created. Five configurations of the pilot/vehicle interface were synthesized, each based on some form of a virtual panoramic display (VPD). They were assessed at each of six segments extracted from the mission scenario. An analysis of variance, with predicted workload as the dependent measure, found highly significant differences between both mission segments and VPD concepts (p less than 0.01). Author

A86-33797
THE SACCADIC EYE MOVEMENT CONTROL SYSTEM
J. HENDRICKSON (Old Dominion University, Norfolk, VA) IN: Human Factors Society, Annual Meeting, 29th, Baltimore, MD, September 29-October 3, 1985, Proceedings. Volume 1 . Santa Monica, CA, Human Factors Society, 1985, p. 427-430. refs

This paper reports the results of an effort to construct a computer model of the saccadic eye movement control system.

The purpose of the system, the structure of the system, and measures of system performance were identified. A model of the system was constructed and a computer simulation of the model was developed and exercised. The performance of the computer model was then compared with the measured performance of the system and the validity of the model was determined. Author

A86-33798
SHADOW MASK DISPLAY VISIBILITY - HUMAN THRESHOLDS FOR PERCEPTION OF MISCONVERGENCE EFFECTS
O. K. HANSEN (HEDCON, Inc., Villa Park, CA) IN: Human Factors Society, Annual Meeting, 29th, Baltimore, MD, September 29-October 3, 1985, Proceedings. Volume 1 . Santa Monica, CA, Human Factors Society, 1985, p. 431-435.

A psychophysical study was conducted to identify the acceptable limits of misregistration of the color vector beams in a 'delta gun' shadow mask display. The criteria for acceptability were the perceptual responses of sixteen male pilots who viewed the display and adjusted the beam convergence to achieve various visual effects. Results are discussed in terms of display image perception and engineering design standards. Author

A WORKLOAD ANALYSIS FOR STRATEGIC CONVENTIONAL STANDOFF CAPABILITY MISSIONS
G. G. KUPERMAN (USAF, Aerospace Medical Research Laboratories, Wright-Patterson AFB, OH) and D. L. WILSON (Science Applications International Corp., Dayton, OH) IN: Human Factors Society, Annual Meeting, 29th, Baltimore, MD, September 29-October 3, 1985, Proceedings. Volume 2 . Santa Monica, CA, Human Factors Society, 1985, p. 635-639. refs

This paper presents the methodology and supporting rationale for the investigation of operator workload in the context of an enhancement to an existing weapon system. The methodology is applicable early in the conceptual design process and forms the baseline data from which final design validation may be developed. The Subjective Workload Assessment Technique (SWAT), used projectively, forms the kernel of the methodology. A strategy for building part-task through full-mission simulations, at increasing levels of face and content validity, is presented in the context of the weapon system development process. Author

APPLICABILITY OF USING THE CAR-II MODEL IN DESIGN AND EVALUATION OF MULTIOPERATOR WORKSTATIONS WITH SHARED CONTROLS
S. J. MORRISSEY, B. E. HERRING (Auburn University, AL), and M. G. GENNETTI (Stanford University, CA) IN: Human Factors Society, Annual Meeting, 29th, Baltimore, MD, September 29-October 3, 1985, Proceedings. Volume 2 . Santa Monica, CA, Human Factors Society, 1985, p. 698-701.

This study was done to show how a computerized workstation design program could be used to design and evaluate workstations having multiple operators with shared or common controls. To do this the Computerized Assessment of Reach program (CAR) was used to evaluate the cockpit of the OH-58A (Huey) helicopter. This same program was then used to demonstrate methods of cockpit redesign. Author

TIMEBASED ANALYSIS OF SIGNIFICANT COORDINATED OPERATIONS (TASCO) - A COCKPIT WORKLOAD ANALYSIS TECHNIQUE
M. G. ELLISON and B. B. ROBERTS (Computer Sciences Corp., Edwards AFB, CA) IN: Human Factors Society, Annual Meeting, 29th, Baltimore, MD, September 29-October 3, 1985, Proceedings. Volume 2 . Santa Monica, CA, Human Factors Society, 1985, p. 774-778.

TASCO has been developed to provide a diagnostic tool to aid in avionics operation task structuring. The objective of the TASCO logic is to determine the optimum organization of cockpit activities considering task complexity and task execution time compared to estimated time available to perform the task set. The TASCO cockpit workload analysis technique measures and evaluates the relationships between pilot proficiency, experience, and weapon system complexity in order to reduce risk in task performance. TELEOPERATION OF LEGGED VEHICLES - UNIQUE PROBLEMS ASSOCIATED WITH WALKING AND FOOT PLACEMENT
R. J. GERTH, D. B. BERINGER, and J. C. MUNDT (Wisconsin, University, Madison) IN: Human Factors Society, Annual Meeting, 29th, Baltimore, MD, September 29-October 3, 1985, Proceedings. Volume 2 . Santa Monica, CA, Human Factors Society, 1985, p. 834-838. refs

Teleoperation of legged walking vehicles poses some interesting problems in display and control design. Informational needs associated with individual foot placement when traversing rough terrain are explained. Problems faced in meeting those needs and vision, display, and control system options are presented. Future research is also described. Author

HUMAN PRODUCTIVITY OF SPACE STATION
K. F. WILLSHIRE (NASA, Langley Research Center, Hampton, VA) IN: Human Factors Society, Annual Meeting, 29th, Baltimore, MD, September 29-October 3, 1985, Proceedings. Volume 2 . Santa Monica, CA, Human Factors Society, 1985, p. 843-845.

The objectives of NASA's Space Station Human Productivity Program are examined. The design and functions of the Space Station are described. The effects of the interior architecture, crew support, crew activities, intravehicular activity (IVA) systems, and extravehicular/IVA interfaces on the productivity of the Space Station are investigated. It is estimated that crew productivity should be sustained for a 90-day tour at levels above 90 percent of the initial mission performance level. I.F.

CHARACTERIZATION OF GOOD TELEOPERATORS - WHAT APTITUDES, INTERESTS, AND EXPERIENCE CORRELATE WITH MEASURES OF TELEOPERATOR PERFORMANCE
J. P. YORCHAK, C. S. HARTLEY (Martin Marietta Corp., Space Operations Simulator Laboratory, Denver, CO), and E. HINMAN (NASA, Marshall Space Flight Center, Huntsville, AL) IN: Human Factors Society, Annual Meeting, 29th, Baltimore, MD, September 29-October 3, 1985, Proceedings. Volume 2 . Santa Monica, CA, Human Factors Society, 1985, p. 1135-1139. refs
(Contract NAS8-35184)

The use of aptitude tests and questionnaries to evaluate an individuals aptitude for teleoperation is studied. The Raven Progressive Matrices Test and Differential Aptitude Tests, and a 16-item questionnaire for assessing the subject's interests,

academic background, and previous experience are described. The Proto-Flight Manipulator Arm, cameras, console, hand controller, and task board utilized by the 17 engineers are examined. The correlation between aptitude scores and questionnaire responses, and operator performance is investigated. Multiple regression data reveal that the eight predictor variables are not individually significant for evaluating operator performance; however, the complete test battery is applicable for predicting 49 percent of subject variance on the criterion task. I.F.

HELICOPTER FLIGHT CONTROL WITH ONE HAND
A. L. LIPPAY, M. KING, R. V. KRUK (CAE Electronics, Ltd., Montreal, Canada), and M. MORGAN (National Aeronautical Establishment, Ottawa, Canada) (CASI, Annual General Meeting, 32nd, Montreal, Canada, May 27, 1985) Canadian Aeronautics and Space Journal (ISSN 0008-2821), vol. 31, Dec. 1985, p. 335-345. refs

In a given control task, human error rate may increase in proportion to the number of control devices and mental transformations. A single device whose degrees of freedom coincide spatially with the principal task parameters, and whose dynamic characteristics provide a modicum of feedback representing the demands imposed on the system, should permit a reduction of the (human) control problem. A deflection-type side-arm controller developed in Montreal is described, which enables axis-by-axis or co-ordinated control in up to six degrees of freedom with one hand. The design minimizes unwanted inputs and cross-coupling between axes. Six-axis control was established in several spacecraft and manipulator simulations. A four-axis version has been installed in a research helicopter. Preliminary testing indicated good pilot acceptance, reduced training/familiarization requirements and - in some cases - significant improvement in control performance. A second generation engineering effort is currently in progress to produce high quality units for formal testing and eventual flight qualification. Author

ADVANCED MANIPULATOR SYSTEM ARCHITECTURAL REQUIREMENTS FOR SPACE STATION
P. KUMAR and S. SACHDEV (Spar Aerospace, Ltd., Remote Manipulator Systems Div., Toronto, Canada) IN: Space and society - Progress and promise; Proceedings of the Twenty-second Space Congress, Cocoa Beach, FL, April 23-26, 1985 . Cape Canaveral, FL, Canaveral Council of Technical Societies, 1985, p. 2-1 to 2-8.

Remote manipulator systems must be governed by concepts and requirements related to maintainability and autonomy for indefinite life. It is required that these systems provide operational autonomy resulting in operations independent of ground and machine autonomy resulting in routine tasks being performed by automated and expert system features. Moreover, these systems must be space maintainable. These requirements embody the lower tier requirements of automation, reliability, safety, fault tolerancing and artificial intelligence features. The requirement for manipulator mobility is discussed, and a Space Station era manipulator system is presented with function-allocation to various levels of control hierarchy and constituents of a system data base. RECENT ADVANCEMENTS IN TELEPRESENCE TECHNOLOGY DEVELOPMENT
K. CORKER (Bolt Beranek and Newman, Inc., Cambridge, MA) and A. K. BEJCZY (California Institute of Technology, Jet Propulsion Laboratory, Pasadena) IN: Space and society - Progress and promise; Proceedings of the Twenty-second Space Congress, Cocoa Beach, FL, April 23-26, 1985 . Cape Canaveral, FL, Canaveral Council of Technical Societies, 1985, p. 2-15 to 2-22. refs

This paper describes recent developments at JPL aimed at enhancing the operator's awareness of the remote task he or she is controlling in space teleoperation. The first development is related to the use of force-reflecting or bilateral manual control in weightless condition. The second development is related to integrated graphics displays of force and torque information originating from a remote robot hand. The third development is related to a distributed computational system in teleoperation organized in two groups: one integrated with a remote robot arm and hand, and another integrated with the control station. This computational system carries out interactive automation functions. Author

EVOLUTIONARY PATHS FOR ARTIFICIAL INTELLIGENCE TECHNOLOGIES IN OPERATOR INTERACTIONS WITH SPACE STATION ROBOTS
R. A. HAMMOND, D. C. DORROUGH (Boeing Computer Services Co., Bellevue, WA), and D. P. MEYER (Boeing Aerospace Co., Seattle, WA) IN: Space and society - Progress and promise; Proceedings of the Twenty-second Space Congress, Cocoa Beach, FL, April 23-26, 1985 . Cape Canaveral, FL, Canaveral Council of Technical Societies, 1985, p. 7-14 to 7-20.

Two paths have been proposed for the evolution of technologies supporting human interfacing with robots aboard the NASA Space Station: (1) the use of teleoperators (so that human operators are in the control loop as the robot operates) followed by the adoption of autonomous robotics, as the technology advances; and (2) the use of fully independent robots from the outset, but using simple task menus until more autonomous robotic technology is developed. Attention is given to the relative merits of each approach in the illustrative case of EVA robots for routine station keeping tasks. The route of essential robot autonomy is concluded to provide the better EVA system. O.C.

AEROSPACE BEHAVIORAL ENGINEERING TECHNOLOGY CONFERENCE, 4TH, LONG BEACH, CA, OCTOBER 14-17, 1985, PROCEEDINGS
Conference sponsored by SAE. Warrendale, PA, Society of Automotive Engineers, Inc., 1985, 444 p. For individual items see A86-35427 to A86-35458.
(SAE P-168)

Papers are presented on assessing human fitness and performance; the use of simulation as a cockpit design tool; the

man-machine interface; the Space Station; and human performance. Consideration is given to advanced transport aircraft technology; operator workload analysis; rotorcraft missions; the pilot in the operational loop; and flight crew training. Topics also discussed include cockpit communications; color displays; commercial air transport and general aviation operations; and space and military operations. I.F.

A86-35431
COCKPIT AUTOMATION - DESIGN AND IMPLEMENTATION ISSUES
R. W. MOSS and J. M. REISING (USAF, Flight Dynamics Laboratory, Wright-Patterson AFB, OH) IN: Aerospace Behavioral Engineering Technology Conference, 4th, Long Beach, CA, October 14-17, 1985, Proceedings . Warrendale, PA, Society of Automotive Engineers, Inc., 1985, p. 41-45. refs
(SAE PAPER 851921)

The relationship between pilots and the electronic crew member (EC) is discussed. The use of automation for decision making and its reliability are examined; the roles of the pilot and EC in decision making are studied. The implementation of the EC is described. Three examples of EC/pilot interaction are presented. I.F.

WORKLOAD ASSESSMENT - PROGRESS DURING THE LAST DECADE
T. M. MCCLOY and W. L. DERRICK (U.S. Air Force Academy, Colorado Springs, CO) IN: Aerospace Behavioral Engineering Technology Conference, 4th, Long Beach, CA, October 14-17, 1985, Proceedings . Warrendale, PA, Society of Automotive Engineers, Inc., 1985, p. 125-130. USAF-supported research. refs
(SAE PAPER 851877)

Over the last decade, considerable research has been conducted on the construct of operator workload and its measurement. From this research, both theory and methods have evolved to provide valid assessment of this construct. Two classes of assessment methods, secondary tasks and subjective scales, dominate the literature at this time. This paper traces the development of both methods, ties their use to current theories of human processing resources, and evaluates both with respect to five criteria. Author

COCKPIT AUTOMATION - IN NEED OF A PHILOSOPHY
E. L. WIENER (Miami, University, FL) IN: Aerospace Behavioral Engineering Technology Conference, 4th, Long Beach, CA, October 14-17, 1985, Proceedings . Warrendale, PA, Society of Automotive Engineers, Inc., 1985, p. 369-375. refs
(Contract NCC2-152)
(SAE PAPER 851956)

Concern has been expressed over the rapid development and deployment of automatic devices in transport aircraft, due mainly to the human interface and particularly the role of automation in inducing human error. The paper discusses the need for coherent philosophies of automation, and proposes several approaches: (1) flight management by exception, which states that as long as a crew stays within the bounds of regulations, air traffic control and flight safety, it may fly as it sees fit; (2) exceptions by forecasting, where the use of forecasting models would predict boundary penetration, rather than waiting for it to happen; (3) goal-sharing, where a computer is informed of overall goals, and subsequently has the capability of checking inputs and aircraft position for consistency with the overall goal or intentions; and (4) artificial intelligence and expert systems, where intelligent machines could mimic human reason. THE EFFECTS OF SYNTACTIC COMPLEXITY ON THE HUMAN-COMPUTER INTERACTION
R. A. CHECHILE, R. N. FLEISCHMAN, and D. M. SADOSKI (Tufts University, Medford, MA) Human Factors (ISSN 0018-7208), vol. 28, Feb. 1986, p. 11-22. refs
(Contract NAG3-51)

Three divided-attention experiments were performed to evaluate the effectiveness of a syntactic analysis of the primary task of editing flight route-way-point information. For all editing conditions, a formal syntactic expression was developed for the operator's interaction with the computer. In terms of the syntactic expression, four measures of syntactic were examined. Increased syntactic complexity did increase the time to train operators, but once the operators were trained, syntactic complexity did not influence the divided-attention performance. However, the number of memory retrievals required of the operator significantly accounted for the variation in the accuracy, workload, and task completion time found on the different editing tasks under attention-sharing conditions.

BIOIMPEDANCE MEASUREMENT WITH RESPECT TO PULSATILE PULMONARY BLOOD FLOW
T. R. WENG, M. KATAYAMA, E. K. MOTOYAMA, and R. P. HIRSCH (Pittsburgh, University, PA) Aviation, Space, and Environmental Medicine (ISSN 0095-6562), vol. 57, May 1986, p. 449-456. Research supported by the Children's Hospital of Pittsburgh and University of Pittsburgh. refs

The feasibility of using impedance plethysmography (IPG) to estimate pulsatile pulmonary distribution in seated objects is evaluated at three lung volumes, RV, FRC and TLC. The upright lung was divided into four equal sampling areas dorsally along the paravertebral space. The Kubicek formula was employed and results indicated a decrease in regional base resistance from the top to 3/4 down the lung and then a leveling off, while there was an increase in regional perfusion from the apex to 3/4 down, and a subsequent decrease. The sum of regional base resistance values was larger than the total sampling field resistance field, a discrepancy explained by the lead field theory. This IPG-determined regional perfusion gradient may represent the pulsatile perfusion gradient, as impedance analyzer outputs are intimately linked to the pulse-synchronous pulsatile nature of pulmonary blood flow. Hence, the advantages of the IPG technique lie in its safety, its noninvasiveness, and its simplicity in assessing regional pulmonary blood flow semiquantitatively in clinical settings or unusual environments.

AN INFORMATIONAL ASSESSMENT OF CHANGES IN THE PHYSIOLOGICAL CHARACTERISTICS OF AN OPERATOR UNDER DIFFERENT WORK REGIMENS [INFORMATSIONNYI PODKHOD K OTSENKE IZMENENII FIZIOLOGICHESKIKH KHARAKTERISTIK OPERATORA PRI RAZNYKH REZHIMAKH EGO RABOTY]
IU. P. GORGO (Kievskii Gosudarstvennyi Universitet, Kiev, Ukrainian SSR) Fiziologiia Cheloveka (ISSN 0131-1646), vol. 12, Mar.-Apr. 1986, p. 253-257. In Russian. refs

A PNN-2 psychoanalyzer that issues multicolored signals requiring timed responses was used to assess the subjects' ability to concentrate. At the same time, the subjects' EKG R-R cardiointervals were recorded automatically. The test conditions simulated normal work tempo, work requiring maximal concentration, and the no-work (control) conditions. The time intervals needed to respond to simple stimuli were found to be shorter under conditions of concentrated activity than under conditions of normal work. The lengths of the latent response periods correlated reliably with the extent of organization of the R-R cardiointervals, indicating that this parameter can be used in assessing the ability to concentrate and thus the potential efficiency of an operator under changing work regimens.

THE USE OF ELLIPSOIDAL SOLIDS TO DISPLAY HUMAN BODY DYNAMIC RESPONSE
D. H. LAANANEN and D. KALITA (Arizona State University, Tempe) IN: Computers in engineering 1985; Proceedings of the International Computers in Engineering Conference and Exhibition, Boston, MA, August 4-8, 1985. Volume 2 . New York, American Society of Mechanical Engineers, 1985, p. 11-17. refs
(Contract DOT-FA03-84-P-01649)

An algorithm for displaying the human body modeled as a set of ellipsoids with hidden lines omitted is described. The algorithm is implemented as a post-processor for a dynamic simulation of an aircraft occupant and seat in a crash environment. It includes consideration of complete penetration of one ellipsoid into another and total obscuration of one by another, features which are desirable for display of the abnormal body positions that can result in a vehicle crash. Also, interaction of the ellipsoids with the polygonal representations of the restraint system and seat has been considered. Results are illustrated by examples of output produced for an aircraft crash simulation. Author

SIMULATION OF AIRCRAFT SEAT RESPONSE TO A CRASH ENVIRONMENT
D. H. LAANANEN (Arizona State University, Tempe) IN: Computers in engineering 1985; Proceedings of the International Computers in Engineering Conference and Exhibition, Boston, MA, August 4-8, 1985. Volume 3 . New York, American Society of Mechanical Engineers, 1985, p. 241-246. refs
(Contract DOT-FA03-84-P-01649)

A three-dimensional mathematical model of an aircraft seat, occupant, and restraint system has been developed for use in analysis of light aircraft crashworthiness. Because of the significant role played by the seat in overall system crashworthiness, a finite element model of the seat structure is included. The seat model can accommodate large displacements, nonlinear material behavior, and local buckling of tubular elements. The occupant model consists of twelve segments whose dimensions and inertial properties have been determined from studies of human body anthropometry and kinematics and from measurements of anthropomorphic test dummies. The seat and occupant models are described, along with the simulation program, and some examples of output data are provided. Author

THE ROLE OF FLIGHT SIMULATION IN HELICOPTER CREW STATION DESIGN
J. N. DEMASI and H. P. HARPER (Sikorsky Aircraft, Stratford, CT) IN: Flight simulation/simulators; Proceedings of the Aerospace Technology Conference and Exposition, Long Beach, CA, October 14-17, 1985 . Warrendale, PA, Society of Automotive Engineers, Inc., 1985, p. 1-10. refs
(SAE PAPER 851900)

The need for simulation is assessed in the context of changing missions and technology; and the helicopter simulation facilities at the Sikorsky Aircraft Division are described in detail. These facilities include the human factors engineering laboratory, the avionics laboratory, the fixed-base simulator, the motion base simulator, and an in-flight simulator. It has been shown that simulation, an essential part of the crew station design process, can be applied at many levels. Simulator capabilities must cover a broad spectrum of fidelity levels with the capability to tie real hardware with the software simulation. It is concluded that in-flight simulation is necessary to provide realism for critical mission elements and to provide a validation of anchor points. Block diagrams are included. K.K.

THE HUMAN ROLE IN SPACE: TECHNOLOGY, ECONOMICS AND OPTIMIZATION
S. B. HALL, ED. (NASA, Marshall Space Flight Center, Huntsville, AL) Park Ridge, NJ, Noyes Publications, 1985, 398 p. No individual items are abstracted in this volume.

Man-machine interactions in space are explored in detail. The role and the degree of direct involvement of humans that will be required in future space missions are investigated. An attempt is made to establish valid criteria for allocating functional activities between humans and machines and to provide insight into the technological requirements, economics, and benefits of the human presence in space. Six basic categories of man-machine interactions are considered: manual, supported, augmented, teleoperated, supervised, and independent. Appendices are included which provide human capability data, project analyses, activity timeline profiles and data sheets for 37 generic activities, support equipment and human capabilities required in these activities, and cumulative costs as a function of activity for seven man-machine modes. C.D.

SPACE TELEROBOTICS - A FEW MORE HURDLES
J. E. PENNINGTON (NASA, Langley Research Center, Hampton, VA) IEEE, International Conference on Robotics and Automation, San Francisco, CA, Apr. 8-10, 1986, Paper. 5 p. refs

In the early 1990's, a telerobotic work system which can be used with the Mobile Remote Manipulator System (MRMS) on the Space Station is to become available. However, a number of difficulties have to be overcome before these plans can be realized. The word 'telerobotics' is used in connection with a system which can function as teleoperator, and which, in addition, has also autonomous functions. Thus, as a robot, the system would automatically perform selected operations using multisensory internal feedback for control. A role for telerobotics is defined, taking into account EVA servicing and repair work, remote satellite refueling, and operations during the Space Station development period. Attention is also given to the definition of a telerobotic system, the definition of the telerobotics technology set, and approaches related to the development of a telerobotic system. G.R.

THE DESIGN, FABRICATION AND DELIVERY OF A MANIPULATOR FOOT RESTRAINT MOCKUP FOR SPACE TELESCOPE DEVELOPMENT TESTING Final Report
M. A. HOLLINGSWORTH 11 Apr. 1986 12 p refs
(Contract NAS8-36366)
(NASA-CR-178837; NAS 1.26:178837; H-86-05) Avail: NTIS HC A02/MF A01 CSCL 05H

The Manipulator Foot Restraint (MFR) is a subsystem of the Remote Manipulator System (RMS) which plays a major role in servicing the Hubble Space Telescope (HST) in orbit. Flight drawings were used to construct the MFR to guarantee that the mockup components were functionally equivalent to the flight MFR. Material surface finishes and tolerances that were compatible to the Neutral Buoyance Simulator (NBS) environment were used. Recommendation for improvements are discussed. B.G.

PHYSICAL, ANTHROPOMETRICAL, AND BODY COMPOSITION CHARACTERISTICS OF WORKERS AT KENNEDY SPACE CENTER
M. L. LASLEY Sep. 1985 55 p refs
(Contract NAS10-10285)
(NASA-TM-83102; NAS 1.15:83102) Avail: NTIS HC A04/MF A01 CSCL 05H

At the Kennedy Space Center, workers are often exposed to cardiovascular and muscular stress in job-related activities which

may require a high level of physical fitness in order to safely complete the work task. Similar tasks will be performed at other launch and landing facilities and in space for the Space Station. One such category includes workers who handle toxic propellants and must wear Self-Contained Atmospheric Protective Ensembles (SCAPE) that can weigh 56 lbs. with the air pack. These suits provide a significant physical challenge to many of the workers in terms of carrying this load while moving about and performing work. Furthermore, under some conditions, there is a significant thermal stress. The physical characteristics of these workers are, therefore, of consequence. The purpose of this study was to analyze the anthropometry, body composition, strength, power, endurance, flexibility, aerobic fitness, and blood variables of a representative sample of male KSC SCAPE workers and to compare them with characteristics of other male workers at KSC (total population N=110). Three separate comparisons were made. Author

MAN-MACHINE SYSTEMS OF THE 1990 DECADE: COGNITIVE FACTORS AND HUMAN INTERFACE ISSUES
P. J. HOFFMAN Aug. 1985 53 p refs
(AD-A163865; NPS74-85-002) Avail: NTIS HC A04/MF A01 CSCL 05H

This paper presents the primary psychological concepts which are fundamental to the design of man-machine interfaces for intelligent systems of the 1990's. These concepts embrace perception, learning motivation, and cognitive capacities of human operators, in systems which require a high degree of operator-machine interaction. The central role of feedback is emphasized through simple schematic examples, designed to provide an understanding of the reciprocity requirements in man-machine communication. Cognitive theory and recent experimental data form the basis for discussion of visual image storage, short-term memory, long-term memory, transfer rates and buffering of information being processed by the human operator, under control of a central processor with a cycle time of roughly 70 milliseconds. Systems of the 1990 era will provide increased capability for high-speed processing of data and will utilize increasing numbers of decision-aides, spreadsheets and AI tools. Users of these systems will be components of networks, linked via efficient communication systems to other users and other subsystems. These developments will lead to fundamental changes in the work place. GRA

THE EFFECT OF COLD TRAINING AND THE WEARING OF GLOVES ON MANUAL PERFORMANCE IN THE COLD: A COMPARISON OF PURE ABILITY AND OPERATIONAL TASKS Final Report
W. H. ROGERS 14 Nov. 1985 19 p refs
(AD-A163893; NSMRL-1067) Avail: NTIS HC A02/MF A01 CSCL 06Q

Cold-induced manual performance decrements pose a serious problem for military cold weather operations. Experiments were based on the notion that the amount of decrement, and possibly the best means for reducing that decrement, depend on the specific motor abilities required to perform a given task. Experiments have been performed using a battery of pure-ability tasks so that ultimately results could be generalized to any task. The study conducted here had the following goals: (1) to complement the previous studies in terms of the cold temperatures tested, and obtain profiles of performance of decrements and cold-injury dangers across a range of cold temperatures; (2) to assess the wearing of gloves and temperature-specific training as potential methods of reducing or eliminating cold-induced manual performance decrements; and (3) to validate and compare results previously and currently obtained using pure-ability tasks with those obtained using operational tasks. A battery of five pure ability and four operational tasks were administered to six four-man groups of U.S. Marines. Three groups practiced the tasks at room temperature on the first of three training days and at -10 C on the other two training days, while the other three groups practiced at room temperature on all three days. AN EVALUATION OF COLOR SETS FOR CRT DISPLAYS Interim Report
D. F. NERI, A. R. JACOBSON, and S. M. LURIA 31 Dec. 1985 30 p refs
(AD-A163894; NSMRL-1068) Avail: NTIS HC A03/MF A01 CSCL 06P

Ten subjects performed a color matching task with ten sets of seven colors, adapted from sets recommended in the literature. The color sets covered a wide range in color difference values. Performance with some color sets was significantly better than that with others on a task where color discrimination was important and the colors needed to be discriminated quickly and accurately. Effectiveness of a color set did not depend on the inclusion of any particular colors; rather, the relationships among colors proved to be important. The larger the color difference value between the two most perceptually similar members of a set, the shorter the reaction time and the fewer the errors on the color matching task. Author (GRA)

COMPENDIUM OF PROTECTIVE EYEWEAR
C. E. MOSS Mar. 1985 87 p refs
(PB86-135779) Avail: NTIS HC A05/MF A01 CSCL 06Q

Wearing apropriate eye and face protection devices will prevent or minimize most eye and/or facial injuries. However, at present there is no data source available on commercially available eye and face protectors. To provide characteristics and other product information, this compendium has been developed to list all commercially available eyewear products manufactured in the United States as of July 1, 1984. The protectors listed in this compendium include spectacles, goggles, welding helmets/hand shields, face shields, and filter plates. The information provided will assist the health and safety community in selecting appropriate eye and face protection for the job. GRA

A SMALL OXYGEN CONCENTRATOR Final Report, Jun. 1983 - Jul. 1984
C. F. THEIS, K. G. IKELS, and R. G. DORNES Dec. 1985 25 p
(AD-A163145; USAFSAM-TR-85-18) Avail: NTIS HC A02/MF A01 CSCL 06K

Onboard oxygen generating systems (OBOGS) require large quantities of air. When toxic contaminants are present, this air volume can become a problem. A small oxygen concentrator (SOC) was developed to operate at 10% the air volume and 4% the molecular sieve weight of the OBOGS. This paper gives detailed instructions on the construction of the SOC. The SOC was tested at inlet pressures of 10, 20, 30, and 40 psig and at product flows of 0.25, 0.50, 1.00, and 1.50 lpm. The SOC beds were packed with 5A or 13X molecular sieve. Additional tests were conducted with the SOC beds at 25 C, 50 C, and 60 C and using 5A molecular sieve. The SOC performance at various inlet pressures and temperatures, as measured by the oxygen concentration in the product gas, demonstrates characteristics similar to the performance of the full-size OBOGS. A SEARCH FOR INTERSTELLAR GLYCINE
I. I. BERULIS, G. WINNEWISER, V. V. KRASNOV (AN SSSR, Fizicheskii Institut, Moscow, USSR), and R. L. SOROCHENKO (Koeln, Universitaet, Cologne, West Germany) (Pis'ma v Astronomicheskii Zhurnal, vol. 11, Aug. 1985, p. 599-604) Soviet Astronomy Letters (ISSN 0360-0327), vol. 11, July-Aug. 1985, p. 251-253. Translation. refs

A search for three 8-mm line microwave lines of glycine conformer II toward Sgr B2, W51, and Ori A was conducted with the RT-22 telescope of the Pushchino Radio Astronomy Station during 1982-1983. The search placed respective upper limits of (4, 6, 2) x 10 to the 13th/sq cm on the column density. B.J.

SIMULATION OF THERMAL POLYCONDENSATION PROCESSES OF AMINO ACIDS DURING THE MIGRATION OF THEIR AQUEOUS SOLUTIONS IN THE EARTH'S LITHOSPHERE [MODELIROVANIE PROTSESSOV TERMICHESKOI POLIKONDENSATSII AMINOKISLOT PRI MIGRATSII IKH VODNYKH RASTVOROV V LITOSFERE ZEMLI]
G. A. LAVRENTEV, T. F. STRIGUNKOVA, I. A. EGOROV, L. IU. RAKITIN, and L. A. PISKUNOVA (AN SSSR, Institut Biokhimii, Moscow, USSR) Akademiia Nauk SSSR, Doklady (ISSN 0002-3264), vol. 287, no. 2, 1986, p. 455-459. In Russian. refs

The possibility of abiogenic peptide synthesis in the earth's lithosphere was investigated under conditions simulating the geological environment in the lithosphere. A continuous flow of amino acid solutions (containing glycine, alanine, valine, leucine, isoleucine, phenylalanine, lysine, arginine, aspartic acid, and glutamic acid) was passed under pressure through a heated reactor filled with layers of crushed kaolinite. At conditions of 200 C and 20 atm nitrogen, significant amounts of peptides (of 700 and higher molecular weight) are synthesized. Compared with the starting solution, the peptides are considerably enriched in lysine. Moreover, the products contain measurable amounts of serine, absent from the starting solution. A possibility is suggested that life might have originated in the lithosphere, before it appeared on the earth surface. I.S.

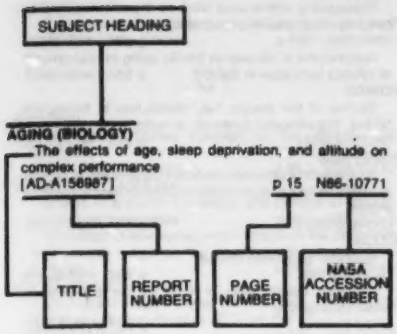
COSMOLOGICAL AND ANTHROPIC PRINCIPLES, COSMIC AND PLANETARY EVENTS, AND THE EXISTENCE OF LIFE IN THE UNIVERSE
M. SUBOTOWICZ (Lublin, Uniwersytet, Poland) Postepy Astronautyki (ISSN 0373-5982), vol. 18, no. 3-4, 1985, p. 113-131. refs

A discussion is presented which assesses the consequences for CETI and SETI research of the probabilities for the existence of extraterrestrial intelligent life implicit in the 'anthropic principle' (AP). AP, while essentially independent of the existing body of physical theory, is strongly supportive of the universality of intelligent life. Attention is also given to other threats, primarily of a physical or practical character, to the conduct of SETI efforts or the accomplishment of CETI; these encompass termination of SETI funding in virtue of public and government indifference, the jamming of CETI reception by increasingly powerful anthropogenic transmissions in orbital space, and the nonsynchronicity of high civilizations capable of SETI/CETI efforts from proximate planetary systems. O.C.

Typical Subject Index Listing



The subject heading is a key to the subject content of the document. The title is used to provide a description of the subject matter. When the title is insufficiently descriptive of the document content, the title extension is added, separated from the title by three hyphens. The (NASA or AIAA) accession number and the page number are included in each entry to assist the user in locating the abstract in the abstract section. If applicable, a report number is also included as an aid in identifying the document. Under any one subject heading, the accession numbers are arranged in sequence with the AIAA accession numbers appearing first.

Processing inferences derived from event-related potential measures in a monitoring task
p 262 A86-33822
Assessment of simulation fidelity using measurements of piloting technique in flight. II p 264 A86-35867
BIONICS
Studies of the electric field distribution in biological bodies. Experimental dosimetry at radiofrequencies
[AD-A163156] p 249 N86-25976
BIOPHYSICS
An analysis of potential predictive parameters of motion sickness using a computerized biophysical data acquisition system
[AD-A164099] p 257 N86-25981
BLOOD
Magnetic separation device
[AD-D012163] p 249 N86-25975
Ultrasonic quantification of blood volume redistribution under hypergravity
[AD-A164379] p 257 N86-25982
BLOOD CIRCULATION
Comparative study of acetazolamide and spironolactone on regional blood distribution on exposure to acute hypobaric hypoxia p 246 A86-35863
Ultrasonic quantification of blood volume redistribution under hypergravity
[AD-A164379] p 257 N86-25982
BLOOD FLOW
Plasma viscosity elevations with simulated weightlessness p 253 A86-36312
Bioimpedance measurement with respect to pulsatile pulmonary blood flow p 271 A86-36316
BLOOD PLASMA
Effect of hydration on plasma vasopressin, renin, and aldosterone responses to head-up tilt
p 253 A86-36311
Plasma viscosity elevations with simulated weightlessness p 253 A86-36312
Manganese metabolism in healthy humans during different times of the year p 255 A86-36533
BLOOD PRESSURE
Aerobic capacity and coronary risk factors in a middle-aged army population AD-A163998 HC A02/MF A01
[AD-A163998] p 257 N86-25979
BLOOD VOLUME
Time course of muscular blood metabolites during forearm rhythmic exercise in hypoxia
p 252 A86-36222
Ultrasonic quantification of blood volume redistribution under hypergravity
[AD-A164379] p 257 N86-25982
BLUE GREEN ALGAE
Hydrogen production from salt water by Marine blue green algae and solar radiation p 245 A86-34985
BODY COMPOSITION (BIOLOGY)
Physical, anthropometrical, and body composition characteristics of workers at Kennedy Space Center
[NASA-TM-83102] p 272 N86-25122
BODY MEASUREMENT (BIOLOGY)
Ultrasonic quantification of blood volume redistribution under hypergravity
[AD-A164379] p 257 N86-25982
BODY WEIGHT
Fitness and activity assessments among US Army populations: Implications for NCHS general population surveys
[AD-A164060] p 257 N86-25980
BONE MARROW
Magnetic separation device
[AD-D012163] p 249 N86-25975
BOTANY
Concepts for the life support subsystem in the EURECA Botany Facility
[DGLR PAPER 85-126] p 245 A86-34573
BRAIN
The use of brain evoked response in a critical event detection task p 261 A86-33819
Event-related brain potentials and resource allocation - From dual-task decrements to dual-task integrality
p 261 A86-33820
Gamma-aminobutyric acid and bulbar mechanisms of hemodynamic regulation p 246 A86-35941
Effects of pressure on uptake and release of calcium by brain synaptosomes p 247 A86-36225

Multidisciplinary studies on excitatory amino acids as transmitters in the brain
[AD-A164258] p 256 N86-25115
BRAIN STEM
Impulse activity of the brain stem neurons related to the cardiac and respiratory rhythms p 246 A86-35940
BREATHING
Synchronization of heart contractions and respiration during thermoregulatory polypnea in dogs p 245 A86-34490
BUTYRIC ACID
Gamma-aminobutyric acid and bulbar mechanisms of hemodynamic regulation p 246 A86-35941

C

CALCIUM
Chemically induced damage to the hippocampal formation
[NDRE/PUBL-86/1002] p 255 N86-25112
CALCIUM METABOLISM
Effects of pressure on uptake and release of calcium by brain synaptosomes p 247 A86-36225
The effect of electromagnetic radiation in the decimeter wavelength range on the neuronal calcium current in molluska p 247 A86-36494
CARCINOGENS
The experimental determination of safe atmospheric exposure concentrations of JP-10 jet fuel
[AD-A163179] p 258 N86-25985
CARDIOLOGY
Antioxidants as antiarrhythmic remedies p 246 A86-35938
Cardiokymography
[PB86-133790] p 258 N86-25987
CARDIOVASCULAR SYSTEM
Analysis of the potential association between noise-induced hearing loss and cardiovascular disease in USAF aircrew members p 250 A86-33760
Cardiovascular dynamics associated with tolerance to lower body negative pressure p 253 A86-36310
Longitudinal study of cardiovascular disease in U.S. Navy pilots p 253 A86-36314
Ultrasonic quantification of blood volume redistribution under hypergravity
[AD-A164379] p 257 N86-25982
CAVITIES
Biosensors from membrane proteins reconstituted in polymerized lipid bilayers
[AD-D012160] p 248 N86-25974
CELLS (BIOLOGY)
Biosensors from membrane proteins reconstituted in polymerized lipid bilayers
[AD-D012160] p 248 N86-25974
Magnetic separation device
[AD-D012163] p 249 N86-25975
DNA analysis of epithelial cell suspensions
[DE86-002403] p 249 N86-25977
CENTRAL NERVOUS SYSTEM
Chemically induced damage to the hippocampal formation
[NDRE/PUBL-86/1002] p 255 N86-25112
Multidisciplinary studies on excitatory amino acids as transmitters in the brain
[AD-A164258] p 256 N86-25115
CEREBRAL CORTEX
The first cortical implant of a semiconductor multielectrode array. VER (Visual Evoked Responses) and propagation analysis
[AD-A164015] p 248 N86-25972
CHEMICAL COMPOSITION
Aerobic capacity and coronary risk factors in a middle-aged army population AD-A163998 HC A02/MF A01
[AD-A163998] p 257 N86-25979
A small oxygen concentrator
[AD-A163145] p 273 N86-25993
CHIPS (ELECTRONICS)
The first cortical implant of a semiconductor multielectrode array. VER (Visual Evoked Responses) and propagation analysis
[AD-A164015] p 248 N86-25972
CHOLESTEROL
Aerobic capacity and coronary risk factors in a middle-aged army population AD-A163998 HC A02/MF A01
[AD-A163998] p 257 N86-25979
CHOLINE
Biosensors from membrane proteins reconstituted in polymerized lipid bilayers
[AD-D012160] p 248 N86-25974
CHOLINESTERASE
Biosensors from membrane proteins reconstituted in polymerized lipid bilayers
[AD-D012160] p 248 N86-25974
CHRONIC CONDITIONS
Impaired pulmonary conversion of angiotensin I to angiotensin II in rats exposed to chronic hypoxia p 246 A86-36218
CIRCADIAN RHYTHMS
The rhythms of paramagnetic-center concentration in mouse liver and a mathematical model of synchronized autooscillations p 247 A86-36497
The mechanisms of muscle activity regulation in humans depending on biorhythm type p 254 A86-36528
Seasonal dynamics of circadian rhythms of oxygen consumption and heat production in youths in Siberian conditions p 254 A86-36529
CLUTTER
Feature positive coding effects on object localization p 267 A86-33789
COCKPITS
There's a voice in the sky - But can a picture tell you more? — comparison between synthesized speech and visual displays in presenting information in cockpits p 266 A86-33781
A hierarchical model of pilot's procedural behavior for cockpit workload analysis p 263 A86-33983
Cockpit automation - Design and implementation issues
[SAE PAPER 851921] p 270 A86-35431
Cockpit automation - In need of a philosophy
[SAE PAPER 851956] p 270 A86-35454
The role of flight simulation in helicopter crew station design
[SAE PAPER 851900] p 272 A86-36940
COGNITION
Man-machine systems of the 1990 decade: Cognitive factors and human interface issues
[AD-A163865] p 273 N86-25123
Theory-based cognitive assessment
[AD-A164083] p 266 N86-25991
COHESION
Behavioral considerations for space station design
[AD-A163478] p 265 N86-25118
COLD ACCLIMATIZATION
Ontogeny of homeothermy in the immature rat - Metabolic and thermal responses p 246 A86-36221
Seasonal dynamics of circadian rhythms of oxygen consumption and heat production in youths in Siberian conditions p 254 A86-36529
Human adaptation to antagonistic environmental factors p 255 A86-36535
COLOR
An evaluation of color sets for CRT displays
[AD-A163894] p 273 N86-25125
COLOR VISION
An evaluation of color sets for CRT displays
[AD-A163894] p 273 N86-25125
COMMUNICATION THEORY
Man-machine systems of the 1990 decade: Cognitive factors and human interface issues
[AD-A163865] p 273 N86-25123
COMPATIBILITY
Behavioral considerations for space station design
[AD-A163478] p 265 N86-25118
COMPLEX SYSTEMS
An experimental approach to validating a theory of human error in complex systems p 260 A86-33792
COMPUTER AIDED DESIGN
Applicability of using the CAR-II model in design and evaluation of multioperator workstations with shared controls p 268 A86-33805
COMPUTER GRAPHICS
Decluttering methods for high density computer-generated graphic displays p 267 A86-33790
Interactive computer-based flight training
[SAE PAPER 851991] p 263 A86-35430
COMPUTER SYSTEMS PERFORMANCE
The effects of syntactic complexity on the human-computer interaction p 271 A86-36172
COMPUTER TECHNIQUES
Man-machine systems of the 1990 decade: Cognitive factors and human interface issues
[AD-A163865] p 273 N86-25123
Studies of the electric field distribution in biological bodies. Experimental dosimetry at radiofrequencies
[AD-A163156] p 249 N86-25076
An analysis of potential predictive parameters of motion sickness using a computerized biophysical data acquisition system
[AD-A164099] p 257 N86-25981
Theory-based cognitive assessment
[AD-A164083] p 266 N86-25991
COMPUTERIZED SIMULATION
The saccadic eye movement control system p 267 A86-33797
The use of ellipsoidal solids to display human body dynamic response p 272 A86-36852
Proceedings of the Item Response Theory and Computerized Adaptive Testing Conference — 3
[AD-A163040] p 265 N86-25980
CONCENTRATION (COMPOSITION)
Comparative biochemistry and metabolism. Part 2: Naphthalene lung toxicity
[AD-A163144] p 257 N86-25983
A small oxygen concentrator
[AD-A163145] p 273 N86-25993
CONFERENCES
Human Factors Society, Annual Meeting, 29th, Baltimore, MD, September 29-October 3, 1985, Proceedings. Volumes 1 & 2 p 259 A86-33776
Aerospace Behavioral Engineering Technology Conference, 4th, Long Beach, CA, October 14-17, 1985, Proceedings
[SAE P-158] p 269 A86-35426
CONSCIOUSNESS
Mental fitness for duty and control of arousal state
[SAE PAPER 851778] p 263 A86-35429
CONSTRAINTS
Research animal stanchion and transporter
[AD-A163907] p 248 N86-25110
The design, fabrication and delivery of a manipulator foot restraint mockup for space telescope development testing
[NASA-CR-178837] p 272 N86-25121
CONTAMINANTS
Isotopic study of the inhalation toxicology of oxidants
[PB86-109485] p 256 N86-25116
CONTROL
Control errors: Psychological causes - An automated method of analysis — Russian book p 270 A86-35480
CONTROL STICKS
Helicopter flight control with one hand p 269 A86-34923
CONTROL SYSTEMS DESIGN
Teleoperation of legged vehicles - Unique problems associated with walking and foot placement p 268 A86-33811
CONVERGENCE
Shadow mask display visibility - Human thresholds for perception of misconvergence effects p 268 A86-33798
CORIOLIS EFFECT
An analysis of potential predictive parameters of motion sickness using a computerized biophysical data acquisition system
[AD-A164099] p 257 N86-25981
CORRELATION
Statistical inferences in cross-lagged panel studies
[AD-A163892] p 265 N86-25120
COST EFFECTIVENESS
Future directions for cost effective Air Force aircrew training - Managed technology and the training system p 262 A86-33830
COSTS
Behavioral considerations for space station design
[AD-A163478] p 265 N86-25118
COVALENT BONDS
Comparative biochemistry and metabolism. Part 2: Naphthalene lung toxicity
[AD-A163144] p 257 N86-25983
CRASHES
Simulation of aircraft seat response to a crash environment p 272 A86-36879
CRASHWORTHINESS
Simulation of aircraft seat response to a crash environment p 272 A86-36879
CREW PROCEDURES (INFLIGHT)
Timebased analysis of significant coordinated operations (TASCO) - A cockpit workload analysis technique p 268 A86-33810
CREW STATIONS
Pro-SWAT applied to advanced helicopter crew station concepts p 267 A86-33795
CREW WORKSTATIONS
Applicability of using the CAR-II model in design and evaluation of multioperator workstations with shared controls p 268 A86-33805
CRYSTAL GROWTH
Iron-silica crystallite nucleation by bacteria in a geothermal sediment p 247 A86-36368
CUES
Eye and head response to an attention cue in a dual task paradigm p 262 A86-33827
CUSHIONS
A review of the pilot backache problem in the CH113 Labrador helicopter
[AD-A164011] p 256 N86-25113
CYCLES
Man-machine systems of the 1990 decade: Cognitive factors and human interface issues
[AD-A163865] p 273 N86-25123

D

DATA ACQUISITION
An analysis of potential predictive parameters of motion sickness using a computerized biophysical data acquisition system
[AD-A164099] p 257 N86-25981
DATA PROCESSING
Automatic and controlled processing approach to interpreting vigilance performance p 259 A86-33777
Information processing in vigilance performance - Complexity revisited p 259 A86-33778
Age-dependent changes in information processing abilities between 20 and 60 years p 260 A86-33788
Rule-based analysis of pilot decisions p 261 A86-33816
Man-machine systems of the 1990 decade: Cognitive factors and human interface issues
[AD-A163865] p 273 N86-25123
The first cortical implant of a semiconductor multielectrode array. VER (Visual Evoked Responses) and propagation analysis
[AD-A164015] p 248 N86-25972
Emergent techniques for assessment of visual performance
[PB86-144755] p 258 N86-25986
DECIMETER WAVES
The effect of electromagnetic radiation in the decimeter wavelength range on the neuronal calcium current in molluska p 247 A86-36494
DECISION MAKING
The use of signal detection theory in research on human-computer interaction p 266 A86-33779
Rule-based analysis of pilot decisions p 261 A86-33816
A comparison of operator performance in manual and automated versions of a dynamic decision-making task p 262 A86-33825
Schema-based theory of information presentation for distributed decision making
[AD-A163150] p 266 N86-25982
DECISION THEORY
Schema-based theory of information presentation for distributed decision making
[AD-A163150] p 266 N86-25982
DEOXYRIBONUCLEIC ACID
DNA analysis of epithelial cell suspensions
[DE86-002403] p 249 N86-25977
DEPLETION
Magnetic separation device
[AD-D012163] p 249 N86-25975
DETECTION
The use of brain evoked response in a critical event detection task p 261 A86-33819
DIAGNOSIS
Retrospective analysis of Naval Special Boards of Flight Surgeons, 1974-83 p 251 A86-33763
Prospects for using millimeter-band electromagnetic radiation as an efficient way of obtaining information on specific processes in living organisms p 248 A86-35088
DIGITAL COMPUTERS
The first cortical implant of a semiconductor multielectrode array. VER (Visual Evoked Responses) and propagation analysis
[AD-A164015] p 248 N86-25972
DISEASES
Analysis of the potential association between noise-induced hearing loss and cardiovascular disease in USAF aircrew members p 250 A86-33760
DISPLAY DEVICES
There's a voice in the sky - But can a picture tell you more? --- comparison between synthesized speech and visual displays in presenting information in cockpits p 266 A86-33781
Feature positive coding effects on object localization p 267 A86-33789
Decluttering methods for high density computer-generated graphic displays p 267 A86-33790
A peripheral integrated status display - Is it really giving the 'big picture' or is it a miniseries? p 267 A86-33791
Shadow mask display visibility - Human thresholds for perception of misconvergence effects p 268 A86-33798
Teleoperation of legged vehicles - Unique problems associated with walking and foot placement p 268 A86-33811
An integrated display for vertical and translational flight Eight factors affecting pilot performance p 264 A86-36175
Visual cue dominance hierarchies - Implications for simulator design
[SAE PAPER 851946] p 265 A86-36847
An evaluation of color sets for CRT displays
[AD-A163894] p 273 N86-25125
DISTRIBUTION (PROPERTY)
Studies of the electric field distribution in biological bodies. Experimental dosimetry at radiofrequencies
[AD-A163158] p 249 N86-25976
DOGS
The first cortical implant of a semiconductor multielectrode array. VER (Visual Evoked Responses) and propagation analysis
[AD-A164015] p 248 N86-25972
The experimental determination of safe atmospheric exposure concentrations of JP-10 jet fuel
[AD-A163179] p 258 N86-25985
DOSIMETERS
Studies of the electric field distribution in biological bodies. Experimental dosimetry at radiofrequencies
[AD-A163158] p 249 N86-25976
DRUGS
Method for the quantitative determination of the parasympathetic regulation of cardiac activity in operators working in sealed chambers p 271 A86-36536
DYES
Magnetic separation device
[AD-D012163] p 249 N86-25975
DYNAMIC RESPONSE
The use of ellipsoidal solids to display human body dynamic response p 272 A86-36852

E

ECONOMIC FACTORS
The human role in space: Technology, economics and optimization --- Book p 272 A86-37037
EFFECTIVENESS
Phosphorobacterin and its effectiveness
[AD-A164508] p 248 N86-25973
ELECTRIC FIELDS
Studies of the electric field distribution in biological bodies. Experimental dosimetry at radiofrequencies
[AD-A163156] p 249 N86-25976
ELECTRICAL IMPEDANCE
Bioimpedance measurement with respect to pulsatile pulmonary blood flow p 271 A86-36316
ELECTROCARDIOGRAPHY
Evaluation of precordial mapping before and after submaximal exercise amongst normal and asymptomatic subjects with non specific ST-T abnormalities p 251 A86-35290
An informational assessment of changes in the physiological characteristics of an operator under different work regimens p 271 A86-36527
Cardiokymography
[PB86-133790] p 258 N86-25987
ELECTROCHEMISTRY
Photoenergy transduction in halobacterium halobium
[NASA-CR-176673] p 248 N86-25970
ELECTRODES
The first cortical implant of a semiconductor multielectrode array. VER (Visual Evoked Responses) and propagation analysis
[AD-A164015] p 248 N86-25972
Biosensors from membrane proteins reconstituted in polymerized lipid bilayers
[AD-D012160] p 248 N86-25974
ELECTROENCEPHALOGRAPHY
Anticipatory adjustments during a warning interval - Cortical negativity and perceptual sensitivity p 261 A86-33818
Event-related brain potentials and intermodal divided attention p 262 A86-33821
Dynamics of the ultraslow bioelectric brain activity during the performance of certain parts of operational activity p 255 A86-36534
The first cortical implant of a semiconductor multielectrode array. VER (Visual Evoked Responses) and propagation analysis
[AD-A164015] p 248 N86-25972
ELECTROMAGNETIC RADIATION
The effect of electromagnetic radiation in the decimeter wavelength range on the neuronal calcium current in molluska p 247 A86-36494
Hygienic assessment of the electromagnetic radiation levels generated by radar installations p 271 A86-36499
ELECTROMAGNETIC SPECTRA
Prospects for using millimeter-band electromagnetic radiation as an efficient way of obtaining information on specific processes in living organisms p 248 A86-35088
ELECTRON MICROSCOPY
Magnetic separation device
[AD-D012163] p 249 N86-25975
ELECTROPLETHYSMOGRAPHY
Bioimpedance measurement with respect to pulsatile pulmonary blood flow p 271 A86-36316
ELLIPSOIDS
The use of ellipsoidal solids to display human body dynamic response p 272 A86-36852
EMERGENCIES
The case for training for the potentially catastrophic situation
[SAE PAPER 851917] p 264 A86-35447
ENVIRONMENT SIMULATION
Simulation of aircraft seat response to a crash environment p 272 A86-36879
ENZYME ACTIVITY
Impaired pulmonary conversion of angiotensin I to angiotensin II in rats exposed to chronic hypoxia p 246 A86-36218
ENZYMES
Multidisciplinary studies on excitatory amino acids as transmitters in the brain
[AD-A164258] p 256 N86-25115
EQUIPMENT SPECIFICATIONS
Research on the specification and acquisition of maintenance training simulators in the U.S. Air Force p 268 A86-33823
ERROR ANALYSIS
An experimental approach to validating a theory of human error in complex systems p 260 A86-33792
Control errors: Psychological causes - An automated method of analysis --- Russian book p 270 A86-35460
ERYTHROCYTES
Review of modified hemoglobin solutions for use as temporary blood substitutes
[AD-A164210] p 256 N86-25114
Magnetic separation device
[AD-D012163] p 249 N86-25975
ETIOLOGY
Head movements in non-terrestrial force environments elicit motion sickness - Implications for the etiology of space motion sickness p 253 A86-36315
EURECA (ESA)
Concepts for the life support subsystem in the EURECA Botany Facility
[DGLR PAPER 85-126] p 245 A86-34573
EVOKED RESPONSE (PSYCHOPHYSIOLOGY)
The use of brain evoked response in a critical event detection task p 261 A86-33819
EXAMINATION
Medical evaluation of cosmonauts during space flight and immediate pre and post flight periods p 251 A86-35287
EXERCISE PHYSIOLOGY
Effects of exercise in normoxia and acute hypoxia on respiratory muscle metabolites p 246 A86-36223
Fitness and activity assessments among US Army populations: Implications for NCHS general population surveys
[AD-A164060] p 257 N86-25980
EXOBIOLOGY
A search for interstellar glycine p 274 A86-35666
Planaria regeneration in zero gravity p 245 A86-34964
Muscle atrophy during space flight - Research needs and opportunities p 255 A86-37077
USSR Space Life Sciences Digest, issue 5
[NASA-CR-3922(05)] p 248 N86-25109
Aerospace Medicine and Biology: A continuing bibliography with indexes (supplement 284)
[NASA-SP-7011(284)] p 255 N86-25111
USSR Space Life Sciences Digest: Index to issues 1-4
[NASA-CR-3922(06)] p 248 N86-25971
EXPERIENCE
Characterization of good teleoperators - What aptitudes, interests, and experience correlate with measures of teleoperator performance p 268 A86-33828
Training of cosmonauts and experience during space flight p 263 A86-35286
EXPERIMENT DESIGN
Assessing the human performance envelope - A brief guide
[SAE PAPER 851776] p 263 A86-35428
EXPOSURE
Acute toxicity studies on 2 Air Force hydraulic fluids (MLO 82-233 and MLO 82-585)
[AD-A163174] p 258 N86-25984
EXTRATERRESTRIAL INTELLIGENCE
Cosmological and anthropic principles, cosmic and planetary events, and the existence of life in the universe p 274 A86-36766
EXTRAVEHICULAR ACTIVITY
Evolutionary paths for artificial intelligence technologies in operator interactions with space station robots p 269 A86-34971

EYE DISEASES
Central serous retinopathy (choroidopathy) in pilots p 254 A86-36317
EYE MOVEMENTS
Eye-scan behavior in a flight simulation task as a function of level of training p 260 A86-33794
Eye and head response to an attention cue in a dual task paradigm p 262 A86-33827
A model of the system controlling involuntary eye movements p 247 A86-36496
EYE PROTECTION
Nonionizing radiation damage in the eye p 251 A86-33836
Compendium of protective eyewear [PB86-135779] p 273 N86-25126

F

FARM CROPS
Phosphorobacterin and its effectiveness [AD-A164508] p 248 N86-25973
FEET (ANATOMY)
The design, fabrication and delivery of a manipulator foot restraint mockup for space telescope development testing [NASA-CR-178837] p 272 N86-25121
FERTILIZERS
Phosphorobacterin and its effectiveness [AD-A164508] p 248 N86-25973
FLIGHT CONTROL
Applicability of using the CAR-II model in design and evaluation of multioperator workstations with shared controls p 268 A86-33805
Helicopter flight control with one hand p 269 A86-34923
FLIGHT CREWS
Future directions for cost effective Air Force aircrew training - Managed technology and the training system p 252 A86-33830
A case for realistic training — of flight crews [SAE PAPER 851915] p 264 A86-35445
Realistic training for effective crew performance [SAE PAPER 851916] p 264 A86-35446
Behavioral considerations for space station design [AD-A163478] p 265 N86-25118
FLIGHT FATIGUE
Helicopter crew evaluations on the effects of vibration on performance p 260 A86-33800
FLIGHT FITNESS
Mental fitness for duty and control of arousal state [SAE PAPER 851778] p 263 A86-35429
FLIGHT SAFETY
A case for realistic training — of flight crews [SAE PAPER 851915] p 264 A86-35445
FLIGHT SIMULATION
Eye-scan behavior in a flight simulation task as a function of level of training p 260 A86-33794
Assessment of simulation fidelity using measurements of piloting technique in flight. II p 264 A86-35667
The role of flight simulation in helicopter crew station design [SAE PAPER 851900] p 272 A86-36940
USSR Space Life Sciences Digest: Index to Issues 1-4 [NASA-CR-3922(06)] p 248 N86-25971
FLIGHT SIMULATORS
Future directions for cost effective Air Force aircrew training - Managed technology and the training system p 252 A86-33830
Visual cue dominance hierarchies - Implications for simulator design [SAE PAPER 851946] p 265 A86-36947
FLIGHT STRESS (BIOLOGY)
Systolic blood pressure in fighter pilots after 12-15 years service p 250 A86-33762
FLIGHT SURGEONS
Retrospective analysis of Naval Special Boards of Flight Surgeons, 1974-83 p 251 A86-33763
FLIGHT TRAINING
Interactive computer-based flight training [SAE PAPER 851991] p 263 A86-35430
FLUORESCENCE
Magnetic separation device [AD-D012163] p 249 N86-25975
FOREARM
Time course of muscular blood metabolites during forearm rhythmic exercise in hypoxia p 252 A86-36222
FUNCTIONAL DESIGN SPECIFICATIONS
Space Station crew interface specifications and standards [SAE PAPER 851801] p 270 A86-35433

G

GALVANIC SKIN RESPONSE
An analysis of potential predictive parameters of motion sickness using a computerized biophysical data acquisition system [AD-A164099] p 257 N86-25981
GAS PRESSURE
A small oxygen concentrator [AD-A163145] p 273 N86-25993
GEOMAGNETISM
The rhythms of paramagnetic-center concentration in mouse liver and a mathematical model of synchronized autooscillations p 247 A86-36497
GLOVES
The effect of cold training and the wearing of gloves on manual performance in the cold: A comparison of pure ability and operational tasks [AD-A163693] p 273 N86-25124
GLUTAMATES
Chemically induced damage to the hippocampal formation [NDRE/PUBL-86/1002] p 255 N86-25112
Multidisciplinary studies on excitatory amino acids as transmitters in the brain [AD-A164258] p 256 N86-25115
GLUTATHIONE
Comparative biochemistry and metabolism. Part 2: Naphthalene lung toxicity [AD-A163144] p 257 N86-25983
GLYCINE
A search for interstellar glycine p 274 A86-33668
GOGGLES
Mild hypoxia and visual performance with night vision goggles p 249 A86-33755
Compendium of protective eyewear [PB86-135779] p 273 N86-25126
GRAVITATIONAL EFFECTS
Respiratory diseases - Aeromedical aspects including disposal p 252 A86-35291
GRAVITATIONAL PHYSIOLOGY
Plasma viscosity elevations with simulated weightlessness p 253 A86-36312
Head movements in non-terrestrial force environments elicit motion sickness - Implications for the etiology of space motion sickness p 253 A86-36315
GROUP DYNAMICS
Behavioral considerations for space station design [AD-A163478] p 265 N86-25118

H

HAMSTERS
The experimental determination of safe atmospheric exposure concentrations of JP-10 jet fuel [AD-A163179] p 258 N86-25985
HEAD MOVEMENT
Adapted head- and eye-movement responses to added-head inertia p 250 A86-33758
Eye and head response to an attention cue in a dual task paradigm p 262 A86-33827
Head movements in non-terrestrial force environments elicit motion sickness - Implications for the etiology of space motion sickness p 253 A86-36315
HEART
Cardiokymography [PB86-133790] p 258 N86-25987
HEART DISEASES
Evaluation of precordial mapping before and after submaximal exercise amongst normal and asymptomatic subjects with non specific ST-T abnormalities p 251 A86-35290
Longitudinal study of cardiovascular disease in U.S. Navy pilots p 253 A86-36314
Aerobic capacity and coronary risk factors in a middle-aged army population AD-A163998 HC A02/MF A01 [AD-A163998] p 257 N86-25979
Cardiokymography [PB86-133790] p 258 N86-25987
HEART FUNCTION
Antioxidants as antiarrhythmic remedies p 246 A86-35938
Changes in the contractile and electrical activities of the rat myocardium under the effect of verapamil under insufficient oxygenation p 246 A86-35939
Method for the quantitative determination of the parasympathetic regulation of cardiac activity in operators working in sealed chambers p 271 A86-36536
HEART RATE
Systolic time intervals in pilots and non-pilots during 70 deg head-up tilt p 250 A86-33757
Synchronization of heart contractions and respiration during thermoregulatory polypnea in dogs p 245 A86-34490
Impulse activity of the brain stem neurons related to the cardiac and respiratory rhythms p 246 A86-35940
Heart and respiration rates during a mental task performed with varying degrees of success p 254 A86-36526
Method for the quantitative determination of the parasympathetic regulation of cardiac activity in operators working in sealed chambers p 271 A86-36536
An analysis of potential predictive parameters of motion sickness using a computerized biophysical data acquisition system [AD-A164099] p 257 N86-25981
HEAT ACCLIMATIZATION
Substantiation of physiological criteria for assessing the functional status of the human body in high-temperature environments p 255 A86-36532
Human adaptation to antagonistic environmental factors p 255 A86-36535
HEAT TOLERANCE
Zonal differentiation of performance under heat stress — of humans p 251 A86-33801
HELICOPTER CONTROL
Helicopter flight control with one hand p 269 A86-34923
HELICOPTER DESIGN
The role of flight simulation in helicopter crew station design [SAE PAPER 851900] p 272 A86-36940
HELICOPTER PERFORMANCE
Pilot speech performance while talking to a speech recognizer and flying a competitive helicopter pursuit task [SAE PAPER 851779] p 264 A86-35441
Assessment of simulation fidelity using measurements of piloting technique in flight. II p 264 A86-35667
HELICOPTERS
Helicopter crew evaluations on the effects of vibration on performance p 260 A86-33800
A review of the pilot backache problem in the CH113 Labrador helicopter [AD-A164011] p 256 N86-25113
HEMATOLOGY
Partial recovery of neutrophil functions during prolonged hypothermia in pigs p 246 A86-36220
Plasma viscosity elevations with simulated weightlessness p 253 A86-36312
Review of modified hemoglobin solutions for use as temporary blood substitutes [AD-A164210] p 256 N86-25114
HEMATOPOIETIC SYSTEM
Review of modified hemoglobin solutions for use as temporary blood substitutes [AD-A164210] p 256 N86-25114
HEMODYNAMIC RESPONSES
Gamma-aminobutyric acid and bulbar mechanisms of hemodynamic regulation p 246 A86-35941
Cutaneous vascular responses to heat simulated at a high altitude of 5,600 m p 252 A86-36219
Hemodynamic response to LBNP following 2 hours HDT (-6 deg) — lower body negative pressure with head-down tilt p 252 A86-36309
Cardiovascular dynamics associated with tolerance to lower body negative pressure p 253 A86-36310
Review of modified hemoglobin solutions for use as temporary blood substitutes [AD-A164210] p 256 N86-25114
HIGH ALTITUDE PRESSURE
Comparative study of acetazolamide and spironolactone on regional blood distribution on exposure to acute hypobaric hypoxia p 246 A86-35863
HIGH PRESSURE
Effects of pressure on uptake and release of calcium by brain synaptosomes p 247 A86-36225
HIPPOCAMPUS
Chemically induced damage to the hippocampal formation [NDRE/PUBL-86/1002] p 255 N86-25112
HISTOCHEMICAL ANALYSIS
Chemically induced damage to the hippocampal formation [NDRE/PUBL-86/1002] p 255 N86-25112
HISTOLOGY
Topical effects of molten salt on rat integument - A histological and photometric assessment p 245 A86-33761
HOMOGENEITY
Studies of the electric field distribution in biological bodies. Experimental dosimetry at radiofrequencies [AD-A163156] p 249 N86-25976
HUBBLE SPACE TELESCOPE
The design, fabrication and delivery of a manipulator foot restraint mockup for space telescope development testing [NASA-CR-178837] p 272 N86-25121

HUMAN BEHAVIOR
An experimental approach to validating a theory of human error in complex systems p 260 A86-33792
HUMAN BEINGS
Evaluating compliance with FCC (Federal Communications Commission) specified guidelines for human exposure to radiofrequency radiation
[PB86-127061] p 256 N86-25117
Behavioral considerations for space station design
[AD-A163478] p 265 N86-25118
Man-machine systems of the 1990 decade: Cognitive factors and human interface issues
[AD-A163865] p 273 N86-25123
Emergent techniques for assessment of visual performance
[PB86-144755] p 258 N86-25988
HUMAN BODY
Studies of the electric field distribution in biological bodies. Experimental dosimetry at radiofrequencies
[AD-A163156] p 249 N86-25976
HUMAN FACTORS ENGINEERING
Human Factors Society, Annual Meeting, 29th, Baltimore, MD, September 29-October 3, 1985, Proceedings. Volumes 1 & 2 p 259 A86-33776
Methods and systems for measuring human performance capabilities p 267 A86-33786
Workload measurement in system design and evaluation p 267 A86-33787
Decluttering methods for high density computer-generated graphic displays p 267 A86-33790
A peripheral integrated status display - Is it really giving the 'big picture' or is it a miniseries? p 267 A86-33791
An experimental approach to validating a theory of human error in complex systems p 260 A86-33792
A workload analysis for strategic conventional standoff capability missions p 268 A86-33803
Applicability of using the CAR-II model in design and evaluation of multioperator workstations with shared controls p 268 A86-33805
Human productivity of Space Station p 268 A86-33813
An automated methodology for conducting human factors evaluations of protective garments p 268 A86-33817
A hierarchical model of pilot's procedural behavior for cockpit workload analysis p 263 A86-33983
Aerospace Behavioral Engineering Technology Conference, 4th, Long Beach, CA, October 14-17, 1985, Proceedings
[SAE P-168] p 269 A86-35426
Workload assessment - Progress during the last decade
[SAE PAPER 851877] p 270 A86-35440
A case for realistic training — of flight crews
[SAE PAPER 851915] p 264 A86-35445
Realistic training for effective crew performance
[SAE PAPER 851916] p 264 A86-35446
The case for training for the potentially catastrophic situation
[SAE PAPER 851917] p 264 A86-35447
Control errors: Psychological causes - An automated method of analysis — Russian book p 270 A86-35460
Physical, anthropometrical, and body composition characteristics of workers at Kennedy Space Center
[NASA-TM-83102] p 272 N86-25122
HUMAN PERFORMANCE
Automatic and controlled processing approach to interpreting vigilance performance p 259 A86-33777
Information processing in vigilance performance - Complexity revisited p 259 A86-33778
To speak or not to speak - A multiple resource perspective p 259 A86-33784
Methods and systems for measuring human performance capabilities p 267 A86-33786
Age-dependent changes in information processing abilities between 20 and 60 years p 260 A86-33788
Helicopter crew evaluations on the effects of vibration on performance p 260 A86-33800
Zonal differentiation of performance under heat stress — of humans p 251 A86-33801
Human productivity of Space Station p 268 A86-33813
Assessing the human performance envelope - A brief guide
[SAE PAPER 851776] p 263 A86-35428
Behavioral considerations for space station design
[AD-A163478] p 265 N86-25118
The effect of cold training and the wearing of gloves on manual performance in the cold: A comparison of pure ability and operational tasks
[AD-A163893] p 273 N86-25124
Normal and abnormal human vestibular ocular function
[NASA-CR-176820] p 257 N86-25978
HUMAN REACTIONS
Shadow mask display visibility - Human thresholds for perception of misconvergence effects p 268 A86-33798
An investigation of the 'von Restorff' phenomenon in post-test workload ratings p 261 A86-33807
HUMAN TOLERANCES
Effect of simulated weightlessness on exercise-induced anaerobic threshold p 250 A86-33756
HUMIDITY
Health effects of ambient ozone exposure in vigorously exercising adults
[PB86-156940] p 258 N86-25989
HYDRAULIC FLUIDS
Acute toxicity studies on 2 Air Force hydraulic fluids (MLO 82-233 and MLO 82-585)
[AD-A163174] p 256 N86-25984
HYDROGEN PRODUCTION
Hydrogen production from salt water by Marine blue green algae and solar radiation p 245 A86-34985
HYPEROXIA
Review of modified hemoglobin solutions for use as temporary blood substitutes
[AD-A164210] p 256 N86-25114
A small oxygen concentrator
[AD-A163145] p 273 N86-25993
HYPERTHERMIA
Zonal differentiation of performance under heat stress — of humans p 251 A86-33801
Cutaneous vascular responses to heat simulated at a high altitude of 5,600 m p 252 A86-36219
Substantiation of physiological criteria for assessing the functional status of the human body in high-temperature environments p 255 A86-36532
Human adaptation to antagonistic environmental factors p 255 A86-36535
HYPOTHERMIA
Partial recovery of neutrophil functions during prolonged hypothermia in pigs p 246 A86-36220
Human adaptation to antagonistic environmental factors p 255 A86-36535
HYPOVENTILATION
Low acute hypoxia ventilatory response and hypoxic depression in acute altitude sickness p 252 A86-36224
HYPOXIA
Mild hypoxia and visual performance with night vision goggles p 249 A86-33755
Comparative study of acetazolamide and spironolactone on regional blood distribution on exposure to acute hypobaric hypoxia p 246 A86-35863
Changes in the contractile and electrical activities of the rat myocardium under the effect of verapamil under insufficient oxygenation p 246 A86-35939
Impaired pulmonary conversion of angiotensin I to angiotensin II in rats exposed to chronic hypoxia p 246 A86-36218
Cutaneous vascular responses to heat simulated at a high altitude of 5,600 m p 252 A86-36219
Time course of muscular blood metabolites during forearm rhythmic exercise in hypoxia p 252 A86-36222
Effects of exercise in normoxia and acute hypoxia on respiratory muscle metabolites p 246 A86-36223
Low acute hypoxia ventilatory response and hypoxic depression in acute altitude sickness p 252 A86-36224

I

IMMUNOLOGY
A study of the effect of ultrasound on the antigenic activity of human erythrocytes p 254 A86-36495
Magnetic separation device
[AD-D012163] p 249 N86-25975
IMPACT TESTS
Comparison of human impact response in restraint systems with and without a negative G strap p 249 A86-33754
IMPLANTATION
The first cortical implant of a semiconductor multielectrode array. VER (Visual Evoked Responses) and propagation analysis
[AD-A164015] p 248 N86-25972
IN-FLIGHT MONITORING
Medical evaluation of cosmonauts during space flight and immediate pre and post flight periods p 251 A86-35287
Vectorcardiographic studies during Indo-Soviet joint space project p 251 A86-35288
INDEXES (DOCUMENTATION)
USSR Space Life Sciences Digest: Index to Issues 1-4
[NASA-CR-3922(06)] p 248 N86-25971
INDIAN SPACE PROGRAM
Vectorcardiographic studies during Indo-Soviet joint space project p 251 A86-35288
INERTIA
Adapted head- and eye-movement responses to added-head inertia p 250 A86-33758
INFERENCE
Statistical inferences in cross-lagged panel studies
[AD-A163892] p 265 N86-25120
INFLATABLE STRUCTURES
A review of the pilot backache problem in the CH113 Labrador helicopter
[AD-A164011] p 256 N86-25113
INFORMATION SYSTEMS
Schema-based theory of information presentation for distributed decision making
[AD-A163150] p 266 N86-25992
INFORMATION THEORY
An informational assessment of changes in the physiological characteristics of an operator under different work regimens p 271 A86-36527
INFRARED RADIATION
Nonionizing radiation damage in the eye p 251 A86-33838
INHIBITORS
Biosensors from membrane proteins reconstituted in polymerized lipid bilayers
[AD-D012160] p 248 N86-25974
INLET PRESSURE
A small oxygen concentrator
[AD-A163145] p 273 N86-25993
INTERACTIVE CONTROL
Pilot vehicle interfaces with smart avionics systems
[SAE PAPER 851923] p 270 A86-35432
INTERFERENCE
The interfering effects of processing code on visual memory p 259 A86-33782
INTERSTELLAR MATTER
A search for interstellar glycine p 274 A86-33668
INVOLUNTARY ACTIONS
A model of the system controlling involuntary eye movements p 247 A86-36496
ION EXTRACTION
Biosensors from membrane proteins reconstituted in polymerized lipid bilayers
[AD-D012160] p 248 N86-25974
IRON
Iron-silica crystallite nucleation by bacteria in a geothermal sediment p 247 A86-36368
Magnetic separation device
[AD-D012163] p 249 N86-25975
ISCHEMIA
Evaluation of precordial mapping before and after submaximal exercise amongst normal and asymptomatic subjects with non specific ST-T abnormalities p 251 A86-35290

J

JET ENGINE FUELS
The experimental determination of safe atmospheric exposure concentrations of JP-10 jet fuel
[AD-A163179] p 258 N86-25985

L

LEARNING
Multidisciplinary studies on excitatory amino acids as transmitters in the brain
[AD-A164258] p 256 N86-25115
LEARNING THEORY
Man-machine systems of the 1990 decade: Cognitive factors and human interface issues
[AD-A163865] p 273 N86-25123
Theory-based cognitive assessment
[AD-A164063] p 266 N86-25991
LEUKOCYTES
Partial recovery of neutrophil functions during prolonged hypothermia in pigs p 246 A86-36220
LIFE SCIENCES
USSR Space Life Sciences Digest, Issue 5
[NASA-CR-3922(05)] p 248 N86-25109
USSR Space Life Sciences Digest: Index to Issues 1-4
[NASA-CR-3922(06)] p 248 N86-25971
LIFE SUPPORT SYSTEMS
Concepts for the life support subsystem in the EURECA Botany Facility
[DGLR PAPER 85-126] p 245 A86-34573

LIPIDS
Biosensors from membrane proteins reconstituted in polymerized lipid bilayers
[AD-D012160] p 248 N86-25974
LITHOSPHERE
Simulation of thermal polycondensation processes of amino acids during the migration of their aqueous solutions in the earth's lithosphere p 274 A86-34489
LIVER
The rhythms of paramagnetic-center concentration in mouse liver and a mathematical model of synchronized autooscillations p 247 A86-36497
LOADS (FORCES)
A review of the pilot backache problem in the CH113 Labrador helicopter
[AD-A164011] p 256 N86-25113
LONG DURATION SPACE FLIGHT
Space Station design criteria for long-term human habitation
[DGLR PAPER 85-147] p 269 A86-35185
LOW TEMPERATURE
The effect of cold training and the wearing of gloves on manual performance in the cold: A comparison of pure ability and operational tasks
[AD-A163693] p 273 N86-25124
LOWER BODY NEGATIVE PRESSURE
Hemodynamic response to LBNP following 2 hours HDT (-6 deg) — lower body negative pressure with head-down tilt p 252 A86-36309
Cardiovascular dynamics associated with tolerance to lower body negative pressure p 253 A86-36310
LYMPHOCYTES
Magnetic separation device
[AD-D012163] p 249 N86-25975

M

MAGNETIC EFFECTS
The effect of external factors on the reactions modeling biological processes (Piccardi test) — cosmoheliogeophysical effects p 247 A86-36498
MAINTENANCE
Research on the specification and acquisition of maintenance training simulators in the U.S. Air Force p 268 A86-33823
MAN ENVIRONMENT INTERACTIONS
The effect of external factors on the reactions modeling biological processes (Piccardi test) — cosmoheliogeophysical effects p 247 A86-36498
The dynamics of systemic functional organization during adaptation to work in extreme environments p 254 A86-36530
Substantiation of physiological criteria for assessing the functional status of the human body in high-temperature environments p 255 A86-36532
MAN MACHINE SYSTEMS
Human Factors Society, Annual Meeting, 29th, Baltimore, MD, September 29-October 3, 1985, Proceedings. Volumes 1 & 2 p 259 A86-33776
The use of signal detection theory in research on human-computer interaction p 266 A86-33779
An experimental approach to validating a theory of human error in complex systems p 260 A86-33792
Pro-SWAT applied to advanced helicopter crew station concepts p 267 A86-33795
Timebased analysis of significant coordinated operations (TASCO) - A cockpit workload analysis technique p 268 A86-33810
Teleoperation of legged vehicles - Unique problems associated with walking and foot placement p 268 A86-33811
A hierarchical model of pilot's procedural behavior for cockpit workload analysis p 263 A86-33983
Helicopter flight control with one hand p 269 A86-34923
Recent advancements in telepresence technology development — in space p 269 A86-34959
Evolutionary paths for artificial intelligence technologies in operator interactions with space station robots p 269 A86-34971
Aerospace Behavioral Engineering Technology Conference, 4th, Long Beach, CA, October 14-17, 1985, Proceedings
[SAE P-168] p 269 A86-35426
Interactive computer-based flight training
[SAE PAPER 851991] p 263 A86-35430
Cockpit automation - Design and implementation issues

MENTAL PERFORMANCE
Assessment of SWAT accuracy — Subjective Workload Assessment Technique p 266 A86-33785
Age-dependent changes in information processing abilities between 20 and 60 years p 260 A86-33788
An experimental approach to validating a theory of human error in complex systems p 260 A86-33792
Training characteristics of the Criterion Task Set workload assessment battery p 261 A86-33809
Anticipatory adjustments during a warning interval - Cortical negativity and perceptual sensitivity p 261 A86-33818
Event-related brain potentials and resource allocation - From dual-task decrements to dual-task integrality p 261 A86-33820
Processing inferences derived from event-related potential measures in a monitoring task p 262 A86-33822
Mental fitness for duty and control of arousal state
[SAE PAPER 851778] p 263 A86-35429
The effects of syntactic complexity on the human-computer interaction p 271 A86-36172
Heart and respiration rates during a mental task performed with varying degrees of success p 254 A86-36526
Evaluating the functional status of operators using indices of mental work capacity p 254 A86-36531
Dynamics of the ultraslow bioelectric brain activity during the performance of certain parts of operational activity p 255 A86-36534
Schema-based theory of information presentation for distributed decision making
[AD-A163150] p 266 N86-25992
MESSAGES
There's a voice in the sky - But can a picture tell you more? — comparison between synthesized speech and visual displays in presenting information in cockpits p 266 A86-33781
METABOLISM
Ontogeny of homeothermy in the immature rat - Metabolic and thermal responses p 246 A86-36221
Comparative biochemistry and metabolism. Part 2: Naphthalene lung toxicity
[AD-A163144] p 257 N86-25983
METABOLITES
Time course of muscular blood metabolites during forearm rhythmic exercise in hypoxia p 252 A86-36222
Effects of exercise in normoxia and acute hypoxia on respiratory muscle metabolites p 246 A86-36223
Comparative biochemistry and metabolism. Part 2: Naphthalene lung toxicity
[AD-A163144] p 257 N86-25983
MICE
The experimental determination of safe atmospheric exposure concentrations of JP-10 jet fuel
[AD-A163179] p 258 N86-25985
Toxicological study of NTO
[DE86-003296] p 258 N86-25986
MICROORGANISMS
Photoenergy transduction in halobacterium halobium
[NASA-CR-176673] p 248 N86-25970
MICROWAVE EMISSION
Prospects for using millimeter-band electromagnetic radiation as an efficient way of obtaining information on specific processes in living organisms p 246 A86-35088
MICROWAVES
Nonionizing radiation damage in the eye p 251 A86-33838
MILITARY AVIATION
Assessment of task proficiency in Air Force OJT — On-the-Job-Training p 260 A86-33806
Future directions for cost effective Air Force aircrew training - Managed technology and the training system p 262 A86-33830
MILITARY HELICOPTERS
Pro-SWAT applied to advanced helicopter crew station concepts p 267 A86-33795
MINERAL METABOLISM
Manganese metabolism in healthy humans during different times of the year p 255 A86-36533
MOISTURE CONTENT
Studies of the electric field distribution in biological bodies. Experimental dosimetry at radiofrequencies
[AD-A163156] p 249 N86-25976
MOLECULAR ABSORPTION
A small oxygen concentrator
[AD-A163145] p 273 N86-25993
MOLECULAR WEIGHT
Review of modified hemoglobin solutions for use as temporary blood substitutes
[AD-A164210] p 256 N86-25114
MOLTEN SALTS
Topical effects of molten salt on rat integument - A histological and photometric assessment p 245 A86-33761
MONOCULAR VISION
Mild hypoxia and visual performance with night vision goggles p 249 A86-33755
MOTION SICKNESS
Sudden emesis following parabolic flight maneuvers Implications for space motion sickness p 250 A86-33759
Head movements in non-terrestrial force environments elicit motion sickness - Implications for the etiology of space motion sickness p 253 A86-36315
Normal and abnormal human vestibular ocular function
[NASA-CR-176820] p 257 N86-25978
An analysis of potential predictive parameters of motion sickness using a computerized biophysical data acquisition system
[AD-A164090] p 257 N86-25981
MOTIVATION
Man-machine systems of the 1990 decade: Cognitive factors and human interface issues
[AD-A163865] p 273 N86-25123
MUSCULAR FUNCTION
Some aspects of yogic exercises during space flight p 263 A86-35289
Time course of muscular blood metabolites during forearm rhythmic exercise in hypoxia p 252 A86-36222
Effects of exercise in normoxia and acute hypoxia on respiratory muscle metabolites p 246 A86-36223

The mechanisms of muscle activity regulation in humans depending on biorhythm type p 254 A86-36528
Muscle atrophy during space flight - Research needs and opportunities p 255 A86-37077

MUSCULAR STRENGTH
Fitness and activity assessments among US Army populations: Implications for NCHS general population surveys
[AD-A164080] p 257 N86-25980

MYOCARDIUM
Changes in the contractile and electrical activities of the rat myocardium under the effect of verapamil under insufficient oxygenation p 246 A86-35939

N

NAPHTHALENE
Comparative biochemistry and metabolism. Part 2: Naphthalene lung toxicity
[AD-A163144] p 257 N86-25983

NASA SPACE PROGRAMS
Human productivity of Space Station p 268 A86-33813

NAVY
Retrospective analysis of Naval Special Boards of Flight Surgeons, 1974-83 p 251 A86-33763

NEAR FIELDS
Studies of the electric field distribution in biological bodies. Experimental dosimetry at radiofrequencies
[AD-A163156] p 249 N86-25976

NEUROMUSCULAR TRANSMISSION
Multidisciplinary studies on excitatory amino acids as transmitters in the brain
[AD-A164258] p 256 N86-25115

NEURONS
Impulse activity of the brain stem neurons related to the cardiac and respiratory rhythms p 246 A86-35940
Multidisciplinary studies on excitatory amino acids as transmitters in the brain
[AD-A164258] p 256 N86-25115

NEUROPHYSIOLOGY
Gamma-aminobutyric acid and bulbar mechanisms of hemodynamic regulation p 246 A86-35941
Dynamics of the ultraslow bioelectric brain activity during the performance of certain parts of operational activity p 255 A86-36534

NEUROTRANSMITTERS
Chemically induced damage to the hippocampal formation
[NDRE/PUBL-86/1002] p 255 N86-25112

NIGHT VISION
Mild hypoxia and visual performance with night vision goggles p 249 A86-33755

NOISE POLLUTION
Analysis of the potential association between noise-induced hearing loss and cardiovascular disease in USAF aircrew members p 250 A86-33760

NYSTAGMUS
An analysis of potential predictive parameters of motion sickness using a computerized biophysical data acquisition system
[AD-A164099] p 257 N86-25981

O

ONTOGENY
Ontogeny of homeothermy in the immature rat - Metabolic and thermal responses p 246 A86-36221

OPERATIONS RESEARCH
Space Station human productivity study p 269 A86-34980
Space Station crew workload - Station operations and customer accommodations
[SAE PAPER 851803] p 270 A86-35435

OPERATOR PERFORMANCE
A workload analysis for strategic conventional standoff capability missions p 268 A86-33803
The psychophysics of workload - A second look at the relationship between subjective measures and performance p 260 A86-33804
Applicability of using the CAR-II model in design and evaluation of multioperator workstations with shared controls p 268 A86-33805
A comparison of operator performance in manual and automated versions of a dynamic decision-making task p 262 A86-33825
Voice and manual control in dual task situations p 262 A86-33826
Eye and head response to an attention cue in a dual task paradigm p 262 A86-33827
Characterization of good telecperators - What aptitudes, interests, and experience correlate with measures of teleoperator performance p 268 A86-33828
Workload assessment - Progress during the last decade
[SAE PAPER 851877] p 270 A86-35440
Control errors: Psychological causes - An automated method of analysis — Russian book p 270 A86-36480
Heart and respiration rates during a mental task performed with varying degrees of success p 254 A86-36526
An informational assessment of changes in the physiological characteristics of an operator under different work regimens p 271 A86-36527
The mechanisms of muscle activity regulation in humans depending on biorhythm type p 254 A86-36528
Evaluating the functional status of operators using indices of mental work capacity p 254 A86-36531
Dynamics of the ultraslow bioelectric brain activity during the performance of certain parts of operational activity p 255 A86-36534
Method for the quantitative determination of the parasympathetic regulation of cardiac activity in operators working in sealed chambers p 271 A86-36536

OPTICAL TRACKING
Adapted head- and eye-movement responses to added-head inertia p 250 A86-33758
Visual-search efficiency — Russian book p 271 A86-36695

ORBITAL SPACE STATIONS
Evolutionary paths for artificial intelligence technologies in operator interactions with space station robots p 269 A86-34971
Behavioral considerations for space station design
[AD-A163478] p 265 N86-25118

ORGANIC COMPOUNDS
Toxicological study of NTO
[DE86-003296] p 258 N86-25986

ORGANIC PHOSPHORUS COMPOUNDS
Phosphorobacterin and its effectiveness
[AD-A164508] p 248 N86-25973
Acute toxicity studies on 2 Air Force hydraulic fluids (MLO 82-233 and MLO 82-585)
[AD-A163174] p 258 N86-25984

ORGANISMS
Prospects for using millimeter-band electromagnetic radiation as an efficient way of obtaining information on specific processes in living organisms p 246 A86-35088

ORTHOPEDICS
A review of the pilot backache problem in the CH113 Labrador helicopter
[AD-A164011] p 256 N86-25113

ORTHOSTATIC TOLERANCE
Systolic time intervals in pilots and non-pilots during 70 deg head-up tilt p 250 A86-33757
Hemodynamic response to LBNP following 2 hours HDT (-6 deg) — lower body negative pressure with head-down tilt p 252 A86-36309
Cardiovascular dynamics associated with tolerance to lower body negative pressure p 253 A86-36310
Effect of hydration on plasma vasopressin, renin, and aldosterone responses to head-up tilt p 253 A86-36311

OXIDES
Comparative biochemistry and metabolism. Part 2: Naphthalene lung toxicity
[AD-A163144] p 257 N86-25983

OXYGEN CONSUMPTION
Effect of simulated weightlessness on exercise-induced anaerobic threshold p 250 A86-33756
Influence of inspired oxygen concentration on acceleration atelectasis p 253 A86-36313
Seasonal dynamics of circadian rhythms of oxygen consumption and heat production in youths in Siberian conditions p 254 A86-36529
Aerobic capacity and coronary risk factors in a middle-aged army population AD-A163998 HC A02/MF A01
[AD-A163998] p 257 N86-25979

OXYGEN SUPPLY EQUIPMENT
A small oxygen concentrator
[AD-A163145] p 273 N86-25993

OXYHEMOGLOBIN
Review of modified hemoglobin solutions for use as temporary blood substitutes
[AD-A164210] p 258 N86-25114

OZONE
Isotopic study of the inhalation toxicology of oxidants
[PB86-109485] p 258 N86-25116
Health effects of ambient ozone exposure in vigorously exercising adults
[PB86-156940] p 258 N86-25989

P

PAIN
A review of the pilot backache problem in the CH113 Labrador helicopter
[AD-A164011] p 256 N86-25113

PARABOLIC FLIGHT
Sudden emesis following parabolic flight maneuvers - Implications for space motion sickness p 250 A86-33759

PARAMAGNETISM
The rhythms of paramagnetic-center concentration in mouse liver and a mathematical model of synchronized autooscillations p 247 A86-36497

PATHOLOGY
The experimental determination of safe atmospheric exposure concentrations of JP-10 jet fuel
[AD-A163179] p 258 N86-25985

PEPTIDES
Biosensors from membrane proteins reconstituted in polymerized lipid bilayers
[AD-D012180] p 248 N86-25974

PERSONNEL
The effect of cold training and the wearing of gloves on manual performance in the cold: A comparison of pure ability and operational tasks
[AD-A163993] p 273 N86-25124

PERSONNEL SELECTION
Research on the specification and acquisition of maintenance training simulators in the U.S. Air Force p 268 A86-33823
Characterization of good telecperators - What aptitudes, interests, and experience correlate with measures of teleoperator performance p 268 A86-33828
Theory-based cognitive assessment
[AD-A164083] p 266 N86-25991

PHARMACOLOGY
Comparative study of acetazolamide and spironolactone on regional blood distribution on exposure to acute hypobaric hypoxia p 248 A86-35863
Antioxidants as antiarrhythmic remedies p 246 A86-35938
Changes in the contractile and electrical activities of the rat myocardium under the effect of verapamil under insufficient oxygenation p 246 A86-35939

PHOTOCHEMICAL REACTIONS
Photoenergy transduction in halobacterium halobium
[NASA-CR-176673] p 248 N86-25970

PHOTOMETRY
Topical effects of molten salt on rat integument - A histological and photometric assessment p 245 A86-33761

PHYSICAL EXERCISE
Effect of simulated weightlessness on exercise-induced anaerobic threshold p 250 A86-33756
Some aspects of yogic exercises during space flight p 263 A86-35289
Evaluation of precordial mapping before and after submaximal exercise amongst normal and asymptomatic subjects with non specific ST-T abnormalities p 251 A86-35290
Time course of muscular blood metabolites during forearm rhythmic exercise in hypoxia p 252 A86-36222
Physical, anthropometrical, and body composition characteristics of workers at Kennedy Space Center
[NASA-TM-83102] p 272 N86-25122
Health effects of ambient ozone exposure in vigorously exercising adults
[PB86-156940] p 258 N86-25989

PHYSICAL FITNESS
Physical, anthropometrical, and body composition characteristics of workers at Kennedy Space Center
[NASA-TM-83102] p 272 N86-25122
Aerobic capacity and coronary risk factors in a middle-aged army population AD-A163998 HC A02/MF A01
[AD-A163998] p 257 N86-25979
Fitness and activity assessments among US Army populations: Implications for NCHS general population surveys
[AD-A164080] p 257 N86-25980

PHYSICAL WORK
The dynamics of systemic functional organization during adaptation to work in extreme environments p 254 A86-36530

PHYSIOCHEMISTRY
Gamma-aminobutyric acid and bulbar mechanisms of hemodynamic regulation p 246 A86-35941
Impaired pulmonary conversion of angiotensin I to angiotensin II in rats exposed to chronic hypoxia p 246 A86-36218
Effects of exercise in normoxia and acute hypoxia on respiratory muscle metabolites p 248 A86-36223

PHYSIOLOGICAL ACCELERATION
Comparison of human impact response in restraint systems with and without a negative G strap
p 249 A86-33754
Influence of inspired oxygen concentration on acceleration atelectasis p 253 A86-36313
Ultrasonic quantification of blood volume redistribution under hypergravity
[AD-A164379] p 257 N86-25982
PHYSIOLOGICAL DEFENSES
Partial recovery of neutrophil functions during prolonged hypothermia in pigs p 246 A86-36220
PHYSIOLOGICAL EFFECTS
Topical effects of molten salt on rat integument - A histological and photometric assessment
p 245 A86-33761
Nonionizing radiation damage in the eye
p 251 A86-33838
Medical problems of space flights p 251 A86-35285
Effects of pressure on uptake and release of calcium by brain synaptosomes p 247 A86-36225
A study of the effect of ultrasound on the antigenic activity of human erythrocytes p 254 A86-36495
The effect of external factors on the reactions modeling biological processes (Piccardi test) — cosmoheliogeophysical effects p 247 A86-36498
Heart and respiration rates during a mental task performed with varying degrees of success
p 254 A86-36526
PHYSIOLOGICAL RESPONSES
Comparison of human impact response in restraint systems with and without a negative G strap
p 249 A86-33754
Systolic time intervals in pilots and non-pilots during 70 deg head-up tilt p 250 A86-33757
Processing inferences derived from event-related potential measures in a monitoring task
p 262 A86-33822
Partial recovery of neutrophil functions during prolonged hypothermia in pigs p 246 A86-36220
Ontogeny of homeothermy in the immature rat - Metabolic and thermal responses p 246 A86-36221
Low acute hypoxia ventilatory response and hypoxic depression in acute altitude sickness
p 252 A86-36224
An informational assessment of changes in the physiological characteristics of an operator under different work regimens p 271 A86-36527
The dynamics of systemic functional organization during adaptation to work in extreme environments
p 254 A86-36530
Evaluating the functional status of operators using indices of mental work capacity p 254 A86-36531
Substantiation of physiological criteria for assessing the functional status of the human body in high-temperature environments p 255 A86-36532
Review of modified hemoglobin solutions for use as temporary blood substitutes
[AD-A164210] p 256 N86-25114
Physical, anthropometrical, and body composition characteristics of workers at Kennedy Space Center
[NASA-TM-83102] p 272 N86-25122
Ultrasonic quantification of blood volume redistribution under hypergravity
[AD-A164379] p 257 N86-25982
PHYSIOLOGICAL TESTS
Comparison of human impact response in restraint systems with and without a negative G strap
p 249 A86-33754
Systolic time intervals in pilots and non-pilots during 70 deg head-up tilt p 250 A86-33757
Automated Portable Test System (APTS) - A performance envelope assessment tool
[SAE PAPER 851775] p 263 A86-35427
Ultrasonic quantification of blood volume redistribution under hypergravity
[AD-A164379] p 257 N86-25982
PILOT ERROR
Helicopter flight control with one hand
p 269 A86-34923
Cockpit automation - In need of a philosophy
[SAE PAPER 851956] p 270 A86-35454
PILOT PERFORMANCE
Mild hypoxia and visual performance with night vision goggles p 249 A86-33755
Systolic time intervals in pilots and non-pilots during 70 deg head-up tilt p 250 A86-33757
Systolic blood pressure in fighter pilots after 12-15 years service p 250 A86-33762
There's a voice in the sky - But can a picture tell you more? — comparison between synthesized speech and visual displays in presenting information in cockpits
p 266 A86-33781
Eye-scan behavior in a flight simulation task as a function of level of training p 260 A86-33794
Pro-SWAT applied to advanced helicopter crew station concepts p 267 A86-33795
Learning and performance in an air refueling part-task trainer - Preliminary data analysis p 260 A86-33796
Shadow mask display visibility - Human thresholds for perception of misconvergence effects
p 268 A86-33798
Assessment of task proficiency in Air Force OJT — On-the-Job-Training p 260 A86-33806
An investigation of the 'von Restorff' phenomenon in post-test workload ratings p 261 A86-33807
The effect of varying task difficulty on subjective workload p 261 A86-33808
Training characteristics of the Criterion Task Set workload assessment battery p 261 A86-33809
Timebased analysis of significant coordinated operations (TASCO) - A cockpit workload analysis technique p 268 A86-33810
Rule-based analysis of pilot decisions
p 261 A86-33816
An automated methodology for conducting human factors evaluations of protective garments
p 268 A86-33817
The use of brain evoked response in a critical event detection task p 261 A86-33819
A hierarchical model of pilot's procedural behavior for cockpit workload analysis p 263 A86-33963
Evaluation of precordial mapping before and after submaximal exercise amongst normal and asymptomatic subjects with non specific ST-T abnormalities
p 251 A86-35290
Aerospace Behavioral Engineering Technology Conference, 4th, Long Beach, CA, October 1-17, 1985, Proceedings
[SAE P-168] p 269 A86-35426
Mental fitness for duty and control of arousal state
[SAE PAPER 851778] p 263 A86-35429
Cockpit automation - Design and implementation issues
[SAE PAPER 851921] p 270 A86-35431
Pilot vehicle interfaces with smart avionics systems
[SAE PAPER 851923] p 270 A86-35432
Pilot speech performance while talking to a speech recognizer and flying a competitive helicopter pursuit task
[SAE PAPER 851779] p 264 A86-35441
Realistic training for effective crew performance
[SAE PAPER 851916] p 264 A86-35446
Assessment of simulation fidelity using measurements of piloting technique in flight. II p 264 A86-35667
An integrated display for vertical and translational flight
Eight factors affecting pilot performance
p 264 A86-36175
Controlling of pilot work capacity by psychosomatic self-regulation techniques p 265 A86-36500
PILOT SELECTION
Training of cosmonauts and experience during space flight p 263 A86-35286
Longitudinal study of cardiovascular disease in U.S. Navy pilots p 253 A86-36314
Central serous retinopathy (choroidopathy) in pilots
p 254 A86-36317
PILOT TRAINING
Eye-scan behavior in a flight simulation task as a function of level of training p 260 A86-33794
Learning and performance in an air refueling part-task trainer - Preliminary data analysis p 260 A86-33796
Assessment of task proficiency in Air Force OJT — On-the-Job-Training p 260 A86-33806
Training characteristics of the Criterion Task Set workload assessment battery p 261 A86-33809
Future directions for cost effective Air Force aircrew training - Managed technology and the training system
p 262 A86-33830
A case for realistic training — of flight crews
[SAE PAPER 851915] p 264 A86-35445
Realistic training for effective crew performance
[SAE PAPER 851916] p 264 A86-35446
The case for training for the potentially catastrophic situation
[SAE PAPER 851917] p 264 A86-35447
The effects of syntactic complexity on the human-computer interaction p 271 A86-36172
Controlling of pilot work capacity by psychosomatic self-regulation techniques p 265 A86-36500
PITUITARY HORMONES
Effect of hydration on plasma vasopressin, renin, and aldosterone responses to head-up tilt
p 253 A86-36311
POLYMERIZATION
Biosensors from membrane proteins reconstituted in polymerized lipid bilayers
[AD-D012160] p 248 N86-25974
PORTABLE EQUIPMENT
Automated Portable Test System (APTS) - A performance envelope assessment tool
[SAE PAPER 851775] p 263 A86-35427
Research animal stanchion and transporter
[AD-A163907] p 248 N86-25110
PRESSURE EFFECTS
Effects of pressure on uptake and release of calcium by brain synaptosomes p 247 A86-36225
PRODUCTIVITY
Space Station human productivity study
p 269 A86-34960
PROJECT SETI
Cosmological and anthropic principles, cosmic and planetary events, and the existence of life in the universe p 274 A86-36766
PROTECTIVE CLOTHING
An automated methodology for conducting human factors evaluations of protective garments
p 268 A86-33817
The effect of cold training and the wearing of gloves on manual performance in the cold: A comparison of pure ability and operational tasks
[AD-A163893] p 273 N86-25124
Compendium of protective eyewear
[PB86-135779] p 273 N86-25126
PROTEINS
Biosensors from membrane proteins reconstituted in polymerized lipid bilayers
[AD-D012160] p 248 N86-25974
PSYCHOLOGICAL EFFECTS
The effect of varying task difficulty on subjective workload p 261 A86-33808
PSYCHOLOGICAL FACTORS
The psychophysics of workload - A second look at the relationship between subjective measures and performance p 260 A86-33804
An investigation of the 'von Restorff' phenomenon in post-test workload ratings p 261 A86-33807
Anticipatory adjustments during a warning interval - Cortical negativity and perceptual sensitivity
p 261 A86-33818
Training of cosmonauts and experience during space flight p 263 A86-35286
Some aspects of yogic exercises during space flight
p 263 A86-35289
Control errors: Psychological causes - An automated method of analysis — Russian book
p 270 A86-35460
Generalizing over conditions by combining the multitrait multimethod matrix and the representative design of experiments
[AD-A163685] p 265 N86-25119
PSYCHOLOGICAL TESTS
Characterization of good teleoperators - What aptitudes, interests, and experience correlate with measures of teleoperator performance p 268 A86-33828
Automated Portable Test System (APTS) - A performance envelope assessment tool
[SAE PAPER 851775] p 263 A86-35427
Generalizing over conditions by combining the multitrait multimethod matrix and the representative design of experiments
[AD-A163685] p 265 N86-25119
Proceedings of the Item Response Theory and Computerized Adaptive Testing Conference — 3
[AD-A163040] p 265 N86-25990
Theory-based cognitive assessment
[AD-A164083] p 266 N86-25991
PSYCHOLOGY
Theory-based cognitive assessment
[AD-A164083] p 266 N86-25991
PSYCHOPHYSICS
The psychophysics of workload - A second look at the relationship between subjective measures and performance p 260 A86-33804
PSYCHOPHYSIOLOGY
Training of cosmonauts and experience during space flight p 263 A86-35286
Some aspects of yogic exercises during space flight
p 263 A86-35289
Controlling of pilot work capacity by psychosomatic self-regulation techniques p 265 A86-36500
PSYCHOSOMATICS
Controlling of pilot work capacity by psychosomatic self-regulation techniques p 265 A86-36500
PUBLIC HEALTH
Health effects of ambient ozone exposure in vigorously exercising adults
[PB86-156940] p 258 N86-25989
PULMONARY CIRCULATION
Impaired pulmonary conversion of angiotensin I to angiotensin II in rats exposed to chronic hypoxia
p 246 A86-36218
Bioimpedance measurement with respect to pulsatile pulmonary blood flow p 271 A86-36316

PULSE RATE
Bioimpedance measurement with respect to pulsatile pulmonary blood flow p 271 A86-36316
PURSUIT TRACKING
Pilot speech performance while talking to a speech recognizer and flying a competitive helicopter pursuit task
[SAE PAPER 851779] p 264 A86-35441

R

RABBITS
Toxicological study of NTO
[DE86-003296] p 258 N86-25986
RADAR EQUIPMENT
Hygienic assessment of the electromagnetic radiation levels generated by radar installations
p 271 A86-36499
RADIATION DAMAGE
Nonionizing radiation damage in the eye
p 251 A86-33838
RADIATION DOSAGE
Hygienic assessment of the electromagnetic radiation levels generated by radar installations
p 271 A86-36499
Evaluating compliance with FCC (Federal Communications Commission) specified guidelines for human exposure to radiofrequency radiation
[PB86-127081] p 256 N86-25117
RADIATION EFFECTS
Prospects for using millimeter-band electromagnetic radiation as an efficient way of obtaining information on specific processes in living organisms
p 246 A86-35088
RADIO ASTRONOMY
A search for interstellar glycine p 274 A86-33668
RADIO FREQUENCIES
Evaluating compliance with FCC (Federal Communications Commission) specified guidelines for human exposure to radiofrequency radiation
[PB86-127081] p 256 N86-25117
RADIOBIOLOGY
Prospects for using millimeter-band electromagnetic radiation as an efficient way of obtaining information on specific processes in living organisms
p 246 A86-35088
The effect of electromagnetic radiation in the decimeter wavelength range on the neuronal calcium current in mollusks p 247 A86-36494
RATES (PER TIME)
Studies of the electric field distribution in biological bodies. Experimental dosimetry at radiofrequencies
[AD-A163156] p 249 N86-25976
RATINGS
An investigation of the 'von Restorff' phenomenon in post-test workload ratings p 261 A86-33807
RATS
The experimental determination of safe atmospheric exposure concentrations of JP-10 jet fuel
[AD-A163179] p 258 N86-25985
Toxicological study of NTO
[DE86-003296] p 258 N86-25986
REACTION KINETICS
Photoenergy transduction in halobacterium halobium
[NASA-CR-176673] p 248 N86-25970
REACTION TIME
An evaluation of color sets for CRT displays
[AD-A163694] p 273 N86-25125
REGENERATION (PHYSIOLOGY)
Planaria regeneration in zero gravity
p 245 A86-34984
REGRESSION ANALYSIS
Statistical inferences in cross-lagged panel studies
[AD-A163892] p 265 N86-25120
REGULATIONS
Evaluating compliance with FCC (Federal Communications Commission) specified guidelines for human exposure to radiofrequency radiation
[PB86-127081] p 256 N86-25117
REMOTE HANDLING
Recent advancements in telepresence technology development — in space p 269 A86-34959
REMOTE MANIPULATOR SYSTEM
Advanced manipulator system architectural requirements for Space Station p 269 A86-34957
Space telerobotics - A few more hurdles
p 272 A86-37047
The design, fabrication and delivery of a manipulator foot restraint mockup for space telescope development testing
[NASA-CR-178837] p 272 N86-25121
RESEARCH AND DEVELOPMENT
Research on the specification and acquisition of maintenance training simulators in the U.S. Air Force
p 268 A86-33823
Future directions for cost effective Air Force aircrew training - Managed technology and the training system
p 262 A86-33830
Assessing the human performance envelope - A brief guide
[SAE PAPER 851776] p 263 A86-35428
Workload assessment - Progress during the last decade
[SAE PAPER 851877] p 270 A86-35440
RESPIRATION
Isotopic study of the inhalation toxicology of oxidants
[PB86-109485] p 256 N86-25116
RESPIRATORY DISEASES
Respiratory diseases - Aeromedical aspects including disposal p 252 A86-35291
RESPIRATORY PHYSIOLOGY
Impaired pulmonary conversion of angiotensin I to angiotensin II in rats exposed to chronic hypoxia
p 246 A86-36218
Effects of exercise in normoxia and acute hypoxia on respiratory muscle metabolites p 246 A86-36223
Low acute hypoxia ventilatory response and hypoxic depression in acute altitude sickness
p 252 A86-36224
Influence of inspired oxygen concentration on acceleration atelectasis p 253 A86-36313
RESPIRATORY RATE
Synchronization of heart contractions and respiration during thermoregulatory polypnea in dogs
p 245 A86-34490
Impulse activity of the brain stem neurons related to the cardiac and respiratory rhythms p 246 A86-35940
Heart and respiration rates during a mental task performed with varying degrees of success
p 254 A86-36526
RETINA
Central serous retinopathy (choroidopathy) in pilots
p 254 A86-36317
RHYTHM (BIOLOGY)
Synchronization of heart contractions and respiration during thermoregulatory polypnea in dogs
p 245 A86-34490
ROBOTICS
Evolutionary paths for artificial intelligence technologies in operator interactions with space station robots
p 269 A86-34971
Space telerobotics - A few more hurdles
p 272 A86-37047
RULES
Rule-based analysis of pilot decisions
p 261 A86-33816

S

SACCADIC EYE MOVEMENTS
Adapted head- and eye-movement responses to added-head inertia p 250 A86-33758
The saccadic eye movement control system
p 267 A86-33797
SAFETY DEVICES
Comparison of human impact response in restraint systems with and without a negative G strap
p 249 A86-33754
Compendium of protective eyewear
[PB86-135779] p 273 N86-25126
SAFETY MANAGEMENT
Hygienic assessment of the electromagnetic radiation levels generated by radar installations
p 271 A86-36499
SCANNING
Eye-scan behavior in a flight simulation task as a function of level of training p 260 A86-33794
SEA WATER
Hydrogen production from salt water by Marine blue green algae and solar radiation p 245 A86-34985
SEARCHING
Visual-search efficiency — Russian book
p 271 A86-36695
SEATS
Simulation of aircraft seat response to a crash environment p 272 A86-36879
A review of the pilot backache problem in the CH113 Labrador helicopter
[AD-A164011] p 256 N86-25113
SEDIMENTARY ROCKS
Iron-silica crystallite nucleation by bacteria in a geothermal sediment p 247 A86-36368
SENSORIMOTOR PERFORMANCE
An automated methodology for conducting human factors evaluations of protective garments
p 268 A86-33817
Automated Portable Test System (APTS) - A performance envelope assessment tool
[SAE PAPER 851775] p 263 A86-35427
The mechanisms of muscle activity regulation in humans depending on biorhythm type p 254 A86-36528
Visual-search efficiency — Russian book
p 271 A86-36695
Normal and abnormal human vestibular ocular function
[NASA-CR-176820] p 257 N86-25978
SENSORY PERCEPTION
Anticipatory adjustments during a warning interval - Cortical negativity and perceptual sensitivity
p 261 A86-33818
SEPARATORS
Magnetic separation device
[AD-D012163] p 249 N86-25975
SHALE OIL
DNA analysis of epithelial cell suspensions
[DE86-002403] p 249 N86-25977
SIEVES
A small oxygen concentrator
[AD-A163145] p 273 N86-25993
SIGNAL ANALYSIS
Evaluation of precordial mapping before and after submaximal exercise amongst normal and asymptomatic subjects with non specific ST-T abnormalities
p 251 A86-35290
An informational assessment of changes in the physiological characteristics of an operator under different work regimens p 271 A86-36527
SIGNAL DETECTION
Information processing in vigilance performance - Complexity revisited p 259 A86-33778
The use of signal detection theory in research on human-computer interaction p 266 A86-33779
Anticipatory adjustments during a warning interval - Cortical negativity and perceptual sensitivity
p 261 A86-33818
SIGNS AND SYMPTOMS
Low acute hypoxia ventilatory response and hypoxic depression in acute altitude sickness
p 252 A86-36224
Effects of pressure on uptake and release of calcium by brain synaptosomes p 247 A86-36225
A review of the pilot backache problem in the CH113 Labrador helicopter
[AD-A164011] p 256 N86-25113
SILICON DIOXIDE
Iron-silica crystallite nucleation by bacteria in a geothermal sediment p 247 A86-36368
SKIN (ANATOMY)
Topical effects of molten salt on rat integument - A histological and photometric assessment
p 245 A86-33761
SKIN TEMPERATURE (BIOLOGY)
Cutaneous vascular responses to heat simulated at a high altitude of 5,600 m p 252 A86-36219
SOCIAL FACTORS
Realistic training for effective crew performance
[SAE PAPER 851916] p 264 A86-35446
SOILS
Phosphorobacterin and its effectiveness
[AD-A164508] p 248 N86-25973
SOLAR RADIATION
Hydrogen production from salt water by Marine blue green algae and solar radiation p 245 A86-34985
SPACE ADAPTATION SYNDROME
Head movements in non-terrestrial force environments elicit motion sickness - Implications for the etiology of space motion sickness p 253 A86-36315
SPACE FLIGHT
USSR Space Life Sciences Digest: Index to Issues 1-4
[NASA-CR-3922(06)] p 248 N86-25971
SPACE FLIGHT STRESS
Medical problems of space flights p 251 A86-35285
Training of cosmonauts and experience during space flight p 263 A86-35286
Medical evaluation of cosmonauts during space flight and immediate pre and post flight periods
p 251 A86-35287
Vectorcardiographic studies during Indo-Soviet joint space project p 251 A86-35288
Some aspects of yogic exercises during space flight
p 263 A86-35289
Respiratory diseases - Aeromedical aspects including disposal p 252 A86-35291
Muscle atrophy during space flight - Research needs and opportunities p 255 A86-37077
SPACE FLIGHT TRAINING
USSR Space Life Sciences Digest, Issue 5
[NASA-CR-3922(05)] p 248 N86-25109
SPACE HABITATS
Space Station design criteria for long-term human habitation
[DGLR PAPER 85-147] p 269 A86-35185

SPACE MAINTENANCE
The design, fabrication and delivery of a manipulator foot restraint mockup for space telescope development testing
[NASA-CR-178837] p 272 N[illegible]121
SPACE MISSIONS
Behavioral considerations for space station design
[AD-A163478] p 265 N86-25118
SPACE PERCEPTION
Adapted head- and eye-movement responses to added-head inertia p 250 A86-33758
The interfering effects of processing code on visual memory p 259 A86-33782
SPACE PSYCHOLOGY
Astronaut crew performance - Recent space experience
[SAE PAPER 851802] p 264 A86-35434
SPACE STATIONS
Human productivity of Space Station p 268 A86-33813
Advanced manipulator system architectural requirements for Space Station p 269 A86-34957
Space Station human productivity study p 269 A86-34980
Space Station design criteria for long-term human habitation
[DGLR PAPER 85-147] p 269 A86-35185
Space Station crew interface specifications and standards
[SAE PAPER 851801] p 270 A86-35433
Space Station crew workload - Station operations and customer accommodations
[SAE PAPER 851803] p 270 A86-35435
Space telerobotics - A few more hurdles p 272 A86-37047
Behavioral considerations for space station design
[AD-A163478] p 265 N86-25118
SPACEBORNE EXPERIMENTS
Concepts for the life support subsystem in the EURECA Botany Facility
[DGLR PAPER 85-126] p 245 A86-34573
Planaria regeneration in zero gravity p 245 A86-34984
SPACECRAFT DESIGN
Space Station design criteria for long-term human habitation
[DGLR PAPER 85-147] p 269 A86-35185
SPACECRAFT ENVIRONMENTS
Astronaut crew performance - Recent space experience
[SAE PAPER 851802] p 264 A86-35434
SPACECRAFT MANEUVERS
Sudden emesis following parabolic flight maneuvers Implications for space motion sickness p 250 A86-33759
SPACECREWS
Space Station human productivity study p 269 A86-34980
Space Station crew interface specifications and standards
[SAE PAPER 851801] p 270 A86-35433
Astronaut crew performance - Recent space experience
[SAE PAPER 851802] p 264 A86-35434
Space Station crew workload - Station operations and customer accommodations
[SAE PAPER 851803] p 270 A86-35435
SPEECH
To speak or not to speak - A multiple resource perspective p 259 A86-33784
SPEECH RECOGNITION
There's a voice in the sky - But can a picture tell you more? — comparison between synthesized speech and visual displays in presenting information in cockpits p 266 A86-33781
Pilot speech performance while talking to a speech recognizer and flying a competitive helicopter pursuit task
[SAE PAPER 851779] p 264 A86-35441
STAINLESS STEELS
Research animal stanchion and transporter
[AD-A163907] p 248 N86-25110
STANDARDS
Space Station crew interface specifications and standards
[SAE PAPER 851801] p 270 A86-35433
STRAPS
Comparison of human impact response in restraint systems with and without a negative G strap p 249 A86-33754
STRATEGY
A workload analysis for strategic conventional standoff capability missions p 268 A86-33803
STRESS (PHYSIOLOGY)
Zonal differentiation of performance under heat stress — of humans p 251 A86-33801
Manganese metabolism in healthy humans during different times of the year p 255 A86-36533
Method for the quantitative determination of the parasympathetic regulation of cardiac activity in operators working in sealed chambers p 271 A86-36536
A review of the pilot backache problem in the CH113 Labrador helicopter
[AD-A164011] p 256 N86-25113
STRUCTURAL VIBRATION
Helicopter crew evaluations on the effects of vibration on performance p 260 A86-33800
SUBSTITUTES
Review of modified hemoglobin solutions for use as temporary blood substitutes
[AD-A164210] p 256 N86-25114
SUPPORTS
A review of the pilot backache problem in the CH113 Labrador helicopter
[AD-A164011] p 256 N86-25113
SURGERY
Research animal stanchion and transporter
[AD-A163907] p 248 N86-25110
SYMPATHETIC NERVOUS SYSTEM
Method for the quantitative determination of the parasympathetic regulation of cardiac activity in operators working in sealed chambers p 271 A86-36536
SYNAPSES
Effects of pressure on uptake and release of calcium by brain synaptosomes p 247 A86-36225
Multidisciplinary studies on excitatory amino acids as transmitters in the brain
[AD-A164258] p 256 N86-25115
SYNTAX
The effects of syntactic complexity on the human-computer interaction p 271 A86-36172
SYSTEMS ENGINEERING
Workload measurement in system design and evaluation p 267 A86-33787
SYSTEMS INTEGRATION
An integrated display for vertical and translational flight Eight factors affecting pilot performance p 264 A86-36175
SYSTOLE
Systolic time intervals in pilots and non-pilots during 70 deg head-up tilt p 250 A86-33757
SYSTOLIC PRESSURE
Systolic blood pressure in fighter pilots after 12-15 years service p 250 A86-33762

T

TASK COMPLEXITY
Information processing in vigilance performance - Complexity revisited p 259 A86-33778
To speak or not to speak - A multiple resource perspective p 259 A86-33784
Eye-scan behavior in a flight simulation task as a function of level of training p 260 A86-33794
Learning and performance in an air refueling part-task trainer - Preliminary data analysis p 260 A86-33796
Assessment of task proficiency in Air Force OJT — On-the-Job-Training p 260 A86-33806
An investigation of the 'von Restorff' phenomenon in post-test workload ratings p 261 A86-33807
The effect of varying task difficulty on subjective workload p 261 A86-33808
Training characteristics of the Criterion Task Set workload assessment battery p 261 A86-33809
Timebased analysis of significant coordinated operations (TASCO) - A cockpit workload analysis technique p 268 A86-33810
Human productivity of Space Station p 268 A86-33813
Rule-based analysis of pilot decisions p 261 A86-33816
An automated methodology for conducting human factors evaluations of protective garments p 268 A86-33817
Anticipatory adjustments during a warning interval - Cortical negativity and perceptual sensitivity p 261 A86-33818
The use of brain evoked response in a critical event detection task p 261 A86-33819
Event-related brain potentials and resource allocation - From dual-task decrements to dual-task integrality p 261 A86-33820
Event-related brain potentials and intermodal divided attention p 262 A86-33821
Processing inferences derived from event-related potential measures in a monitoring task p 262 A86-33822
A comparison of operator performance in manual and automated versions of a dynamic decision-making task p 262 A86-33825
Voice and manual control in dual task situations p 262 A86-33826
Eye and head response to an attention cue in a dual task paradigm p 262 A86-33827
Assessment of simulation fidelity using measurements of piloting technique in flight. II p 264 A86-35867
The effects of syntactic complexity on the human-computer interaction p 271 A86-36172
TASKS
The effect of cold training and the wearing of gloves on manual performance in the cold: A comparison of pure ability and operational tasks
[AD-A163893] p 273 N86-25124
TECHNOLOGY ASSESSMENT
The human role in space: Technology, economics and optimization — Book p 272 A86-37037
TECHNOLOGY UTILIZATION
Applicability of using the CAR-II model in design and evaluation of multioperator workstations with shared controls p 268 A86-33805
TELEOPERATORS
Teleoperation of legged vehicles - Unique problems associated with walking and foot placement p 268 A86-33811
Characterization of good teleoperators - What aptitudes, interests, and experience correlate with measures of teleoperator performance p 268 A86-33828
Recent advancements in telepresence technology development — in space p 269 A86-34958
Space telerobotics - A few more hurdles p 272 A86-37047
TEMPORAL DISTRIBUTION
Systolic time intervals in pilots and non-pilots during 70 deg head-up tilt p 250 A86-33757
Time course of muscular blood metabolites during forearm rhythmic exercise in hypoxia p 252 A86-36222
THERMOREGULATION
Ontogeny of homeothermy in the immature rat - Metabolic and thermal responses p 246 A86-36221
Seasonal dynamics of circadian rhythms of oxygen consumption and heat production in youths in Siberian conditions p 254 A86-36529
Substantiation of physiological criteria for assessing the functional status of the human body in high-temperature environments p 255 A86-36532
THRESHOLDS (PERCEPTION)
Shadow mask display visibility - Human thresholds for perception of misconvergence effects p 268 A86-33798
TIME DEPENDENCE
Systolic blood pressure in fighter pilots after 12-15 years service p 250 A86-33762
Timebased analysis of significant coordinated operations (TASCO) - A cockpit workload analysis technique p 268 A86-33810
TIME SHARING
Event-related brain potentials and resource allocation - From dual-task decrements to dual-task integrality p 261 A86-33820
Voice and manual control in dual task situations p 262 A86-33826
The effects of syntactic complexity on the human-computer interaction p 271 A86-36172
TISSUES (BIOLOGY)
Multidisciplinary studies on excitatory amino acids as transmitters in the brain
[AD-A164258] p 256 N86-25115
Biosensors from membrane proteins reconstituted in polymerized lipid bilayers
[AD-D012160] p 248 N86-25974
TOLERANCES (PHYSIOLOGY)
Acute toxicity studies on 2 Air Force hydraulic fluids (MLO 82-233 and MLO 82-585)
[AD-A163174] p 258 N86-25984
The experimental determination of safe atmospheric exposure concentrations of JP-10 jet fuel
[AD-A163179] p 258 N86-25985
TOLUENE
Chemically induced damage to the hippocampal formation
[NDRE/PUBL-86/1002] p 255 N86-25112
TOXICITY
Topical effects of molten salt on rat integument - A histological and photometric assessment p 245 A86-33761
Acute toxicity studies on 2 Air Force hydraulic fluids (MLO 82-233 and MLO 82-585)
[AD-A163174] p 258 N86-25984
The experimental determination of safe atmospheric exposure concentrations of JP-10 jet fuel
[AD-A163179] p 258 N86-25985
Toxicological study of NTO
[DE86-003296] p 258 N86-25986

TOXICOLOGY
Isotopic study of the inhalation toxicology of oxidants
[PB86-109485] p 256 N86-25116
TRACKING (POSITION)
Feature positive coding effects on object localization
p 267 A86-33789
TRAINING EVALUATION
A case for realistic training — of flight crews
[SAE PAPER 851915] p 264 A86-35445
Realistic training for effective crew performance
[SAE PAPER 851916] p 264 A86-35446
The case for training for the potentially catastrophic situation
[SAE PAPER 851917] p 264 A86-35447
TRAINING SIMULATORS
Learning and performance in an air refueling part-task trainer - Preliminary data analysis p 260 A86-33796
Research on the specification and acquisition of maintenance training simulators in the U.S. Air Force
p 268 A86-33823
TRANSLATIONAL MOTION
An integrated display for vertical and translational flight Eight factors affecting pilot performance
p 264 A86-36175
TRANSPORTER
Research animal stanchion and transporter
[AD-A162907] p 248 N86-25110
TRIMETHYL COMPOUNDS
Chemically induced damage to the hippocampal formation
[NDRE/PUBL-86/1002] p 255 N86-25112

U

U.S.S.R.
USSR Space Life Sciences Digest: Index to Issues 1-4
[NASA-CR-3922(06)] p 248 N86-25971
U.S.S.R. SPACE PROGRAM
Vectorcardiographic studies during Indo-Soviet joint space project p 251 A86-35288
ULTRASONIC RADIATION
A study of the effect of ultrasound on the antigenic activity of human erythrocytes p 254 A86-36495
ULTRASONICS
Ultrasonic quantification of blood volume redistribution under hypergravity
[AD-A164379] p 257 N86-25982

V

VASOCONSTRICTION
Cutaneous vascular responses to heat simulated at a high altitude of 5,800 m p 252 A86-36219
VASODILATION
Cutaneous vascular responses to heat simulated at a high altitude of 5,800 m p 252 A86-36219
VECTORCARDIOGRAPHY
Vectorcardiographic studies during Indo-Soviet joint space project p 251 A86-35288
VERBAL COMMUNICATION
Pilot speech performance while talking to a speech recognizer and flying a competitive helicopter pursuit task
[SAE PAPER 851779] p 264 A86-35441
VERTEBRAL COLUMN
A review of the pilot backache problem in the CH113 Labrador helicopter
[AD-A164011] p 256 N86-25113
VERTICAL FLIGHT
An integrated display for vertical and translational flight Eight factors affecting pilot performance
p 264 A86-36175
VESTIBULAR TESTS
Sudden emesis following parabolic flight maneuvers Implications for space motion sickness
p 250 A86-33759
Normal and abnormal human vestibular ocular function
[NASA-CR-176820] p 257 N86-25978
VESTIBULES
Normal and abnormal human vestibular ocular function
[NASA-CR-176820] p 257 N86-25978
VISCOSITY
Plasma viscosity elevations with simulated weightlessness p 253 A86-36312
VISION
The first cortical implant of a semiconductor multielectrode array. VER (Visual Evoked Responses) and propagation analysis
[AD-A164015] p 248 N86-25972
VISUAL ACUITY
Mild hypoxia and visual performance with night vision goggles p 249 A86-33755
Central serous retinopathy (choroidopathy) in pilots
p 254 A86-36317
Emergent techniques for assessment of visual performance
[PB86-144755] p 258 N86-25998
VISUAL DISCRIMINATION
An evaluation of color sets for CRT displays
[AD-A163894] p 273 N86-25125
VISUAL OBSERVATION
Visual-search efficiency — Russian book
p 271 A86-36695
VISUAL PERCEPTION
Shadow mask display visibility - Human thresholds for perception of misconvergence effects
p 268 A86-33798
Emergent techniques for assessment of visual performance
[PB86-144755] p 258 N86-25998
VISUAL SIGNALS
Visual cue dominance hierarchies - Implications for simulator design
[SAE PAPER 851946] p 265 A86-36947
VISUAL STIMULI
Feature positive coding effects on object localization
p 267 A86-33789
Event-related brain potentials and intermodal divided attention p 262 A86-33821
VISUAL TASKS
The interfering effects of processing code on visual memory p 259 A86-33782
To speak or not to speak - A multiple resource perspective p 259 A86-33784
Visual-search efficiency — Russian book
p 271 A86-36695
VOICE CONTROL
Voice and manual control in dual task situations
p 262 A86-33826
VOMITING
Sudden emesis following parabolic flight maneuvers Implications for space motion sickness
p 250 A86-33759

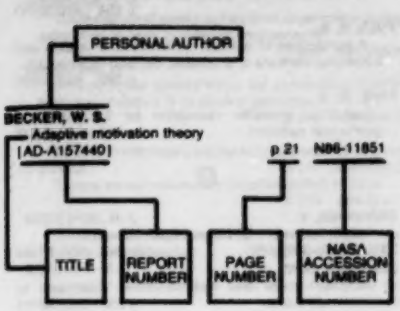
W

WALKING MACHINES
Teleoperation of legged vehicles - Unique problems associated with walking and foot placement
p 268 A86-33811
WARNING
Anticipatory adjustments during a warning interval - Cortical negativity and perceptual sensitivity
p 261 A86-33818
WATER BALANCE
Effect of hydration on plasma vasopressin, renin, and aldosterone responses to head-up tilt
p 253 A86-36311
WATER POLLUTION
DNA analysis of epithelial cell suspensions
[DE86-002403] p 249 N86-25977
WEAPON SYSTEMS
A workload analysis for strategic conventional standoff capability missions p 268 A86-33803
Research on the specification and acquisition of maintenance training simulators in the U.S. Air Force
p 268 A86-33823
WEIGHTLESSNESS
Comparison of human impact response in restraint systems with and without a negative G strap
p 249 A86-33754
Planaria regeneration in zero gravity
p 245 A86-34984
WEIGHTLESSNESS SIMULATION
Effect of simulated weightlessness on exercise-induced anaerobic threshold p 250 A86-33756
Hemodynamic response to LBNP following 2 hours HDT (-6 deg) — lower body negative pressure with head-down tilt p 252 A86-36309
Plasma viscosity elevations with simulated weightlessness p 253 A86-36312
WORK CAPACITY
Human productivity of Space Station
p 266 A86-33813
Controlling of pilot work capacity by psychosomatic self-regulation techniques p 265 A86-36500
The mechanisms of muscle activity regulation in humans depending on biorhythm type p 254 A86-36528
The dynamics of systemic functional organization during adaptation to work in extreme environments
p 254 A86-36530
Evaluating the functional status of operators using indices of mental work capacity p 254 A86-36531
WORKLOADS (PSYCHOPHYSIOLOGY)
Assessing subjective workload assessment - A comparison of SWAT and the NASA-bipolar methods — Subjective Workload Assessment Technique
p 259 A86-33783
Assessment of SWAT accuracy — Subjective Workload Assessment Technique p 259 A86-33785
Workload measurement in system design and evaluation p 267 A86-33787
Pro-SWAT applied to advanced helicopter crew station concepts p 267 A86-33795
A workload analysis for strategic conventional standoff capability missions p 268 A86-33803
The psychophysics of workload - A second look at the relationship between subjective measures and performance p 260 A86-33804
An investigation of the 'von Restorff' phenomenon in post-test workload ratings p 261 A86-33807
The effect of varying task difficulty on subjective workload p 261 A86-33808
Training characteristics of the Criterion Task Set workload assessment battery p 261 A86-33809
Timebased analysis of significant coordinated operations (TASCO) - A cockpit workload analysis technique p 266 A86-33810
Event-related brain potentials and resource allocation - From dual-task decrements to dual-task integrality
p 261 A86-33820
Event-related brain potentials and intermodal divided attention p 262 A86-33821
Processing inferences derived from event-related potential measures in a monitoring task
p 262 A86-33822
A hierarchical model of pilot's procedural behavior for cockpit workload analysis p 263 A86-33983
Space Station crew workload - Station operations and customer accommodations
[SAE PAPER 851803] p 270 A86-35435
Workload assessment - Progress during the last decade
[SAE PAPER 851877] p 270 A86-35440
Heart and respiration rates during a mental task performed with varying degrees of success
p 254 A86-36526
An informational assessment of changes in the physiological characteristics of an operator under different work regimens p 271 A86-36527
The dynamics of systemic functional organization during adaptation to work in extreme environments
p 254 A86-36530
Evaluating the functional status of operators using indices of mental work capacity p 254 A86-36531

Y

YIELD
Phosphorobacterin and its effectiveness
[AD-A164508] p 248 N86-25973

Typical Personal Author Index Listing



Listings in this index are arranged alphabetically by personal author. The title of the document provides the user with a brief description of the subject matter. The report number helps to indicate the type of document listed (e.g., NASA report, translation, NASA contractor report). The page and accession numbers are located beneath and to the right of the title. Under any one author's name the accession numbers are arranged in sequence with the AIAA accession numbers appearing first.

A

ABUSHKEVICH, V. G.
Synchronization of heart contractions and respiration during thermoregulatory polypnea in dogs
p 245 A86-34490

ADAIR, E. R.
Ontogeny of homeothermy in the immature rat - Metabolic and thermal responses p 246 A86-36221

ADAVAL, S. K.
Evaluation of precordial mapping before and after submaximal exercise amongst normal and asymptomatic subjects with non specific ST-T abnormalities
p 251 A86-35290

ALBRIGHT, R.
Aerobic capacity and coronary risk factors in a middle-aged army population AD-A163998 HC A02/MF A01
[AD-A163998] p 257 N86-25979

ALEKSEEV, S. I.
The effect of electromagnetic radiation in the decimeter wavelength range on the neuronal calcium current in mollusks p 247 A86-36494

ALEXANDER, D.
Aerobic capacity and coronary risk factors in a middle-aged army population AD-A163998 HC A02/MF A01
[AD-A163998] p 257 N86-25979

ANTONOV, A. A.
Method for the quantitative determination of the parasympathetic regulation of cardiac activity in operators working in sealed chambers p 271 A86-36536

ARBAK, C. J.
Eye and head response to an attention cue in a dual task paradigm p 262 A86-33827

ARZI, H.
The psychophysics of workload - A second look at the relationship between subjective measures and performance p 260 A86-33804

ASTASHIN, V. A.
Human adaptation to antagonistic environmental factors p 255 A86-36535

AZHAEV, A. N.
Substantiation of physiological criteria for assessing the functional status of the human body in high-temperature environments p 255 A86-36532

B

BALLDIN, U. I.
Influence of inspired oxygen concentration on acceleration atelectasis p 253 A86-36313

BANERJEE, P. K.
Systolic time intervals in pilots and non-pilots during 70 deg head-up tilt p 250 A86-33757

BARCIELA, S.
Hydrogen production from salt water by Marine blue green algae and solar radiation p 245 A86-34985

BARGERON, C. B.
Nonionizing radiation damage in the eye
p 251 A86-33838

BARKER, C.
Partial recovery of neutrophil functions during prolonged hypothermia in pigs p 246 A86-36220

BARZILAY, J.
Systolic blood pressure in fighter pilots after 12-15 years service p 250 A86-33762

BATEMAN, R. P.
Helicopter crew evaluations on the effects of vibration on performance p 260 A86-33800

BEACH, A.
A review of the pilot backache problem in the CH113 Labrador helicopter
[AD-A164011] p 256 N86-25113

BEDNEK, J. L., JR.
Aerobic capacity and coronary risk factors in a middle-aged army population AD-A163998 HC A02/MF A01
[AD-A163998] p 257 N86-25979

BEHNKE, A. A.
Zonal differentiation of performance under heat stress
p 251 A86-33801

BEIER, J.
Hemodynamic response to LBNP following 2 hours HDT (-6 deg) p 252 A86-36309

BEJCZY, A. K.
Recent advancements in telepresence technology development p 269 A86-34959

BERINGER, D. B.
A peripheral integrated status display - Is it really giving the 'big picture' or is it a miniseries?
p 267 A86-33791
Teleoperation of legged vehicles - Unique problems associated with walking and foot placement
p 268 A86-33811

BERULIS, I. I.
A search for interstellar glycine p 274 A86-33668

BEVERIDGE, T. J.
Iron-silica crystallite nucleation by bacteria in a geothermal sediment p 247 A86-36368

BHAGAT, P. K.
Ultrasonic quantification of blood volume redistribution under hypergravity
[AD-A164379] p 257 N86-25982

BIGGAR, W. D.
Partial recovery of neutrophil functions during prolonged hypothermia in pigs p 246 A86-36220

BITTNER, A. C., JR.
Automated Portable Test System (APTS) - A performance envelope assessment tool
[SAE PAPER 851775] p 263 A86-35427
Assessing the human performance envelope - A brief guide
[SAE PAPER 851776] p 263 A86-35428

BLACK, F. O.
Normal and abnormal human vestibular ocular function
[NASA-CR-176820] p 257 N86-25978

BOBROVA, M. A.
Impulse activity of the brain stem neurons related to the cardiac and respiratory rhythms p 246 A86-35940

BOGOMOLNI, R. A.
Photoenergy transduction in halobacterium halobium
[NASA-CR-176873] p 248 N86-25970

BOHN, D.
Partial recovery of neutrophil functions during prolonged hypothermia in pigs p 246 A86-36220

BOWERS, J. C.
Information processing in vigilance performance - Complexity revisited p 259 A86-33778

BRAUNE, R.
Age-dependent changes in information processing abilities between 20 and 60 years p 260 A86-33788

BRINKLEY, J. W.
Comparison of human impact response in restraint systems with and without a negative G strap
p 249 A86-33754

BROWN, D. R.
Ultrasonic quantification of blood volume redistribution under hypergravity
[AD-A164379] p 257 N86-25982

BRUNER, R. H.
The experimental determination of safe atmospheric exposure concentrations of JP-10 jet fuel
[AD-A163179] p 258 N86-25985

BUCKPITT, A. R.
Comparative biochemistry and metabolism. Part 2: Naphthalene lung toxicity
[AD-A163144] p 257 N86-25983

BURNS, R. K.
Feature positive coding effects on object localization
p 267 A86-33789

BUROV, A. IU.
Evaluating the functional status of operators using indices of mental work capacity p 254 A86-36531

BURTON, R. R.
Influence of inspired oxygen concentration on acceleration atelectasis p 253 A86-36313

C

CALHOUN, G. L.
Eye and head response to an attention cue in a dual task paradigm p 262 A86-33827

CALL, D. W.
An automated methodology for conducting human factors evaluations of protective garments
p 268 A86-33817

CAPDEROU, A.
Time course of muscular blood metabolites during forearm rhythmic exercise in hypoxia
p 252 A86-36222

CARROLL, R. J.
Research on the specification and acquisition of maintenance training simulators in the U.S. Air Force
p 268 A86-33823

CAVIN, J.
Magnetic separation device
[AD-D012183] p 249 N86-25975

CHAPMAN, R. S.
Health effects of ambient ozone exposure in vigorously exercising adults
[PB86-156940] p 258 N86-25989

CHATTERJEE, P. C.
Medical problems of space flights p 251 A86-35285
Vectorcardiographic studies during Indo-Soviet joint space project p 251 A86-35288
Some aspects of yogic exercises during space flight
p 263 A86-35289

CHECHILE, R. A.
The effects of syntactic complexity on the human-computer interaction p 271 A86-36172

CHEKURDA, R. P.
Heart and respiration rates during a mental task performed with varying degrees of success
p 254 A86-36526

CHIBRIKIN, V. M.
The rhythms of paramagnetic-center concentration in mouse liver and a mathematical model of synchronized autooscillations p 247 A86-36497

CHILDS, J. M.
Interactive computer-based flight training
[SAE PAPER 851991] p 263 A86-35430

CHILLAG, N.
The psychophysics of workload - A second look at the relationship between subjective measures and performance p 260 A86-33804

CHUPRINA, E. I.
The dynamics of systemic functional organization during adaptation to work in extreme environments
p 254 A86-36530

CLAUZEL, J. S.
A case for realistic training
[SAE PAPER 851915] p 264 A86-35445

CLEMENT, W. F.
Assessment of simulation fidelity using measurements of piloting technique in flight. II p 264 A86-35867

CLEVELAND, R. F.
Evaluating compliance with FCC (Federal Communications Commission) specified guidelines for human exposure to radiofrequency radiation
[PB86-127081] p 256 N86-25117

CLEVELAND, W. S.
Assessment of simulation fidelity using measurements of piloting technique in flight. II p 264 A86-35867

COATES, G. D.
Eye-scan behavior in a flight simulation task as a function of level of training p 260 A86-33794

COLLSTOCK, J. R., JR.
Eye-scan behavior in a flight simulation task as a function of level of training p 260 A86-33794

CONVERTINO, V. A.
Effect of simulated weightlessness on exercise-induced anaerobic threshold p 250 A86-33756
Cardiovascular dynamics associated with tolerance to lower body negative pressure p 253 A86-36310
Plasma viscosity elevations with simulated weightlessness p 253 A86-36312

CORKER, K.
Recent advancements in telepresence technology development p 269 A86-34959

COTMAN, C. W.
Multidisciplinary studies on excitatory amino acids as transmitters in the brain
[AD-A164258] p 256 N86-25115

COURTICE, A. J.
Future directions for cost effective Air Force aircrew training - Managed technology and the training system
p 262 A86-33830

CRABTREE, M. S.
Methods and systems for measuring human performance capabilities p 267 A86-33786
Workload measurement in system design and evaluation p 267 A86-33787

CRAWFORD, D. P.
Magnetic separation device
[AD-D012163] p 249 N86-25975

CULP, V.
Voice and manual control in dual task situations
p 262 A86-33826

CURRAN, P. S.
Decluttering methods for high density computer-generated graphic displays
p 267 A86-33790

D

DASHKOVSKII, A. I.
Synchronization of heart contractions and respiration during thermoregulatory polypnea in dogs
p 245 A86-34490

DEMASI, J. N.
The role of flight simulation in helicopter crew station design
[SAE PAPER 851900] p 272 A86-36840

DEMBER, W. N.
Information processing in vigilance performance - Complexity revisited p 259 A86-33778

DEMPSEY, J. A.
Effects of exercise in normoxia and acute hypoxia on respiratory muscle metabolites p 248 A86-36223

DERRICK, W. L.
Workload assessment - Progress during the last decade
[SAE PAPER 851877] p 270 A86-35440

DE'NATKOV, N. D.
Prospects for using millimeter-band electromagnetic radiation as an efficient way of obtaining information on specific processes in living organisms
p 246 A86-35086

DIKSHIT, M. B.
Systolic time intervals in pilots and non-pilots during 70 deg head-up tilt p 250 A86-33757
Some aspects of yogic exercises during space flight
p 263 A86-35269

DIVEKAR, H. M.
Comparative study of acetazolamide and spironolactone on regional blood distribution on exposure to acute hypobaric hypoxia p 248 A86-35863

DIVERT, G. M.
The mechanisms of muscle activity regulation in humans depending on biorhythm type p 254 A86-36528

DOMAKHINA, G. M.
The mechanisms of muscle activity regulation in humans depending on biorhythm type p 254 A86-36528

DORNER, R. G.
A small oxygen concentrator
[AD-A163145] p 273 N86-25993

DOWROUGH, D. C.
Evolutionary paths for artificial intelligence technologies in operator interactions with space station robots
p 269 A86-34971

DOUGUET, D.
Time course of muscular blood metabolites during forearm rhythmic exercise in hypoxia
p 252 A86-36222

DUBUR, G. IA.
Antioxidants as antiarrhythmic remedies
p 246 A86-35936

DUNEVIN, K. O.
Behavioral considerations for space station design
[AD-A163478] p 265 N86-25118

DUMLAP, W. P.
Automated Portable Test System (APTS) - A performance envelope assessment tool
[SAE PAPER 851775] p 263 A86-35427

E

EBERTS, R. E.
There's a voice in the sky - But can a picture tell you more?
p 266 A86-33781

EGGEMEIER, F. T.
Methods and systems for measuring human performance capabilities p 267 A86-33786
Workload measurement in system design and evaluation p 267 A86-33787

EGOROV, I. A.
Simulation of thermal polycondensation processes of amino acids during the migration of their aqueous solutions in the earth's lithosphere p 274 A86-34489

ELLISON, M. G.
Timebased analysis of significant coordinated operations (TASCO) - A cockpit workload analysis technique p 268 A86-33810

EMELIANOV, A. M.
Control errors: Psychological causes - An automated method of analysis p 270 A86-35460

F

FARRELL, R. A.
Nonionizing radiation damage in the eye
p 251 A86-33838

FEIGENBAUM, E.
Cardiokymography
[PB86-133790] p 258 N86-25967

FERGUSON, E. W.
Plasma viscosity elevations with simulated weightlessness p 253 A86-36312

FERGUSON, S. W.
Assessment of simulation fidelity using measurements of piloting technique in flight. II p 264 A86-35867

FERRIS, F. G.
Iron-silica crystallite nucleation by bacteria in a geothermal sediment p 247 A86-36368

FISK, A. D.
Automatic and controlled processing approach to interpreting vigilance performance p 259 A86-33777

FITZJARRELL, P. B.
The first cortical implant of a semiconductor multielectrode array. VER (Visual Evoked Responses) and propagation analysis
[AD-A164015] p 248 N86-25972

FITZPATRICK, J. A.
Research on the specification and acquisition of maintenance training simulators in the U.S. Air Force
p 266 A86-33823

FLEISCHMAN, R. N.
The effects of syntactic complexity on the human-computer interaction p 271 A86-36172

FORECAST, D. F.
Systolic blood pressure in fighter pilots after 12-15 years service p 250 A86-33762

FORTE, V. A., JR.
Research animal stanchion and transporter
[AD-A163907] p 248 N86-25110

FOUSHEE, H. C.
Realistic training for effective crew performance
[SAE PAPER 851916] p 264 A86-35446

FREGOSI, R. F.
Effects of exercise in normoxia and acute hypoxia on respiratory muscle metabolites p 248 A86-36223

FROLKIS, R. A.
Antioxidants as antiarrhythmic remedies
p 246 A86-35936

FROLKIS, V. V.
Antioxidants as antiarrhythmic remedies
p 246 A86-35936

FROOM, P.
Systolic blood pressure in fighter pilots after 12-15 years service p 250 A86-33762
Central serous retinopathy (choroidopathy) in pilots
p 254 A86-36317

FULD, R. B.
A comparison of operator performance in manual and automated versions of a dynamic decision-making task
p 262 A86-33825

FYFE, W. S.
Iron-silica crystallite nucleation by bacteria in a geothermal sediment p 247 A86-36368

G

GARSHNEK, V.
USSR Space Life Sciences Digest, issue 5
[NASA-CR-3922(05)] p 243 N86-25109

GAUTHIER, G. M.
Adapted head- and eye-movement responses to added-head inertia p 250 A86-33758

GAVRIUTIN, V. M.
Hygienic assessment of the electromagnetic radiation levels generated by radar installations
p 271 A86-36409

GAWORSKI, C. L.
Acute toxicity studies on 2 Air Force hydraulic fluids (MLO 82-233 and MLO 82-585)
[AD-A163174] p 258 N86-25984

GEBHARDT, U.
Hemodynamic response to LBNP following 2 hours HDT (-6 deg) p 252 A86-36309

GEELEN, G.
Effect of hydration on plasma vasopressin, renin, and aldosterone responses to head-up tilt
p 253 A86-36311

GEER, C. W.
Space Station crew interface specifications and standards
[SAE PAPER 851801] p 270 A86-35433

GENNETTI, M. G.
Applicability of using the CAR-II model in design and evaluation of multioperator workstations with shared controls p 268 A86-33805

GERTH, R. J.
Teleoperation of legged vehicles - Unique problems associated with walking and foot placement
p 268 A86-33811

GILMAN, S. C.
Effects of pressure on uptake and release of calcium by brain synaptosomes p 247 A86-36225

GILMOUR, J. D.
Pilot vehicle interfaces with smart avionics systems
[SAE PAPER 851923] p 270 A86-35432

GOETTL, B. P.
The interfering effects of processing code on visual memory p 259 A86-33782

GOLANT, M. B.
Prospects for using millimeter-band electromagnetic radiation as an efficient way of obtaining information on specific processes in living organisms
p 246 A86-35086

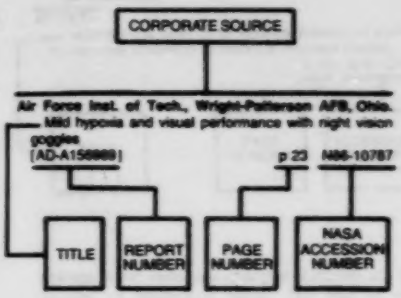
Typical Corporate Source Index Listing



Listings in this index are arranged alphabetically by corporate source. The title of the document is used to provide a brief description of the subject matter. The page number and the accession number are included in each entry to assist the user in locating the abstract in the abstract section. If applicable, a report number is also included as an aid in identifying the document.

A

Air Force Academy, Colo.
Behavioral considerations for space station design
[AD-A163478] p 265 N86-25118

Air Force Human Resources Lab., Brooks AFB, Tex.
Theory-based cognitive assessment
[AD-A164083] p 266 N86-25991

Air Force Inst. of Tech., Wright-Patterson AFB, Ohio.
The first cortical implant of a semiconductor multielectrode array. VER (Visual Evoked Responses) and propagation analysis
[AD-A164015] p 248 N86-25972

An analysis of potential predictive parameters of motion sickness using a computerized biophysical data acquisition system
[AD-A164099] p 257 N86-25981

Air Force Systems Command, Wright-Patterson AFB, Ohio.
Phosphorobacterin and its effectiveness
[AD-A164508] p 248 N86-25973

Arizona Univ., Tucson.
Cardiovascular dynamics associated with tolerance to lower body negative pressure p 253 A86-36310

Plasma viscosity elevations with simulated weightlessness p 253 A86-36312

Army Research Inst. of Environmental Medicine, Natick, Mass.
Research animal stanchion and transporter
[AD-A163907] p 248 N86-25110

Aerobic capacity and coronary risk factors in a middle-aged army population AD-A163998 HC A02/MF A01
[AD-A163998] p 257 N86-25979

Fitness and activity assessments among US Army populations: Implications for NCHS general population surveys
[AD-A164060] p 257 N86-25980

B

Baylor Coll. of Medicine, Houston, Tex.
Health effects of ambient ozone exposure in vigorously exercising adults
[PB86-158940] p 258 N86-25989

Biomedics Corp., Cocoa Beach, Fla.
Effect of simulated weightlessness on exercise-induced anaerobic threshold p 250 A86-33756

U.S.S.R.

A search for interstellar glycine p 274 A86-33668

Simulation of thermal polycondensation processes of amino acids during the migration of their aqueous solutions in the earth's lithosphere p 274 A86-34489

Synchronization of heart contractions and respiration during thermoregulatory polypnea in dogs p 245 A86-34490

Prospects for using millimeter-band electromagnetic radiation as an efficient way of obtaining information on specific processes in living organisms p 246 A86-35068

Anticoxidants as antiarrhythmic remedies p 246 A86-35838

Changes in the contractile and electrical activities of the rat myocardium under the effect of verapamil under insufficient oxygenation p 246 A86-35939

Impulse activity of the brain stem neurons related to the cardiac and respiratory rhythms p 246 A86-35940

Gamma-aminobutyric acid and bulbar mechanisms of hemodynamic regulation p 246 A86-35941

The effect of electromagnetic radiation in the decimeter wavelength range on the neuronal calcium current in mollusks p 247 A86-36494

A study of the effect of ultrasound on the antigenic activity of human erythrocytes p 254 A86-36495

A model of the system controlling involuntary eye movements p 247 A86-36496

The rhythms of paramagnetic-center concentration in mouse liver and a mathematical model of synchronized autooscillations p 247 A86-36497

The effect of external factors on the reactions modeling biological processes (Piccardi test) p 247 A86-36498

Hygienic assessment of the electromagnetic radiation levels generated by radar installations p 271 A86-36499

Controlling of pilot work capacity by psychosomatic self-regulation techniques p 265 A86-36500

Heart and respiration rates during a mental task performed with varying degrees of success p 254 A86-36526

An informational assessment of changes in the physiological characteristics of an operator under different work regimens p 271 A86-36527

The mechanisms of muscle activity regulation in humans depending on biorhythm type p 254 A86-36528

Seasonal dynamics of circadian rhythms of oxygen consumption and heat production in youths in Siberian conditions p 254 A86-36529

The dynamics of systemic functional organization during adaptation to work in extreme environments p 254 A86-36530

Evaluating the functional status of operators using indices of mental work capacity p 254 A86-36531

Substantiation of physiological criteria for assessing the functional status of the human body in high-temperature environments p 255 A86-36532

Manganese metabolism in healthy humans during different times of the year p 255 A86-36533

Dynamics of the ultraslow bioelectric brain activity during the performance of certain parts of operational activity p 255 A86-36534

Human adaptation to antagonistic environmental factors p 255 A86-36535

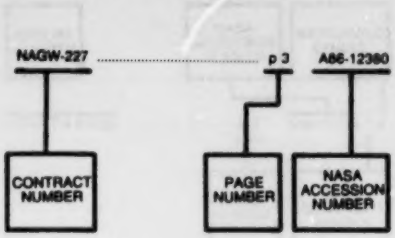
Method for the quantitative determination of the parasympathetic regulation of cardiac activity in operators working in sealed chambers p 271 A86-36536

Visual-search efficiency p 271 A86-36895

Phosphorobacterin and its effectiveness
[AD-A164508] p 248 N86-25973

FOREIGN

Typical Contract Number Index Listing



Listings in this index are arranged alpha-numerically by contract number. Under each contract number, the accession numbers denoting documents that have been produced as a result of research done under that contract are arranged in ascending order with the AIAA accession numbers appearing first. The accession number denotes the number by which the citation is identified in the abstract section. Preceding the accession number is the page number on which the citation may be found.

AVAILABILITY OF CITED PUBLICATIONS

IAA ENTRIES (A86-10000 Series)

Publications announced in *IAA* are available from the AIAA Technical Information Service as follows: Paper copies of accessions are available at $10.00 per document (up to 50 pages), additional pages $0.25 each. Microfiche[1] of documents announced in *IAA* are available at the rate of $4.00 per microfiche on demand. Standing order microfiche are available at the rate of $1.45 per microfiche for *IAA* source documents and $1.75 per microfiche for AIAA meeting papers.

Minimum air-mail postage to foreign countries is $2.50. All foreign orders are shipped on payment of pro-forma invoices.

All inquiries and requests should be addressed to: Technical Information Service, American Institute of Aeronautics and Astronautics, 555 West 57th Street, New York, NY 10019. Please refer to the accession number when requesting publications.

STAR ENTRIES (N86-10000 Series)

One or more sources from which a document announced in *STAR* is available to the public is ordinarily given on the last line of the citation. The most commonly indicated sources and their acronyms or abbreviations are listed below. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

Avail: NTIS. Sold by the National Technical Information Service. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code preceded by the letters HC or MF in the *STAR* citation. Current values for the price codes are given in the tables on NTIS PRICE SCHEDULES.

Documents on microfiche are designated by a pound sign (#) following the accession number. The pound sign is used without regard to the source or quality of the microfiche.

Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) is available at greatly reduced unit prices. For this service and for information concerning subscription to NASA printed reports, consult the NTIS Subscription Section, Springfield, Va. 22161.

NOTE ON ORDERING DOCUMENTS: When ordering NASA publications (those followed by the * symbol), use the N accession number. NASA patent applications (only the specifications are offered) should be ordered by the US-Patent-Appl-SN number. Non-NASA publications (no asterisk) should be ordered by the AD, PB, or other *report* number shown on the last line of the citation, not by the N accession number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy. The current price and order number are given following the availability line. (NTIS will fill microfiche requests, as indicated above, for those documents identified by a # symbol.)

Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Administration, Public Document Room (Room 126), 600 Independence Ave., S.W., Washington, D.C. 20546, or public document rooms located at each of the NASA research centers, the NASA Space Technology Laboratories, and the NASA Pasadena Office at the Jet Propulsion Laboratory.

(1) A microfiche is a transparent sheet of film, 105 by 148 mm in size containing as many as 60 to 98 pages of information reduced to micro images (not to exceed 26.1 reduction).

Avail: DOE Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts*. Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center - Its Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center.

Avail: Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation.

Avail: USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed in this introduction. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.

Avail: HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, California. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.

Avail: BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, inquiry should be addressed to the BLL.)

Avail: Fachinformationszentrum, Karlsruhe. Sold by the Fachinformationszentrum Energie, Physik, Mathematik GMBH, Eggenstein Leopoldshafen, Federal Republic of Germany, at the price shown in deutschmarks (DM).

Avail: Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.

Avail: US Patent and Trademark Office. Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of $1.50 each, postage free.

Avail: ESDU. Pricing information on specific data, computer programs, and details on ESDU topic categories can be obtained from ESDU International Ltd. Requesters in North America should use the Virginia address while all other requesters should use the London address.

Avail: (US Sales Only). These foreign documents are available to users within the United States from the National Technical Information Service (NTIS). They are available to users outside the United States through the International Nuclear Information Service (INIS) representative in their country, or by applying directly to the issuing organization.

Other availabilities: If the publication is available from a source other than the above, the publisher and his address will be displayed entirely on the availability line or in combination with the corporate author line.

PUBLIC COLLECTIONS OF NASA DOCUMENTS

DOMESTIC: NASA and NASA-sponsored documents and a large number of aerospace publications are available to the public for reference purposes at the library maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

EUROPEAN: An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England for public access. The British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy or microfiche of NASA and NASA-sponsored documents, those identified by both the symbols # and * from ESA — Information Retrieval Service European Space Agency, 8-10 rue Mario-Nikis, 75738 CEDEX 15, France.

FEDERAL DEPOSITORY LIBRARY PROGRAM

In order to provide the general public with greater access to U.S. Government publications, Congress established the Federal Depository Library Program under the Government Printing Office (GPO), with 50 regional depositories responsible for permanent retention of material, inter-library loan, and reference services. At least one copy of nearly every NASA and NASA-sponsored publication, either in printed or microfiche format, is received and retained by the 50 regional depositories. A list of the regional GPO libraries, arranged alphabetically by state, appears on the inside back cover. These libraries are *not* sales outlets. A local library can contact a Regional Depository to help locate specific reports, or direct contact may be made by an individual.

STANDING ORDER SUBSCRIPTIONS

NASA SP-7011 and its supplements are available from the National Technical Information Service (NTIS) on standing order subscription as PB 86-912300 at the price of $8.00 domestic and $16.00 foreign, and at $14.00 domestic and $28.00 foreign for the annual index. Standing order subscriptions do not terminate at the end of a year, as do regular subscriptions, but continue indefinitely unless specifically terminated by the subscriber. Questions on the availability of the predecessor publications, *Aerospace Medicine and Biology* (Volumes I-XI), should be directed to NTIS.

INTRODUCTION

This Supplement to *Aerospace Medicine and Biology* lists 210 reports, articles and other documents announced during September 1986 in *Scientific and Technical Aerospace Reports (STAR)* or in *International Aerospace Abstracts (IAA).* The first issue of the bibliography was published in July 1964.

In its subject coverage, *Aerospace Medicine and Biology* concentrates on the biological, physiological, psychological, and environmental effects to which man is subjected during and following simulated or actual flight in the Earth's atmosphere or in interplanetary space. References describing similar effects of biological organisms of lower order are also included. Such related topics as sanitary problems, pharmacology, toxicology, safety and survival, life support systems, exobiology, and personnel factors receive appropriate attention. In general, emphasis is placed on applied research, but references to fundamental studies and theoretical principles related to experimental development also qualify for inclusion.

Each entry in the bibliography consists of a bibliographic citation accompanied in most cases by an abstract. The listing of the entries is arranged by *STAR* categories 51 through 55, the Life Sciences division. The citations, and abstracts when available, are reproduced exactly as they appeared originally in *IAA* or *STAR,* including the original accession numbers from the respective announcement journals. The *IAA* items will precede the *STAR* items within each category.

Seven indexes — subject, personal author, corporate source, foreign technology, contract, report number, and accession number — are included.

An annual index will be prepared at the end of the calendar year covering all documents listed in the 1986 Supplements.

TABLE OF CONTENTS

Page

Category 51 Life Sciences (General) 275
Includes genetics.

Category 52 Aerospace Medicine 280
Includes physiological factors; biological effects of radiation; and weightlessness.

Category 53 Behavioral Sciences 290
Includes psychological factors; individual and group behavior; crew training and evaluation; and psychiatric research.

Category 54 Man/System Technology and Life Support 293
Includes human engineering; biotechnology; and space suits and protective clothing.

Category 55 Planetary Biology 296
Includes exobiology; and extraterrestrial life.

Subject Index A-1
Personal Author Index B-1
Corporate Source Index C-1
Foreign Technology Index D-1

The major nutritional components of the green algae (Scenedesmus obliquus) grown in a Constant Cell density Apparatus were determined. Suitable methodology to prepare proteins from which three major undesirable components of these cells (i.e., cell walls, nucleic acids, and pigments) were either removed or substantially reduced was developed. Results showed that processing of green algae to protein isolate enhances its potential nutritional and organoleptic acceptability as a diet component in a Controlled Ecological Life Support System.

CONTRACT NUMBERS
Ferredoxins are low-molecular-weight, nonheme, iron proteins which function as electron carriers in a wide variety of electron transport chains. Howard et al. (1983) have suggested that the amino end of Azotobacter vinelandii ferredoxin shows a greater similarity to the carboxyl end of ferredoxin from Chromatium vinosum and that their half-chain sequences are homologous when the half-chains of either species are considered in inverse order. Examination of this proposition has made it necessary to reevaluate previous conclusions concerning the evolution of bacterial ferredoxin. Attention is given to the properties of the bacterial ferredoxin sequences, and the evolution of the bacterial ferredoxins.

LIFE SCIENCE OPPORTUNITIES IN THE SPACE STATION
L. R. YOUNG (MIT, Cambridge, MA) IN: International Conference on Space, 25th, Rome, Italy, March 26-28, 1985, Proceedings . Rome, Rassegna Internazionale Elettronica Nucleare ed Aerospaziale, 1985, p. 73-76.

Areas of research in the life sciences are pointed out that could benefit greatly when the facilities of the Space Station become available. Research subjects and problems meriting work include: human physiology (cardiovascular system deconditioning, loss of bone minerals, loss of muscle mass, vestibular system reaction to weightlessness); gravitational biology; and the study of the origin and evolution of life on earth. Some facilities that will be needed to conduct this research are mentioned, in particular the variable g centrifuge for use by various disciplines and capable of handling humans as well as animals and plants. D.H.

SOME IMPLICATIONS OF MASS EXTINCTION FOR THE EVOLUTION OF COMPLEX LIFE
J. J. SEPKOSKI, JR. (Chicago, University, IL) IN: The search for extraterrestrial life: Recent developments; Proceedings of the Symposium, Boston, MA, June 18-21, 1984 . Dordrecht, D. Reidel Publishing Co., 1985, p. 223-232. refs
(Contract NAG2-282)

Extinction has the destructive effect of eliminating established lineages from an evolutionary system, and the constructive effect of vacating ecospace into which new lineages can evolve. Mass extinctions, which are times of unusually intense extinction, have been consistently followed by major radiations of new lineages. Extraterrestrial impacts associated with extinction events and a periodic recurrence of these events implicates an extraterrestrial forcing mechanism as the ultimate cause of mass extinction. This suggests that the extraplanetary environment has played an important, active role in the development of complex life on earth. Author

A86-38149
UNIVERSAL ASPECTS OF BIOLOGICAL EVOLUTION
J. A. BALL (Harvard-Smithsonian Center for Astrophysics, Cambridge, MA) IN: The search for extraterrestrial life: Recent developments; Proceedings of the Symposium, Boston, MA, June 18-21, 1984 . Dordrecht, D. Reidel Publishing Co., 1985, p. 251-254.

The question of universal biology is addressed and the following points are discussed in detail: (1) the concept of progress can be defined in a fairly precise way; (2) the earth's fossil record shows that progress has occurred; (3) even after Darwin, the reason why is hardly understood; (4) the problem can be approached by considering the differential survival of replicators called genes and memes, and (5) an extrapolation of the trend predicts continued progress for earth's biosystem and presumably for other civilizations. It is concluded that what is needed is a unified general theory that contains Prigogine's dissipative structures in non-equilibrium thermodynamics, the origin of life and biological systems from nonliving material, Darwinian evolution by mutation and natural selection of replicators, and progress through accumulation of information in hierarchial structures up through civilizations, all as special cases or corollaries. Such a theory would define a level-of-development parameter for a system in terms of its useful information or instruction content. It would also define progress as an increase in the level of development, and then it would specify the conditions under which progress may or may not take place. K.K.

A86-39096
HEMODYNAMICS OF MINIATURE SWINE DURING +GZ STRESS WITH AND WITHOUT ANTI-G SUPPORT
J. W. BURNS, M. J. PARNELL, and R. R. BURTON (USAF, School of Aerospace Medicine, Brooks AFB, TX) Journal of Applied Physiology (ISSN 0161-7567), vol. 60, May 1986, p. 1628-1637. refs

The relation between venous flow (VF), head-level arterial blood pressure, and increasing +Gz is examined. Nine, female miniature swine weighing between 31.0-56.0 kg are subjected to head-to-tail inertial load levels of +3, +5, and +7 Gz for 60 sec, with and without anti-G-suit inflation. An inserted probe and catheter were used to measure VF, central venous pressure (CVP), abdominal venous pressure (AVP), eyelevel blood pressure (ELBP), and esophageal pressure. A decrease in ELBP from control of 75, 113, and 160 pct without G-suit inflation and of 50, 65, and 98 pct with G-suit inflation for +3 Gz, +5 Gz, and +7 Gz, respectively is recorded; VF decreases from control by 41, 48, and 64 pct without G-suit inflation and by 20, 31, and 39 pct with G-suit inflation at increasing Gz levels. The effects of an anti-G-strain maneuver on the cardiovascular system is investigated; increases in the continuous AVP-to-CVP gradient and the VF are observed during no strain and increasing +Gz. The data reveal VF occurs at all +Gz levels with and without G-suit support and there is no correlation between the decrease in VF and the increase in ELBP during +Gz. I.F.

ARE INTERPRETATIONS OF ANCIENT MARINE TEMPERATURES CONSTRAINED BY THE PRESENCE OF ANCIENT MARINE ORGANISMS?
J. W. VALENTINE (California, University, Santa Barbara) IN: The carbon cycle and atmospheric CO2: Natural variations archean to present; Proceedings of the Chapman Conference on Natural Variations in Carbon Dioxide and the Carbon Cycle, Tarpon Springs, FL, January 9-13, 1984 . Washington, DC, American Geophysical Union, 1985, p. 623-627. refs
(Contract NSF EAR-81-21212; NAG2-73)

The relationship between marine temperature and marine organisms is investigated. The adaptation of organisms to extreme temperatures is studied; it is observed that chemautotrophic and chemoheterotrophic prokaryotes adapt to 100 C, photoautotrophic prokaryotes to 73 C, and fungi to 60 C. The physiological and molecular factors related to thermal limits in organisms such as enzymes, lipids, or plasma membranes, are examined. Two types of thermal adaptations, resistance and capacity, are detected in organisms. Reasons for species distributions according to temperature barriers are proposed by Read (1967) and Bullock (1955) and are related to enzyme limits. The effects of an organism's composition on thermal stability is analyzed. I.F.

The effect of electromagnetic radiation (EMR) on the function of the central nervous system was studied in rats and mice. In rats, exposure to microwave radiation for 10 min led to a lowering of the EEG response to rhythmic photostimulation, due to sensory interference. The role of cutaneous receptors in the sensory effects of microwaves was studied in mice subjected to 5 min of EMR alone or to EMR following (by two weeks) an exposure to low intensity ionizing radiation (from Co-60). Both EMR and gamma rays separately led to a significant and equal increase in the measured response to cold while the combination of both types of radiation led to a cancellation of the observed increases. The role of skin receptors in the sensory changes effected by EMR is discussed. I.S.

BIOTECHNICA '85 INTERNATIONAL CONGRESS FOR BIOTECHNOLOGY
C. E. ZOMZELY-NEURATH 27 Feb. 1986 24 p Congress held in Hannover, East Germany, 8-10 Oct. 1985
(AD-A165415; ONRL-C-13-85) Avail: NTIS HC A02/MF A01 CSCL 06A

The First International Congress and Exhibition, Biotechnical '85, which took place from 8 through 10 October 1985 at the Hannover Exhibition Grounds, was designed to provide an insight into the structure and growth potential of the relatively new biotechnology market. The congress, which included exhibitions, seminars, workshops, and panel discussions, focused on the commercial and industrial applications of biotechnology. The congress received support from the European Community because of its emphasis on fostering contacts between industry and academia. Over 170 companies, as well as research institutes and universities from 15 countries, disseminated information about current developments in research, laboratory equipment, and production techniques. The topics in the scientific program presented at the symposia sessions were divided into three general areas: (1) measurement of process control and development of

models; (2) biocatalyst preparation, utilization, and improvement; and (3) animal and plant cell cultures. GRA

DEVELOPMENT, GROWTH AND TIME
P. M. B. VITANYI Aug. 1985 20 p Revised Submitted for publication
(CWI-CS-R8516; B8575498; ESA-86-97007) Avail: NTIS HC A02/MF A01

A simple mathematical model for filamentous growth and development is proposed. The model relates stereotype elemental (cellular) behavior to empirically observed overall growth curves. The sigmoidal growth curves are obtained. The separation of subjective or physiological time of the organism from objective or absolute, and the relation between them are emphasized. The underlying philosophy is related to Lindenmayer's developmental model. ESA

THE ROLE OF THE OCEANS IN THE ATMOSPHERIC CYCLE OF CARBONYL SULFIDE
J. E. JOHNSON 1985 111 p
Avail: Univ. Microfilms Order No. DA8529909

The magnitude of the global air-sea flux of carbonyl sulfide (OCS) was assessed. Air and seawater concentrations of OCS from the equator to the Aleutian Islands were measured. The Henry's law constant of solubility for OCS was measured in the laboratory for filtered and boiled seawater at three temperatures. These measurements show: (1) the atmospheric concentration of OCS is very constant and the latitudinal gradient, if any, is small, with a maximum gradient of 7% between 50 deg N and the equator; (2) the ocean surface layer is supersaturated with OCS and is therefore a source for the atmosphere instead of a sink; (3) there appears to be a subsurface maximum in the OCS concentration in the oceanic mixed layer in tropical waters; (4) values for the solubility of OCS in seawater are 10% lower than reported elsewhere; (5) a history of measurements of atmospheric OCS by four groups shows that any secular trend in atmospheric OCS is less than 3%/ yr; (6) the budget for atmospheric OCS is still not well understood. Dissert. Abstr.

USSR SPACE LIFE SCIENCES DIGEST, ISSUE 6
L. R. HOOKE, ed., M. RADTKE, ed., R. TEETER, ed., and J. E. ROWE, ed. Washington NASA Jun. 1986 131 p
(Contract NASW-3676)
(NASA-CR-3922(07); NAS 1.26:3922(07)) Avail: NTIS HC A07/MF A01 CSCL 06C

This is the sixth issue of NASA's USSR Space Life Sciences Digest. It contains abstracts of 54 papers recently published in Russian language periodicals and bound collections and of 10 new Soviet monographs. Selected abstracts are illustrated with figures and tables from the original. Additional features include a table of Soviet EVAs and information about English translations of Soviet materials available to readers. The topics covered in this issue have been identified as relevant to 26 areas of aerospace medicine and space biology. These areas are adaptation, biospherics, body fluids, botany, cardiovascular and respiratory systems, developmental biology, endocrinology, enzymology, exobiology, genetics, habitability and environment effects, health and medical treatment, hematology, human performance, immunology, life support systems, mathematical modeling, metabolism., microbiology, morphology and cytology, musculoskeletal system, neurophysiology, nutrition, perception, personnel selection, psychology, radiobiology, reproductive biology, and space medicine. STUDIES ON INFORMATION PROCESSING MECHANISMS IN THE CENTRAL VISUAL SYSTEM OF THE CAT
S. KAJI Dec. 1985 42 p
(EL-861; ISSN-0366-9106; UDC-5.72.788.916.3) Avail: NTIS HC A03/MF A01

The characteristics of information processing of visual neurons were investigated, including nonlinear summation and contour enhancement effects of concentric receptive fields, and neural interactions between detectors for the same or different stimulus domains. A model was proposed to explain the results of antagonistic actions between the center and surrounding regions in the concentric receptive field of lateral geniculate neurons. The response of lateral geniculate neurons with concentric receptive fields to large two-dimensional figures was investigated. The interactions between the different orientation detecting processes were investigated in the orientation sensitive neurons of the visual cortex. The neural interactions between two direction-selective processes as well as between direction and selective process were investigated in the complex type neurons, using a non-oriented textured stimulus (two-dimensional random noise pattern) and an oriented grating. INHALATION TOXICOLOGY. 5: EVALUATION OF RELATIVE TOXICITY TO RATS OF THERMAL DECOMPOSITION PRODUCTS FROM TWO AIRCRAFT SEAT FIRE-BLOCKING MATERIALS Report, Oct. 1983 - Sep. 1984
D. C. SANDERS, C. R. CRANE, and B. R. ENDECOTT Nov. 1985 16 p
(AD-A165034; DOT-FAA-AM-86-1) Avail: NTIS HC A02/MF A01 CSCL 06T

Two fire-blocking layer (FBL) materials, designed to delay the thermal decomposition of polyurethane foam seat cushions during an aircraft cabin fire, were evaluated for the relative toxicity of their gaseous combustion products. Each materials was thermally decomposed under five distinct thermal environments: two contact temperatures (600 and 750 c) in a horizontal hot tube furnace and three flux levels (2.5, 5.0, and 7.5 w/cm) in a radiant heat furnace. The measured toxicological endpoint was time-to-incapacitation (+ sub i) in the albino rat; this endpoint is believed to be the most relevant one for assessing smoke hazard in a fire environment. In three of the five test environments, norfab, an aluminized synthetic fabric, produced shorter + sub i--and was thus toxic--than vonar, a neoprene foam. However, at 2.5 w/cm in the radiant furnace system, the norfab test specimen lost only 13 percent of the sample weight and did not incapacitate any of the test animals during the exposure period and, at 750c (flaming) in the combustion tube assembly, norfab produced longer and more variable + sub i than did vonar. Hydrogen cyanide (hcn) was detected in the combustion products from norfab under all test conditions except the 2.4 w/cm radiant flux level; no HCN was dtected in the test c onditions except the 2.5 w/+ sub i radiant flux level; no HCN was detected in the combustion products from any of the vonar tests. GRA

MICROWAVE EFFECTS ON CNS: A HISTOPATHOLOGIC, ULTRASTRUCTURAL AND AUTORADIOGRAPHIC STUDY Final Report
E. N. ALBERT 20 Feb. 1986 69 p
(Contract N00014-78-C-0527)
(AD-A165040) Avail: NTIS HC A04/MF A01 CSCL 06R

The objectives of this investigation were to: (1) investigate the effects of electromagnetic fields on the release of calcium ions from nervous tissue, (2) examine for histological changes, if any, of young rat brains after 2.45 GHz microwave exposure, and (3) study the rat brain metabolism during 2.45 GHz microwave exposure using 2-Deoxyglucose. In conclusion, the data presented here demonstrates that the specific radiofrequency radiation used does not perturb Ca ions efflux from avian brain tissue under in vitro conditions. Comparison of this data with that gathered by

Blackman's group, however, suggests that appropriate radiofrequency radiation in conjunction with certain other physical factors may indeed perturb Ca ions efflux. GRA

LATE BIOLOGICAL EFFECTS FROM INTERNAL AND EXTERNAL EXPOSURE
W. H. ADAMS 1985 12 p Presented at the Health Physics Society Symposium Hammond, La., 28 May 1985
(Contract DE-AC02-76CH-00016)
(DE86-001181; BNL-37087; CONF-8505213-1) Avail: NTIS HC A02/MF A01

Information on late biological effects of radiation was obtained from the long-term medical followup of a small population of Marshallese accidentally exposed to radioactive fallout from a thermonuclear test in 1954. Endocrine data are compatible with a sequence of nonstochastic radiation effects. The ingestion of radioisotopes of iodine produced clinical thyroid hypofunction in children, biochemical evidence of thyroid dysfunction in some adults, thyroid adenomatous module formation, and, as a possible indirect effect of thyroid damage, at least two cases of pituitary adenoma. In contrast, the only evidence of a stochastic effect has been a real increase in thyroid cancers among the more highly exposed people of Rongelap, none of whom have evidence of residual disease. While three nonthyroidal cancers which are known to be inducible in humans by external irradiation have been documented in the exposed population, three similar cancers have occurred in an unexposed comparison population of Marshallese. Nonstochastic effects of radiation exposure may be common but subtle. In the Marshallese experience the morbidity of delayed nonstochastic effects far exceeds that of the stochastic. DOE

INFLUENCE OF SHIPBOARD ENVIRONMENTAL FACTORS ON CONDITIONED REFLEX ACTIVITY OF EXPERIMENTAL ANIMALS DURING A LONG VOYAGE
O. Y. NETUDYKHATKA, A. P. STOYANOV, and V. N. YEVSTAFYEV *In its* USSR Report: Life Sciences. Biomedical and Behavioral Sciences (JPRS-UBB-86-008) p 98 9 May 1986 Transl. into ENGLISH from Fiziologicheskiy Zhurnal (Kiev, USSR), v. 31, no. 6, Nov. - Dec. 1985 p 688-691
Avail: NTIS HC A07/MF A01

The influence of environmental factors encountered on board a ship, with predominance of the noise vibration component, was studied with the conditioned reflex activity of experimental animals. Experiments were performed on 120 male Wistar white rats during a 90-day voyage of a freighter. The influence of specific shipboard environmental factors was evaluated on the basis of studies on conditioned motor reflexes involving response to a sound signal which preceded application of a mild electric shock by 5 seconds. The changes in the conditioned reflex activity varied with intensity and duration of training. Differences in the avoidance reaction were observed in all groups of animals, indicating an increase in the degree of inhibitory processes in the central nervous system as a result of the influence of the unfavorable sanitary-hygienic factors characteristic for the working spaces in ships. CHANGE OF RNA AND PROTEIN LEVEL IN NEURONS-GLIA SYSTEM UNDER EFFECTS OF HYPERTHERMIA AND HYPOXIA
L. M. MAMALYGA *In its* USSR Report: Life Sciences. Biomedical and Behavioral Sciences (JPRS-UBB-86-008) p 103 9 May 1986 Transl. into ENGLISH from Izvestiya Akademii Nauk Moldavskoy SSR. Seriya Biologicheskikh i Khimicheskikh Nauk (Kishinev, USSR), no. 5, Sep. Oct. 1985 p 42-47
Avail: NTIS HC A07/MF A01

Functional and metabolic possibilities of different brain structures, under the effects of hyperthermia, hypoxia, and combinations of both, were studied by cytochemical and morphological methods in experiments performed on Wistar male white rats (weight 160 to 180 g) (age 5 to 6 months). Rats were subjected to simulated altitude of 8200 m, to hyperthermia at 40 C for 75 minutes, or to combined hyperthermia and hypoxia at 8200 m and 40 C for 75 minutes. After the experiment, rats were decapitated without use of anesthesia and RNA level and total and basic proteins in various neuron-glia systems were studied. Separate and combined effects of hyperthermia and hypoxia in the organism produced metabolic and morpholocigal changes in the brain structures studied. Reduction of RNA level and proteins in the neurons under combined effect of hyperthermia and hypoxia decreased their cytoplasm volume; overheating dehydrated the organism, reduced the volume of circulating blood, increased its viscosity, and reduced the hemoglobin level in the erythrocytes. The combined effect of hyperthermia and hypoxia, increasing at different rates, decreased the resistance of the animal to altitude considerably. Author

USSR REPORT: SPACE BIOLOGY AND AEROSPACE MEDICINE, NO. 1, JANUARY - FEBRUARY 1986
17 Apr. 1986 161 p Transl. into ENGLISH of Kosmicheskaya Biologiya i Aviakosmicheskaya Meditsina (Moscow, USSR), no. 1, Jan.-Feb. 1986 94 p
(JPRS-USB-86-003) Avail: NTIS HC A08

Presented is the translation of a journal on space biology and aerospace medicine published in the USSR. The journal is divided into areas of surveys, experimental and general theoretical research, methods, and brief reports. Some representative topics are: Prospects for using ultraviolet radiation in long term spaceflights; Some human reactions during seven-day antiorthostatic hypokinesia; Effect of diphosphonates on bones of hypokinetic rats; Effect of different doses of ultraviolet radiation on vitamin levels in man; Reproductive capacity of microflora on polymers used in sealed environments; and amino acid spectrum of human blood in the presence of emotional stress.

COLLAGEN, LIPID AND GLYCOGEN CONTENT OF RAT SKELETAL MUSCLES IN RECOVERY PERIOD AFTER 15- AND 30-DAY HYPOKINESIA
P. P. POTAPOV *In its* USSR Report: Space Biology and Aerospace Medicine, No. 1, January - February 1986 (JPRS-USB-86-003) p 45-48 17 Apr. 1986 Transl. into ENGLISH from Kosmicheskaya Biologiya i Aviakosmicheskaya Meditsina (Moscow, USSR), v. 20, no. 1, Jan. Feb. 1986 p 33-35
Avail: NTIS HC A08

On the 15th hypokinetic day, carcass mass, glycogen and lipid content in skeletal muscles decreased while collagen content increased. The content of collagen returned to the norm by the 7th day of the recovery period. By that time the glycogen content increased significantly and a week later decreased noticeably. The content of total lipids and triglycerides was higher than the baseline level on the 15th and 30th days of the recovery period. On hypokinesia day 30 carcass mass and glycogen content decreased while collagencontent increased. After 30-day hypokinesia, glycogen significantly increased on the 7th day and returned to the norm by the 60th day of the recovery period. Lipid content was elevated only on the 7th day of the recovery period, and collagen content returned to the norm on the 15th day of the recovery period. Following 15- and 30-day hypokinesia, carcass mass returned to the baseline level by the 30th day of the recovery period. Author

MORPHOLOGICAL AND BIOCHEMICAL INVESTIGATION OF RAT ADRENOCORTICAL FUNCTION DURING LONG-TERM HYPOKINESIA
Y. V. VOROTNIKOVA and Y. A. ZAGORSKAYA *In its* USSR Report: Space Biology and Aerospace Medicine, No. 1, January - February 1986 (JPRS-USB-86-003) p 59-65 17 Apr. 1986 Transl. into ENGLISH from Kosmicheskaya Biologiya i Aviakosmicheskaya Meditsina (Moscow, USSR), v. 20, no. 1, Jan. Feb. 1986 p 41-45
Avail: NTIS HC A08

Female rats exposed to 3-month hypokinesia were used to study adrenal morphology and plasma corticosterone. Prolonged hypokinesia (60 to 90 days) led to a dissociation between adrenal hypertrophy and lower corticosterone content in plasma. During hypokinesia, rats were also exposed to an additional stress effect, i.e., 5-hour immobilization. This approach showed that in the course of 90-day hypokinesia the adrenal cortex retained its ability to react to an acute stress by an enhanced corticosteroid secretion. Moreover, in response to stress effects of identical strength and duration the experimental adrenals produced more corticosterone than the controls with no structural rearrangement or delipoidization. EFFECT OF DIPHOSPHONATES ON BONES OF HYPOKINETIC RATS
V. N. SHVETS, A. S. PANKOVA, O. Y. KABITSKAYA, Z. Y. VNUKOVA, and B. V. MORUKOV *In its* USSR Report: Space Biology and Aerospace Medicine, No. 1, January - February 1986 (JPRS-USB-86-003) p 66-72 17 Apr. 1986 Transl. into ENGLISH from Kosmicheskaya Biologiya i Aviakosmicheskaya Meditsina (Moscow, USSR), v. 20, no. 1, Jan. Feb. 1986 p 45-49
Avail: NTIS HC A08

The diphosphonate effect on bones was studied in Wistar male rats weighing about 200 g. The rats were kept for 60 days in small size cages where their motor activity was diminished. Every day the rats were given 0.3% solution of 1-hydroxy-ethylene-1,1-diphosphonate (HEDP) containing 9 mg/kg phosphorus. In the course of hypokinetic exposure the rats developed generalized osteoporosis. Histomorphometric measurements demonstrated that the drug did not prevent mineral losses from the tubular bones (humerus, femur). However, the drug led to a complete bone mass recovery in the pelvix and a partial recovery in the sternum. The drug also produced a preventive effect on the population of cells-precursors of osteogenesis, the number of which decreases significantly during hypokinesia. Author

EXPERIMENTS WITH DEVELOPING PLANTS ABOARD SALYUT-5, SALYUT-6 AND SALYUT-7 ORIBITAL STATIONS
L. N. KOSTINA, I. D. ANIKEYEVA, and E. N. VAULINA *In its* USSR Report: Space Biology and Aerospace Medicine, No. 1, January - February 1986 (JPRS-USB-86-003) p 73-78 17 Apr. 1986 Transl. into ENGLISH from Kosmicheskaya Biologiya i Aviakosmicheskaya Meditsina (Moscow, USSR), v. 20, no. 1, Jan. Feb. 1986 p 53-56
Avail: NTIS HC A08

The experiments with air dry Crepis capillaris seeds flown on the spacecraft Soyuz-16 and orbital stations Salyut-5, Salyut-6 and Salyut-7 showed that the number of aberrant cells in the seedlings grown during flight (experimental) and after flight (flight control) was higher than in the ground based control. This number was greater in the experimental seedlings than in the flight controls. The plants Arabidopsis thaliana grew from cotyledons to flowers during flight. The seeds developed postflight exhibited a lower fertility and a higher frequency of recessive mutants. The greater number of mutants persisted in the progeny of plants that completed their developmental cycle. Inhibited viability of germs manifested as a reduced germination rate of flown seeds and a premature death of seedlings. In the first postflight generation the lesions produced by large chromosome aberrations were eliminated and the lesions caused by gene mutations and microaberrations were retained. Author

PHYSICAL ENDURANCE OF RATS DURING INTENSIVE AND REPEATED EXPOSURE TO STATIONARY MAGNETIC FIELD
L. V. KOKOREVA *In its* USSR Report: Space Biology and Aerospace Medicine, No. 1, January - February 1986 (JPRS-USB-86-003) p 92-94 17 Apr. 1986 Transl. into ENGLISH from Kosmicheskaya Biologiya i Aviakosmicheskaya Meditsina (Moscow, USSR), v. 20, Jan. - Feb. 1986 p 61-63
Avail: NTIS HC A08

Variations in physical endurance of rats exposed to a constant magnetic field of 1.6 T for 3 hours a day during 30 days were investigated. The parameter was measured as the time of swimming with a load making 10% of body weight until complete arrest. The rats exposed once, 5 or 15 times showed a longer time of swimming than the controls. On the 30th day of exposure there was no difference between the experimental and control animals. The data obtained suggest that exposure to a constant magnetic field produces a stimulating effect on physical work capacity during the first 15 days. Author

EFFECT OF DIBASOL AND SOME OF ITS IMIDAZO ANALOGUES ON ANIMAL TOLERANCE TO GRAVITATIONAL ACCELERATIONS AND DYNAMICS OF DEVELOPMENT OF POSTISCHEMIC CEREBROVASCULAR PHENOMENA
V. K. VERESHCHAGIN and M. D. GAYEVYY *In its* USSR Report: Space Biology and Aerospace Medicine, No. 1, January - February 1986 (JPRS-USB-86-003) p 100-105 17 Apr. 1986 Transl. into ENGLISH from Kosmicheskaya Biologiya i Aviakosmicheskaya Meditsina (Moscow, USSR), v. 20, no. 1, Jan. Feb. 1986 p 67-70
Avail: NTIS HC A08

Anesthetized and nonanesthetized animals were used to study the effect of dibazolum and its new imidazo analogs (designated AKS-67 and AKS-87) on animal tolerance to gravitational effects and cerebral ischemia (ligation of both carotid arteries), as well as on systemic arterial pressure and tone of cerebral and peripheral vessels (resistographically) in the postischemic period. The drugs were administered 30 to 90 min before exposure. It was found that in nonanesthetized rats dibazolum and AKS-87 increased tolerance to cranio-caudal acceleration and decreased it to caudo-cranial acceleration, whereas AKS-67 produced a distinct protective effect regardless of the vector. In anesthetized rats (bilateral carotid ligation) AKS-67 and AKS-87 increased

acceleration tolerance and dibazolum produced no protective effect. Dibazolum enhanced postischemic hypotension while AKS-67 and AKS-87 delayed or completely arrested it. For aerospace medicine the drug AKS-67 is of particular importance because it increases significantly animal tolerance to acceleration and stabilizes arterial pressure in the postischemic period.

REPRODUCTIVE CAPACITY OF MICROFLORA ON POLYMERS USED IN SEALED ENVIRONMENTS
N. D. NOVIKOVA, M. I. ORLOVA, and M. B. DYACHENKO *In its* USSR Report: Space Biology and Aerospace Medicine, No. 1, January - February 1986 (JPRS-USB-86-003) p 106-109 17 Apr. 1986 Transl. into ENGLISH from Kosmicheskaya Biologiya i Aviakosmicheskaya Meditsina (Moscow, USSR), v. 20, no. 1, Jan. Feb. 1986 p 71-73
Avail: NTIS HC A08

The main representatives of human automicroflora were examined to identify the microorganisms that can grow and develop on various polymers used in an enclosed interior. Bacteria of the genera Pseudomonas, Proteus and Bacillus were found to be most proliferative. Microbial growth was strongly influenced by environmental parameters of the enclosure and by the chemical structure of the polymer.

RESTRAINT SYSTEM FOR WAKING MACACA MULATTA MONKEYS DURING POSTURAL TESTS
V. P. MELNICHENKO, M. D. GOLDOVSKAYA, V. P. KOTOV, A. G. POPOV, I. S. KONDAKOVA, and N. V. GORBATENKOVA *In its* USSR Report: Space Biology and Aerospace Medicine, No. 1, January - February 1986 (JPRS-USB-86-003) p 110-112 17 Apr. 1986 Transl. into ENGLISH from Kosmicheskaya Biologiya i Aviakosmicheskaya Meditsina (Moscow, USSR), v. 20, no. 1, Jan. Feb. 1986 p 73-74
Avail: NTIS HC A08

Postural tests are a convenient model for investigation of the distinctions in physiological functions with changes in body position in relation to the vector of Earth's gravity. Postural tests are difficult to perform on waking Macaca mulatta monkeys because of their general motor activity, the level of which depends largely on how the animals are immobilized on the turntable. A restraint system involving the use of a special suit is known. The results of the observations revealed that the system of immobilization must meet the following requirements: it should not cause any pain to the animal and must reduce to a minimum the effect of factors that elicit discomfort; it must provide for a standard position of the monkey on the turntable platform; it must prevent passive displacement of the monkey under the effect of gravity when the turntable is tilted. For this reason, a restraint system was developed, the principal elements of which are an immobilization suit, a device that restricts head movements, a device that restricts the monkey's body movements in orthostatic position. The above system was used in postural tests on monkeys weight 3.5 to 6 kg. The system provided reliable, sparing immobilization of monkeys on the turntable and was convenient to work with.

DIRECT SPECTROPHOTOMETRIC METHOD OF ASSAYING AMMONIA CONCENTRATION IN GAS ENVIRONMENT OF SEEDING CHAMBERS
A. A. POLOVINKIN and A. N. KRAVCHUK *In its* USSR Report: Space Biology and Aerospace Medicine, No. 1, January - February 1986 (JPRS-USB-86-003) p 120-122 17 Apr. 1986 Transl. into ENGLISH from Kosmicheskaya Biologiya i Aviakosmicheskaya Meditsina (Moscow, USSR), v. 20, Jan. - Feb. 1986 p 78-80
Avail: NTIS HC A08

Toxicologists have been traditionally using colorimetry methods to measure ammonia concentration in the air environment. Colorimetric methods are simple to use, they have rather high sensivity and accuracy. However, they also have a number of flaws. Use of a spectrophotometric method of assaying ammonia in an air environment eliminates these flaws. A combined unit was developed and used for measurement of ammonia concentration in the range of 1 to 150 mg/cu m in the atmosphere of seeding chambers in toxicological experiments. The method is based on using the absorption maximum of ammonia at a wavelength of 204.3 mm. Introduction of the device to practical toxicological studies makes it possible to effect continuous monitoring, recording and correction of ammonia content of seeding chambers.

INTENSITY OF PHOTOSYNTHESIS IN CLOSTERIOPSIS ACICULAR VAR. AFRICANA HIND AS A FUNCTION OF OXYGEN CONCENTRATION IN THE ATMOSPHERE
M. A. LEVINSKIKH *In its* USSR Report: Space Biology and Aerospace Medicine, No. 1, January - February 1986 (JPRS-USB-86-003) p 129-131 17 Apr. 1986 Transl. into ENGLISH from Kosmicheskaya Biologiya i Aviakosmicheskaya Meditsina (Moscow, USSR), v. 20, no. 1, Jan. Feb. 1986 p 83-84
Avail: NTIS HC A08

When unicellular algae are included in the photoautotrophic link of closed ecological systems, it is important to know their attitude toward different concentrations of oxygen in the atmosphere. The adverse influence of high concentrations of oxygen on photosynthesis is known as the Warburg effect. The inhibitory effect of high oxygen content on photosynthetic productivity of algae referable to different taxonomic groups has been repeatedly confirmed by many authors. In particular, for a number of Chlorella strains it was shown that intensity of photosynthesis, in the case of both cumulative and continuous long term cultivation, is directly related to concentration of oxygen in the gas phase. At the same time, there is information to the effect that some algae can retain productivity when partial oxygen pressure is raised both in the range of 3 to 5 to 21% and up to 40 to 80%. Finally, it was established that the photosynthetic process in Chlorella sorokiniana ORS is resistant to oxygen concentrations in the atmosphere of up to 95%. The intensity of photosynthesis in Closteriopsis acicularis var. africana Hind., family Ankistrodesmaceae, as a function of oxygen concentration in the reactor's gas phase was investigated.

FOREARM SKIN AND MUSCLE VASOCONSTRICTION DURING LOWER BODY NEGATIVE PRESSURE
A. TRIPATHI (John B. Pierce Foundation Laboratory, New Haven, CT) and E. R. NADEL (Yale University, New Haven, CT) Journal of Applied Physiology (ISSN 0161-7567), vol. 60, May 1986, p. 1535-1541. refs

In view of conflicting reports of skeletal muscle and skin blood flow participation in baroreceptor-mediated reflexes, the effects of graded lower body negative pressure (LBNP) on cutaneous and muscular components of forearm blood flow (FBF) in seven male

subjects at 28 C are studied. FBF was measured by venous occlusion plethysmography and cutaneous flow by laser-Doppler velocimetry, the difference being the muscular flow. Mean FBF decreased by 39 and 56 percent from control at LBNP of 20 and 50 Torr, respectively. Skin flow decreased linearly with graded LBNP contributing 32 percent of the decrease of total blood flow at 20 Torr and then 50 percent of the total decrease of blood flow at 50 Torr. Conversely, the decrease in muscle flow represented 68 percent of the total decrease at LBNP of 20 Torr and then 50 percent of the total decrease at LBNP of 50 Torr. It is concluded that both skin and muscle circulations participate in sustained peripheral vasoconstriction during LBNP, with muscle flow achieving near maximum vasoconstriction by 20 Torr and skin showing a graded vasoconstriction to decreases in LBNP.

PULMONARY GAS EXCHANGE IN HUMANS DURING EXERCISE AT SEA LEVEL
M. D. HAMMOND, G. E. GALE, K. S. KAPITAN, A. RIES, and P. D. WAGNER (California, University, La Jolla; California University, Medical Center, San Diego) Journal of Applied Physiology (ISSN 0161-7567), vol. 60, May 1986, p. 1590-1598. refs
(Contract NIH-HL-17731; NIH-RR-00827)

Gas exchange in eight male subjects between 22 + or - 1.5 yr during exercise at sea level is studied using the multiple-inert gas-elimination technique. The order of work load is: (1) rest, (2) minimal exercise, (3) heavy exercise, (4) heavy exercise while breathing 100 pct O2, (5) rest, (6) moderate exercise, and (7) light exercise. Mixed expired and arterial respiratory and inert gas tensions, cardiac output, heart rate, ventilation, respiratory rate, and blood temperature were measured at rest and during exercise. It is obeserved that the alveolar-to-arterial O2 tension difference increases linearly with O2 uptake revealing a decrease in the efficiency of pulmonary gas exchange. The effect of ventilation-perfusion inequality and diffusion limitation on the increase is analyzed. It is detected that the ventilation-perfusion inequality and diffusion limitation increases during exercise from 0.28 + or - 0.13 to 0.58 + or 0.30 and 100 pct O2 breathing does not alter this reaction. The data confirm that increasing ventilation-perfusion inequality and O2 diffusion limitation occur during heavy exercise at sea level and these changes are independent of the work load order. I.F.

PHYSIOLOGICAL PROFILE OF WORLD-CLASS HIGH-ALTITUDE CLIMBERS
O. OELZ, H. HOWALD, P. E. DI PRAMPERO, H. HOPPELER, H. CLAASSEN (University Hospital, Zurich; Swiss School for Physical Education and Sports, Magglingen; Centre Medical Universitaire, Geneva; Bern, Universitaet, Switzerland) et al. Journal of Applied Physiology (ISSN 0161-7567), vol. 60, May 1986, p. 1734-1742. Research supported by the EMDO-Stiftung. refs
(Contract SNSF-3,332,78; SNSF-3,128,081; SNSF-3,364,082)

The physiological characteristics of six climbers who had reached an altitude of 8500 m or above without supplemental O2 are studied 2-12 months after high-altitude exposure. The muscle fiber types, muscle morphometry, maximal aerobic and anaerobic power, ventilation control, oxygen/hemoglobin saturation, and heart rate of the climbers are compared to sedentary controls (SCs) and long-distance runners (LDRs). The maximal O2 consumption of 60 + or - 6 ml/kg per min, anaerobic power of 28 + - 2.5 W/kg, muscle types and morphometry, and the ventilatory response of the climbers correlate with SCs and/or LDRs; however, the HbO2 pct of the climbers is higher than that of the SCs and LDRs. It is noted that except for higher HbO2 saturation, high-altitude climbers do not possess physiological characteristics that enhance their adaptation to high altitudes. I.F.

A FUNDAMENTAL PROBLEM IN DETERMINING FUNCTIONAL RESIDUAL CAPACITY OR RESIDUAL VOLUME
U. BOUTELLIER and L. E. FARHI (New York, State University, Buffalo) Journal of Applied Physiology (ISSN 0161-7567), vol. 60, May 1986, p. 1810-1813.
(Contract NAS9-16042)

To measure a lung volume that is not directly accessible, one often follows dilution of a single-gas tracer, present initially only in the lung or in a rebreathing bag. The final volume available to the tracer is assumed to be the sum of the two initial components. Since O2 is taken up and CO2 is eliminated during the few breaths required for mixing, the total volume changes. The error in lung volume due to this volume change can exceed 10 pct. Theoretical and experimental data is presented to demonstrate the effect of CO2 and O2 exchange. A general equation, based on N2 and Ar, which allows one to circumvent the problems created by these fluxes is introduced. The pitfall of the back-extrapolation approach for a single tracer is shown.

HUMAN BODY IMPEDANCE AND THRESHOLD CURRENTS FOR PERCEPTION AND PAIN FOR CONTACT HAZARD ANALYSIS IN THE VLF-MF BAND
I. CHATTERJEE, O. P. GANDHI (Utah, University, Salt Lake City), and D. WU (East China Normal University, Shanghai, People's Republic of China) IEEE Transactions on Biomedical Engineering (ISSN 0018-9294), vol. BME-33, May 1986, p. 486-494. refs
(Contract F33615-83-R-0613)

The body impedance and threshold currents for perception and pain in the VLF-to-MF band (10 kHz-3 MHz) obtained from measurements on 367 male and female human subjects in the 18-70 year age range, allowed the calculation of average values and the formulation of valid statistical predictions for the general adult population. Tests using various types of contact simulating contact with different vehicles indicate that human body impedance is inversely proportional to body dimensions, and that the threshold current for perception is proportional to the square of the body dimensions. Results suggest that the 0.3-3 MHz frequency band ANSI guideline 632 V/m is too high for many situations, and that safety devices such as safety shoes and gloves only offer adequate protection up to 1 MHz for VLF, and 4 MHz for MF currents. The human hand/ungrounded van handle contact current flow is shown to be as high as 879 mA, and to produce a local wrist SAR of about 1045 W/kg. R.R.

FLIGHT FITNESS AND A PAST MYOCARDIAL INFARCTION [APTITUDE AU VOL ET INFARCTUS DU MYOCARDE ANCIEN]
G. LEGUAY, A. SEIGNEURIC (Hopital d'Instruction des Armees Dominique Larrey, Versailles, France), and J. DRONIOU (Hopital d'Instruction des Armees Val-de-Grace, Paris, France) (Entretiens de Medecine Aerospatiale, 5th, Le Bourget, France, June 3, 4, 1985) Medecine Aeronautique et Spatiale, vol. 25, 1st Quarter, 1986, p. 14-20. In French. ref

Recent advances in diagnostic techniques have led to a reconsideration of the impact of a previous myocardial infarction (MI) on certification for flight fitness. Current practice is to declare pilots who experience an MI permanently unfit for flight duty. An MI is precipitated by an inert fibrous placque on the contractile myocardium, causing a ventricular dysfunction (VD) and cardiac disrhythmia (CI). The symptoms are monitored by cavitary scintigraphy, echography and angiography (VD) and ECG and scintigraphy (CI). However, only coronorography (CG), performed by an expert, can identify the precise state of health and permit an accurate prognosis. The flight environment, particularly hypoxic conditions, increased catecholamine levels due to increased stresses during takeoff and landing, and dehydration (common

among flight crews) are predisposing factors to MI attacks. Since an MI is only symptomatic of other evolutive conditions, a judgement of unfit for flight duty is thought to be correct unless continued medical monitoring over a period of months reveals a recession in symptoms, accompanied by appropriate changes in life style. Restricted flight duty may then be allowed. The restrictions include the presence of a copilot, the avoidance of hypoxic altitudes and dehydration conditions, and ECG and CI examinations twice a year. M.S.K.

A86-39773
A PRACTICAL ATTITUDE TOWARD VENTRICULAR REPOLARIZATION ABNORMALITIES IN FLIGHT CREWS [ATTITUDE PRATIQUE DEVANT DES ANOMALIES DE LA REPOLARISATION VENTRICULAIRE CHEZ LE PERSONNEL NAVIGANT]
D. THOMAS, M. KOMAJDA, and Y. GROSGOGEAT (Centre Hospitalier Universitaire La Pitie-La Salpetriere, Paris, France) (Entretiens de Medecine Aerospatiale, 5th, Le Bourget, France, June 3, 4, 1985) Medecine Aeronautique et Spatiale, vol. 25, 1st Quarter, 1986, p. 24-28. In French. refs

The results of epidemiological studies of the frequency of repolarization abnormalities (RA) in the general population and in flying personnel are discussed from the point of view of the implications of the RA in the absence of other evidence for coronary problems. For the general population, out of 6786 subjects aged 19-83 yr, 7.9 percent registered RAs. For 8625 RAF personnel, 3.9 percent exhibited variations in the ST segment or the T wave. Other studies have also been performed, and all indicate that the RA data have no significance unless there are other symptoms of ventricular problems. The application of an ECG stress test has been 45 percent effective in detecting the presence or confirming the absence of collateral dysfunctions. However, the ECG stress tests can be a vital aid in identifying other ventricular problems among flight personnel who, if no other abnormalities appear during the test, can be considered healthy and certified fit for flight. Further, more invasive tests are indicated if RAs appear during the stress tests of flying personnel. M.S.K.

NORMAL OR PATHOLOGICAL CORONARY STATUS - REFLECTIONS AND PRACTICAL EXPERIENCES FOR EXPERTISE WITH FLIGHT PERSONNEL [ÉTAT CORONARIEN NORMAL OU PATHOLOGIQUE? - REFLEXIONS ET INCIDENCES PRATIQUES POUR L'EXPERTISE DU PERSONNEL NAVIGANT]
M. KOMAJDA, D. THOMAS, and Y. GROSGOGEAT (Centre Hospitalier Universitaire La Pitie-La Salpetriere, Paris, France) (Entretiens de Medecine Aerospatiale, 5th, Le Bourget, France, June 3, 4, 1985) Medecine Aeronautique et Spatiale, vol. 25, 1st Quarter, 1986, p. 31-34. In French. refs

The major techniques used in judging the normality or pathology of a coronary artery are reviewed. The performance of many autopsies have demonstrated that coronary stenoses is a function of sex and age. Atherosclerosis may be present at infancy and progress after that point, or may appear in the form of lipidic striations or fibro-muscular placques and remain clinically latent. Symptoms appear when multiple ulcerations or thromboses occur. Various invasive methods for assessing the degree of coronary stenosis have not proved as useful as myocardial scintigraphy with Thallium 201 for measuring the ventricular flow rates and reserves. The type of pain described by the patient is also important and can aid in the diagnosis of up to 90 percent of the dysfunctions. ECG measurements will only reveal abnormalities if made under stressful conditions. The ECG data, if continued for 24-48 hr, can reveal the presence of problems in ventricular rhythm or fibrillation. These tools are valuable for aerospace medicine in that they permit diagnosing the magnitude of stenosis and the chances that myocardial ischemia or rhythm abnormalities can be precipitated by normal flight duties. Experimental designs are described which could lead to a greater predictive capability for coronary problems. M.S.K.

A86-39775
SLEEP IN AN AEROSPACE ENVIRONMENT [SOMMEIL EN MILIEU AEROSPATIAL]
J. COLIN Medecine Aeronautique et Spatiale, vol. 25, 1st Quarter, 1986, p. 61-70. In French. refs

The causes and symptoms of sleep disturbances in aerospace environment are discussed. Travel by air or in space disrupts human circadian rhythms by moving people and their physiological rhythms out of synchronization with an external light/darkness cycle and the local time zone. The problem is acute in night and long-duration flights and when confronting wide variations in the day/night period. The loss of synchrony is highest in east-west and west-east flights. Physiological data on the diurnal cycles of various biological and psychological factors are provided to illustrate the behavior of internal clocks, e.g., internal temperature, adrenaline secretions, psychomotor performance, etc., to correspond with the local day/night cycle. Many minimums occur during the normal middle of the night. Resynchronization to a new time arrangement requires a length of time that varies with the individual. Consequently, days, even weeks pass before a person can sleep at a time appropriate to the local environment. Regarding spaceflight, experience in the Gemini program encouraged NASA to schedule astronaut activities in space at times that correspond with the day/night schedule at Cape Kennedy, thereby separating the day/night cycle (90 min) from the place of travel. M.S.K.

MECHANISM OF ELECTROMAGNETIC ENERGY EFFECTS ON THE NERVOUS SYSTEM: VOLTAGE-CLAMP STUDY Final Report, Oct. 1981 - Sep. 1984
C. L. BRANDT and N. L. CAMPBELL Jul. 1985 69 p refs
(AD-A164653; NOSC/TR-1051) Avail: NTIS HC A04/MF A01 CSCL 06R

Low-level microwave energy at a frequency of 2.45 GHz has been previously observed to alter the firing frequency of Aplysia californica neurons. This study was undertaken to search out the mechanism of this microwave effect by examining the influences of microwave energy on specific ion currents across the cell membrane that influence the cell's firing frequency. Late outward K(+) current was examined and showed no statistically significant change during microwave exposure. The membrane current shape during voltage clamping (the summation of several different ionic currents) also showed no change during exposure except in one instance when exposure was concurrent with the application of Na(+) free artificial sea water. FLUID-ELECTROLYTE-MINERAL INTERRELATIONS AS AFFECTING WORK PERFORMANCE Final Report, 18 Jun. 1984 - 1 Jul. 1985
M. JANGHORBANI Nov. 1985 39 p
(Contract DAMD17-84-G-4012; DA PROJ. 3E1-62777-A-879) (AD-A165325) Avail: NTIS HC A03/MF A01 CSCL 06P

This is the Final Report dealing with development of stable isotope approaches for the study of water-electrolyte balance dynamics in relation to exercise in heat. This progress report describes the development of analytical chemistry of labeled water (H2O18) and rubidium as tracers for the measurement of body water and its dynamics and intracellular mass and its correlates. The methods used in these studies are based on Isotope Ratio Mass Spectrometry (IR/MS) and Inductively Coupled Plasma Mass Spectrometry (ICP/MS). It is shown clearly that both these methods

can be used effectively for simultaneous measurement of body water and body rubidium and their correlates in human adults.

PERCEPTUAL AND PHYSIOLOGICAL RESPONSES DURING EXERCISE IN COOL AND COLD WATER
M. M. TONER, L. L. DROLET, and K. B. PANDOLF 1986 11 p (AD-A165491) Avail: NTIS HC A02/MF A01 CSCL 06S

This investigation examined the interaction of exposure to cold water stress with both perceived exertion and thermal sensation during exercise. Eight male volunteers performed arm, leg and combined arm and leg exercise for 45 min in water at 20 and 26 C. Exercise was performed at a low (n = 7) and a high (n = 8) intensity relative to the ergometer specific peak oxygen uptake (VO2 peak). In general, percent VO2 peak did not differ (p greater than 0.05) between type of exercise in either 20 or 26 C water. During low intensity exercise when power output was matched across water temperature (T sub w), percent VO2 peak was greater (P less than 0.05) in 20 C water (52%) compared to 26 C water (42%). Ratings of perceived exertion (RPE) did not differ (p greater than 0.05) between T sub w. During high intensity exercise when percent VO2 peak was matched across T sub w, RPE was low (P less than 0.01) during exercise in 20 C (X = 12.9) compared to 26C (X = 13.9). Multiple correlation analyses comparing both final RPE and thermal sensation (TS) with physiological and thermal measures were performed across type of exercise and T sub w. These data suggest that the change in oxygen uptake associated with exercise in cold water does not add to the overall perception of exertion. This perception appears to be related to cardiopulmonary variables rather than thermal measures, whereas thermal sensation is related to thermal measures and not cardiopulmonary variables.

INDIVIDUAL PARAMETERS IN THERMOREGULATORY CONTROL; A REVIEW
G. HAVENITH Dec. 1985 86 p Sponsored by Netherlands Central Organization TNO , Delft
(IZF-1985-26; TDCK-86-0429; ESA-86-96943) Avail: NTIS HC A05/MF A01

Variations in human thermoregulatory behavior caused by differences in sex, age, anthropometric measures, hydration state, and circadian rhythm were studied. In order of significance, factors which affect the variations are: state of acclimatization (defined by sweat characteristics); physical fitness (circulatory capacity); hydration state (plasma osmolality and volume); anthropometric measures (body surface, fat, inactive body mass); and time of day.

VISUAL PROTECTION AND ENHANCEMENT
Loughton, England Dec. 1985 230 p refs In ENGLISH and FRENCH Conference held in Athens, Greece, 22-24 Apr. 1985 (AGARD-CP-379; ISBN-92-835-0384-8) Avail: NTIS HC A11/MF A01

Vision is the preeminent sensory channel through which the aviator obtains information necessary for the control of his aircraft and the execution of his operational role. Recognizing this to be important, all reasonable and practical means of enhancing and protecting vision should be adopted. The papers presented considers not only systems for visual protection and enhancement but also addressed the basic physiological and pathological mechanisms underlying existing and future solutions.

AEROMEDICAL LESSONS LEARNED WITH NIGHT VISION DEVICES
D. R. PRICE and W. E. MCLEAN *In* AGARD Visual Protection and Enhancement 10 p Dec. 1985
Avail: NTIS HC A11/MF A01

A review of night vision devices used in the military helicopter flight environment is presented, along with aeromedical lessons learned. Discussion revolves around experience with three U.S. Army aviation systems: the currently used second-generation night vision goggle (NVG), or AN/PVS-5; the soon-to-be-fielded AN/AVS-6 third-generation NVG; and the AH-64 Apache thermal sensor and imaging system. Performance characteristics are presented, and primary emphasis is on aeromedical research related to pilot interface with the systems to include visual acuity, contrast sensitivity, depth discrimination, dark adaptation, crew fatigue, and adaptational problems.

PARTICULAR PROBLEMS OF AIRWORTHINESS FROM AN OPHTHALMOLOGICAL VIEW
J. DRAEGER, K. HANKE, and H. WIRT *In* AGARD Visual Protection and Enhancement 3 p Dec. 1985
Avail: NTIS HC A11/MF A01

Navigation of aircrafts depends on visual acuity and optical perception in the main. Therefore ophthalmological evaluation is of major importance in aviation medicine. Each country uses its own national medical standards for the three different pilot classes. But there still remain applicants not exactly meeting these standards. In West Germany, a special expert board is competent for these borderline cases in civil aviation. Some examples are given from the practice of this board showing the particular problems of appropriate decisions. Also the major differences of national regulations between West Germany and the USA are discussed, comparing civil and Air Force standards.

NEW GLASSES FOR PRESBYOPIC PILOTS
J. DRAEGER, H. WIRT, and K. HANKE *In* AGARD Visual Protection and Enhancement 3 p Dec. 1985
Avail: NTIS HC A11/MF A01

Presbyopia is a physiological condition starting by an age of about 40 and increasing steadily with age until accommodation ceases around 55. This means that the naked eye is not able to read instruments and charts in near distance. In a fighter cockpit the information of the head-up display is projected on to the windscreen. Therefore, the pilot has to share his attention between infinity and the projected image of the head-up display, focussing and defocussing very quickly between both distances, always looking straight. This reaction slows down with age. In an experimental study an attempt was made to investigate this complex problem and to test certain solutions. A group of untrained presbyopic subjects were asked to perform specifically designed tasks of assembling small parts and were fitted with different multifocal glasses. In three different ranges and different levels, approximately according to the distance in a cockpit, they had to differentiate and to grasp small electronic elements and to fix them on an electronic plate. The time needed and the mistakes were noted and compared. The evaluation showed much better results for those subjects which had with their glasses the greatest visual field for each specific range and level.

CONTACT LENSES FOR PILOTS AND AIRCREW IN THE SERVICES
J. K. CLOHERTY *In its* Visual Protection and Enhancement 12 p Dec. 1985
Avail: NTIS HC A11/MF A01

After working for five years in the contact lens department of Moorsfields Eye Hospital in London and after fitting and monitoring forty volunteers in the RAF Aircrew Soft Contact Lens Trial, it is the opinion of the author that high water content soft contact lenses, or silicone lenses, used as extended wear lenses, are the only contact lenses which are suitable in an aircrew service environment. The fitting and monitoring of such lenses must be carried out by experts in the field of contact lenses. Author

EFFECTS OF BROAD-BANDED EYE PROTECTION ON DARK ADAPTATION
H. ZWICK, T. A. GARCIA, E. S. BEATRICE, and K. R. BLOOM *In* AGARD Visual Protection and Enhancement 8 p Dec. 1985
Avail: NTIS HC A11/MF A01

Modern combat scenarios require soldiers to perform military tasks under night time conditions. While image enhancement devices are vital to such military performance, unimpaired human night vision retinal mechanisms are essential for performance success. Protection of the human biological sensor is of utmost importance. In this investigation, earlier findings indicating that sunglasses could prevent deleterious effects of bright light on dark adaptation are reexamined. It was found that the use of broad band attenuating spectacles could improve absolute visual thresholds but they had minimal effect on central retinal mechanisms. Dark adaptation functions measured with long wavelength light showed no significant sunglass effect; whereas, such functions measured with intermediate spectral light decreased in final visual thresholds. These differential effects were obtained under environmental light conditions insufficient to produce an evaluation in final visual thresholds for control group subjects not provided with sunglasses. The results strongly support previous arguments for providing standard visible and near ultraviolet protection to personnel required to perform military tasks under extremely bright environmental light. EYE PROTECTION AGAINST INTENSE LIGHT SOURCES
D. N. FARRER *In* AGARD Visual Protection and Enhancement 3 p Dec. 1985
Avail: NTIS HC A11/MF A01

The assessment of modern techniques for the protection of the eyes against laser radiation must begin with the careful evaluation of these stimuli within the context of impairment of useful work. Occupational safety and health standards were designed to define exposure limits of laser systems to prevent damage. However, an eye hazard may not exist within some exposure conditions (e.g., glare, dazzle, or reversible scotoma) in which functional vision impairment could result in job performance failures. Additionally, eye protection devices should not induce impairment properties. It is within this context that this research program was designed. The identification of laser threats, effects on functional vision and eye protective device properties are important considerations for successful aircrew performance. The vast array of intense light sources which represent threats to functional vision, introduces significant challenges for this research area. Author

CALCULATIONS ON TECHNICAL REQUIREMENTS FOR PROTECTION DEVICES AGAINST A NUCLEAR LIGHT FLASH
W. REHMANN and H. SESTERHENN *In* AGARD Visual Protection and Enhancement 11 p Dec. 1985
Avail: NTIS HC A11/MF A01

Preliminary calculations on the requirements for protective devices against permanent retinal burns caused by nuclear detonations were based on a simplified model which was also used for this study. Computations concerning the reversible flash blindness of flight crews caused by a nuclear explosion is studied as well as the resultant technical requirements to be met by antiflash eye protection systems. In the low yield nuclear range the computations led to shutter times which are technically unfeasible at the present time. Therefore, additional computations were made to determine the periods of blindness occurring when technically feasible antiflash eye protection systems are used. They were then compared with the periods of blindness to be expected under identical conditions but without antiflash eye protection systems. Author

THE APPLICATION OF DIFFRACTION OPTICS TECHNIQUES TO LASER EYE PROTECTION
G. T. CHISUM *In* AGARD Visual Protection and Enhancement 4 p Dec. 1985
Avail: NTIS HC A11/MF A01

Development of a method of protecting the eyes of military personnel from laser radiation has been pursued for a number of years. The devices developed have marginal acceptability, particularly for aircrew personnel. Efforts underway to develop a holographic diffraction grating protection device indicate that such a device is feasible and that the requirements of high transmittance, multiple wavelength rejection and configuration suitable for aircrew use can be met. FOVEAL FLASHES AND HUMAN PERFORMANCE
D. I. RANDOLPH, E. T. SCHMEISSER, and E. S. BEATRICE *In* AGARD Visual Protection and Enhancement 6 p Dec. 1985
Avail: NTIS HC A11/MF A01

The role of several variables in the production of a flash which would reduce the ability of humans to detect and discriminate targets, functions which are required of both air and ground troops is determined. Four volunteers were exposed to xenon gas discharge tubes with different retinal spot sizes and flash durations. The task consisted of a reaction time experiment in which the subjects detected both the presence and orientation of a striped grating which subtended 0.57 deg at the retina. Three grating contrasts at three pattern-background contrasts were presented in a pseudo random order. Three flash conditions were used. The results showed that the larger image size and longer flash durations produced significantly poorer performance on both the detection and discrimination tasks. For the smallest retinal spot size, and the shortest flash condition, the detection but not the discrimination times were faster than the nonflash trials. This indicated that while the flash may have acted as a preparatory signal, more complex pattern processing remained sensitive to the flash. Author

PERMANENT VISUAL CHANGE ASSOCIATED WITH PUNCTATE FOVEAL LESIONS
H. ZWICK, K. R. BLOOM, and E. S. BEATRICE *In* AGARD Visual Protection and Enhancement 8 p Dec. 1985
Avail: NTIS HC A11/MF A01

In order to understand battlefield hazards of laser exposure under field conditions, it has been necessary to evaluate effects of small punctate foveal lesions on visual function of nonhuman primates. Previous experiments have found a correlation between functional loss and foveal damage. The present investigation

showed that detecting the effects of small foveal lesions is not an easy task. From the results, the possibility that considerable foveal damage could occur before a measurable change in visual function could be detected with presently available visual function testing procedures is apparent. It is recommended that more sensitive visual function test procedures, such as clinical tests that measure both spectral and spatial resolution under threshold contrast conditions. Author

LACTOBACTERIA AND PROPHYLAXIS IN SPACE
I. IVANOV *In its* USSR Report: Life Sciences. Biomedical and Behavioral Sciences (JPRS-UBB-86-008) p 1 9 May 1986 Transl. into ENGLISH from Tass (Tartu, USSR), 11 Mar. 1986
Avail: NTIS HC A07/MF A01

Cosmonauts on long duration space flights face health hazards in the form of pathogenic bacteria. Lactobacteria increase the resistance of the body to disease and kill agents responsible for many diseases. The lactobacteria have the capacity to stick to the cell of the human body and thus make them invulnerable to pathogenic microbes. The lactobacteria preparation replenishes the loss of the bacteria in the human body and stimulates the immune system. The use of these microorganisms institutes an ecological barrier protecting man. SWEATING REFLEX IN COMPLEX OF METHODS FOR EVALUATING OPERATOR EFFICIENCY
P. P. SLYNKO, L. I. BUKVAREVA, S. V. ZAPOROZHETS, and P. M. ONISHCHENKO *In its* USSR Report: Life Sciences. Biomedical and Behavioral Sciences (JPRS-UBB-86-008) p 46 9 May 1986 Transl. into ENGLISH from Fiziologicheskiy Zhurnal (Kiev, USSR), v. 31, no. 6, Nov. - Dec. 1985 p 678-682 Original language document was announced as A86-21453
Avail: NTIS HC A07/MF A01

A method for measuring the electrodermal characteristics associated with the stress induced diaphoretic reflex was developed. The method is intended for use in evaluating the functional conditions of a human operator in monotonous work conditions. A general description of the diaphoretic skin sensor is give, and experimental results are presented concerning the accuracy of the method in comparison to conventional electrodermal sensing methods. It is shown that, in contrast to conventional methods, the present sensing method offers a highly reliable measure of skin response over extended periods of monotonous work. I.H.(IAA)

EFFECTS OF COLD EXPOSURE ON THERMAL STATUS OF MEN AND WOMEN
R. F. AFANASYEVA and R. O. OGANYAN *In its* USSR Report: Life Sciences. Biomedical and Behavioral Sciences (JPRS-UBB-86-008) p 100 9 May 1986 Transl. into ENGLISH from Gigiyena Truda i Professionalnyye Zabolevaniya (Moscow, USSR), no. 1, Jan. 1986 p 24-28
Avail: NTIS HC A07/MF A01

Sex differences in thermal confort perception and objective changes in skin temperature and heat loss on exposure to different environmental temperatures were assessed in 8 men and 9 women between the ages of 20 and 35 years. In conjecture with the objective data that thermoregulation in women relies essentially on physical factors (decreased skin temperature and diminished body heat loss), women were quicker to perceive thermal discomfort. In men, thermal homeostasis relied preferentially on chemical thermoregulation reflected in greater heat loss. B.G.

STUDY OF BRAIN BIOCHEMISTRY DURING HYPOTHERMIA
E. E. EMIRBEKOV and S. P. LVOVA *In its* USSR Report: Life Sciences. Biomedical and Behavioral Sciences (JPRS-UBB-86-008) p 101 9 May 1986 Transl. into ENGLISH from Kriobiologiya (Kiev, USSR), no. 1, 1985 p 44-49
Avail: NTIS HC A07/MF A01

Aspects of cerebral metabolism in hibernating and non-hibernating animals during hypothermia are discussed and analyzed on the basis of literature survey. Existing factual materials on neurochemical changes in the brain due to hypothermia cannot support formulation of a fully developed theory of the effect of cooling on cerebral metabolism. There are many gaps in the area of neuro-specific components and their role in hypothermia. A specific concept of the effect of hypothermia on molecular processes in the brain is described briefly. Existence of reserve possibilities of regulatory processes in the central nervous system during hypothermia is indicated and prospects are presented for extending resistance of warm blooded animals to hypothermia by use of adaptive functions at low body temperatures. SOMATOSENSORY AND AUDITORY PERCEPTION ACCORDING TO STUDY USING FOCUSED ULTRASOUND
Y. M. TSIRULNIKOV *In its* USSR Report: Life Sciences. Biomedical and Behavioral Sciences (JPRS-UBB-86-008) p 102 9 May 1986 Transl. into ENGLISH from Zhurnal Evolyutsionnoy Biokhimii i Fiziologii (Leningrad, USSR), v. 21, no. 6, Nov. - Dec. 1985 p 591-596
Avail: NTIS HC A07/MF A01

Materials from literature are used in discussion of aspects of the interpenetration of physiology and psychology in the area of sensory preception with emphasis on the contribution of somatosensory and auditory systems with the aid of focused ultrasound. Characteristics of distribution of sensitivity in the skin surface and in deep tissues are described and discussed. Specific feature of sensitivity in biologically active points are considered. The advisability of isolating elementary sensation and considering its role in formation of a sensory image was indicated. Artificial formation of samples, especially single-model samples such as tactile, temperature or auditory modes was found to be helpful since such a model can be controlled to a great degree with the aid of focused ultrasound and other artificial stimuli. EXPERIMENTAL AND GENERAL THEORETICAL RESEARCH: NATURE OF CIRCULATORY REGULATION IN PILOTS
V. G. DOROSHEV, Z. A. KIRILLOVA, and A. P. VANARSHENKO *In its* USSR Report: Space Biology and Aerospace Medicine, No. 1, January - February 1986 (JPRS-USB-86-003) p 14-18 17 Apr. 1986 Transl. into ENGLISH from Kosmicheskaya Biologiya i Aviakosmicheskaya Meditsina (Moscow, USSR), v. 20, no. 1, Jan. Feb. 1986 p 12-15
Avail: NTIS HC A08

Dynamic observations over a group of pilots within a working week during three months have shown that blood pressure increases to meet the requirements via higher cardiac output. When

stresses grow and fatigue sets in, the pattern of circulation regulation changes so that elevated blood pressure is maintained due to an increased peripheral resistance. Differential approach to the pattern of blood pressure regulation makes it possible to assess the degree of circulation adaptation to various work loads. Author

EFFECT OF INTENSIVE OPERATOR WORK ON LIPID PEROXIDATION PROCESSES IN MAN
S. M. IVANOVA, O. N. ORLOV, S. S. BRANTOVA, O. I. LABETSKAYA, N. A. DAVYDOVA, A. Y. ZEZEROV, and A. S. USHAKOV *In its* USSR Report: Space Biology and Aerospace Medicine, No. 1, January - February 1986 (JPRS-USB-86-003) p 25-28 17 Apr. 1986 Transl. into ENGLISH from Kosmicheskaya Biologiya i Aviakosmicheskaya Meditsina (Moscow, USSR), v. 20, no. 1, Jan. Feb. 1986 p 20-22
Avail: NTIS HC A08

It was demonstrated that the stress associated with an active mental work for 2 hours leads to a high rate of lipid peroxidation which results in a greater amount of products of lipid peroxidation in blood and pentane in exhaled air. Simultaneous measurements of blood catecholamines have shown their significant increase immediately after exposure to the stress effect. It can therefore be concluded that a stress situation enhances lipid peroxidation in the human body. Author

DISTINCTIONS IN HUMORAL CONTROL OF METABOLISM WITH SIMULATION OF SPACEFLIGHT FACTORS
S. KALANDAROV, V. P. BYCHKOV, I. D. FRENKEL, and G. I. PROSKUROVA *In its* USSR Report: Space Biology and Aerospace Medicine, No. 1, January - February 1986 (JPRS-USB-86-003) p 34-38 17 Apr. 1986 Transl. into ENGLISH from Kosmicheskaya Biologiya i Aviakosmicheskaya Meditsina (Moscow, USSR), v. 20, no. 1, Jan. Feb. 1986 p 25-28
Avail: NTIS HC A08

Hormonal regulation of metabolism was investigated in test subjects of three age groups: group 1 included test subjects of 41 to 50 years old, group 2 test subjects of 50 to 57 years old, and group 3 test subjects of 26 to 33 years old. Test subjects from groups 1 and 2 were exposed to head down tilt as well as linear acceleration of 3 Gz for 1 min and exercises of 450 to 1050 kgm before and after the tilt test. Group 3 test subjects were exposed to neuroemotional stress before, during and after the head down test. Exposure to head down tilt, acceleration and exercises caused adaptive changes in humoral regulation of metabolism in the test subjects of groups 1 and 2. Food supplements given to group 3 test subjects produced a normalizing effect on humoral regulation of metabolism. Author

LEDOVSKOY *In its* USSR Report: Space Biology and Aerospace Medicine, No. 1, January - February 1986 (JPRS-USB-86-003) p 39-44 17 Apr. 1986 Transl. into ENGLISH from Kosmicheskaya Biologiya i Aviakosmicheskaya Meditsina (Moscow, USSR), v. 20, no. 1, Jan. Feb. 1986 p 29-32
Avail: NTIS HC A08

Time-course variations in the cardiovascular parameters, vestibulo-autonomic stability, work capacity and nutritional status were measured in 20 male test subjects, aged 19 to 22, who were exposed for 7 days to head down tilt. Beginning with days 3 or 4, new hemodynamic ratios developed that indicated a new level of circulation regulation and adaptation to head down tilt. It appears that blood redistribution towards the head led to an enhanced vestibulo-autonomic stability. Renal excretion of nitrogen increased, reaching the highest level on days 6 to 7. The investigations allow the conclusion that 7-day head down tilt may cause changes in almost every physiological system. Author

HUMAN CENTRAL HEMODYNAMICS DURING LOWER LIMB DECOMPRESSION
V. V. RUMYANTSEV and V. Y. KATKOV *In its* USSR Report: Space Biology and Aerospace Medicine, No. 1, January - February 1986 (JPRS-USB-86-003) p 49-52 17 Apr. 1986 Transl. into ENGLISH from Kosmicheskaya Biologiya i Aviakosmicheskaya Meditsina (Moscow, USSR), v. 20, no. 1, Jan. Feb. 1986 p 35-37
Avail: NTIS HC A08

Experiments were performed to study the effect of leg decompression in the head down position at -15 deg. The method of chronic catheterization was used, pressure was measured in different areas of the cardiovascular system, blood was withdrawn for biochemical analysis. The effect of leg decompression was compared with that of lower body negative pressure. Decompression produced changes in Pressure in Pulmonary (PAP) and Central Venous Pressure (CVP) that were similar in sign but different in magnitude. The decompression induced changes in PAP and CVP were primarily determined by the area of exposure. Using previous data, a nomograph was constructed to evaluate PAP and CVP variations as a function of the decompression mode and site. Author

PHASIC PROCESSES IN KINETICS OF FORMED BLOOD ELEMENTS
V. V. VERIGO and F. GAUSER *In its* USSR Report: Space Biology and Aerospace Medicine, No. 1, January - February 1986 (JPRS-USB-86-003) p 53-58 17 Apr. 1986 Transl. into ENGLISH from Kosmicheskaya Biologiya i Aviakosmicheskaya Meditsina (Moscow, USSR), v. 20, no. 1, Jan. Feb. 1986 p 38-41
Avail: NTIS HC A08

When quantitating blood shifts in response to environmental effects, it is important to take into account the phasic pattern of certain processes. Theoretical considerations and experimental data on the fluctuations of the counts of formed elements have been published. Since the fluctuations cannot be easily detected by experimental methods, they can be investigated using mathematical modeling. A model describing the counts of red blood cells and their precursors in relation to the age structure of the population was developed. Depending on the oxygen requirements and physiological parameters, humoral regulation controls cell proliferation and release into the functioning pool. The model allows for incidental hemolysis as well as for lifetime of red blood cells. Simulation of various processes in the blood system when exposed to unusual environmental effects has shown that some of the processes can be phasic in character. Author

T AND B COMPONENTS OF IMMUNITY IN THE PRESENCE OF ACUTE MOUNTAIN SICKNESS
M. M. MIRRAKHIMOV, M. I. KITAYEV, R. O. KHAMZAMULIN, A. G. TOKHTABAYEV, and S. M. POGREBITSKIY *In its* USSR Report: Space Biology and Aerospace Medicine, No. 1, January - February 1986 (JPRS-USB-86-003) p 79-84 17 Apr. 1986 Transl. into ENGLISH from Kosmicheskaya Biologiya i Aviakosmicheskaya Meditsina (Moscow, USSR), v. 20, no. 1, Jan. Feb. 1986 p 53-56
Avail: NTIS HC A08

Immunological aspects of the adaptation process were investigated in 57 male test subjects that stayed for 30 days at an altitude of 3600 m above sea level. The uneventful development of adaptation was accompanied by a short term decrease in the number and activity of T-lymphocytes. An acute mountain disease led to a distinct deficiency of T-cell immunity which still persisted on test day 30. Besides, the content of zero cells in circulating blood was increased and the blast-transformation reaction of lymphocytes to concavalin A was inhibited. Prior to the ascent the test subjects who were susceptible to the acute mountain

disease showed a lower content of T-lymphocytes and a higher content of zero cells in circulating blood. Author

EFFECT OF DIFFERENT DOSES OF ULTRAVIOLET RADIATION ON VITAMIN LEVELS IN MAN
M. S. BELAKOVSKIY, M. G. YUZHANSKAYA, N. Y. PANFEROVA, L. K. PASTUSHKOVA, O. G. PEREVERZEVA, A. N. SMIRNOVA, I. N. SERGEYEV, and V. B. SPIRICHEV *In its* USSR Report: Space Biology and Aerospace Medicine, No. 1, January - February 1986 (JPRS-USB-86-003) p 85-91 17 Apr. 1986 Transl. into ENGLISH from Kosmicheskaya Biologiya i Aviakosmicheskaya Meditsina (Moscow, USSR), v. 20, no. 1, Jan. Feb. 1986 p 56-61
Avail: NTIS HC A08

Exposure of healthy adults to prophylactic doses of UV radiation in the medium and long wavelength spectrum improved metabolism of vitamins A, E and D and increased their content in the body. UV irradiation even in prophylactic doses increased ascorbic acid requirements. Excessive UV radiation produced an adverse effect on the vitamin content. However, the vitamin concentration in blood was not significantly decreased. This can be explained by the adaptation of the human body to UV-irradiation upon a continuous increase of its dosage. RADIOBIOLOGICAL VALIDATION OF QUALITY FACTOR OF PROTONS AND HELIUM IONS
N. I. RYZHOV and B. S. FEDORENKO *In its* USSR Report: Space Biology and Aerospace Medicine, No. 1, January - February 1986 (JPRS-USB-86-003) p 95-99 17 Apr. 1986 Transl. into ENGLISH from Kosmicheskaya Biologiya i Aviakosmicheskaya Meditsina (Moscow, USSR), v. 20, Jan. - Feb. 1986 p 63-66
Avail: NTIS HC A08

Reported data and experimental results of measuring the relative biological effectiveness of protons of different energies and helium ions of 4 GeV/nuclon were analyzed to determine quality factors of the major components of cosmic radiations. It is recommended to use quality factors equal to 1.30 to 1.45 for 100 to 730 MeV protons and equal to 1.75 for 9 GeV protons and 4 GeV/nuclon helium ions. It is also suggested to employ them as standards for solving practical problems of radiation safety in spaceflights. Author

METHOD OF DEMONSTRATING CALCIUM IN HUMAN FOOT BY NEUTRON ACTIVATION OF (ALPHA, N)-SOURCES
V. Y. ZAYCHIK, A. Y. KONDRASHOV, and B. V. MORUKOV *In its* USSR Report: Space Biology and Aerospace Medicine, No. 1, January - February 1986 (JPRS-USB-86-003) p 113-119 17 Apr. 1986 Transl. into ENGLISH from Kosmicheskaya Biologiya i Aviakosmicheskaya Meditsina (Moscow, USSR), v. 20, Jan. - Feb. 1986 p 75-78
Avail: NTIS HC A08

Bone demineralization during long term exposure to weightlessness and hypokinesia is presently a universally recognized fact. However, it should be noted that quantitatively incomparable results were obtained with use of different methods (X-ray densitometry, photon absorptiometry, X-ray tomography) to determine mineralization of bone. Evidently, this is attributable to the fact that they yield only an indirect estimate of the state of the mineral matrix of bone, since they characterize a parameter inherent in bone tissue as a whole, namely, the degree of absorption of photons of X-ray and gamma ranges of energy. Availability of this information alone does not allow one to draw a strictly quantitative conclusion about one of the important features of the mineral matrix, the concentration of calcium. Recording mesoroentgen radiation during exposure of some parts of the skeleton, for example, the calcaneus, to mu-mesons is a promising procedure for development of a method of direct measurement of the main mineral constituents of bone. However, there is still much to be done in this direction, and it is difficult to execute such a measuring method, as well as to make a quantitative interpretation of the obtained results. A description of the in vivo NAA method for Ca level in the human foot is presented. Special investigations had to be conducted to optimize irradiation conditions and spectrometry, as well as develop special equipment, in order to reach the goal of no more than 0.05 relative total error of each individual measurement with an equivalent dose or no more than 3 rem. BLOOD SERUM ENZYMES DURING 7-DAY WATER IMMERSION
T. Y. DROZDOVA and Y. G. VETROVA *In its* USSR Report: Space Biology and Aerospace Medicine, No. 1, January - Februar, 1986 (JPRS-USB-86-003) p 126-128 17 Apr. 1986 Transl. into ENGLISH from Kosmicheskaya Biologiya i Aviakosmicheskaya Meditsina (Moscow, USSR), v. 20, no. 1, Jan. Feb. 1986 p 82-83
Avail: NTIS HC A08

During submersion in water the body is exposed to a number of factors, among which redistribution of blood and lack of load on the locomotor system are rather important. This could affect metabolism of skeletomuscular tissue and parenchymatous organs, analogous to the effect of weightlessness. Investigation of changes in blood serum enzyme spectrum enables the demonstration, with some degree of certainty, the direction of metabolic transformations in different tissues and organs in weightlessness. RADIOPROTECTIVE AND THERAPEUTIC EFFICACY OF CARRAGEENAN AGAINST PROTON RADIATION
K. S. CHERTKOV, N. I. GVOZDEVA, B. S. FEDORENKO, and Y. Y. PREOBRAZHENSKIY *In its* USSR Report: Space Biology and Aerospace Medicine, No. 1, January - February 1986 (JPRS-USB-86-003) p 132-135 17 Apr. 1986 Transl. into ENGLISH from Kosmicheskaya Biologiya i Aviakosmicheskaya Meditsina (Moscow, USSR), v. 20, no. 1, Jan. Feb. 1986 p 84-86
Avail: NTIS HC A08

Assurance of radiation safety of long term spaceflights is one of the important tasks put to space biology and medicine. In this regard, importance is attributed to refinement of technical equipment, search and development of effective drugs. It is known that the danger of irradiation, mainly from high energy protons, is higher in long term spaceflights. It was deemed desirable to investigate the radioprotective properties of some previously tested radioprotective agents, for example, carrageenan, during exposure to protons. E.R.

STUDIES ON VISUAL INFORMATION PROCESSING IN RETINAL NEURONS
M. YAMADA Oct. 1985 78 p In JAPANESE; ENGLISH summary
(EL-859; ISSN-0366-9106; UDC-612.843:681.3) Avail: NTIS HC A05/MF A01

In the retina a great deal of information is processed. A negative feedback hypothesis in synaptic mechanisms explaining color information processes in retinal neurons was not proved physiologically in spite of being supported by histological findings. In order to know the characteristics of visual information processing, the relationship between photostimulus and electric response of cells, particularly, the response dynamics was investigated. A linear response analysis method was applied to the neural network in a retina. The effects of light adaptation on the waveforms of oscillatory potentials found in photoresponses of rods were examined. The relationship between rod and cone neural pathways was studied. The responses of second neurons to photostimulus at receptor cells was also examined. B.G.

Avail: NTIS HC A05/MF A01

Several techniques were developed to measure human olfactory evoked potentials (OEPs). Waveforms of the OEPs were recorded when perceived. Techniques for rejecting the contaminants and preventing various kinds of noise are described. The saturation phenomenon is discussed with respect to the amplitude of OEPs for repeated pulse stimuli. Psychological studies on the scaling structure of odors were performed to compare the waveforms of OEPs with the psychological data of olfaction. Waveform of OEPs for various odorants were measured. The singualr value decomposition (SVD) method is applied to analyze the waveforms. The correlation of the response peak of OEPs at 300 milliseconds with the P300 response of the event related potential was discussed. B.G.

BIOLOGICAL EFFECTS OF IONIZING RADIATION [EFFETTI BIOLOGICI DELLE RADIAZIONI IONIZZANTI]
M. BELLI *In its* Elements of Radiation Protection 28 p 15 Nov. 1985 In ITALIAN
Avail: NTIS HC A06/MF A01

The processes leading to damage of living cells by ionizing radiation are reviewed. The discussion includes the definitions of relative biological effectiveness and linear energy transfer; a description of the primary processes and the effects on lipids, proteins and DNA; the DNA self-repairing processes; and theories of damaging mechanisms. It is concluded that DNA is the main target for permanent biological damage, which is a function of initial damage and recovery capacity. It is shown that mutation mechanisms where the effect-dose ratios do not show a threshold are relevant to genetic and cancerogenic effects. ESA

EFFECTS OF RADIATION HEALTH [EFFETTI SANITARI DELLE RADIAZIONI]
S. FRULLANI *In its* Elements of Radiation Protection 45 p 15 Nov. 1985 In ITALIAN
Avail: NTIS HC A06/MF A01

The measurement of radiation parameters such as relative biological effectiveness and linear energy transfer, and the clinical effects of radiation as dependent of dose and type are reviewed in order to assess criteria for a radiation health policy. Stochastic and threshold effects are discussed. The protective regulations existing in the European Community are examined. It is shown that the dose limits are chosen to give a risk limit of one per thousand per year, that is ten times the amount corresponding to low risk professions. ESA

OPERATING RADIATION PROTECTION: MEDICAL ASPECTS [RADIOPROTEZIONE OPERATIVE: ASPETTI MEDICI]
G. CAMPURRA *In* Istituto Superiore di Sanita Elements of Radiation Protection 12 p 15 Nov. 1985 In ITALIAN
Avail: NTIS HC A06/MF A01

The duties of medical personnel working with radiation exposed workers are described. The nature of preliminary medical evaluations are explained, showing that the main goal is to determine workers' ability to support radiation risk and to identify as early as possible any pathological condition due to radiation or implying a physiological reduction of radiation resistance. Clinical examinations to be performed are classified and discussed. Italian regulations are included. ESA

EFFECTS OF MUSCLE ATROPHY ON MOTOR CONTROL Final Technical Report, 1 Jun. 1982 - 31 May 1985
D. G. STUART 1985 22 p
(Contract NAGW-338)
(NASA-CR-177201; NAS 1.26:177201) Avail: NTIS HC A02/MF A01 CSCL 06P

As a biological tissue, muscle adapts to the demands of usage. One traditional way of assessing the extent of this adaptation has been to examine the effects of an altered-activity protocol on the physiological properties of muscles. However, in order to accurately interpret the changes associated with an activity pattern, it is necessary to employ an appropriate control model. A substantial literature exists which reports altered-use effects by comparing experimental observations with those from animals raised in small laboratory cages. Some evidence suggests that small-cage-reared animals actually represent a model of reduced use. For example, laboratory animals subjected to limited physical activity have shown resistance to insulin-induced glucose uptake which can be altered by exercise training. This project concerned itself with the basic mechanisms underlying muscle atrophy. Specifically, the project addressed the issue of the appropriateness of rats raised in conventional-sized cages as experimental models to examine this phenomenon. The project hypothesis was that rats raised in small cages are inappropriate models for the study of muscle atrophy. The experimental protocol involved: 1) raising two populations of rats, one group in conventional (small)-sized cages and the other group in a much larger (133x) cage, from weanling age (21 days)

through to young adulthood (125 days); 2) comparison of size- and force-related characteristics of selected test muscles in an acute terminal paradigm. Author

CONCERNING BAROTRAUMA OF THE LUNGS-TRANSLATION
G. KHRISTOV 5 Feb. 1986 20 p Transl. into ENGLISH from Khirurgiya (Bulgaria), v. 22, no. 6, 1969 p 589-597
(AD-A165006; FTD-ID(RS)T-1143-85) Avail: NTIS HC A02/MF A01 CSCL 06E

The popularization and development of skin diving has led to the appearance of a new type of trauma of the lungs, caused by rapid change in air pressure in the lungs during sudden ascent of the diver with the breath held. Barotrauma of the lungs may be occasionally observed in anesthesiological practice as well. The paper discusses the etiopathogenesis, clinical manifestations and treatment of the complaint. The author has observed and described three cases of barotrauma of the lungs, one of which ended in death. It is emphasized that effective treatment of pulmonary barotrauma is feasible only when a barochamber is available, large enough to accommodate the performance of resuscitation and, if necessary, surgical interventions. SOFT CONTACT LENS WEAR DURING +G(Z) ACCELERATION Final Report, Oct. 1982 - Jun. 1985
W. J. FLYNN, M. G. BLOCK, W. F. PROVINES, T. J. TREDICI, and R. D. KULLMAN Dec. 1985 23 p
(AD-A165013; USAFSAM-TR-85-84) Avail: NTIS HC A02/MF A01 CSCL 17H

The effects of +G sub z on soft contact lens wear are reported here. Human centrifuge rides up to +8 G sub z were accomplished on 11 subjects. Six myopic subjects were tested with low-, medium-, and high-water-content spherical soft lenses. Two astigmatic subjects were tested with various designs of toric soft lenses. In addition, the contact lens subjects were tested with spectacles for comparison. Three emetropic subjects served as controls. Video photography was used to monitor lens position during the centrifuge rides; and visual acuity was checked at +1, +2, +4, +6 and +8 G sub z with a reduced Snellen eye chart. Each lens type and control run was evaluated in straight-ahead, lateral, and vertical gaze. No significant decentration was noted for any of the lens types tested up to the maximum level of +8 G sub z. Visual acuity was reduced at the higher +G sub z levels for contact lenses, and spectacle trials, and with the emmetropic controls--all to similar levels. Contact lens did not produce any corneal insult due to the +G sub z exposure. Author (GRA)
